My people, too, have to live with their history and their memories. But they must also find the strength to look forward and to tackle tomorrow's problems. The new frontiers that we are aiming at here are those of reconciliation with ourselves—of a domestic political atmosphere in which dispassionate cooperation and fair adjustment become possible—of a sense of responsibility toward the great community of nations in which we desire to live, to which we belong and to which we have to make our contribution.

Among the most encouraging impressions to be gained in Washington these days there is what I would like to call the integration of the intellectuals. In the spirit of a living, creative democracy there appears an outline here of something that we in Europe should not pass over. In Europe, too, we cannot afford to sustain the intellectual forces largely in isolation from the state. Our communities will have to try, increasingly, to find a common denominator for points of view of practical experience and of theoretical insight.

The community of free nations reaches beyond NATO and SEATO although all concerned—including those in countries not within the alliance—should understand the importance of these alliances for the freedom of nations and for the peace of the world.

I should like to think that this community must never be placed in the position in which your country and mine found themselves in 1933. Economic crises and wars are not only the occasions calling for a Roosevelt, or capable of producing a Hitler. There is also such a thing—no need to stress the point here—as poverty in the midst of abundance. The aimless, empty condition of false content can also paralyze and blind men.

Confronted with a determined adversary—as in the case of the Communist world—the contrast between private wealth and public penury, the state of immobility in the midst of plenty, can become fatal for the community of free nations. But, it is my impression that the curse has been broken, that once again that same spirit will prevail which, in the thirties, helped to overcome here dogmatic views on the economic and social order. The free world's response must be powerful.

In economic terms, Germany has achieved more than we could have imagined 12 years ago. We need not be ashamed of the prosperity thus achieved—unless it be the fact that the various sections of the population have not obtained a more just share in economic growth. It is obvious, I should think, that, in addition to the successful concepts we also have taken over a few less happy concepts from the United States. Production indices, the level of the individual standard of living, television sets and iceboxes—these appeared to many people to be sufficient guarantee that we would pass the great challenge. Germany has copied this misunderstood concept of democracy with dedication and a certain thoroughness.

Meanwhile, we too have understood more and more clearly that we must not only insure a more just sharing of the proceeds of the common labors, but also make sure—

above all—that arrears be made up in those public tasks which hitherto were neglected. Public health, education, urban renewal, road building—these are some of the focal points in Germany demanding our attention. We too have our depressed areas.

We in Europe too will have to overcome the complacency and selfishness of an excessively superficial life. The efforts of the strongest man in a rowing team are of little avail, unless the others row towards the same goal by the same stroke.

In my opinion, cooperation within the Western Community should become closer than it was the case so far. We, certainly, should not neglect our military security. But, we must be on guard lest we look at everything from a military angle. Not only the recently developing countries are involved. Our relationship to the peoples in the Communist world is also at stake here. The ideas of freedom and of human dignity are being challenged as long as fellow men starve and suffer oppression—wherever it may be.

It is in the very nature of communism that it should claim to be gospel and to proclaim that our grandchildren shall be Communists. In Berlin, we need to look only across the street to see the Communists in their everyday appearance and not dressed up in their spotless Marxist Sunday best. Their perspective of world revolution need not make us tremble. It is the design of men and not of supermen. The difference between planning and reality is the incurable disease of communism. In Berlin, one can also learn that Soviet communism is not an elemental force in the face of which one is powerless.

We in Berlin are not in danger of being charged with weakness or receptivity to communism. Nor do we have any illusions. But, sometimes it would appear as if the fear of communism grew in proportion to the distance from it. The people in the Soviet-occupied part of Germany—which surrounds my city—have seen through communism—in their minds they have largely overcome it.

We really have no need to evade the spiritual struggle. Peaceful coexistence—that is another way to describe a struggle by every means short of war. But, it also means that within the Soviet sphere of power some of our standards have been accepted. The program to catch up with and to overtake the United States in production means that the West—to this extent—is the yardstick by which the Communist world wants to be measured itself.

I do not believe that the Communist leaders are in a position today to radically revise their long-term program. If that is a correct conclusion, certain consequences must be drawn. Then, new efforts make sense—efforts to banish the danger of war step by step, and to replace the balance of terror by the rules of a peaceful contest. This contest, however, has started already and no one will be able to escape from it. What we need is firmness in our fundamental convictions, self-reliance, confidence in our friends and—not least—an unprejudiced view not dimmed by yesterday's truths, but fearlessly studying what has to be done in a world of change. I know that the idea of freedom has the longer reach.

I can imagine a future in which Western and Eastern Europe will sensibly collaborate. Meanwhile, Germany will have to help in eliminating avoidable tensions in her relations with her Western neighbors.

Only one thing must not be expected from us: that we renounce reunification and agree to 17 million of our countrymen to be divided from us to be thrown on the rubbish heap of history. You would not allow this to happen either, say—to California and to one-quarter of your people. Dr. Adenauer once said that the day of the peace treaty will not only be a day of joy, but also a day of sacrifice for our nation. I think that is the right view. But I must add: we shall not pay in terms of human beings. It would be dishonest toward our allies if I allowed here any doubt to arise regarding my view, or if I allowed the opinion to go unchallenged that this question would be settled by the course of events.

I know: what used to be will not come back. But, we also know: many of the things now existing will not remain as they are. In spite of everything that has happened, my people have the same right of self-determination which other nations claim for themselves. And, I am convinced that this point of view will be understood and will, ultimately, prevail.

And now let me stress once more that we are not only called upon to arm and to parley, but that we also have to maintain ourselves in the economic and social and—above all—in the ideological struggle and, that in this struggle we must push on toward new frontiers.

In this quest, we can let ourselves be guided, I think, by the thoughts written by President Roosevelt for his Jefferson Day address which he never delivered, having died the day before: "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

Inducements to New Industry in Walsenburg, Colo.

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article on the city of Walsenburg, Colo., recently published in the Pueblo Chieftain.

Walsenburg, in the southeastern part of Colorado, has, for the last several years, undergone an economic decline. The city, however, has not sat still. Blessed with a remarkable climate and scenery, the area offers much to the tourist. Available water and power should act as an inducement to new industry. The efforts of Walsenburg citizens to bring new development combined with the sound financial condition of both the city and county governments serves to make the future bright. The fact that Walsenburg qualifies under the terms of the area redevelopment bill which the Senate approved last week, offers additional promise for Walsenburg.

Mr. President, this article, written by Mr. Floyd Jeter, owner and manager of the local radio station KFLJ, joints out very well the attractions of Walsenburg.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WALSENBURG'S LARGE WATER SUPPLY ONE OF CITY'S OUTSTANDING FEATURES

(By Floyd Jeter)

WALSENBURG.—The city of Walsenburg is pulling itself up by its bootstraps, so to speak.

Among things about which the community can boost is an excellent water supply. Five to ten times as much water as is needed for domestic consumption is available in the town.

In 1945 water collections were only about $22,000 per year. Joe Mosco, who was elected mayor at that time, helped put the city on a businesslike basis.

Mosco states, "Water collections jumped up to $55,000 and $60,000 a year. The city began to pay on the bonds instead of just the interest."

There was not enough water, no filter plant, and an inadequate distribution system. More water rights were bought. A tank was erected on a nearby hill. A filter plant was built. Majority interest in Martin Lake and Kolar Ditch water rights were bought. The Harry Willis Ranch and water rights were also purchased. The city of Walsenburg bought the powerplant and installed new equipment. A swimming pool was built.

The powerplant now is paying for itself at the rate of $109,000 in principal and interest this year. The payment gradually will decrease. The water department is paying its own bonds with the exception of a 1¼ mill levy.

City operations recently have been on a substantial basis, sometimes with several thousand dollars surplus, occasionally a little in the red. An example of the latter occurred last year due to a change of the fiscal year from April 1 to January 1 and because two new pieces of street equipment were purchased. This meant that the last council left a few-thousand-dollars deficit from 1959 to 1960 fiscal year.

Eight years ago, the country was in debt about $60,000. However, financial conditions began to change gradually and at present, the county has no bonded indebtedness. The county owns good road equipment. Tom Solomon, county treasurer, reported that all funds carried over amounted to almost $102,000, of which $50,000 was loaned on interest in the form of bonds that brought the county funds $1,200 in interest in 1960. All buildings in the Walsenburg school district RE1 are paid for. A fleet of almost new schoolbuses transport the youngsters.

Last year, approximately $30,000 was spent in capital improvements, and in addition to this, new schoolbuses and a considerable amount of maintenance work was done. The school district's only debt of $20,000 in bonds cannot be paid off ahead of schedule because of the agreement with the bonding company.

Walsenburg and Huerfano County as a whole are in good condition. Neat houses painted in bright colors are in abundance. Green lawns and flower gardens are everywhere. Trees shade the many paved streets. Attractive churches invite worshipers.

Plans are being made for the Martin Lake development which would create two larger lakes. Walsenburg will furnish the water for this project which should spur the development of a golf course, of picnic areas, kiddie fishing lakes, camping areas, boating and water skiing, fishing and trailer parks. Altogether the area of approximately 1,100 acres will provide unlimited recreation facilities. Huerfano County has two winter sports areas, one currently in operation. A playground park, wading pool, tennis courts, and baseball diamonds provide recreation facilities for the youngsters.

Walsenburg has recently begun to get new FHA and new GI housing loans. Six new homes are under construction at the present time.

Progressive citizens are working on numerous projects to better Walsenburg, among these the new low-rent housing program and the proposed hospital. Walsenburg's people are working together toward a common goal.

Tribute to Hickman Price, Jr.

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. HART. Mr. President, one of the outstanding citizens of Michigan who now is serving this country in President Kennedy's administration is Hickman Price, Jr., Assistant Secretary of Commerce. Today, Mr. Price is also held in great esteem in Brazil, where, by his responsible example, he has countered the charge that North American business leaders working in Latin America are unable to generate goodwill for our country and at the same time serve effectively the business interests of the United States.

Upon Mr. Price's departure from Brazil, to take up his new duties, the Honorable Antonio Sylvio Cunha Bueno, Federal Deputy from Sao Paulo, recognized these qualities of Mr. Price, in the course of a magnificent speech which was delivered in the Brazilian Chamber of Deputies. I ask unanimous consent to have the speech printed in the Appendix of the RECORD.

There beong no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY DEPUTY ANTONIO SYLVIO CUNHA BUENO IN THE CHAMBER OF DEPUTIES

New and encouraging prospects are opened up for a strengthening of the bonds between Brazil, the United States of America, and other countries. President John F. Kennedy assumes control of the White House, and public opinion throughout the world is turned on him, due to the tension in the present-day world, created by the cold war. Latin America permanently passed over in programs of foreign aid, in view of the immensity of its requirements for development, awaits its opportunity. It wishes to see the economic and financial cooperation plan finally made real in order to raise the low standard of living of underdeveloped peoples, trailing along in the wake of industrialized countries.

It is a fact that capital, experience, and specialized labor has brought considerable progress to the peoples of America. The expansion in commercial interchange between countries in the hemisphere will allow an economic system to be formed capable of strengthening political and cultural relations, and of supplying the basis for its progress to the continent.

The example given us by Old Europe, by the formation of its free trade zones and common markets, is noteworthy in view of what it represents in complementing the economy. America can be proud of having offered the political bases of its international organizations to the whole world, when it idealized the inter-American plan. The time has now come for its economic integration as foreseen by President Juscelino Kubitschek in his doctrine on Operation Pan Americana.

It is never too much to recall that investments of domestic and also foreign capital have brought new possibilities to our people raising their standard of living.

Industrialization, allied to modern productive and mechanized agriculture, provides a larger amount of riches and, based on the theory and practice of mass production, besides affording a splendid labor market, creates better opportunities for a wider distribution of commodities and better standards of living for a large number of people.

Relations between Brazil and the United States of America have traditionally been good in the political, cultural, and economic fields. It is not only economic and political interchange which keeps us united, but, principally the joint feeling of our hopes in the past and in the present. First, the implantation of liberty in the New World, and, later, preservation of democratic liberties on the whole of the earth's face. This feeling and this hope, which have taken their course in our history, were well understood by statesmen of the Americas, among them Bolivar, Franklin D. Roosevelt and others. And, among us, D. Pedro II who on a visit to the United States of America, left his imprint on passing through that country, including in its best known universities, such as Harvard and Yale, Joaquim Nabuco, our first Ambassador to Washington, planted the seeds of political and cultural understanding. A significant fact in international relations was the launching of the good neighbor policy in 1933 by President Franklin D. Roosevelt. And, of more recent date, the launching of Operation Pan Americana by Brazil. The repercussions in the northern continent, added to various occurrences in the center of the hemisphere, were such that the two largest North American parties, in complete accord, included a solution on a large scale of the problem of cooperation with Latin American countries, in their presidential campaign platforms of 1960. This to our thinking, is the most significant change in North American foreign policy.

Inspired by the wish to become better acquainted with Latin American problems, principally those about Brazil, President Kennedy has just given concrete and undeniable proof of his concern to find solutions which will result in healthy and effective collaboration between our nations.

The first magistrate of the people, who today occupies the White House decided to enlist a countryman of his in Brazil who will make this approach through deeds and words.

I refer to the invitation addressed to Hickman Price, Jr., to occupy the post of Assistant Secretary of Commerce. All Brazilians who are more directly committed in the fight for the country's economic emancipation, respect and admire this North American, whose friendship to Brazil has been proved for many years. The new Assistant Secretary of Commerce of the American Nation is a man acquainted with the base problems of the country, having been a pioneer and one of the greatest enthusiasts and a real collaborator in the fight for the implantation of the automotive industry. It is worth glancing over his life which has been devoted to heavy industry, and where he has always occupied the highest position.

He was born in Nashville, Tenn., on August 14, 1911. At 23 years of age he already occupied the highest positions in the Bankers Trust Co. of New York. From January 1942 to May 1945 he was with the Foreign Economic Administration. From 1945 to 1952 he was vice president of Kaiser-Fraser Corp., and was also treasurer of the same company from 1945 to 1946. In the same company from 1946 to 1952 he rose to the high position of executive vice president. From 1952 to 1956 he was president of Willys-Overland Export Corp., and simultaneously vice president of Willys Motors Inc. from 1955–56.

In 1956 he was nominated executive director of Willys-Overland do Brazil S.A. In this company he showed his qualities as a pioneer. At that time Willys-Overland do Brazil S.A. was located in a building of restricted size and with some used machinery. In 3 years only, it was transformed into the largest plant for automotive vehicles in operation in Brazil. At that time the company employed 33 workers, today it employs 7,000. A 95-percent index of nationalization of its vehicles has been reached.

The cause of this speedy development in the company was in large part due to Hickman Price, Jr., who foresaw the need for participation by the small Brazilian investor in this new and growing industry. As a result, the company today has over 40,000 shareholders.

Through the intermediary of an agency of the French Government, Hickman Price, Jr., arranged for an investment of U.S. $11 million, for the production of the French Dauphine automobile.

Total investment in machinery and equipment in the company during Hickman Price, Jr.'s term of office was U.S. $33 million. For this work and contribution to Brazilian economy, he was awarded the highest decoration from the Brazilian Government to a foreigner—the Order of the Cruzeiro do Sul.

In 1959 he left the pioneer factory, after having placed it on the road to progress. In November he was invited by Mercedes Benz do Brasil S.A. where he is still executive vice president. This industry employs 6,000 workers, and is classified amongst the largest in Latin America.

At a press interview it was possible to feel and sense the new Secretary's resolution in regard to our future relations: "I am sure that the good sense of the Brazilian people and their wide capacity for work will bring profitable results to the country and toward its leadership in Latin America. During the last 5 years Brazil has undergone tremendous economic expansion, in proportion to other countries in the world. And, like all things which grow at a similar rate, Brazil has little time to breathe. But my confidence in its future continues strong. In 1980 Brazil will have a population of 125 million souls, approximately, and to be able to stand this increase it must continue its development at an accelerated rate."

Referring to his hopes for greater intensification of the relations between the United States and Brazil, where two new governments "undertake to develop a joint action, with a view to general development of the Americas and the maintenance of democracy," Mr. Hickman Price, Jr., said "Presidents Janio Quadros and John Kennedy are men who share the same ideals and principles, they were elected at the same time, they are of the same age, they take office at the same time, and they hold the mandates in the two largest countries in the hemisphere. Due to these reasons, one can only anticipate joint work in defense of the general welfare."

In closing Mr. Price emphasized that he leaves Brazil, but that all his life he will be a friend of this country "in the performance of my duties I shall do everything to encourage capital investment in Brazil with exact elucidation to investors as to possibilities in Brazil. My effort will be made for capital to enter in close association with Brazilian investors, through a system of 'help by participation' and not by stimulating the appearance of eventual monopolies. And this will be achieved, I believe, since the members of the new U.S. Government have more experience in foreign problems than those in the preceding governments."

Therefore, Mr. President and deputies, the nomination of the new Assistant Secretary of Commerce of the sister nation merits recognition in the annals of this house.

We believe that Hickman Price, Jr., through his qualities as a real leader, through the perfect and direct knowledge he has of Brazilian requirements, through his proven capacity for work, and above all, through the love which he has shown in the study and solution of large national problems, will be a splendid collaborator in the

work of promoting understanding amongst the two great nations who, due to the positions they enjoy at the moment, undoubtedly will be responsible for safeguarding a free and democratic world.

That was all I had to say, Mr. President.

Resolution of Oregon State Building and Construction Trades Council

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. MORSE. Mr. President, Mr. Joe L. Willis, executive secretary of the Oregon State Building and Construction Trades Council, has brought to my attention the resolution which was unanimously endorsed at the 46th semiannual convention of the council.

I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION TO PRINT A U.S. POSTAGE STAMP, "THE NUCLEUS OF CRAFTSMANSHIP—APPRENTICESHIP," RECOGNIZING THE BASIC PHILOSOPHY OF BONA FIDE APPRENTICESHIP AND BRINGING TO THE ATTENTION OF THE AMERICAN PUBLIC THE VALUE OF THE APPRENTICESHIP SYSTEM TO OUR NATIONAL ECONOMY

Whereas millions of our fellow workers, throughout the years, have given of their time and effort in the promotion of this philosophy, for the purpose of training competent craftsmen for the industrial welfare of our Nation; and

Whereas the future status of skilled manpower in the United States is becoming increasingly dependent upon apprentice training; and

Whereas there is a need to acquaint the American public with the gigantic strides, activities and efforts in establishing the philosophy of bona fide apprenticeship, and the efforts that are being taken by labor and management to provide the public with the highest possible grade of products and services in conformity with approved practices of safety and skilled craftsmanship; and

Whereas it is the desire of the Oregon State Building and Construction Trades Council to pay tribute to these fellow workers, apprentices and to labor and management representatives who have voluntarily contributed their time and effort to this very necessary industrial activity: Now, therefore, be it

Resolved, That the Oregon State Building and Construction Trades Council go on record as approving, and to petition the Postmaster General to have printed, a U.S. postage stamp using a facsimile of the imprint on this resolution and the attached analogy; also to request our congressional delegation to so petition the Postmaster General.

JOE L. WILLIS,
Executive Secretary.

THE NUCLEUS OF CRAFTSMANSHIP—APPRENTICESHIP

Apprenticeship might well be called the nucleus of craftsmanship. Just as the sun is the nucleus of our solar system, holding in place the planets and their satellites by virtue of its enormous gravity pull, so is our economic system held in balance by the qualified craftsmen who staff the machines and build the artifacts of our civilization.

The sun nurtures and sustains all life as we know it—plant life that men and animals depend upon for life grow from this sunlight and warmth. Similarly, apprenticeship could appropriately be termed the sustaining force of our economic life, supplying as it does, qualified craftsmen who have learned their skills through apprenticeship. Through the vitalizing influence of apprenticeship the apprentice grows in efficiency, and with the skills of his trade firmly established and thoroughly mastered, matures into a craftsman, becoming an integral part of the vital lifelines of our production system.

Truly, as the sun is the nucleus of our solar system, apprenticeship is the nucleus of our craftsmanship.

Burshears' Remarkable Boy Scouts

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Reader's Digest article—condensed from the Denver Post—entitled "Burshears' Remarkable Boy Scouts."

We Coloradans know well of the activities of these young Colorado Boy Scouts, but I am proud that the widely read Reader's Digest thought it worthwhile to carry their story. As this magazine is read in 21 countries, and published in 12 different languages, this remarkable tale of Scoutmaster J. F. Burshears' Koshares of La Junta, Colo., will reach millions of people. These American youngsters are citizens who do us credit—both at home and abroad. In these days when juvenile delinquents are a cause of grave concern all over the globe, I believe the example of these young Coloradans can be an inspiration to parents, to teachers, and to young people everywhere.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURSHEARS' REMARKABLE BOY SCOUTS

"The great chieftains have gone their way; the buffalo have faded into Mother Earth, never to return. So listen to the rhythm of the Great Medicine Drum. See again the life of the Red Man as the Koshares reveal the age-old scenes."

The narator stopped, and with war whoop and the boom-thump, boom-thump of the thunder drum, 100 young braves danced into the light of the tepee fires flaring in the night wind. The music of their ankle bells and their primitive Indian hand rattles mingled eerily.

For an hour and a half they weaved and stomped, their bare backs shining with sweat. They did a dozen stirring dances: a prayer for a successful buffalo hunt; a Pueblo house blessing; the traditional Hopi prayer for rain, with wriggling bullsnakes clenched in their teeth.

John Chapman, New York drama critic, declared: "I have seen many spectacles, but there is nothing in my memory to match the performance of these Boy Scouts."

For the Koshare Indian Dancers are Boy Scouts, and there is not a real redskin in the outfit. These lads from the southeast Colorado prairie town of La Junta are members of one of the best known Boy Scout troops in the United States. Their interpretive dances are so successful that the boys earn $500 a night, travel in their own bus thousands of miles each year, and have built their own $200,000 Scout headquarters.

Scoutmaster J. F. "Buck" Burshears, a heavy-set bespectacled man of 51, who contracts with the Santa Fe Railway to furnish crews to take care of livestock in transit, began building his troop nearly 30 years ago. An Eagle Scout himself, he was just out of college and holding his first job. He fixed over an old chicken coop for a meeting place. But he soon found that he needed something special to keep the older boys interested in scouting. "The kids always got steamed up whenever we went on a trip," he says. "So I figured we'd build a troop of entertainers and pay our own way on a lot of trips." The La Junta scoutmaster has done just that, and the youngsters have been beating at his door ever since.

The idea of forming a Boy Scout tribe stemmed from Burshears' own long-time interest in Indian lore and dancing. And the boys soon discover that being a Koshare (ko-shär-e is the Pueblo word for funmaker) is no idle play. Indian dancing is more strenuous than many sports. And the Koshares do more than just dance. "I want these lads to know how much we owe the Indian," Burshears explains. "I want to keep our heritage alive." Buck makes the Indian a fascinating study. He and his boys have worked up a repertoire of 100 dances, drawing for their material on scholarly studies of tribal life, authoritative books, and especially on visits to Indians.

Buck himself has spent 30 years researching tribal dancing from the Montana Blackfeet to the Florida Seminoles, and is still on the hunt. For a time he lived with a Southwest tribe and coauthored a book on Indian beadwork. Each year he travels with his scouts to such affairs as the great Indian ceremonial dances at Gallup, N. Mex., where he films the finest dancing and costumes, and records the Indian chants—some 50 hours of films and recordings to date. His big, inviting home, virtually an Indian museum, at times overflows with youngsters running the movies, poring over Buck's library and practicing new routines.

Last fall, with the aspens turning gold amid the snowcapped Rockies, I traveled with Buck to the ancient Taos, N. Mex., fiesta, for fresh material. We feasted with the Taos Indians and observed their rituals, danced in this same place for perhaps a thousand years.

"The Indians' dances," Buck told me, "were mostly ceremonies in which they worshipped their gods: the sun and moon, wind and rain, thunder and lightning, birds and animals." Other dances celebrated such events as marriage, death, the harvest. Many of the southwest dances, like the Hopi Snake Dance, were prayers for rain.

One of the Koshares' most spectacular performances is the Sioux Ghost Dance. In the late 1880's a Paiute Indian named Wovoka claimed he was the "Messiah" with power to crush all white men and raise the buffalo out of the earth again. Wovoka fired the Plains Indians with a religious dance in which they wore "ghostshirts"—supposedly impervious to white man's bullets. The dancing craze spread like prairie fire and terrorized the whites, until U.S. troops finally put an end to it at Wounded Knee in western South Dakota in 1890. Buck and his boys tramped the Wounded Knee battlefield, listened to firsthand accounts from surviving Sioux. Later, seeing the

Koshares dance, a withered chieftain appealed to Buck: "Come, teach our young people, too."

It takes a lot of time and determination to become one of Buck's Indians. He holds his troop to about 150 members, carefully selecting only 25 or 30 new boys a year. A junior high younster comes in on trial as a Papoose, and immediately starts to assemble his Indian costume, which includes such items as owl claws, horsetails and eagle feathers. To bead his breechclout and vest may take him six months. The boy must also devote several hours a week to learning the basic toe-heel and stomp steps. A Papoose must also earn 15 merit badges, read five recommended books on Indians, maintain a 75-percent atendance at Scout meetings and at least a "C" average in school.

After World War II Buck plunged into building a Scout headquarters modeled after the underground kiva or sacred meeting place of ancient pueblo. The Koshares subscribed $10,000 from their earnings, the townspeople $10,000, and city fathers sat down with the scoutmaster to blueprint a modest affair. But one day astonished La Juntans discovered that the Scout leader was pouring foundations for a structure with recreation rooms, trading post, little theater, Indian art museum and a ceremonial kiva seating 500.

"He'll never finish it," snorted a local businessman.

But the enterprising Scout leader marshaled the community. Citizens volunteered labor. The school board donated leftover pumice block. Scouts helped tear down a surplus Army messhall for lumber. Old telephone poles were scrounged to fashion Buck's huge dome-shaped kiva ceiling. A leading Pueblo artist, Valleno Herrera, painted a series of Indian dance murals. Since the headquarters opened in 1949 it has had nearly 1 million visitors.

Today the Koshares are big business. Traveling mostly during summer vacation, they earn from $25,000 to $30,000 a year (about half goes for expenses, the rest to the troop). New York's Madison Square Garden offered $1,000 a day for a month's engagement, but Buck declined because it would interfere with the boys' schooling. The troop travels in its own 37-passenger, air-conditioned bus. A faithful team of dads—businessmen, electricians, plumbers, doctors—assists the scoutmaster. One father, a telephone repairman, gives up his vacation each year and has driven the bus more than 200,000 miles.

The road show sets a rugged pace: Koshares stage an evening performance, clean up, reload the equipment and bunk down in sleeping bags in armories, gymnasiums, or under the stars. After a few hours' sleep, they drive maybe 400 miles and the next night dance again. It is a grind, but the youngsters thrive on it. Every third or fourth day, the road show halts while the Scouts sleep in, go sight seeing or attend a ball game. On Sundays the group splits up for church.

Every year the Koshares travel from 15,000 to 20,000 miles. "One summer my kid saw New York, Washington, Yellowstone Park, and spent 5 days off San Diego on a Navy carrier," a La Junta electrician told me proudly. "I have a hard time getting out of Colorado." Buck's youngsters have viewed America's agricultural and industrial might; toured our national parks and shrines; visited famous art galleries; flown to Canada; lunched with Congress; been received at the White House.

But exciting and educational as all this is, these Boy Scouts reap perhaps even greater rewards from the training, discipline and romance of being a Koshare. It grips them early. At the kiva one day I saw an 11-year-old sidle up to the scoutmaster. "Buck, it isn't my birthday yet," he beamed, "but I've already started beading my breechclout."

Said Jon Kolomitz, now a University of Colorado prelaw student: "As a brave, I learned hard work and sportmanship; and as head chief, I learned public speaking and leadership. I owe everything to the Koshares."

Dr. William McDivitt, president of Otero Junior College and father of three sons, calls the Koshare training "education beyond price—something the schools can't offer."

In 27 years, Buck has touched the lives of some 800 youngsters and now is starting on the second generation. He has seen over 250 Boy Scouts attain eagle rank, which is probably a record no other troop can match.

Saluting the devoted scoutmaster on his 25th anniversary with the Koshares, a citation from Colorado College said: "Buck Burshears has uncovered a small universe in our region; and he has shown the possibilities in a boy caught up by a truly worthwhile idea."

The Farmer Needs a Good Press Agent

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ANDERSEN of Minnesota. Mr. Speaker, the following editorial by Mr. Don Olson, of the Marshall Messenger, Marshall, Minn., is so factual that I believe every Member of the House and others reading the CONGRESSIONAL RECORD can well study it carefully.

THE FARMER NEEDS A GOOD PRESS AGENT

Big city people generally have two impressions of the American farmer and American agriculture. First, they believe the farmer has been riding a gravy train at the expense of the taxpayer and, second, the farmer is responsible for keeping food prices high.

This is the image most city people have of the farmer and why not? They have been told this repeatedly ever since the first corn-hog program was instituted back in the depression of the thirties.

The facts, however, do not point to the farmer as the one who is guilty of keeping food prices high. In fact, compared with most other commodities, food prices aren't out of line.

The average American householder spent 23½ percent of his disposable (after taxes) income for food in 1939. In 1959 he spent only 20 percent for food, and if he had eaten the same kind and quantities of food he bought in 1939, he would have spent only 15 percent.

The Japanese spend about 42 percent of their disposable income for food. West Germans spend 45 percent and the Russians the whopping total of 56 percent.

According to Robert C. Liebenow, president of the Chicago Board of Trade, "The food bill of the United States would be a lot more than it is today if it were not for increased farm productivity. With 1940 technology the yearly food bill of the consumer probably would be $13 billion more than it is now. That would really cause screams about the cost of living."

Secondly, most city people look upon the farmer as a rather small minority group that is fading fast from the American scene. They complain that this small, unimportant segment of the American economy is being supported by city people and the Government.

The fact is that agriculture still is one of the main businesses of the United States. American farmers buy $16 billion worth of farm machinery, gas, oil, electricity, and other products each year. Farmers use more steel annually than the tonnage that goes into passenger cars. Farmers produce 51 percent of industry's raw materials.

This doesn't sound small, petty, unimportant, does it?

Farming itself employs about 7.5 million workers. That total is more than is employed in the steel industry, or the automobile industry, or the transportation industry, or public utilities, combined.

And the industries which buy, process, handle and service farm products hire around 10 million more.

Few people are aware of these things. Certainly the big city people are not. To correct all of the missunderstandings about American farmers and agriculture in general, the farmer needs a good press agent. Heaven only knows he has had mighty poor press in the eastern cities.

And right here in Marshall the farmer could use a better press agent to correct some of the mistaken impressions some people have.

Our chamber of commerce certainly ought to have an agriculture committee, not necessarily to serve as press agent, but rather to keep the membership informed on our area farmers and their problems. If agriculture is big business on the national level, it certainly is important here in Marshall.

New Industries for Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 22, 1961

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Bulletin of March 19, 1961, entitled "Self-Help Continues."

This is further evidence of the excellent work done by the citizens of Wilkes-Barre, in their efforts to obtain new industries. I certainly want to commend Wilkes-Barre and other communities for successful efforts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SELF-HELP CONTINUES

Once again, the "coal crackers" of the Wilkes-Barre area in Pennsylvania's anthracite region have shown that they are not going to sit still and wait for someone else to help them.

They are fighting to bring new industry into their region, to take the place of the dying coal industry, and spending their own money to do it. The Greater Wilkes-Barre Industrial Fund campaign has just gone over the top by $200,000 in a drive for $1,500,000.

This money is voluntary, pledged by labor and industry, and much of it will come from payroll deductions authorized by people fortunate enough to have a job in the area.

The fund will be used as the local share of money to build factory "shells" which can be leased to industry. Area bankers and the Pennsylvania Industrial Development Corp. will put up the remainder needed.

The public's share of the money came from an area with 12,000 jobless among the 185,000 residents. Two other drives in the past 12 years had already raised $2 million. Self-help of this kind is in the finest American tradition.

The Lummi Diking Project, State of Washington

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition:

To the Congress of the United States:

We, the undersigned Lummi Indians, being a large majority of Indian owners of lands within the Lummi Diking project in the Lummi Reservation in the State of Washington, and representing at least a partial ownership interest in substantially every Indian-owned tract therein, respectfully petition that your honorable body pass legislation which will permit the said project to be absorbed, and its purposes carried out, by a diking and drainage district to be organized and operated under the laws of the State of Washington. Such legislation should not otherwise reduce any of our Lummi treaty rights, nor otherwise subject our lands to State jurisdiction or taxation, and it should cancel past charges.

Such legislation should follow the lines of H.R. 11953, introduced in the 86th Congress and as passed by the House of Representatives. We approve that bill. If any changes are considered appropriate we authorize our Lummi chief, Norbert James, to speak for us, confident that he will express our wishes and represent our best interests.

We urge this legislation because for reasons rooted in mistakes of long past years, and the fault of no one person nor of anybody now connected with the project, and springing chiefly from the attempt to include white-owned neighboring lands in the project, its affairs are now so muddled and complicated that:

A. There has been gross unfairness against owners of certain classes of lands, particularly Indians, and under the present setup there is no prospect of remedy thereof. Only cancellation of claims can avoid further injustice.

B. Collection of assessments has been, and is now being, concentrated upon Indian owners of lands rented through the agency of the United States Bureau of Indian Affairs, and this is a great injustice to them.

C. A decision of the U.S. Court of Appeals in favor of the plaintiff white owner against the United States (*Hood v. United States* (256 Fed. 2d 522)), makes clear that no Government operation can reach all benefited land.

D. Operation under such a proposed district: (1) is the only way to bring in all benefited lands and to assure fair and equitable operation, (2) would permit drainage projects not possible now under a project limited to diking, thus greatly increasing the fertility and value of our lands, (3) would provide local "grassroot" control by elected officers assisted by county engineer and commissioners. All parties agree that thereby costs would be reduced, (4) would demonstrate the ability and willingness of whites and Indians to work together.

$85,800,000,000

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. DERWINSKI. Mr. Speaker, the Wall Street Journal, known for its nonpartisan and exact editorial policy, certainly lived up to its standards with the concise comment on the issue of Wednesday, March 22, directed to the cost of our foreign aid program. I feel the inclusion of this item in the RECORD would be of educational value to the Members of the Congress.

The editorial follows:

$85,800,000,000

Give or take a few hundred million dollars, the figure above is the total cost of U.S. foreign aid programs during the 15 years since World War II. To those of us accustomed to dealing with homely sums like $1.98, it's hard to imagine the amount of money represented by those 11 digits.

Yet this sum that surpasses comprehension, we're told, isn't nearly enough; foreign aid must go on and on, as an obligation passing from one generation to the next. If this be so, we wonder what the sum will be, with digits strung out like boxcars, 10, 20, and 30 years hence.

Maybe some future generations, boggling at the foreign aid figure, will simply decide to stop counting, for the numbers are likely to run out long before the alleged need does.

The Minimum Wage Law

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to revise and extend my remarks, I am making a statement and including certain extraneous matter for the information of Members of Congress as to the minimum wage law.

I am not opposed to a minimum wage law as such, but I am opposed to a minimum wage law which stands any likelihood of furthering unemployment in my district, in my State, and in my country.

If H.R. 3935, the committee bill, is to be the bill which is to be pressed for passage, then I would hope that an amendment to that legislation would be accepted to take care of the rural areas of this country. As numbers of us know, who have studied and are concerned that the plight of the little small merchant, who has clerks who do not make enough sales at the margin of profit now existing in rural retail stores, to justify the raise in wages, the impact of extending the coverage to those areas and to those establishments would be to cause some layoff of people and further unemployment, as well as extend the economic difficulty in those little communities. In the small rural communities of this country, when a person is laid off it means a loss of income to the community as a whole and any widespread unemployment in these areas will affect larger communities.

I recognize the fact that in the larger metropolitan statistical areas of this country, because of the fact that cost of living is higher in the cities, the sales are greater, the sales per clerk are larger per hour, and the stores are for the most part modern, they pay higher wages, but in the rural areas of this country this

is not true, and I, therefore, would propose an amendment to H.R. 3935, as reported March 13, 1961, as follows:

AMENDMENT

(1) On page 19, between lines 16 and 17, insert the following new paragraph:

(2) "Any employee employed in a retail or service establishment, situated outside of the boundaries of a standard metropolitan statistical area as now delineated and now defined by the Federal Committee on Standard Metropolitan Statistical Areas, under the direction of the U.S. Bureau of the Budget: or."

(Renumber successive paragraphs.)

For estimated coverage of employees I present the following tabulation:

EXHIBIT A

ESTIMATED COVERAGE—WAGE HOUR BILL USING STANDARD METROPOLITAN STATISTICAL AREAS, BUREAU OF THE CENSUS

	Number employees covered
Total retail employees, 1958	7,942,914
67.7 percent in standard metropolitan statistical area	5,377,363
Standard metropolitan statistical areas, with $100,000 per store exemption test	3,129,625
With $300,000 per store exemption test	2,317,643

(1) Statistical Abstract of United States, 1960, page 834.

(2) Percent based on latest available census reports.

(3) Statistical Abstract of United States, 1960, page 833.

Worker by store size based on 1954 census.

Nineteen hundred and fifty-eight figures not available.

If we are going to extend the coverage, this amendment would serve to recognize the conditions which actually exist in our communities today. I have also introduced, for the purpose of allowing the House to vote, and I hope favorably, on the pure constitutional question, a bill which I believe will extend the coverage to those actually engaged in commerce, without any extension of coverage or invasion of those fields not engaged in commerce.

This bill consists of an amendment to the Fair Labor Standards Act of 1938, as amended. The purpose of the amendment is to provide certain additional coverage for employees presently engaged in retail trade or service and of other employees engaged in commerce or in the purchase of goods for commerce, to increase the minimum wage under the act, and for other purposes.

You will note that the purpose and issue of this submission differs from the purpose and effect of H.R. 3935, as introduced by Mr. ROOSEVELT, and H.R. 5561, as introduced by Mr. KITCHIN, and H.R. 5537, as introduced by Mr. MARTIN of Nebraska.

In order more precisely to differentiate between the present submission and the former bills referred to, we note, briefly, that the Roosevelt bill, consists of "enterprise" tests under which all retailers are covered who come within the "enterprise" definition, and have sales of more than $1 million annually, regardless of the number of units or establishments making up the total enterprise; the Kitchin bill provides coverage only as the enterprise is engaged in business in two or more States and has five or more units, but otherwise accepting the enterprise criteria of the Roosevelt bill in all its vastness and complex impacts. The Martin bill is a simple amendment to the Fair Labor Standards Act to increase the minimum wage to $1.15 without affecting present coverage provisions or the exemptions therefrom. The Martin amendment has great appeal to many people.

Constitutional questions plague both H.R. 3935—Roosevelt bill—and H.R. 5561—Kitchin bill. Under both measures, however, some extension of coverage is sought, and, not withstanding certain blanket exemptions contained in both measures, measurable additional coverage is provided.

The enclosed submission differs from any of the foregoing in that it will accomplish the following:

(a) It will avoid the constitutional question inherent in the Roosevelt and Kitchin bills, that is, the regulation of local business activities, that are truly and legally intrastate. This avoidance is accomplished by retaining the present format of the Fair Labor Standards Act, which has been held constitutional by the Supreme Court of the United States.

(b) It will provide additional coverage. This is accomplished by amending out the retail exemption. By repeal of the retail exemption, employees of retail and service industries will be covered to the extent that such employees are engaged in trade, commerce, transportation, transmission, or communication, among the several States, or between any State and any place outside thereof. Employees who engage in activities which are not interstate in character will not be covered.

The present test of the Fair Labor Standards Act, as land down and recognized by the Supreme Court has been an "employee" test: that is, whether or not the services of the "employee" has been those of one directly engaged in interstate activities. By retaining this test, all employees of retail and service establishments who are engaged in such interstate activities and transactions will be covered and it is estimated that there will be an additional coverage of 1,800,000 persons.

Individuals whose activities are intrastate in character, such as those individuals engaged in local retailing activities which are performed after the interstate movement of merchandise has ceased; will not be covered. By way of example, warehousemen, communication forces, and buyers will so be covered; local salespersons are not covered.

Much litigation over the past 23 years has produced a clear and definitive picture of the relative distinctions of interstate against intrastate activities. There will be no period of uncertainty, there will be no multiplicity of litigation, and there can be no distortion by regulation. Distortion by regulation can be a nightmare under the enterprise doctrine by the Roosevelt bill and by the Kitchin bill.

The complexity of retail distribution is such that the economics of the industry differ by locality, by region, by character of stores, by productivity of employees, by inventory turnover within the various segments of the retail industry—see Dun & Bradstreet study attached exhibit B—and many other similar significant factors of difference and variety.

[1] The bracketed ratios are based on net sales.
[2] Does not include mechanics' wages.
[3] Not available.
[4] Does not include manufacturing labor.
[5] Ratios shown are for stores in the following volume groups: department stores with annual sales volume under $250,000; furniture stores between $250,000 and $500,000; women's wear stores under $250,000.
[6] Rent only.
[7] Salaries of owners and managers.
[8] Total expense plus net profit does not equal gross margin.
[9] Before owners' salaries were drawn.

EXPLANATION OF TERMS

Advertising: Net expenditure for newspaper, radio, and other forms of advertising, exclusive of wages.

Bad debts: Receivables considered during the year as uncollectible, or the reserve set up to cover such losses.

Cost of goods sold: Opening inventory, plus merchandise purchased (including inbound freight and cartage), less closing inventory; after deducting cash discounts received.

Employees' wages: Gross payroll of all employees, including amount withheld for Federal income taxes.

Gross margin: The difference between net sales and cost of goods sold; also known as "gross profit on sales." This is a composite figure, the net result of selling different kinds of goods at varying markups. Cash discounts received are included in gross margin.

Inventory turnover: Cost of goods sold divided by average inventory (average of opening and closing inventories).

Net operating profit: The difference between gross margin and total expense; before deduction for Federal and State income taxes but after allowance for owners' salaries.

Net sales: Gross sales less returns and allowances and less sales and excise taxes collected, net after all discounts allowed.

Occupancy cost: The cost of occupying a store, whether rented or owned. For renters, this item includes rent, utilities, and leasehold improvements; for owners, it includes utilities, property insurance and property taxes, interest on mortgage and building depreciation.

Owners' compensation: Salaries or drawings of proprietors, partners, or officers.

Total expense: The sum of all individual expense items. It does not include income taxes and in most cases does not include nonoperating charges.

Year: This represents the period upon which the ratio figures are based. It is not the year the figures were published.

Conversion table

[In percent]

Gross margin	Markup	Gross margin	Markup
5.0	5.3	28.0	38.9
7.5	8.1	30.0	42.9
10.0	11.1	31.0	45.0
12.0	13.7	32.0	47.1
13.0	15.0	33.0	49.3
14.0	16.3	34.0	51.6
15.0	17.7	35.0	53.9
16.0	19.1	37.0	58.8
17.0	20.5	39.0	64.0
18.0	22.0	40.0	66.7
19.0	23.5	42.0	72.5
20.0	25.0	45.0	81.9
22.0	28.2	47.0	88.8
25.0	33.3	50.0	100.0

To obtain a gross margin shown in this table, multiply cost of goods by the markup percent opposite and add the result to cost of goods. This will give the selling price needed to obtain the desired gross margin.

By eliminating the problem of regulation of these intrastate activities, these economic complexities are avoided. Further, discrimination is firmly avoided, but, more importantly, the Commerce clause is neither ignored nor distorted, and is not made a basis of dangerous federalism in local affairs best handled at the State level.

Another objection to H.R. 3935, the Roosevelt bill, is the fact that it gives insufficient recognition to small and locally owned group operations in the retail field and in the farm cooperative field—such as FCX Farm Supply Stores—each of which establishment is a separate corporation in most cases. Many of these separate establishments are organized in separate corporations or other distinct legal forms and the local residents and management or the

employees or, in the case of cooperatives the patrons thereof, are also owners of the business.

There is a vast distinction between this type of locally owned, locally formed, "homegrown" mercantile operation and large integrated mercantile groups whose stock is publicly floated and issued in the large stock exchanges of the country.

I do not wish to discriminate in any way against any group in the mercantile industry, but I do feel that these separately organized, locally owned "homegrown" mercantile organizations deserve consideration.

I offer the following amendment to accomplish my expressed purposes on this matter:

AMENDMENT

On page 42, between lines 21 and 22, insert the following paragraph:

(3) "Any employee employed by any retail or service establishment, which is separately organized in corporate or other legal form, in which local residents of the State in which such establishment is located or local management personnel or employees (including district or group supervisory employees having supervision of not over 15 establishments) or their immediate families own at least 20 percent of the net worth of the establishment."

I hope the House will seriously consider my bill and amendments and what we have said here.

Promoting a Recession

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. HIESTAND. Mr. Speaker, I wish to insert in the Appendix of the RECORD, a concise statement, full of wisdom, on the state of the U.S. economy.

It appeared in the magazine Furniture Field, and was relayed to me by one of my constituents:

HOW TO START A RECESSION

Take a booming economy, such as the Nation had in the beginning of 1960. Start issuing reports and studies, liberally sprinkled with quotations from usually reliable sources, on what's wrong with the economy. Make the economy an everyday issue. As the months progress, single out various areas of chronic unemployment and issue daily communiques on how bad things are in these areas. Keep up a steady stream of newspaper stories, radio and TV reports, and magazine articles on emergency measures for stricken areas including food trucks, clothing drives, city, county, State, and Federal aid. In no time at all, you'll have a beautiful, blooming recession.

The above paragraph could have been copied from a party line pamphlet sent by the Kremlin to the Communist Party of the United States, but it wasn't. It just so happens that, in this case, either intentionally or by coincidence, we are being bombarded with the kind of propaganda that acts to deepen a recession and weaken our national security. It's time to stop it.

Our gross national product is within a percentage point or two of its highest level in the history of our country. More than 60 million people are employed and taking home more money than ever before. Personal savings in banks and savings and loan associations are at their highest level. Billions are being spent in new industrial plants, machine tools, and public works including the greatest overall highway building program in our history. Why aren't we being brainwashed with this kind of positive information? Ask any furniture retailer who was operating a store in the thirties. If he can clear his mind long enough from the present overwhelming propaganda, he'll tell you that we are in a positive boom compared to those days.

The Court and the Committee

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ROOSEVELT. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Commonweal of March 17, 1961:

THE COURT AND THE COMMITTEE

In its close decisions on the Wilkinson and Braden cases the Supreme Court has illustrated once again the perennial tension and conflict between individual rights and national security, between the limitations imposed by authority and the demands of liberty. And in these decisions it has to a considerable extent, unfortunately, invalidated the Watkins ruling of 1957 and strengthened the Barenblatt decision of 1959.

In these latest decisions the Court voted 5 ot 4 to uphold in broad terms the investigating power of the House Committee on Un-American Activities. The committee may, as it did in the cases of Wilkinson and Braden, demand of people who have criticized the committee whether they are members of the Communist Party without showing that such information is germane to legislative purposes.

If the vote of 5 to 4 shows how narrow the decision was, a comparison of majority and dissenting opinions show how far the Justices are from agreement on the crucial issues involved. The majority opinion stated in the Wilkinson case that the Justices were unable to say "on this record that the subcommittee was not pursuing a valid legislative purpose" and that they were not persuaded by the contention that public censure was the committee's intent. The majority stated further that a man was not immunized from inquiry merely because he had criticized the committee if there was reason to think he had Communist affiliations.

In one dissent Justice Black (with the concurrence of Chief Justice Warren and Justice Douglas) wrote: "I think it clear that this case involves nothing more nor less than an attempt of the Un-American Activities Committee to use the contempt power of the House of Representatives as a weapon against those who criticize it." Without proper limitations to safeguard the individual "the conclusion is inescapable that the only real limitation upon the committee's power to harass its opponents is the committee's own self-restraint."

Though not in agreement with every reservation of the dissenting justices, we place ourselves firmly on their side. It is not simply that we believe the great forces of modern history weigh heavily against the freedoms of the individual and that we must be forever alert to guard and preserve them. Nor is it that we question the right, indeed the obligation, of the State—as it channels its authority through the House of Representatives to the Un-American Activities Committee—to work for the common good by preserving national security.

The questions at issue are not to be settled by the clash of abstract principles, nor is the solution predetermined by simple allegiance to liberal or conservative attitudes that have all but lost their meaning in the terrible fluidity of modern history.

In the decisions at issue, for example, as both the majority and disenting opinions make clear, some judgment of the House committee becomes almost inevitable. Justice Black's opinion was made explicit when he spoke of the committee's "own self-restraint, a characteristic which probably has not been predominant in the committee's work over the last few years."

It is the history of this committee—a history of little good, much confusion and harmful acrimony—that emphasizes the need for clearly defined restraints. As the situation now stands in the light of these most recent Court decisions, the committee is free to harass any of its critics if it states as a reason for inquiry a purpose that is even remotely plausible. Such trust should not be demanded of the citizen and, indeed, the committee under Representative WALTER has not shown that such trust is merited.

H.R. 2797 a Bill To Establish Procedure for Determination of Economic Justification of Certain Inland Waterway Improvement Projects

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. VAN ZANDT. Mr. Speaker, on January 16, 1961, I introduced H.R. 2797, which if enacted into law will make possible Interstate Commerce Commission participation in economic surveys of proposed waterway navigation projects.

The Federal Government each year expends vast sums of money for the construction and improvement of navigation facilities of the inland waterways of the United States. Congress regularly enacts legislation authorizing the future expenditure of additional amounts for such purposes. There is a fundamental weakness in the procedure by which these projects are approved and Federal funds authorized and appropriated therefor. It is that the agency of the Federal Government charged with the responsibility of regulating surface transportation in interstate commerce—the Interstate Commerce Commission—is not consulted concerning the economic value of the proposed waterway project as a transportation instrumentality. Nor is there any requirement that surveys, studies, and reports with respect to proposed waterway projects give consideration or weight to the national transportation policy declared by Congress in the

Transportation Act of 1940. The procedure followed has led to the authorization and construction of navigation projects that are not economically sound additions to our national transportation system.

Before a particular waterway improvement for navigation purposes is undertaken, a survey is normally authorized by Congress and is then made by the Corps of Engineers, U.S. Army through the division engineer and submitted to the Board of Engineers for Rivers and Harbors for review and recommendation. In making such surveys and reaching conclusions as to whether a particular project should or should not be undertaken, the Board is required by statute to consider the amount and character of commerce which will be benefitted by the improvements, the relationship of the cost of the improvement, both construction and maintenance, to the commercial interests involved, and the necessity for the work, together with the propriety of its being undertaken, continued, or maintained at the expense of the United States. The statutory requirements provide only a very general standard to guide the engineers in reaching their conclusion.

In actual practice to arrive at their recommendations, the Engineers first perform their appropriate function as engineers in estimating the total cost to build the project. From this they calculate annual costs, against which they balance "benefits," consisting almost wholly of assumed "savings" in transportation costs as compared with charges over existing means and routes of transportation. These so-called "savings" are, of course, not true economic savings but result principally from shifting true transportation costs from shippers to taxpayers through providing the waterway at public expense. The Engineers have no responsibility with respect to the welfare of the national transportation system and in recommending inland waterway improvements give little, if any, weight to the effect on other existing forms of transport. They have the sole responsibility for surveying, studying and reporting to Congress upon the economic feasibility of constructing or improving an inland waterway navigation facility.

On the other hand, to obtain a certificate to operate as a common carrier by water application must be made to the Interstate Commerce Commission and a certificate is issued only after an ICC finding that the proposed service is or will be required by the present or future public convenience and necessity. To obtain a permit to operate as a contract carrier by water application must be made to the ICC and a permit is issued only after an ICC finding that the proposed operation will be consistent with the public interest and the national transportation policy declared in the Interstate Commerce Act. These requirements, essential as they are to the development and coordination of a sound national transportation system, are largely ineffective where they come into play only after huge expenditures have already been made to construct or improve a waterway transportation facility which is unnecessary or undesirable in light of public convenience and necessity, the public interest and the national transportation policy. Once such a navigation project has been constructed, no matter how uneconomic it may be, it would be anomalous for the ICC to deny applications to operate over it. Clearly, if the Commission is to have control over the issuance of certificates and permits it should be the agency delegated by Congress to make recommendations with respect to the wisdom of the Government constructing additional waterways, the provision of which has so much bearing on the effective exercise of authority over certificates and permits.

The ICC, as the agency directly charged with responsibility for the effectuation of a sound national transportation policy and the maintenance of a sound national transportation system, should have a direct and vital role in determining the economic suitability of proposed inland waterway navigation projects.

H.R. 2797 would require that the ICC consider and report to the Corps of Engineers with respect to public convenience and necessity requirements of all proposed inland waterway construction or improvement projects favorably recommended by the Engineers and not yet commenced or less than 25 percent complete. It sets forth eight specific economic factors to be considered by the ICC in determining the economic justification of such proposals. It would require the Engineers to submit its surveys and reports containing recommendations favoring inland waterway projects to the ICC for its investigation and report. The bill would require the Board of Engineers for Rivers and Harbors and the Chief of Engineers in reaching their determination of the recommendation to be made to Congress concerning the desirability in the public interest of any inland waterway improvement to give due consideration to the ICC report. Moreover, it would provide for Congress to have for its consideration the independent report of the ICC for all inland waterway projects favorably recommended to it by the Engineers as well as for previously authorized projects not commenced or less than 25 percent complete.

The interjection of the Interstate Commerce Commission into the existing procedure by which inland waterway projects are recommended would not alter in any respect the requirement upon the Corps of Engineers to furnish an engineering, cost, and related study upon which the Congress may rely in determining the feasibility of a proposed project. It would simply provide additional data for the guidance of Congress in the form of the ICC report that is required to accompany the engineers' report. Such additional data is vital to the preservation and development of a sound national transportation system.

Who Pays the Bill?

EXTENSION OF REMARKS
OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. DAGUE. Mr. Speaker, it must already be apparent to anyone who has listened attentively to President Kennedy that he talks with two voices—some people call it double talk. With the voice of calm reassurance he undertakes to quiet the fears of the average businessman and leads him to believe that his primary concern is with the financial stability of the Nation. And then with a strident—although sometimes cajoling—voice he asks Congress to authorize a program designed to spend additional billions that are nowhere in sight from existing revenue sources.

The time is here when the President must be reminded that he cannot have it both ways. If business is to prosper and expand, if our economy is to remain strong, we simply must abandon the fallacious idea that all of these vast welfare ventures can be financed with borrowed money. And as usual the do-gooder refuses to reckon the cost of his philanthropy and he apparently does not give a tinker's hoot if in the process of bringing the better life to the backward and the benighted we wind up bankrupt.

To repeat, Mr. Kennedy cannot have it both ways. Either he is going to accompany each new spending plan with the outline of where we are going to get the money or he must stop trying to quiet apprehensive businessmen with reassuring platitudes relative to a stable currency and economy.

The Lancaster (Pa.) New Era has put this proposition in much better focus than I can and I am pleased to commend the following editorial to your attention:

WHO PAYS THE BILL?

In recent weeks President Kennedy has sent a number of messages to Congress recommending new programs, some of which he labels crucial and needing instant attention.

In many cases the programs themselves, or at least their goals sound wonderful. Their aims are to further peace in the world, bolster our economy and plug up some of the weak points. Few could argue against these goals.

All of the programs involve the spending of more money. No one really knows how much in total, although in some cases, like the $600 million aid to Latin America, the President spelled out the estimated cost.

If the President's programs add up to $10 to $15 billion more than present Federal expenditures, as many are predicting, the big question is where will the money come from?

Our budget already is squeezed and the administration is forecasting a deficit due to the business slowdown. Therefore, funds must come from new sources and there are only two of those we can think of at the moment—higher taxes or bigger debt.

An increase in taxes at this time will hardly stimulate business; and more debt would simply mean more inflation and a weaker dollar.

So what do we do, throw out the whole program? Obviously that isn't the answer. It is up to Congress now to cull and weed and trim. Congress must decide which programs must be done immediately, which may not be needed at all, and which would be better for the Nation if they were modified.

Each of us would probably like a bigger house, a better car, a boat, etc. All of these things sound wonderful, just like the President's proposals. But, do we really need them and can we afford them? That is a fair yardstick for Congress to use.

Congress Overplays Hunt for Un-American Activities

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Providence, R.I., Evening Bulletin:

CONGRESS OVERPLAYS HUNT FOR UN-AMERICAN ACTIVITIES

The House Un-American Activities Committee easily is the most controversial congressional committee in modern times. College professors, including 87 of them at Brown, have signed petitions to abolish it; ministers from the pulpit condemn its inquiries as a technique in thought control; college students picket the White House in protest against its aims.

The committee has its defenders. On the day students in the ranks of the National Committee To Abolish the Un-American Activities Committee picketed the White House, three other groups marched in Lafayette Park across from them in support of the committee. These other groups represented the Anti-Communist International, George Lincoln Rockwell's American Nazi Party, and a third organization called Fighting American Nationalists.

Here is evidence, then, that the Un-American Activities Committee continues to polarize Americans, one camp working to do away with it and the other just as vociferously defending it.

Controversy by itself is not harmful. It can be a distinct public good. It depends on what all the shouting is about. In our opinion, the Un-American Activities Committee is provoking a lot of unnecessary shouting and, therefore, has run out of a useful purpose for existing.

If the committee were the only major Government agency competent to sift evidence of Communist infiltration and to offer suggestions for legislation to combat it, the committee would deserve an extended lease on life. These were the purposes of the committee before it was organized as a standing, or permanent, committee, and it was productive. But since taking on permanent status in 1946, the committee also has assumed increasingly the role of guardian of public thought, and has called before it in inquisitorial manner men who were no closer to communism than Thomas Jefferson, and smeared them for their ideas. This, perhaps, is the reason former President Truman has characterized the committee as "the most un-American thing in the country today."

This is not to say that Communist infiltration is not a threat in the United States. We may be sure that it is. But the Un-American Activities Committee is no more competent to search it out and correct the cause by legislation than a victim can cure a common cold by swatting the virus with a flyswatter. The FBI and other antisubversive agencies are far better equipped to find subversion where it exists, and if legislation is needed to stop it, they always can get the ear of Congress.

Continuation of the Un-American Activities Committee as a standing committee is, in our opinion, unwarranted as long as there are better and less controversial ways of discovering the hows, whys, and wheres of Communist infiltration as a present or future danger.

An Unnecessary Issue

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. George Sokolsky appeared in the Washington Post of March 21.

I believe Mr. Sokolsky's point is very well taken, namely, that this is not a constitutional matter. I can find nothing in the Constitution in any way relating to a public school system, and that is hardly remarkable because when the Constitution was written there was no such system and any schools that existed were mostly in the hands of, and taught by, the clergy of the various denominations.

The Constitution states very clearly only one thing in regard to religion and that appears in article I of the Bill of Rights:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.

How the church schools of this country can be said to be in contravention of this article of the Bill of Rights is certainly utter absurdity. These schools certainly do not establish any religion as a State religion, as they represent and are supported by every sect in our country, of which there are literally hundreds.

Mr. Speaker, an awful lot can be tied to the Constitution, but this is carrying such reasoning beyond the realm of logic:

AN UNNECESSARY ISSUE
(By George E. Sokolsky)

The quarrel between President Kennedy and the Roman Catholic Church is unnecessary and pointless.

The idea of having two bills, one covering aid to schools generally and the other making a special provision for private and church-related schools, is a political gimmick which is designed to avoid an unfavorable Supreme Court decision on the major bill, should it be passed by Congress. The tendency of the Supreme Court to legislate has an ulterior effect upon both the executive and legislative branches of the Government.

The argument over separation of church and state is unrelated to the Constitution, which has not one word to say on the subject. The assumption that financial aid to parochial schools establishes a church is obviously fallacious, for no established church governs our Armed Forces which has the largest and most effective chaplain service; also every meeting of Congress is opened by a clergyman who, if he desires, wears the uniform of his church on the occasion.

The Constitution is opposed to an established church; that is a government-owned church, like the Anglican Church, whose titular head is the Queen of England. Opposition to establishment did not mean and could not mean opposition to religion per se or to the right of parents to send their children to denominational rather than to secular schools.

True, taxes are used for public schools, the parents who send their children to denominational or other private schools paying double for the education of their children.

There are many kinds of denominational-connected schools in this country—Roman Catholic, Episcopalian, Lutheran, Jewish, Hasidic, Nation of Islam, etc. The largest are the Roman Catholic schools, which in a city like New York include about one-third of the school population, according to Charles Silver, president of the Board of Education.

In the discussion of Federal aid to education, the term aid is false. The money comes out of taxes which all citizens pay. In fact, the citizens pay more than they receive back because there is a diversion of funds between collection and expenditure that almost amounts to a brokerage fee by the Federal Government. If enough tax money were left for local communities, they would have sufficient funds to take care of their own schools and would use those funds in accordance with local public opinion.

Furthermore, three formulas are possible for the distribution of aid. One is that aid go to State governments to be expended according to their judgment without Federal supervision; another is the expansion of Federal supervision until all forms of local control over education disappear and a vast Federal system of education takes its place. A third possibility is the current mixed system in which local direction of schools is ostensible, but many controls are set up, such as State boards of regents, State universities, college entrance boards, supervision through State aid to schools, supervision through Federal aid to schools—until their individuality disappears and every school, up to college grades, becomes identic.

There are proponents and defenders of each of these systems which grow in authority from year to year, so that local control of education weakens.

The church-related school is old in American history. In fact, at the beginning all schools were church related and the teachers were clergymen.

Stop Talking America Into a Depression

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I included the following letter from Mr. James M. Ward, manager of the Shenandoah, Iowa, Chamber of Commerce:

CHAMBER OF COMMERCE,
Shenandoah, Iowa, February 16, 1961.

Hon. BEN F. JENSEN,
House Office Building,
Washington, D.C.

DEAR MR. JENSEN: Local businessmen are beginning to view with alarm the continuing statements by President Kennedy on the lack of confidence by the administration in the Nation's economy. Continued talk of unemployment and depression will no nothing but hurt our chance of pulling out of the current recession.

One of our local industries cites the following example: In January of this year their sales were 41 percent ahead of a year ago. By February 1, sales had dropped to 10 percent behind, and by February 14, to 23 percent behind year to date figures. This firm serves 48 States on a wholesale basis. Top company management attributes the fall off in their orders to a hesitancy on the part of consumers to buy, and it is their belief that "gloom and doom" statements by the administration are a major cause of this customer hesitancy.

On behalf of the Shenandoah business community, I urge action on the national level in reversing this trend of negative thinking. Let's not allow our country to be talked into a depression. Positive action on both the local and national level, playing up the bright spots in our economy and expressing confidence in the future will do much to restore the faith of the public in our country's future.

Yours very truly.

JAMES M. WARD,
Manager,
Shenandoah Chamber of Commerce.

Salute to the Legion

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. FENTON. Mr. Speaker, the American Legion recently celebrated the 42d anniversary of its founding, and we are proud of an organization whose patriotic principles are a guiding light in the darkest hours. Their sacrifices and services are an inspiration to all who would fight, and if need be, die for the principles of democracy.

The 13th District of the American Legion in Pennsylvania, of which I am a member, is ever active in the welfare of a free society, and is an outstanding credit to the Nation and the communities it serves.

The Pottsville Republican, an outstanding newspaper in my district and State, gave considerable recognition to our 13th District Legion when it published in its editorial columns an article penned by Veteran Walter Kraus, of Cumbola, the current adjutant of this active 13th Legion District.

My colleagues, I am pleased at the request of my World War I buddies to present this editorial from the March 17 issue of the Pottsville Republican as follows:

SALUTE TO THE LEGION

The American Legion is celebrating the 42d anniversary of its birth March 15 to 17. It was born at the historic caucus of delegates from the first American Expeditionary Force in Paris, France, in 1919. The organization was completed at the St. Louis, Mo., caucus, May 8, to 10, 1919.

It has come a long way since its cradle days.

Today the American Legion is a three-war organization. It draws its membership from the eligible veterans of World Wars I and II and of the Korean conflict. It counts its ranks by the millions. It has 17,000 community posts, most of which own their homes. Its resources, prestige, influence and power for good are truly king-sized. Its good name and public good will are solidly entrenced in grassroots appreciation of its civic virtues and unselfish services to communities, States and the Nation.

From its beginning the American Legion has been dedicated to the promotion of the best interests of America and of the defenders of America. It believes these two go together—that you cannot foster patriotic services without also fostering a high appreciation of them. In this postulate, history supports the American Legion. The downfall of every great empire was first preceded by a discount of public service.

The American Legion continues to be the most outspoken patriotic force in our Nation. It has never compromised its dynamic conviction of Americanism. It never leaves any doubt as to where it stands on matters that affect the welfare of America and preservation of our free institutions.

It always speaks out in crisp and salty language for what it considers best for America.

So a 42-gun salute to the American Legion on its 1961 anniversary as the host of all the citizen armies of our time, manned by businessmen and laborers, professors and farmers, Protestants, Catholics and Jews, colored and white, men and women, American patriots—charter members, champions of democracy and soldiers of peace—who have put aside their uniforms but have never laid down their arms.

Indian Housing

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BERRY. Mr. Speaker, today one of the great American tragedies is the plight of the American Indians, who as the first Americans were sole landlords of vast and untracked lands for about 20,000 years before descending to North America by way of the Bering Strait and the Aleutian Islands about 9,000 years ago.

Ben Franklin said of the Indians:

Savages we call them because their manners differ from ours, which we think the perfection of civility. They think the same of theirs.

Failure to recognize and act on the very serious and specialized problems of the Indians living in 24 States containing Federal Reservations, and those in Alaska, is not only a disservice to our Nation but perpetuates an injustice upon people from whom we borrowed certain lofty ideas of democracy for our own Constitution.

The progress of time has not been kind to the first Americans but has ravaged them culturally, economically, and socially. While much can be said of the successful efforts of some tribes to sustain their culture the effects of prejudice and assimilation are evident. The American Indian, once the epitome of many men in one man—dynamic, powerful, fearless, and proud as he roamed the plains, the mountains and valleys, is less proud and less fearless as he ekes out an existence. The Indians, through the years, have developed a certain resignation that their status quo will continue. Understandably, many are Americans—with reservati ns.

Millions of non-Indian Americans enjoy and take for granted the highest living standards anywhere in the world. By contrast, the vast majority of the more than 380,000 American Indians exist under standards and conditions which are a generation and a half behind the rest of their countrymen.

Only an integrated attack on existing conditions combined with a united cooperative effort on the part of the Congress, the Federal Government, industry, organizations, and Indian leaders to improve the economic and social climate will avoid further degradation and decadence of the American Indians, who in spite of conditions are increasing, not vanishing. Indian children born today soon learn to expect little from the future. Many are without education because of inadequate school facilities. There is nothing ahead but more deaths in the first year of life; more disease from tuberculosis, heart, and infections; more outside toilets designated by health authorities as unsanitary; more unsanitary and contaminated water supply; and more brush wickiups (constructed of saplings or yucca fronds), brush shelters, hogans, tepees, wigwams, tar paper shacks consisting of one or two rooms with dirt floors, which more often than not are occupied by large families. Few are electrified, heated, or have adequate facilities for disposal of garbage and refuse.

These are but a few of the hard and sober facts as to what a large percentage of the Indians have experienced throughout their lifetime and what Indian youth faces today unless action is taken. We know what such conditions have brought in other nations.

Let's leave the disquieting effects induced by depicting the truth of the bleak and seemingly hopeless situation of the Indians and let's review a step taken recently which has created a new climate for seeking feasible solutions to the housing problem of Indians.

Both my colleague, BEN REIFEL, and I appreciated the opportunity to make a few remarks at the first American Indian Housing Conference held January 23 and 24 at the National Housing Center in Washington. The sponsor of the conference was Arrow, Inc., a nonprofit Indian organization. Sixty or more American Indians representing 25 different tribes attended. Arrow invited Government agencies, Members of the House and Senate, representatives from Senate and House Interior and Insular Affairs Committees, other organizations, private industry, tribal attorneys and inter-

ested individuals, directly or indirectly, concerned with Indian affairs to participate. The purpose of the conference was two-fold. First, Indian tribal leaders were given the opportunity to identify their general housing problems and to enumerate at length the difficulties Indians encounter in meeting the credit eligibility requirements necessary to purchase homes with mortgages insured by the Federal Government. Secondly, the representatives of the various Government agencies, particularly FHA and PHA, explained the laws and regulations governing their existing programs and services, which can be and have been utilized to assist Indians in upgrading their living standards. In addition, participants discussed areas which may require remedial, amendatory or new legislation. Efforts were made by legal counsels of the Housing agencies to determine which agency should appropriately have the major role in assisting Indians to improve their housing.

The Indian reservation lands, comprising many, many millions of acres present complex problems which must be resolved before a workable solution in Indian housing can be initiated. The complexities surrounding Indian lands are compounded by the fact that some of the land is restricted from being sold, mortgaged or leased because it is owned by the tribe and as tribal land is held in common by tribal members. Other land is allotted land, owned by individual Indians, but before it can be sold, the consent of the Secretary of the Interior must be obtained since it is trust land.

I commend Arrow, and all the participating agencies, individuals and organizations, and the Indians for their candor in discussing difficult and somewhat sensitive problems and for contributing a reservoir of important information. The success or failure of any such meeting depends largely upon the prevailing atmosphere in which the meeting is conducted.

Particularly, however, I want to express a special thank you to the Federal Housing Administration who was asked by Arrow to take the lead in the conference work. FHA officials gave generously and willingly of their time and knowledge about the agency's existing programs and services which have already been successfully used in Arizona and which can be used by individual Indians and groups of Indians in other areas in the transition to better housing.

The conference succeeded in getting across to the Indian representation that on the part of the Federal Government housing agencies there is genuine concern and desire to help all Indians to have decent, safe, and sanitary housing. The housing officials urged the Indian leaders to return to their tribes and decide on the kind of housing best suited to their needs. They should engage competent land planners and architects to carefully plan and develop a housing program with the aid of FHA consulting and advisory services.

A new spirit was born at this first American housing conference. It is a spirit which has rekindled hope in the minds and hearts of the Indians for a brighter future for their children and it has stirred the imagination of the Federal housing agencies to continue to explore every way in which Indians may share the productivity of our Nation both economically and socially as well as safeguarding their rights to benefit from the marvelous development we envision for the future.

The conferees adopted the following resolution at the conclusion of the conference which I anticipate will be properly presented to the new FHA Commissioner:

Whereas the first conference on Indian housing sponsored by Arrow, Inc., has focused attention of various agencies, groups, and individuals on the serious problem of Indian housing: Be it

Resolved, That—

A. A Coordinating Committee on Indian Housing be formed by the Commissioner of the Federal Housing Administration including but not limited to Department of the Interior; Department of Health, Education, and Welfare; Department of Agriculture; Federal Housing Administration; Public Housing Administration; Veterans' Administration; Indian representation; tribal attorney representation; industry representation whose function it will be to (1) examine existing public housing programs to determine their application to Indian need; (2) recommend such administration changes as may be necessary, and possible in rules, regulations, and procedures so that housing programs may be made available for Indian people; (3) recommend such amendatory or supplemental legislation as may be necessary to make housing programs available to Indian people; (4) stimulate activity in all organizations they represent to provide at all times under existing authority full opportunity for Indians to participate in housing programs; (5) take such other action possible to accomplish the objective of adequate housing for Indians.

B. Regional and other sectional meetings on Indian housing be promoted by Indian groups and tribes to reach better understanding of needs and desires of Indian people for housing. Reports on these meetings to be forwarded to the above coordinating committee.

C. Appreciation be extended to Arrow, National Congress of American Indians, Bureau of Indian Affairs, and the Federal Housing Administration as well as other agencies, groups and individuals for their interest in housing problems of Indian people.

Unemployment and Foreign Trade

EXTENSION OF REMARKS

OF

HON. HORACE R. KORNEGAY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. KORNEGAY. Mr. Speaker, in the light of the current and intense interest in the effect of the import of foreign textiles and textile products on our domestic industry, under leave to extend my remarks in the RECORD, I include the contents of a brochure recently issued by Mr. Spencer Love, chairman and president of Burlington Industries, Inc., entitled "Unemployment and Foreign Trade." I believe the Members of the House will be interested in Mr. Love's timely discussion of this problem:

UNEMPLOYMENT AND FOREIGN TRADE

(By Spencer Love)

We in the textile industry believe that American trade policy is outmoded, unrealistic and based on erroneous concepts of today's world conditions.

The import, trade, and foreign investment polices as encouraged and practiced over the last decade will in our opinion continue to expand our home roster of unemployed. President Kennedy has shown great concern over depressed areas and the need for helping them. If he cannot, however, correct some basic trade concepts he will find new trouble areas springing up about as fast as he can remedy those already existing. Many such areas are as a result of the shrinking of the textile and allied industries which alone directly employ over 2 million people.

The concept that more and more trade of any sort is good per se, and tends toward world peace and growth is a basically erroneous one. Imports or expansions of manufactured goods coming into one country from another which tend to undercut existing domestic industries already operating at less than capacity can be strong irritants to good relationships, and can create serious repercussions and antagonisms.

Except for some few notable exceptions we appear to be the only so-called free and thoroughly industrialized Nation where there is substantial unemployment which is tolerating increasing imports of manufactured articles. At the same time billions of our capital are going abroad into countries where such expansion of capital is not particularly needed, mainly because there appears to be a better investment return abroad. In many instances—and mark this—many manufacturers who are investing abroad have their eye on utimately bringing these more cheaply manufactured items back into the United States. There are many who will approve a drive for increasing exports of manufactured goods as a worthy endeavor. At the same time they know and say privately that it is foolish to think that we can importantly increase our exports of manufactured goods against growing and intensified worldwide competition from cheap labor countries. Many of those who give lip service to the export drive are quietly placing large sums of their new investment money into plants overseas.

Current trade policy evolved when our only major competition in manufactured goods was from the old Western European industries who were way behind us in mass production methods. Now we find ourselves faced with a rapidly advancing technology in the Western European countries and even more rapid advances in the cheap labor oriental countries—also Spain, Portugal, and the Middle East—not to mention what we will soon be facing from behind the Iron Curtain. Attempts to make adjustments to these rapidly changing conditions via the tariff route are bound to be abortive, because tariffs high enough to give reasonable protection against the exploitation of oriental and coolie labor would be prohibitive to the traditional amounts of specialties from our European neighbors and friends. GATT is admittedly out of date and no longer able to cope with present situations, such as the regional trading blocs.

In the textile industry our competition comes from all over the world. The Western European countries have wage scales something under half of ours. In addition they can buy most of their raw materials considerably cheaper than we can. They can even secure our own cotton at about 25 percent off our supported price and send it back to us in manufactured goods. Such countries as Hong Kong, Japan, Poland, Czechoslovakia, and many others with efficient plants have wage scales far lower than

Europe and constitute a threat to Western Europeans as well as to us. In these operations low wages, low raw material costs, low overhead, low taxes and the absence of protective laws for labor can be exploited to the fullest. Even with all our productivity and versatility only a fool would claim we can compete with such conditions under our wage scales and other rules. Make no mistake—these people have modern plants—they are efficient and resourceful.

In all the countries I have named, technological progress over decades has been leapfrogged and in the Orient wages are 10 to 20 percent of our legal minimum. Many of these countries tend to concentrate their expansion in a few products such as textiles. Our present policy encourages overexpansion, often gives them our machines and know-how and will ultimately permit them to wreck the established markets of the highly advanced Western World.

Lest you feel I am making a specific attack on the Japanese may I say that the Japanese were smart enough to understand these dangers and their inevitable consequences to international good will and negotiated reasonable textile quotas about 4 years ago through our Government. The Japanese should be commended for so doing. The Japanese, however, now feel frustrated and irritated over this because, while they have been living with reasonable limits, other areas have stepped into the breach and expanded enormously their exports to the United States.

Over the last year or two the largest expansions in imported textiles have come from or through the Hong Kong area. I hardly need point out that there can be no excuse along lines of international peace or good will, or other moral justification, for bringing enormous prosperity to the limited few who are exploiting the Hong Kong situation. It doesn't take much imagination to understand why the Japanese are quite restive and threatening to reverse their present policy of self-restraint.

The importance of early action cannot be minimized. Imports have more than doubled over the last couple of years and at the present rate of increase we will have no industry left worth mentioning in 5 or 6 years. New capital is sedulously avoiding our industry, as witnessed by the price of our securities. Yet once these countries have gained specific footholds in our markets, limitations cutting back such positions could be a source of serious friction, when by contrast there could be very little complaint against setting up reasonable quotas or limitations before dangerous levels are too well established.

The times call for bold action which disregards many past concepts. It is estimated that about 13 million will be added to our work forces during the next 10 years. When we add to this projection the 5.5 million workers unemployed now, plus the millions more on short time, the conclusion is inescapable that America's No. 1 problem is to assure expanding job opportunities for American workers.

There is undoubtedly great confusion on the entire subject of promoting trade and foreign investments. There is a vast difference between investment for profit in well-developed countries and invesement which may truly aid undeveloped countries or tend to spread further the cause of peace. A large amount of our investment capital is going to Europe. Most of Europe no longer needs such capital, and these moves may soon become much more a source of friction than a source of help. They are hurting our dollar balances.

At the present time our textile industry is in a much deeper recession than the average of the economy. This appears to be because our greatly improved year in 1959 invited an enormous new flood of imports. In this fashion our heads were chopped off before we had reached a level of profit return that would bring our stocks up to book value and attract capital on a fair basis for needed replenishment and modernization in the industry. I will not review the facts and figures of industry shrinkage, though I might observe here that about half of our worsted and woolen industry has now vanished, which of itself creates an alarming situation.

Before it is too late, before many new potential frictions are generated, before unemployment becomes too high, we must find solutions to these problems and we must adopt new and bold philosophies for directing world trade in keeping with today's facts of life. Solutions in the end must promote profitable trade in needed items among the nations of the world, but must provide protection against the impact of coming Communist and cheap labor competition in consumer goods and it must promote expansion of job opportunities here at home. Neither we nor the world will gain in the long run by our continued exportation of jobs, nor will anyone gain if we are forced to pull our living standards down and thus destroy the example we have been setting to the world of what can be done in distributing our wealth more and more broadly and improving the living standards of the masses.

The way we can be helpful to the rest of the world is to protect our jobs and keep our economy strong; then direct whatever surplus we can spare carefully and systematically toward helping improving living, health, and educational conditions of the underdeveloped countries. Such needs are much more basic and important to the masses of those countries than premature industrialization, which has all too often only resulted in the great enrichment of a few on a purely happenstance basis; these few in so many instances in the past have proven to be individuals or corporations who have no particular interest in improving the welfare of the masses. Hence they have speeded rather than deterred communistic tendencies.

Key to Farm Surplus Problem

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ULLMAN. Mr. Speaker, the President has recently sent us his message on American agriculture. In his able analysis of the situation he points out that "our farmers deserve praise, not condemnation; and their efficiency should be a cause for gratitude, not something for which they are penalized." The same important point is made in the following article from last month's issue of the Oregon-Washington Farmer Union written by my friend Al Lamb. I think my colleagues will find it of interest:

MANAGED SUPPLY—NOT SOIL BANK—IS KEY TO FARM SURPLUS PROBLEM

(By Al Lamb, board member, Oregon-Washington Farmers Union)

The raw material for an example of nature's power is pouring in daily. Unfortunately the communications media in and out of Red China will likely prevent the whole story from being told. The story can be summarized in one sentence, "The great leap forward has fallen on its face." Evidence of this popped up recently at odd spots throughout the world. Item: East Germany began buying soybeans on free world markets. Item: Red China purchased 500,000 tons of Australian grain and some estimates indicate purchases may have been another 200,000 tons higher. Item: Canada sold Red China 28 million bushels of wheat and 12 million bushels of barley in one of the largest commercial sales ever made by our northen neighbor.

Remember Red China is the second largest producer of soybeans in the world. Her Iron Curtain cronies that depend on Chinese beans were acting like this year's crop had been a failure—witness items 1 and 2 above. The Chinese communes are being remodeled into more Russian-styled collective farms. One reason we don't assimilate all this evidence more quickly is due to the phenomenal ability of the American farmers to produce. Let's examine evidence to this effect. Item: U.S. population has increased 20 percent in the last 10 years and these people were fed the widest variety of food at the lowest relative cost in history. This was accomplished on 5 percent less acreage, on 20 percent fewer farms with 20 percent less labor. Item: We have grown from a nation in which 1 of every 4 workers had to produce food into a nation in which 1 farmer produces food for 24. In Russia one agricultural worker still produces enough food for only four or five people. If our farmers were no more efficient than the Russians, 22½ million workers would have to leave work in nonfarm business and return to food production.

Not only do we passively accept the American farmer's success, but many people damn him for it rather than respect him for it. The fruits of the farmer's ingenuity and nature's benevolence become "burdensome surpluses" rather than "bountiful harvests." We think it is time to reappraise our values and put our abundance in the proper perspective. Retiring acres and paying the farmer for producing nothing is one approach—a completely negative one. Rewarding full production by skillfully maintaining and distributing valuable supplies of foodstuff is another approach—a positive one. Surpluses are not a liability.

Abundance is an asset. We have a chance to dramatically show the world that our system is far superior to any other. Let's not ignore the eloquent example of Red China's agricultural failure. Let's capitalize on it. And let's never forget how quickly mother nature can wipe out apparently adequate reserves of grain. When properly directed our reserve of foodstuffs will continue to be the most valuable weapon for peace in the free world's arsenal.

Abolish the HUAC

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Century of January 4, 1961:

ABOLISH THE HUAC

Numerous prints of a movie called "Operation Abolition" are now being circulated throughout the country. The movie is presented as a documentary coverage of student demonstrations during the meeting of the

House Committee on Un-American Activities in San Francisco, May 12–14, and suggests that the demonstrations were Communist led and inspired. Evidence mounts that the film, which opens with an introduction by Congressman FRANCIS E. WALTER, chairman of the committee, has been highly doctored to give the impression of mob action. Comments Reporter magazine: "The film shows students displaying defiance after police warnings, although actually the demonstrations occurred at a completely different time." In this issue (p. 14) we print the substance of a statement made at the fifth General Assembly of the National Council of Churches by Robert Moon, Methodist minister of San Leandro, Calif. His plea was referred to the NCC's Divsion of Christian Life and Work for investigation. We hope that such an investigation will be made speedily. If the reports we have received are accurate, the House Un-American Activities Committee has distorted the truth for propaganda purposes. Fiction is being presented to the public as though it were fact and the reputations of the students at the University of California in Berkeley are being unjustly and unnecessarily maligned. Who will curb the un-American activities of the Un-American Activities Committee? From its formation this committee has year after year done more harm than good. The American thing to do is to abolish it. Such an "operation abolition" would be in the best interest of the Nation.

Upsetting Anti-Red Dictators

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. DERWINSKI. Mr. Speaker, Columnist Constantine Brown, in his syndicated column which appeared in the Washington Evening Star March 21, discussed a subject which certainly should receive the full attention of the Congress and especially the committees dealing with foreign relations. I submit this article and suggest that it be most thoughtfully considered:

UPSETTING ANTI-RED DICTATORS—POLITICAL WISDOM OF U.S. MOVE AGAINST PORTUGAL IN U.N. IS QUESTIONED

(By Constantine Brown)

Our dedication to seeing democratic governments established everywhere and our abhorrence of dictatorships are well known and appreciated by most of our friends throughout the world.

Only one facet of our present foreign policy drive is being questioned: Is it politically wise at this time of intensive world crisis to attempt to tumble dictatorships which are loyal to the cause of the free world and at the same time court and encourage Communist and pro-Communist regimes?

Have we learned nothing, it is asked, from the mistakes of the Eisenhower administration which brought the Castro gang to power in Cuba.

It appears that the new administration which has more energetic men than the Eisenhower government had in its last 3 years has chosen to continue and speed up these policies which caused even Republicans to castigate their own administration.

A case in point is our attitude toward Portugal which has been run successfully and for the good of the majority of its people by the benevolent Dictator Salazar, a former professor of political science. This reporter has received recently letters from American friends in Lisbon. They write about the efforts of a minority in Portugal—mostly intellectuals and students—to overthrow Salazar. There is no such desire, they say, among the Portuguese masses who live a relatively plentiful life. The leaders of the ring want more than drastic domestic reforms such as took place at our instigation in South Korea. Their battle cry includes also Portuguese neutralism. They want their country to leave the NATO, have diplomatic relations with the Soviet Union, Communist China, and their satellites, and neutralize the American airbase in the Azores.

On the surface the movement in Portugal cannot be described as Communist, but merely as an effort to obtain unadulterated democracy. All the same, it serves the strategic objectives of international communism.

The minority which is planning to overthrow Salazar uses Washington's attitude of "displeasure with the regime" as one of its main cards. America enjoys a tremendous prestige in the Iberian Peninsula. Salazar's opponents have taken advantage of the *Santa Maria* incident to point to the friendly attitude of the United States toward the would-be Portuguese revolutionaries and Washington's hostility toward the Salazar regime. But the incident and our complacent attitude toward Captain Galvao, the leader of the heterogeneous band which committed an act of piracy on the high seas, would have been a passing incident had it not been for our more recent attitude in the United Nations.

Last week the chief American delegate to the United Nations, Ambassador Adlai Stevenson, sided with the Soviet Union in the vote intended to castigate Portugal for its policies of oppression in its African area of Angola. The measure was defeated despite the American and Soviet vote.

Lisbon apparently interpreted our action as a gesture of the very liberal-minded Adlai Stevenson. Reports were circulated in this country, and abroad, that he had not consulted President Kennedy or Secretary of State Dean Rusk before casting his vote. The White House promptly denied the rumors and announced that Mr. Stevenson had acted on instruction from Washington, and that his vote represented our policy toward colonialism. This caused more than a temporary disturbance in Lisbon, where a highly responsible official stated unofficially: "We can protect ourselves from our enemies. But who can protect us from friends like the Americans who attack us in the U.N. when our hands are full?"

And, indeed, the hands of the Salazar Government are full. This is not due to any genuine difficulty within the country, but because of the incursions from the Congo into the northern portions of Angola. So far, some 80 to 100 Portuguese and peaceful Angolans have been massacred.

The efforts of Portugal to reestablish order in its own territory are going to be described in the U.N. as oppression. The murderous acts of the men who massacred the peaceful population are already being described as a freedom movement.

The African-Asian delegations to the U.N. are expected to soon make a request for a debate on the worsening situation in Angola, charging that Portugal is violating human rights and that the situation is a potential threat to international peace.

"K" Economics by Kennedy and Keynes

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. CEDERBERG. Mr. Speaker, the first 2 months of the Kennedy administration reveals a trend that merges the Kennedy New Frontierism with Keynesianism which heads us to more spending and more inflation.

The acceptance of the Keynesian economic philosophy by the Kennedy advisers is pointed out by Mr. Henry Hazlitt in a recent issue of Newsweek magazine under the heading of "Kennedian Economics."

It is worth considering in view of some of the proposals being presented to us during this session. It follows:

KENNEDIAN ECONOMICS

(By Henry Hazlitt)

Mr. Kennedy's economic program raises so many questions simultaneously that it seems best to discuss some of them in a series of brief notes.

Campaign document: The President's economic message of February 2 is a partisan document. It professes to be dealing with a crisis brought on by the apathy of his predecessor. "In the past 7 (i.e., Eisenhower) years, our rate of growth has slowed down disturbingly." Slowed down from what? In the 8 Eisenhower years our gross national product grew, in real terms, by 23.7 percent, or about 3 percent a year. Over the preceding 8 Truman years it grew 8.1 percent, or 1 percent a year.

The growth game: The fact that the American economy reached the highest production on record in 1960, at $503 billion, is treated not as an achievement but as a disgrace. This was nothing compared with what it ought to have done: "It was capable of producing at least $535 billion." If it had done what it ought, then $20 billion more personal income could have been earned * * *. Corporate profits could have been $5 billion higher" and everyone could have had a job. The growth slogans may be economic hocus-pocus, but they are a wonderful political device. No matter what an economy has done, it can always be argued that it ought to have done better, and that your own remedies would have done it.

Spending cure-all: Mr. Kennedy's own chief remedy is spending, spending in every direction, more and faster spending on agriculture, on housing, on highways, on urban renewal, on unemployment compensation, on depressed areas, on distribution of surplus food, on school lunches, on veterans, on defense contracts, on education, on flood control, on irrigation, on forests, on long-range energy resource development, and on a beefed up and expanded social security program.

No budget at all: How much would all this increased spending come to? Mr. Kennedy does not say. His message not only fails to give any total, but even the cost of the chief individual items. He is content to say that "the programs I am now proposing will not by themselves unbalance the budget which was earlier submitted"—apparently for the reason that he expects a deficit anyway, so

what difference can a few more billion make? We are to operate, apparently, with no budget at all.

To be sure: "This administration is pledged to a Federal revenue system that balances the budget over the years of the economic cycle—yielding surpluses for debt retirement in times of high employment that more than offset the deficits which accompany—and indeed help overcome—low levels of economic activity in poor years." The political advantage of this system is that no one can ever hold you to account, because no one knows when an economic cycle has begun or ended, or just where we are in it, or when employment is ever high enough to take the terrible risk of balancing or overbalancing the budget. We have already had 24 budget deficits in the last 30 years. The record will become even worse if we adopt the indeterminate cyclical-balance theory as official doctrine.

Social security: The most reckless spending proposal of all is that increasing social security commitments in all directions. The OASDI program has long cried for expert reappraisal and study. Its unfunded liabilities have been estimated by actuaries as already from $350 billion to $650 billion. The month-long strikes, riots, and violence in Belgium, when the Government proposed very moderate reductions in the social security benefits which some groups had got used to, were an ominous warning to other nations of the political as well as economic dangers of overcommitment. Social security benefits are easy to raise, enormously difficult to reduce.

Inflation: In brief, the Kennedy economic program accepts lock, stock, and barrel the Keynesian economic philosophy, which never sees the cure for unemployment in any adjustment of wages, prices, or costs, but only in more and more spending and inflation.

Division of Indian Health Employees Scholarship Fund in the Aberdeen, S. Dak., Area Office

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BERRY. Mr. Speaker, one of the finest projects of a group of Federal employees that has come to my attention is the Division of Indian Health Employees Scholarship Fund in the Aberdeen, S. Dak., area office.

The program was begun in 1958 when it was discovered that a number of Indian students desiring to continue their education in health programs were unable to do so because of lack of sufficient funds. The employees in the Division of Indian Health decided to take the initiative and establish a scholarship program to meet this need.

In addition to contributions by employees, various fundraising activities have been conducted including dances, bingo parties and the like. The employees and their families contributed of their time and energy in making these affairs successful, thus adding to the scholarship fund.

During the 1960–61 school year, six students received scholarships totaling $1,962. The scholarship fund currently contains $1,800.12 in savings and $509.50 in their checking account, for a total reserve of $2,309.62.

I would like to commend Dr. James R. Shaw, Chief of the Division of Indian Health, and Dr. Donald McNaughton, medical officer in charge of the Aberdeen area, for this fine effort, and their encouragement of the employees in the Division to assist in this very worthwhile endeavor.

House Backs "Know Communism" Policy

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the American Bar News of March 15, 1961:

HOUSE BACKS "KNOW COMMUNISM" POLICY

The house of delegates of the American Bar Association has gone on record as urging the legal profession and the public to encourage and support the Nation's high schools and colleges to provide adequate instruction in the techniques and objectives of communism so as to better prepare young Americans to meet the challenge to our system of freedom under law.

HOUSE UNANIMOUS

The action was taken without a dissenting vote at the midyear meeting of the 258-member house in Chicago on February 20–21. The resolution calls upon members of the ABA, and the legal profession at large, to lead in mobilizing public support for teachers and school officials who wish to strengthen their school curricula in this area but have in the past been hesitant to do so because of uncertainty about public understanding. The resolution adopted by the house was presented by a special committee which held a 2-day conference with a dozen leading educators in Washington, D.C., on January 26–27. The educators unanimously endorsed the resolution. As adopted by the house it reads:

Whereas we recognize the urgency of instructing all Americans in the full scope and aims of communism and the increasing threat it poses to the free world and to our democracy and freedom under law to the end that an informed citizenry may successfully defend and preserve our American heritage; and

Whereas our educational institutions, both public and private, especially at the secondary, college and adult levels, afford the best means of developing sound programs of instruction in this area; and

Whereas these institutions and educators, in accepting this responsibility, must be given public understanding and support; Now, therefore, be it

Resolved by the American Bar Association:

(1) That through our members and the cooperation of State and local bar associations we encourage and support our schools and colleges in the presentation of adequate instruction in the history, doctrines, objectives and techniques of communism, thereby helping to instill a greater appreciation of democracy and freedom under law and the will to preserve that freedom;

(2) That to insure the highest quality of instruction in this area, those responsible for our educational programs be urged to provide the appropriate training of instructors and to stimulate the production of scholarly text books and other teaching materials of professional excellence;

(3) That we seek to implement this resolution through a special committee of seven members to observe and encourage progress in this educational program and to render annual reports to the association, the committee to include the chairmen of our Committees on American Citizenship, the Bill of Rights, and Communist Tactics, Strategy and Objectives, and one or more of our members who are educators.

PUBLIC SUPPORT NEEDED

In a report accompanying the resolution, the conference committee said: "Public understanding and support for this educational program will be essential. It is to be hoped that our members and the State and local bar associations will assist in developing proper understanding and in mobilizing public support."

"This program will be beset with many obstacles," the report added. "There are even those who deem it treasonable to mention communism in the classroom. Pressures and emotions will be brought to play upon any textbooks and educational aids. There will be those who fear that a well-meaning program may itself become infiltrated or perverted. A great host of patriotic educators, with proper public support, can see that these pitfalls and obstacles are avoided or overcome."

PRESS PRAISES PLAN

In the first days following the house of delegates action leading newspapers of the country, and many educators, expressed enthusiastic approval of the step. The gist of the press comment was that understanding the methods and aims of communism is the best defense against it, because the record of communism offers its own indictment of the system.

Through its president, Kenneth D. Wells, the Freedoms Foundation at Valley Forge offered its support and services to the ABA on "the plans you have in the fields of education and instruction on international communism."

The Rails Speak Out

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial as it appeared in the Washington Evening Star of March 21, 1961.

THE RAILS SPEAK OUT

The Nation's railroad industry is not crying wolf in its appeal to Congress, and more basically to public opinion, for help in treating its economic ailments.

There is plentiful evidence that the ailments exist, and that they have been getting steadily worse in recent years. The Association of American Railroads estimates, for example, that the profit rate of the carriers in 1959 was at the bottom of a list of 70 major industrial groups, that net income in 1960 was the lowest since 1949 and that 27 out of 106 Class I roads operated in the red last year. Employment of 780,000 on the carriers themselves was down 43 percent from 1946, and the job loss on the roads and in the industries supplying the rails has been increasingly heavy in the past 3 or 5

years. Unused capacity is calculated as high as 75 percent by some sources, a figure that represents a staggering waste of costly facilities.

In this period of declining fortunes, and a declining share percentagewise of both freight and passenger hauling, the rails have made efforts to help themselves. In 15 postwar years, expenditures of private capital for modernization of equipment and facilities have totaled about $15 billion. Currently, railroad managements are turning to merger possibilities as holding greatest promise of improved service and operating economies, but all of these call for the time-consuming examination and approval by governmental authorities. For the first time in years, there is hope that a Presidential commission will find a solution acceptable both to management and labor on the long-standing work rules controversy.

At this point, the rails are declaring war against what they consider the greatest obstruction to their well-being—discrimination in favor of competing services (air, highway, and water) at all levels of government. Their battlecry is a demand for four freedoms—from discriminatory regulation, discriminatory taxation, subsidized competition, and restrictions against providing a diversified transportation service. In place of these disadvantages, they ask equality of treatment, with the example to be set in the first instance by the Federal Government. Actually, most of what they ask has been recommended in numerous studies by governmental and private bodies over a long period of years.

Basically, the developing plight of the rails has not lacked attention: it has lacked action. There is no assurance that the result will be different now, unless government (at all levels) faces up to the fact that eventual deterioration of the railroad system could be damaging to the national economy in peacetime and disastrous to the Nation in wartime.

Wheelchair Club Will Send 100th Chair Abroad for Easter

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Sunday Independent of March 19, 1961, which reports the truly humanitarian accomplishments of the Wheelchair Club, Inc., of Wilkes-Barre, Pa., founded and directed by Mrs. Paul Bedford. My compliments to Mrs. Bedford and her fine organization for the noble undertaking which they have successfully pursued for a number of years.

The article follows:

WHEELCHAIR CLUB WILL SEND 100TH CHAIR ABROAD FOR EASTER

Wheelchair Club, Inc., founded and directed by Mrs. Paul Bedford of this city, filled its annual 100-chair goal of wheelchairs for shipment overseas prior to the Easter holidays with the delivery of 10 chairs last week to the United Old Age Home in Jerusalem.

Mrs. Bedford said yesterday that requests from overseas for wheelchairs continue to arrive at her West South Street residence and she has always attempted to get 100 chairs overseas each year prior to Easter.

"Thus far we have been most successful," she reported. "I have to thank all the people who have assisted me in this work. I know the joy of Easter will be in the hearts of those who have received the chairs and those individuals wo have made it possible."

Mardi Gras Celebration

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, on February 10, 1961, the Louisiana Society had its annual New Orleans Mardi Gras celebration in Washington. I was not able to be present for that occasion but a representative of the Louisiana oil and gas fraternity, from my congressional district, Mr. Nicholas H. Wheless, Jr., made a most inspiring address at a luncheon in Washington in connection with this celebration.

This speech, although short, was very complimentary to the Louisiana delegation and was well thought out. I have therefore asked that it be made a part of the official RECORD at this point:

REMARKS BY N. H. WHELESS, JR., AT LUNCHEON IN OLD SUPREME COURT ROOM—FEBRUARY 10, 1961, IN CONNECTION WITH WASHINGTON MARDI GRAS CELEBRATION

Members of the Louisiana delegation, queens and maids and all Louisianians in attendance, I am privileged to bring you warmest greetings from the Louisiana oil and gas fraternity. In addition, I am charged with the pleasant task of expressing the appreciation of our people for the Louisiana delegation in the Congress of the United States.

Our Louisiana delegation has achieved recognition in many facets of government endeavor. They are without exception men intimately acquainted with their State, and dedicated to the service of all the United States.

We in the oil and gas business know them particularly for their understanding of our industry. This is no accident—all of our representatives have oil or gas production in their districts; 60 of the 64 parishes represented by our two Senators have petroleum production. One out of every eight Louisiana worker derives income from some phase of the oil and gas business—some 89,000 persons.

Our Louisiana Senators and Representatives represent the fastest-growing oil and gas area in the Nation. Over the last decade 40 percent of all the new reserves of oil and gas found in the United States was discovered under Louisiana soil or water bottom. This is an impressive record. A good share of the credit for its achievement should be given to the men who have labored diligently to create and maintain a healthy petroleum industry.

Louisiana once was predominantly agricultural. Now it ranks second among the States in both production and reserves of oil and gas. It has the third largest refinery capacity among the States and its petrochemical output is high.

But the real significance of oil and gas to Louisiana is in its role as a supplier of energy to America. For 67 percent of all the energy consumed in the United States is derived from petroleum—and Louisiana is the second largest source.

Energy consumption is translated into goods and services—into progress and prosperity. America's intelligent use of energy is the key to its stature as the foremost nation in the world.

Our congressional delegation, in its informed presentation of the oil and gas industry's problems and achievements, is acting in the best interest of all the people of this country. We commend them to you—not only for their service to us, the people of Louisiana, but for their equally great service to this Nation.

Professors Engage in Shallow Thinking About House Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. CEDERBERG. Mr. Speaker, 250 professors from 79 of the country's universities and colleges have proven to the Nation the truth to the saying that "a little learning is a dangerous thing."

These are the educators who joined the American Civil Liberties Union in its lang-range campaign against the House Committee on Un-American Activities. These professors, by their action, indicate that they are unread men, unversed in what is taking place in the world today. They appear to be unaware of a Communist conspiracy which would engulf this country were it not for the host of loyal Americans—perhaps less educated than the degreed professors but at least less gullible.

It was Alexander Pope who wrote of a little learning being a dangerous thing and the full test of the verse should be sound advice to the professors. What Pope wrote follows:

A little learning is a dangerous thing;
Drink deep, or taste not the Pierian spring:
There shallow draughts intoxicate the brain,
And drinking largely sobers us again.

I would suggest that the professors "drink largely" of the documented publications, the speeches of men who have the facts at hand, and of the public records of the Subversive Activities Control Board and committees of Congress. Shallow drinking and shallow thinking are apparently fellow travelers.

Mr. David Lawrence ably presents the case against the professors in a recently syndicated article which follows:

SUPREME COURT UNDER NEW FIRE—PROFESSORS HIT FOR SEEKING ABOLITION OF UN-AMERICAN ACTIVITIES COMMITTEE

Not so very long ago those persons who publicly criticized the Supreme Court of the United States for its "desegregation" decision were being accused of defiance of our judicial institutions or of trying to undermine their prestige. But no such treatment probably is in store for the 250 "leading American professors" in 79 universities and colleges who have just issued to the press of the Nation a bitter statement criticizing the Supreme Court.

They object to the fact that the Supreme Court in two successive cases has declared

constitutional the right of the House Committee on Un-American Activities to require witnesses under certain circumstances to answer questions about Communist activities in America. Indeed, this is today the low of the land.

The professors, in their statement, contend that they are dedicated to the proposition that free inquiry and free expression nourish mental growth and are thus basic to the Nation's growth. But then the same 250 professors go on to demand the abolition of the House Committee because they do not agree with its expressions of opinion or its attempts to elicit information about Communist operations in this country.

While the same statement condemns trial by publicity, the officials of the American Civil Liberties Union—who say they canvassed the professors to obtain their signatures—announce that this organization is engaged in a long-range campaign against the continuance of the House Committee on Un-American Activities.

It is not clear just what the professors want to accomplish outside or inside American colleges and universities, though there is an implication that they believe they have a right to carry this type of controversy directly to their classrooms. Presumably there would be nobody with similar knowledge present on the other side to rebut their arguments before the students. The professors, in their statement, complain that "Many teachers in the colleges and universities, as well as in the public schools, have grown timid about stating, even for classroom discussion, ideas which someone later might interpret as subversive."

What the professors really object to is the effort of the House Committee on Un-American Activities to do something which none of the executive agencies like the CIA or the FBI can do—namely, to expose in the midst of the cold war the workings of the Communist apparatus inside the United States.

The professors who signed the latest petition do not hesitate to identify themselves with the prestige conveyed by the names of the universities and colleges that employ them. Thus the statement, in giving the list of the 250 professors, attaches in each case the name of the university or college where they teach and their subjects. The following notation is included.

"The institutional affiliation of the remaining signers is for the purpose of identification only and in no way commits the institution to the views expressed."

But why is it necessary to identify these professors by using the name of their respective colleges and universities and by specifying the subjects they teach? Will the general public assume that, because these professors hold such positions, they perhaps reflect the views of a substantial number of other professors who were or were not canvassed?

There are, for example, among the signers 18 professors from Harvard, 13 from Yale and 5 from Princeton. Is the public to infer that the board of trustees of Harvard or Yale or Princeton or the faculty of each approves the use of the names of their universities in the public prints hereafter as an attachment to any political-propaganda document regardless of content?

Will the parents of students in those universities feel any concern that some professors holding views of this kind will dominate discussions of communism in the classroom? Will some of the donors of funds to the various universities begin to harbor fears that such funds may be used to hire professors who advocate that a gag be imposed on the free expression of ideas by a committee of Congress—especially on a topic of vital importance to the security and safety of the United States?

These are questions that naturally will arise now. The professors, in their statement, concede that the committee has latterly improved its hearing manners, but this apparently isn't enough—they demand that the committee be abolished altogether, notwithstanding the fact that the courts specifically are empowered to correct any abuses in the conduct of hearings.

The late Justice Oliver Wendell Holmes once defined "free speech" as "freedom for the thought we hate." But these college professors don't want the House Committee on Un-American Activities even to exist, let alone to speak out under the free-speech clause of the Constitution—which, incidentally, applies not only to the signers of petitions, but also to Members of Congress and its committees.

What Kind of Federal Help Do Our Old People Want?

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post in connection with medical aid for our elder citizens:

WHAT KIND OF FEDERAL HELP DO OUR OLD PEOPLE WANT?

People have been growing old for as long as the human race can remember—not quite as old as most of us expect to become, by the grace of God and antibiotics, but old nevertheless. But now there is a widespread feeling that "the aged" have become a class for whose welfare younger people feel free to prescribe. The things that young people think ought to interest old people are terrifying: Morris dancing, bingo, "discussion with others of the same age group," basket weaving and adult education. Few of the professionals give much thought to the oddball senior citizen who prefers to work as long as they'll let him, to participate in family and community activities without worrying too much about his great age.

This sort of thing aside, the gist of the problem of "our aging population" is financial. At the recent White House Conference on Aging, attention was concentrated on the sections which were assigned to discuss the cost of medical care and the best way to meet it. There was no need of a conference to make it clear that social workers, labor-union leaders, professors of social science and bureaucrats would tend to favor a Federal system of health insurance, whereas doctors, insurance executives, and economy-minded Senators would be either against it or, at any rate, worried about it. And, of course, inasmuch as the Department of Health, Education, and Welfare was putting on the show, it should have surprised nobody that the solution favored by HEW was the one favored by the conference. The surprise was that considerable opposition, criticism and reluctance cropped up.

Discussion of the financial problems of the aged, for example, was and is complicated by the variety of contradictory statistics presented on how the aged, sick or well, are doing as matters stand now. The Emory University survey, conducted under the direction of Professors Wiggins and Schoeck under a grant from the Foundation for Voluntary Welfare, indicated that a fair proportion of older people thought they were in good shape physically and weren't too much concerned over their ability to pay ordinary medical bills. On the other hand, George Meany, president of AFL–CIO, declared that three-fifths of our old people are forced to get along on less than $1,000 a year. Marion B. Folsom, former secretary of HEW, told his section that retired people now get along fairly well with their income from private savings, company pension plans and social security, as evidenced by the fact that only 15 percent of people over 65 receive old age assistance, and the percentage is much lower in some industrial States. Mr. Folsom added, however, that, "a high percentage of older people do have difficulty in meeting the cost of medical care."

Aside from the increase in longevity, the high cost of housing and the greater activity of social workers, why has old age become so much more of a problem than it used to be? One answer was suggested at the White House Conference by Dr. Maurice E. Linden of the Philadelphia Department of Public Health. It was Dr. Linden's contention that the tendency to make old age a problem is a manifestation of the same underlying disease—family, cultural and social fragmentation and breakdown. Historically the problems of life occurred in the outside world and were solved within the family, but today it would appear that conflicts of living occur within the family and seek solution outside the family.

Thus what used to be intimate family problems become matters for the marriage counselor, the parole officer, the psychiatrist, the disciplinary school. Grandfather and grandmother, instead of enjoying an honored position in the home, become a problem for social solution. That children, as well as the state, have some responsibility for the care of their elders is generally ignored. Indeed, a brochure issued by HEW suggests that parents now live so long that they can no longer expect to remain a part of their younger relatives' family. The idea of a statute of limitations on family loyalty is something new.

Just the same, even those who look to Federal bureaucracy to take care of our old people feel bad about it. Governor Meyner of New Jersey, for example, declared that "few of our senior citizens are crying, 'I am old, take care of me.' Rather I believe they are saying, 'Because of my age don't discriminate against me. Don't shut off employment opportunities.' "

Inflexible retirement plans were attacked by many delegates, although only Joseph Livingston, financial editor of the Philadelphia Bulletin, had the temerity to take the bull by the horns and urge the lifting of the earnings limitation for social security annuitants. The labor-union delegates, of whom there were 132, generally took the view that to do that would encourage the employment of old people at substandard wages—that is to say, wages which, while presumably satisfactory to the recipient, might compete with union wage scales in certain sheltered trades. Nevertheless the growing idea that men and women are better off employed at something, as long as they are physically able to work, is an interesting shift from the earlier view that retirement was the be-all and end-all of a worker's life experience.

It can be argued that the Government itself, partly through its efforts to solve the problems of the needy, has contributed to the sorry plight in which some old people find themselves. For one thing, over the years Federal income tax has taken from our generation more than our fathers habitually saved. And, as Senator BARRY GOLDWATER, of

Arizona, pointed out in an address at the conference, Government extravagance and deficit financing have created the inflation which cuts the buying power of pensions, social security annuities or other income available to old people.

Mr. Meany estimated that the $32 a month, which was the average social security payment in 1940, would buy as much as $49 would buy in 1959. Mr. Meany then proceeded to endorse aid to education, assistance to distressed areas, loans and grants to communities for urban renewal and essential facilities and a broad housing program—a set of recommendations which could easily reduce the purchasing power of the current average social security check of $83 still further.

Inasmuch as it is admitted generally that indigence in old age by no means involves all old people, many question the good sense of firing a broadside at the whole aged population. The Kerr-Mills law now on the books attempts to confine the treatment to those who need it and to leave the administration of old-age medical care to the States, which are entitled to Federal grants if they adopt acceptable programs.

Few at the White House Conference thought favorably of the Kerr-Mills bill. The reason was that under it State authorities must establish the individual's need of aid before giving him any. To ask a man about to receive public money to show that he needs it is supposed to be an affront to his dignity and to make him a second-class citizen. Old-age health insurance, like social security, it is insisted, should be a matter of right because the recipient has paid for it.

Obviously this is an emotional rather than a realistic view because, actuarially speaking, the social security annuitant hasn't paid for more than a fraction of what he gets. His employer has paid for half of it, and what does the boss get out of it as a matter of right? Perhaps he benefits by not having to provide such a generous pension system as he might otherwise be compelled to adopt, but that is another story. Even so, the financing of social security, being based on calculated payments to people as they reach a given age or to their survivors, is calculable and manageable. But health insurance is another story. An attempt to cover chronic illness, mental illness, senility, complicated surgery and the host of minor seizures and ailments to which aging flesh is heir could be financially disastrous. A limited coverage, designed to be supplemented by private health insurance and local hospital plans, would appear to be the optimum solution. The current agitation has shaken the insurance companies out of their complacency, and several promising private plans have been announced.

However, political pressures can be counted on to expand the coverage far beyond that contemplated at the beginning. If old people, why not youth, prospective mothers, delinquent children, alcoholics? It is this expansionist tendency that should be worrying advocates of a universal, compulsory health-insurance system.

Papa Knows Best

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. SEELY-BROWN. Mr. Speaker, I am pleased to include, by unanimous consent, as an extension of my remarks, an editorial from the current issue of the Farm Journal, the caption of which is "Papa Knows Best."

This editorial expresses in simple but forceful language the thoughts which many of us had about the feed-grains bill that passed this House, and upon which action was completed with the adoption of the conference report.

I voted against this bill, Mr. Speaker. I agree with the editorial that "the feed-grains bill was a fine sample" of the idea that "a half-dozen planners sitting in Washington can try to tell farmers how much or how little of this and that to raise." What happens, as the editorial points out, is "a worse mess than they started with."

The editorial follows:

PAPA KNOWS BEST

The feed grains bill may be law or it may be dead by the time you read this—likely it will have been changed at least—but it is very much worth your attention anyway for it puts in clear view the farm philisophy of the new administration. It tells you what to expect from here on.

We don't question that Mr. Freeman and associates want to help farmers. But we challenge the idea that a half dozen planners sitting in Washington can try to tell farmers how much or how little of this and that to raise without creating a worse mess than they started with. The original feed grains bill was a fine sample. Its land-retirement purpose was good, but here were a few things wrong about the methods:

1. The office of the Secretary of Agriculture would become the feed-grain market of the United States. One man, the Secretary, would determine what the cash grain farmers would get for their crop, and what the livestock, dairy, and poultry farmers who buy feed would pay. The plan put no ceiling the prices the Secretary could set. It allowed him to take grain out of Government bins and sell it as much as 17 percent below support levels. That's too much power to give any one man. A very great deal too much.

2. The program gave the Secretary a whip to use on reluctant farmers. You didn't have to join his program, but if you didn't he could make it cost you—up to 17 percent of the support price. He had a persuader to make you crawl into the Government tent—unless you wanted to pay. How typical this is of the big Government crowd, the planners, and how revealing of their philosophy: "Papa knows best," and can remind you of it if necessary.

3. Wheat can be a feed crop, a big one, but wheat was ignored in the bill. We can't do anything about the wheat now in the ground but we could provide for what we're going to do when seeding time comes around again.

If there's anything we should have learned after 20 years or more of sad experience it's this: You can't legislate soundly for just one segment of farming at a time. Anytime we try it we only rotate the problem to another segment and wind up with a worse muddle than before. Yet here we are trying it once more.

4. The bill made no provision for retiring whole farms, which in some instances is best for all concerned.

5. The bill introduced the Brannan plan by the back door. Farmers who comply would get the support price but the Government could sell the grain at 17 percent less—a direct payment without name.

6. Fruit and vegetable growers would get new competition—you could put the idled feed-grain land into fruit or vegetables if you want to forego a Government payment.

7. Soybean farmers are about to see their markets hurt by an increase (that they don't want) in their support price from $1.85 to $2.30. The bean farmers have been doing fine. They've increased production of beans from 180 million bushes at the close of World War II to 550 million in 1960. They've taken 12 million acres a year out of other crops. They've exported a fourth of their beans—for dollars. In short they've been a problem to nobody.

So what happens? Without consulting the bean farmers the planners up the price support by 45 cents. Why? Because they first decided it would be good to raise corn supports to $1.20. When one went up the other had to for we already have too much corn and too few beans.

Actually, we need about 2½ million more acres of beans but we were going to get them anyway with prices the way they are. What's likely to happen now is that we could wind up with about as much corn as ever and one more surplus crop—beans.

Isn't it wonderful when the planners get going?

The Worst Flood in Alabama's History

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very fine letter from Mr. C. O. Mason, Sr., mayor of the town of Pine Hill, Ala. I agree thoroughly with what my friend, C. O. Mason has to say in this letter, and I believe every right-thinking man and woman will too. It is just too bad that the people who are trying to cause us trouble in our beloved Southland do not know of the cordial relationship that has always existed between the white and colored people of our part of the country, however, they are beginning to wake up in certain parts of the country up North, up East, and even out West. Anyway, the facts in this letter were certainly interesting to me and I am sure it will be to you.

The letter follows:

TOWN OF PINE HILL,
Pine Hill, Ala., March 19, 1961.

Hon. FRANK W. BOYKIN,
Washington, D.C.

DEAR FRANK: This section, as well as all along the Alabama River from above Montgomery south, is recovering from the worst flood in Alabama's history. There were no lives lost but property damage will run up into the millions.

The American Red Cross, the Salvation Army, the National Guard, and the sheriff's forces moved in and they together with the citizens did a wonderful job working around the clock with very little or no rest. Hundreds of families together with their livestock had to be taken from their homes, and had to be provided with food, clothing, shelter, and medical attention.

The facts that stand out so strong in this matter and that should be brought to the attention of the New York Times as well as other northern papers and to some of our Government officials are that notwithstanding the fact that 85 to 90 percent of the people that had to be taken from their homes and taken care of were Negroes. And

where was the NAACP and the Christian Improvement Association? They were not heard from.

The NAACP sends millions to the South to break down our way of life but they don't send a nickel to help their people in the time of a disaster.

I wish you would make this fact known to some of the people in Congress that are always talking about more civil rights.

I am glad to note that you are on the program for the dedication of the Jackson lock and dam. We have an invitation from the Warrior-Tombigbee Development Association and guess we will see you there April 7.

With all good wishes.

Sincerely yours,

C. O. MASON.

Jobs by Inflation?

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. CEDERBERG. Mr. Speaker, the difference between a new dose of inflation and a logical coordination of wages and prices, at whatever average level, as the answer to the unemployment problem is set forth by Mr. Henry Hazlitt in his column the heading of which asks "Jobs by Inflation?" in the March 6 edition of Newsweek magazine.

The article follows:

JOBS BY INFLATION?

(By Henry Hazlitt)

We are in a recession. Unemployment is alarmingly high. We must act. "I hope we can get action as soon as possible."

Thus the Kennedy administration. And what is this action we must take so precipitously? It is more Government spending in all directions—on unemployment compensation, crop price supports, housing, highways, depressed areas, veterans, social security, Federal aid to education, and scores of other projects. It is lowering interest rates and increasing loans. It is, in a word, inflation.

Behind this proposed remedy is the same theory that has dominated the economic policy of most Western governments, especially our own, for the last quarter century. It is the theory made popular by union propaganda, and the late Lord Keynes.

Keynes himself recognized that raising wage rates would only increase unemployment. He left handedly conceded that unemployment might exist because real wage rates were already too high in comparison with prices and demand, so that the outlook for profits was to bleak to encourage full employment. But he argued that a direct lowering of money wage rates would be so strongly resisted by the unions as to be politically impossible. Therefore, the only way to lower wage rates to a workable level was to lower the value of money. The way to do this was to inflate, to print more money, and so to raise prices and monetary demand to a level at which full employment would be possible again.

WHY NOT FOREVER?

This is the process to which we have resorted again and again in the last 28 years. Economically, it has seemed to work. We have had continuous inflation, but we have also (at least since 1942) had fairly continuous employment. Politically, it has kept whatever administration was in power from having to face up to the problem of how to halt constant union wage demands and increases that exceeded the gains in labor's marginal productivity at the existing level of prices. We have floated ourselves out by ever new doses of inflation.

Well, why can't we do it again? Why can't we keep it up forever?

One reason it is especially dangerous to try it again now is that we have done it so much in the past that we have undermined international confidence in the dollar. Our labor costs of production on some items have been raised to a point that is pricing them out of the world market. American capital is being invested in new plants abroad rather than at home. Our existing inflation has already caused a deficit in our balance of payments. We have been losing gold at a dangerous rate. Further inflation will only intensify the problem.

DESPERATE RACE

And we can't keep inflating forever because the process inevitably becomes accelerative. With every dose of monetary inflation and increase of prices, the unions make demands for still further wage increases to keep up with or get ahead of the latest price increase. Each round of wage increases leads to another dose of inflation to pay the new wage level. There is a perpetual and increasingly desperate race between the printing press and the union demands.

Yet the whole race is needless. What is necessary for full employment is the coordination of wages and prices, at whatever average level. If this coordination does not exist, if a new dose of inflation simply touches off a new round of wage hikes, then the inflation is futile, even as a short-term expedient.

What labor is chiefly suffering from today is too many victories. It is no mere coincidence that unemployment now is highest in lines in which wage rates are highest. As compared with average wages of $2.30 an hour in all manufacturing industries, wages in automobile plants are $2.87 an hour, in steel mills $3.02, in bituminous coal mines $3.27. But in the excited calls of the Kennedy administration for action, there is complete silence regarding wage rates. They are treated as irrelevant.

Yet not quite. Among the proposed remedies for unemployment are higher and longer unemployment benefits and higher minimum wages to keep wage rates up or to force them still higher.

A Journey to Ireland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another in a series of articles written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, which appeared in that newspaper on March 19, 1961. Mr. Heffernan wrote this series of articles for his publication following an extended trip through Ireland last fall. The latest article in this series follows:

A JOURNEY TO IRELAND—TRADITIONAL HUNTING ATTIRE HAS BECOME QUITE DEFINITE

(By Tom Heffernan)

As most Wyoming Valley people realize, the manner of attire in sports is pretty well standardized, so a football player wouldn't come out in shorts, as do the British in the rather similar game of rugby, while a baseball uniform would be considered ludicrous if made with long trousers whereas British players of cricket, ancestor of our diamond game, do wear slacks—white ones.

Something of a peak in custom and tradition in dress is reached in foxhunting, where it has become quite formal and an interesting item in the ensemble is the stock—the tying of which probably always will baffle us.

It is a long piece, shaped or in a straight fold, of white or light colored cloth which is wrapped about the neck, first from front to rear, brought then around to the front again and tied.

COLLAR AND TIE IN ONE

Thus it serves both as collar and tie but it is not easy to handle for the uninitiated which we certainly were.

So when, the day before our first attempt, we saw a young Englishman in the lobby, we spoke to him. He nodded in return.

That happened again, later, with the young man showing the usual English reserve.

Finally we went to him, said we were about to try hunting for the first time and got a look of considerable surprise.

Everyone always was surprised to learn that we had selected Ireland as a starter, since the going is pretty rugged for a beginner.

A PLEA FOR HELP

Anyway, we wondered if he would help us since, we confessed, we didn't even know how to tie a stock—which we should have learned to do before we left America.

He said he would, came to the room just when, by some accident, all the lights in Adare went out accidentally so the period of instruction was delayed until next morning.

At that time, he suggested we come to the room occupied by him and a friend, Captain Beloe, who had served during the war with the British Combined Operations—a supercommando outfit.

In addition, the captain had ridden in that frightening Grand National at Aintree, with its awful jumps.

He said he would help us—and he did.

Perhaps we should add that our original friend was John Gouriet who, we found out on receiving a letter from him after our return to America, was an officer in the King's Royal Hussars.

ANNOYED BY PHONIES

As he helped us, Captain Beloe, with the complete accent of a British aristocrat, talked interestingly to us and to Gouriet.

"These people," he said, "who come over for the hunting, who know nothing, pretend they know everything, we let go out to make fools of themselves and perhaps break their bloody necks.

"Remember that millionaire chap from Australia last year, who even had some kind of monogram on his coat?" he said to John.

"You," he said to us, "came here, admit you know nothing and, my friend, I shall do everything in my power to help you.

"Hunting has been my life. I have been master of foxhounds. It has been my life."

Then we asked the captain about the black Melton coat we were wearing, which had three buttons.

"It seems," we said, "that it would be better if it had four.

"However, the customs and traditions of your hunting have added so much to the sport, it is a pleasure to observe them.

"So we hesitated about having another button added since there was no use making it wrong."

WE GET THE TRUTH

The captain just looked at us.

"That of course, is the coat they sold you in America and I swear I would have said nothing if you hadn't asked.

"But you did ask. And you ask me if another button would make it wrong.

"And all that I can say is that there is nothing right about your coat. It's all wrong."

Please bear in mind that all of the captain's remarks were made with a smile and in the best of humor. So he also added to reassure our shaky confidence.

"But we always say, you know, it's not the coat. It's what's in it."

YOUNG MAN IS MOST HELPFUL

For some reason, Captain Beloe (pronounced much like below) could not hunt with us that day, but John Gouriet (pronounced to rhyme with Duryea) did, for which we were thankful.

He helped constantly, watched over us at every difficult jump, introduced us to people and stuck with us right to the end.

Probably we gave him quick reason to fear for the worst because on this our first introduction to foxhunting, on the first day, at the very first jump, we were thrown.

Like a good fellow, soon after that he pulled up alongside to remark, "We're all even now, you know," as he pointed to mud on his sleeve to show that he, too, had parted company with his horse.

Then, right near the end of the day, as his horse made a mistake at a wall, he went off again only to arise, look for us, and call:

"I'm one up on you now, you know."

(P.S.—We still are hopelessly clumsy tying a stock and it usually comes out looking most of all like a mussy tourniquet.)

HUNTER SO BIG WE WERE HELPLESS

We called the horse big and it was much the biggest animal we ever rode.

For instance, the first day we had a handsome chestnut, looking big to us, and which stood 17 hands, belonging to Mickey Butler.

Then came this huge one, 17 hands 2 inches which, since his hand is 4 inches means the saddle was about 6 feet off the ground.

It belonged to John Liston, a successful farmer.

Butler, a workingman who loved hunting, made sure he was in Ireland during the season, and the days his horse was ready he rode it himself if it were not rented by a visitor such as we were.

Getting back to that big bay of Liston's, since we needed considerable help to get on, we never got off until the day's hunting was over, and one day, having to go through several fields with a charming young English girl named Diana Ash, we were embarrassed.

Twice it was necessary for someone to get off to open big iron gates and then, when we met a ditch and bank encumbered by a flimsy fence of barbed wire, someone had to pull out a couple posts and hold the wire down while the other drove over.

Since there was no way for us to get back on that huge mount, we stayed up there while Miss Ash got off and did the chores for us each time.

DRESS WASN'T FORMAL AFTER ALL

Our awe of the rigidity of English customs, with Americans convinced they will dress for dinner in the middle of the jungle, had us a bit uncertain what to wear when invited to the home of Lord Daresbury on an evening after a hunt.

Of course, matters were somewhat simplified by the fact that we could choose between only two outfits—a blue suit or a tweed jacket with gray trousers—so we wore the suit. * * * We had nothing else with us.

On arrival, already there was a delightful young couple from London, the Rallis, who also had hunted with the Limerick hounds that day—and he was in tweeds.

Next came Lady Hilton, lovely as always and this time in black sweater and black velvet slacks.

Major F. W. Kennedy, the efficient and most accommodating secretary, wore tweeds.

Finally Lord Daresbury arrived wearing, most comfortably, a brownish-green set of quilted nylons that are closely related to pajamas and which must feel good after a day in the outdoor chill of a rainy clime.

Taking one look at our blue suit, Lady Hilton said: "You look as if we were back in London."

TALKED WHEN WE SHOULD LISTEN

As it happened that day, when a confusion at the finish found the field scattered, we had wound up the hunt with the Rallis and it was a pleasure to be able to offer our car as a conveyance to get them back to Lord Daresbury's place, where they were guests.

And once again, we learned that when you don't know what you are talking about it is best to keep the mouth shut.

It was a little late when we arrived at Lord Daresbury's, getting rather dark and a bit foggy, so we didn't know what we were approaching when a wide and low building loomed mistily ahead.

"Is that the kennels?" we asked.

"No," came the quiet answer from the back seat.

"Oh. * * * Perhaps it is the stables?" we continued blithely but not brightly.

After a moment Mrs. Susan answered.

"It's the house."

A bit later, when we returned after dressing, we found it was not only the house but a most interesting one.

And in the big room at one end, with comfortable chairs, a blazing fire and relaxing atmosphere, were wonderful hunting scenes.

Not prints but paintings, with one so big it was almost like a mural and ran practically the full length of the wall in a big room.

Minimum Wage: 1961

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following most timely editorial which appeared in the New York Times of March 21, 1961:

The United States has had a Federal minimum wage law since 1938; but even today only a little more than a third of the American labor force is protected by it. In the 23 years since the law has been on the books, there has been virtually no upward revision of its coverage; and even the monetary floor (originally 25 cents an hour; now $1) has not been raised in over 5 years.

President Kennedy is now proposing—as he did when he was a Senator—both a controlled increase in the minimum to reach $1.25 within two and a half years after enactment, and a limited extension of the coverage to include an additional 4,300,000 workers. While the bill is not an ideal one—for instance, it omits service workers in hotels and restaurants and agricultural workers on large-scale farms—it does represent a reasonable step toward the protection of some of the lowest paid segments of American labor. We favor the least possible Government interference in the fixing of prices or wages; but establishment of a minimum wage for those unable to protect themselves is a long-accepted and necessary function of the Federal Government.

Since long before the memorable fight in Congress over the first Fair Labor Standards Act of 1938, some employers have always argued that they or their employees will be put out of business by imposition of a legal floor for wages. We do not share that fear, and neither history nor statistics bear it out. For example, in 1959 the Wage and Hour Administrator informed Congress that of the 2,100,000 employees affected by the 1956 increase in the minimum to $1, less than 2,000 were discharged or otherwise adversely affected. Last year Secretary of Labor Mitchell himself agreed that a "modest increase" would not materially curtail employment in the low-wage industries.

On the contrary, surveys have shown that a higher minimum in low-wage communities has actually stimulated, rather than depressed, employment, and has stimulated it not only far beyond the national average but to a greater degree in the specific industries affected by the new minimum than in the industries not so affected. As for the relationship of a rising minimum wage to foreign competition, wages in most of our export industries are already above the minimum, and in other cases the projected increase would have but a minor effect on the sale price of the product.

The reports are that the President is going to have a hard fight to secure passage of his bill. He should have the support in Congress of all who believe that one secret of American industrial success lies in its relatively high standard of labor and living.

Kennedy's Course

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I should like to include in the Appendix of the CONGRESSIONAL RECORD the following column by Roscoe Drummond entitled "Kennedy's Course," which appeared in the Washington Post of Wednesday, March 15, 1961.

The column follows:

KENNEDY'S COURSE—HALLMARK IS CAUTION AND PRUDENCE

(By Roscoe Drummond)

It is too soon to conclude that the Kennedy administration will continue to be as moderate and as traditional as it is today, but on the basis of the President's words and deeds thus far, it is accurate to report:

That the Kennedy administration is less reformist than F.D.R., less partisan—but not less political—than Harry Truman, and in degree somewhat less conservative than Dwight D. Eisenhower. The new administration is less conservative than the Eisenhower administration because it is more willing to use the power and resources of the Federal Government to achieve social and economic goals.

Obviously the end result may greatly diverge from this description. Unforeseeable events could alter its course. But the hallmark of the Kennedy Presidency after several weeks in office is one of caution and prudence. It is proposing no radical experimenting with the economy as did F.D.R. It is not petty or petulant in small things as H.S.T. (who, however, was magnificent in the great decisions). The Kennedy administration is not tampering with the main lines of foreign policy pursued by President Eisenhower.

It is clear that John F. Kennedy wants a better and more productive America in public services and in the private economy, but he is no passionate, doctrinaire reformer intent upon making over the United States.

Mr. Kennedy's speeches and actions quite accurately portray his concept of the Presidency at the start of his term.

There is nothing radically experimental or untraditional in the Kennedy program. Extension of unemployment insurance payments follows the Eisenhower precedent of the 1959 recession. Federal aid to education has been supported by both parties since Senator Robert A. Taft introduced his bill in 1948. Aid to depressed areas and medical assistance to the aged were debated in the Kennedy-Nixon campaign only on grounds of method.

I am not suggesting that Mr. Kennedy's measures are always the best or only way of reaching his goals. What I am suggesting is that both in method and in objective the Kennedy administration is acting within the framework of national policy and tradition as developed in America since the depression of the 1930's.

The most significant difference between the reformist era of the New Deal and the let's-make-things-better era of J.F.K. is the built-in hostility to business in the Roosevelt administration and the built-in cordiality to business in the Kennedy administration. It is noteworthy that President Kennedy's first public speech after his state of the Union address was delivered to the Industrial Conference Board. For years F.D.R. would not speak to the U.S. Chamber of Commerce. Mr. Kennedy said:

"Far from being natural enemies, Government and business are natural allies. * * * We know that your success and ours are intertwined—that you have facts and know-how we need. Whatever past differences may have existed, we seek more than an attitude of truce, more than a treaty—we seek the spirit of a full-fledged alliance. * * * We will not discriminate for or against any segment of our society or any segment of the business community. * * * We are not opposed to business."

This is not the credo of a reformist administration. And Mr. Kennedy is giving substance to this credo by advocating tax incentives to carry through plant modernization to enable the economy to produce more efficiently in the world market. Such tax incentives were not forthcoming during the Eisenhower administration.

This attitude bespeaks the political center which the President seems eager to occupy.

Disarmament Proposals of the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. BOYKIN. Mr. Speaker, in the March 17, 1961, edition of Life Line there appears an excellent article entitled "Disarmament Proposals of the U.S.S.R." Under leave to extend my remarks in the RECORD, I include this article:

DISARMAMENT PROPOSALS OF U.S.S.R.

When the leaders of Soviet Russia talk about world disarmament, what do they mean? We do not have to guess. They have told us themselves.

The Communist policy on peace and disarmament was set forth in a resolution of the Sixth World Congress of the Communist International. Here is what the resolution said:

"War is inseparable from capitalism. From this it follows that the abolition of war is possible only through the abolition of capitalism, that is, through the overthrow of the middle class.

"But the overthrow of capitalism is impossible without force. The revolutionary proletariat, precisely because it is fighting for socialism and for the abolition of war, cannot be against every war.

"The international policy of the U.S.S.R. is a peace policy which conforms to the interests of the ruling class of Soviet Russia. The aim of this policy is to guard the international revolution and to protect the work of building up socialism—the object of which is revolutionizing the world.

"The peace policy of the proletarian state certainly does not imply that the Soviet state has become reconciled with capitalism. It is merely another and, under present conditions, a more advantageous form of fighting capitalism, a form which the U.S.S.R. has consistently employed since the October revolution.

"The proletariat in the Soviet Union harbors no illusions as to the possibility of a durable peace with the imperialists. The proletariat knows that the imperialist attack against the Soviet Union is inevitable; that in the process of a proletarian world revolution, war between proletariat and bourgeois states, wars for the emancipation of the world from capitalism will necessarily and inevitably arise.

"There is a glaring contradiction between the imperialists' policy of piling up armaments and their hypocritical talk about peace. There is no such contradiction, however, between the Soviet Government's preparation for defense and for revolutionary war and a consistent peace policy. Revolutionary war of the proletarian dictatorship is but a continuation of revolutionary peace policy by other means.

"The proposals for general and complete disarmament submitted by the Soviet Government * * * differ radically in aim, sincerity, and objective significance from the phrases and schemes submitted by the imperialists. The aim of the Soviet proposals is not to spread pacifist illusions, but to destroy them; not to support capitalism by ignoring or toning down its shady sides, but to propagate the fundamental Marxian postulate that disarmament and the abolition of war are possible only with the fall of capitalism.

"The disarmament policy of the Soviet Government must be utilized for purposes of agitation much more energetically and to a wider extent than has been done hitherto (1) for recruiting sympathizers for the Soviet Union—the champion of peace and socialism; and (2) for utilizing the results of the Soviet disarmament policy and its exposure of the imperialists in the effort to eradicate all pacifist illusions and to carry on propaganda among the masses in support of the only way toward disarmament and the abolition of war: arming of the proletariat, overthrowing the bourgeoisie and establishing the proletarian dictatorship."

The moral is this: These mistaken enemies of America are not fooling themselves; let us make certain they do not fool us with talk of peace that means war.

The Medora: North Dakota Townsite Area Adjoining Teddy Roosevelt Memorial Park

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. SHORT. Mr. Speaker, I would like to call the attention of my colleagues, and ask their support of a bill which I have introduced—H.R. 2295—to assist my home community of Medora in a problem they face which they are unable to solve by themselves.

This small, historic cowtown of Medora has been totally unprepared and unequipped for the impact of the thousands of visitors who come there each year, attracted by the Theodore Roosevelt National Memorial Park, the Marquis de Mores Chateau, and the outdoor drama, "Old Four Eyes."

The legislation which I propose, and in which I have been joined by other members of the North Dakota delegation: Senators YOUNG and BURDICK, and Congressman NYGAARD, only authorizes the Department of Interior to extend its existing facilities upon reaching an agreement with Medora relative to the cost of service and the period of repayment. I want to firmly emphasize this does not provide a direct grant to the village.

Only with adequate sewage and water facilities can the community meet the dire need for sufficient eating, lodging, and restroom accommodations. We had this legislation prepared only after exhaustive study convinced us there is no way the town of Medora can finance construction of its own facilities. This bill provides that in order to afford this service to visitors to the area and to encourage the preservation and restoration of the pioneer cattle town of Medora, the Secretary of the Interior is authorized to assist in modernizing the water and sewage facilities of the village. The cost of the proposed facilities may not exceed $100,000 and non-Federal users of the system would be charged enough to recover a pro rata share of depreciation, plus costs of the system's operation and maintenance. The existing water and sewage disposal system located within the National Park Headquarters area is ample to take care of the needs of the park and also allow the people of Medora to connect to that system.

This bill has been assigned to the Interior and Insular Affairs Committee, where we are hopeful of getting early and favorable consideration. The Departmental reports last year were favorable, but the shortage of time prevented getting final action on similar legislation.

I am happy to report that the 37th Legislative Assembly of the State of North Dakota in session this year joined in supporting this legislation, and passed Senate Concurrent Resolution 00, introduced by Senators Leland Roen and William R. Reichert, pointing up the need to remedy the situation and thus enhance

the whole Theodore Roosevelt Memorial Park development.

A copy of their resolution follows:

CONCURRENT RESOLUTION COMMENDING THE SPONSORS OF LEGISLATION PRESENTLY IN CONGRESS WHICH SEEKS TO REMEDY THE SANITATION AND WATER SUPPLY FACILITIES OF MEDORA, N. DAK., AND ALSO URGING THE CONGRESS TO FAVORABLY CONSIDER SUCH PROPOSED LEGISLATION

Whereas House Concurrent Resolution U adopted by the 36th legislative assembly provided for the creation of a commission to cooperate with the village board of Medora, N. Dak, in the preservation of that community as a typical pioneer cow town in an area of State and national importance and interest; and

Whereas it has been proposed to restore Medora to its historic appearance at the time of Theodore Roosevelt, the Marquis de Mores, the Eaton brothers, and the colorful Texas and Oklahoma drovers whose longhorn trail herds grazed the Badlands of this State and blazed the routes into western North Dakota, followed by others for more than half a century; and

Whereas the impact of the ever-increasing activities in the adjoining Theodore Roosevelt National Memorial Park upon Medora has resulted in overtaxing and overloading the sanitation and water supply facilities of the village to the extent that the health and well-being of its inhabitants and visitors are seriously imperiled; and

Whereas U.S. Representatives DON L. SHORT and HJALMAR C. NYGAARD have introduced House bills Nos. 2295 and 2270, respectively, and U.S. Senators MILTON R. YOUNG and QUENTIN N. BURDICK have jointly introduced Senate bill No. 98 in the current session of Congress, authorizing the Secretary of the Interior to provide water and sewage disposal facilities to the Medora area adjoining the park with a view to alleviating and correcting such dangerous situation and greatly enhancing the value of the said park development; and

Whereas the proposed legislation provides that such water and sewage disposal systems would be connected to those of the National Park Service in said park, and that the costs allocated to the village of Medora would be repaid by the non-Federal users thereof in such manner and under such conditions as may be determined by the Secretary of the Interior: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the North Dakota delegation in Congress, the sponsors of the aforementioned proposed legislation, be highly commended for seeking to remedy the intolerable situation in Medora, as described herein, through enactment of the legislation proposed in the aforesaid bills; and be it further

Resolved, That the Congress is hereby urged to give favorable consideration to the legislation proposed by said bills to the end that the planned water and sewage disposal facilities proposed therein may be authorized and constructed; and be it further

Resolved, That the secretary of state is hereby directed to mail copies of this resolution to Senators Young and Burdick, and Representatives Short and Nygaard; to Hon. Clinton P. Anderson, chairman, Senate Committee on Interior and Insular Affairs; to Hon. Wayne N. Aspinall, chairman, House Committee on Interior and Insular Affairs; Hon. Stewart L. Udall, Secretary of the Interior; Hon. Conrad L. Wirth, Director, National Park Service; and to Hon. David E. Bell, Director of the Bureau of the Budget, all in Washington, D.C.

ORVILLE W. HAGEN
President of the Senate.
HOWARD F. DOHERTY,
Secretary of the Senate.
R. FAY BROWN,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.

It is my hope that when these improvements are made in the facilities of the town of Medora that many of my colleagues will find the opportunity to visit the park and relax in the pleasant, invigorating atmosphere of the Badlands, where I have lived all my life.

Pioneers for the New Frontier

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Secretary of Commerce, Luther H. Hodges, before the annual convention of the Associated General Contractors of America, Inc., on Monday afternoon, February 27, 1961, at the Statler-Hilton Hotel, Boston, Mass. It was a distinct privilege for me to be present on this occasion and to hear Secretary Hodges' speech:

PIONEERS FOR THE NEW FRONTIER

Governor Volpe, Mr. Miller, distinguished guests, ladies and gentlemen, it is indeed a privilege to be with you at this 42d annual convention of the Associated General Contractors of America, and I appreciate your honoring the Department of Commerce in asking me to be here. I well expect my position as Secretary of Commerce to be my most challenging opportunity for public service. During my career in the business world I dealt at length with the numerous manufacturing problems of the textile industry as well as the merchandising problems of American business and in my capacity as general manager of a large textile corporation, I acquired some experience in dealing with the construction industry through our plant expansions.

Also, my involvement in the program of German industrial reconstruction after World War II, in the work of disbursing American foreign aid funds, as well as in fostering major industrial expansion in the State of North Carolina, afforded me unique opportunities to promote the construction and modernization of facilities which represent the backbone of our complex economic society.

I do not have to tell an informed group such as this about the vital value of the highways, factories, stores, schools, hospitals, homes, and other construction activity in the everyday life of our Nation. Nor can I overlook the size and importance of the industry which you represent, accounting as it does for almost 15 percent of the Nation's total economic output.

However, my experience has convinced me that many of us have failed properly to appraise the economic issues confronting us in the next decade. This is true, even when these issues have major implications for the outlook of the particular segment of the economy with which we are individually involved.

What are the issues we must face up to in the coming years if we are to fulfill our national objectives, our international commitments, and our promises to our children for a secure future of peace, prosperity, and progress?

We face difficult choices dictated not only by self-interest, but by the intense competition of other nations, both friendly and not so friendly. They have pushed modernization of industry and capital investment while we concentrated on producing abundant consumer goods with little regard to the prices or wage levels involved. They stressed research in science and technology—we too often reacted as if the news of their effort was science fiction. They built schools and universities while we in many areas debated problems of Federal aid to education—who learned to copy and improve on our methods of production, while we too often halted our major production facilities because of breakdowns in labor-management relations.

What is the current situation? At present 5½ million of our fellow Americans are unemployed. More than half of our major metropolitan areas are economically depressed. Costs continue to show the impact of a long period of wage-price spirals. We face the possibility of a continuing deficit in our balance of payments. We are almost certain to have an unbalanced Federal budget. We are confronted with difficult problems in the areas of international relations.

Where do we start, and what are the resources which we can bring to the task of meeting our national goals? If the nation's economic recovery and growth are to be energetically advanced, what will be the nature of the governmental actions needed, and what role will the business community play in advancing these goals both in its own interests and those of the Nation?

To get close to home, what is the task for the great construction industry of the United States, an industry which in scope, impact, and potential for releasing creative forces, ranks extremely high in the world? How can you bring fresh reality to your association's slogan, "America Progresses Through Construction"?

A number of specific problems suggest the magnitude of the challenge ahead. As President Kennedy observed in his state of the Union message, 25 million Americans are living in substandard homes.

What an opportunity for building we have here. Unhappily most of these people cannot afford the homes which are being built today by an industry which too often bears the burden of sky-high building costs—high money rates—inflated land values—antiquated building codes—restrictive work practices—and a singular lack of uniformity in design and equipment.

If we are going to build 2 million homes a year rather than the 1¼ million homes of last year, we will need breakthroughs in many areas. Onsite productivity will need to be advanced by both management and labor. Such matters as the most advanced design of equipment and basic materials will need new research with emphasis on practical application.

The monetary and fiscal policies of the Government and the lending policies of pri-

vate investors will need reappraisals. Cost cutting will need to be realized in dramatic ways. The pace of forward planning and execution of plans by local communities to provide supporting facilities such as schools, roads, water, and sewer works to sustain a higher level of new housing construction will also have to be stepped up in tune with the tempo of the times.

Another problem. We have growing classroom shortages despite the many new school construction projects underway and the record level of approvals by voters for financing these buildings. It has been estimated that there are 2 million schoolchildren with inadequate space. The crisis in secondary and college classroom space in particular is approaching an acute phase.

Assuming favorable action by Congress on President Kennedy's program, Federal grants may be forthcoming soon to help alleviate this problem, but money alone will not do the job. Our architectural and construction industries need to adopt new techniques to make sure that the taxpayers' money yields the highest return in this field lest we build structures that fail to meet the changing educational needs of even a single decade. The opportunity here for imaginative leadership is a challenging one.

Can you imagine the kinds of construction opportunities there would be if we really got to work to do a serious job of urban renewal in this country? Can you imagine the kinds of construction prospects we would have if we took full advantage of the opportunity for modernizing our vast industrial machine?

I am not asserting that we face today an immediate shortage of capacity, but I do believe we face a shortage of that kind of efficient physical plant which would make it possible to produce more economically and to perform the research which leads to the production of more new products—thus broadening the scope of both our domestic and foreign markets, and making our products and services more competitive.

Many people have been telling us that it is lower wage levels which have been permitting foreign nations to compete with us effectively in world markets. Although we compete with lower wage scales elsewhere, it seems to me that the truth is that more modern production facilities, more efficient labor practices, better planning, more aggresive salesmanship—in short, greater productivity, superior research efforts, and more initiative have enabled foreign producers to outdo us in many areas of legitimate business competition.

As I told the National Industrial Conference Board recently, we have in this country taken things too easy—we haven't really been selling. However, I see signs of improvement, and a reawakening of our people.

I want to emphasize that a lot of talk and grumbling will not solve our problems—we need to "dig" for business. We in the Government are taking some practical steps. By way of example, we are taking a new hard look at our tax laws and I am hopeful we can do something along this line. Without discussing specific proposals, if you will permit this generality, I will say that we must make our tax laws the instrument of incentive rather than an alibi for indifference.

We need provisions bearing on depreciation allowances to stimulate rather than retard the investment decisions of industry.

As the officer of the Government primarily concerned with the problems of business and industry, large and small, I consult with other Cabinet officers who represent the interests of the farmer, of labor, and of other sectors of our population. We also represent the interests of the Nation as a whole. I know that there is broad agreement among us on those policy matters which are crucial to reversing the present economic downtrend, reducing unemployment, and maintaining the purchasing power of the dollar.

Make no mistake. Whatever our immediate areas of responsibility, we are pulling together as a team. This is important.

This administration believes in fiscal responsibility and balanced budgets. But human wants and national needs are paramount. If necessary to spur recovery, I believe and I know my colleagues believe, that the Federal budget can be used effectively to help, not hinder, our forward progress.

The farmer must be helped to expand his real income so that he reinforces economic growth. Fiscal and monetary policies must be aimed at providing more funds for investment, at lower costs, within a framework of restricting inflationary forces. We must develop urban areas by more practical planning and well-placed financial assistance at all levels of Government. Furthermore, these programs must be carried on side by side with vigorous efforts to help the growing number of distressed areas of the country by long-term redevelopment programs as well as by more immediate relief measures.

You are, no doubt, aware already of the President's actions and proposals in regard to our human and natural resources, such as housing, surplus food, unemployment, old age security, health, taxes, veterans aid, education, minimum wages, and development of our land, water, forests, and minerals.

I might stress to this group our plans for expediting procurement and construction. We have already accelerated our Federal aid highway fund payments for this fiscal year and are urging the States to speed up contracts. Other departments of Government are working along the same lines.

But no short-range measures can substitute for a long-term effort to promote economic growth by fostering private investment, by maximizing our use of natural resources and the further development of energy sources, and finally by strengthening and utilizing to the full our human resources through broad advances in the fields of education and health, as well as through scientific and technological gains.

Underlying all our programs and proposals for their implementation must be stress and concern for achieving greater productivity and price stability. President Kennedy's recently announced Labor-Management Advisory Committee provides a vehicle for moving forward towards these objectives. The Committe is composed of a membership from labor, management, and the public. I have no doubt that in the final analysis the broad economic advances, which we must achieve to nurture our profit motivated economy, throughout the 60's, depends not only on the scientific breakthroughs which are sure to come, but on our development of sound wage and price policies within a framework of healthy competition, friendly Government policies, and a mutual understanding of economic problems by industry and labor and a rededication to the national interest.

A word about the outlook for your industry. The construction analysts in the Department of Commerce tell me that by 1965 physical output in construction should exceed 1959 record levels by 20 to 25 percent. This indicates a volume of new construction approaching $70 billion in current dollars. You also should know that we are closely cooperating with the leaders of your industry in a program to stimulate the participation of American construction firms in foreign work.

This effort, we hope, will open up in the next few years many new uncharted opportunities which should not only expand your profits but also reinforce the accurate image of American know-how in many parts of the world.

Having mentioned the Department of Commerce, I should like to say something more about my views of how this Department can best serve the construction industry as well as the other industries within our sphere of interest.

May I assure you that the Department of Commerce will pursue the goals of this administration with determination, dedication, and vigor. We shall respond with imagination and resourcefulness to the immediate needs of the economy as well as to the long-range requirements for growth. We shall be ever mindful of expanding markets, both domestic and foreign, and sustaining a healthy and attractive climate for investment not only to increase output but to modernize plant and equipment. In short, we in the Department of Commerce shall expend every effort to demonstrate beyond all doubt the superiority of the free enterprise system and the benefits it offers to all.

We cannot carry out our mission without your wholehearted cooperation, your constructive suggestions, and your criticism. We must not only have your figures for our statistics, but we must also have your opinions, outlooks, and proposals whether for administrative actions, for legislative considerations, or for analytical studies.

Since January 20 we have concentrated on sustaining and improving the organization of the Department of Commerce to increase its effectiveness—an effort which will continue with force and inspiration.

With many different areas of responsibility we shall study each to assure that our established programs will meet current and future needs. As examples, our steadily changing transportation picture requires a constant reappraisal of our highway program. Our system of patents encourages and protects invention to stimulate investment and production. Our foreign trade must be expanded by promoting markets and effectively meeting competition abroad. Finally, our domestic economy must operate with the full knowledge embodied in facts and figures to assure that our growth is balanced and our prosperity widespread. As Secretary of Commerce, I shall administer the Department so that it can and will meet its responsibilities.

The major responsibility of private industry is to avail itself of every profitable worldwide opportunity to invest, produce, sell, and grow. We in the Department of Commerce have no pat formulas to offer you to accomplish any of these, but offer valuable tools for your use. We have an abundance of statistical information which makes us the leading factfinding organization in the world. Our veritable stockpile of information covers population, business, science, and technology and many other facets of world developments. This is not a dormant inventory—it is kept up to date and it is useful.

The National Bureau of Standards has conducted research in the field of building technology for many years, and its work in this field is well known to all of you here. In an extension of this activity, the Bureau has recently been designated as a central agency within Government for coordinating a broad program of fundamental fire research to be carried out by the Bureau, the Forest Service of the Department of Agriculture, the Bureau of Mines of the Department of Interior, and several private laboratories.

The goal of this research is additional knowledge of the why and how of unwanted fires, to help reduce the great loss of lives and property in accidental fires. Standards has been working in this field since 1914, developing basic information on ignition phenomena and fire resistance of materials, on flame detection and extinguishment, and on fire growth and spread. This new program is expected to remedy the present

scarcity of technical information required to improve fire fighting methods, and should eventually prove of great value to the construction industry as it seeks to meet the needs of our country.

Our Census Bureau, the Nation's major fact-finding agency, furnishes the construction industry with information on housing starts, the value of construction put in place and related data of importance to your industry. Figures on population growth, migration and family formation and income are also provided by the Census Bureau. All of this material is essential to prompt and accurate appraisals of economic trends. We are making efforts to improve coverage and expedite publication of results.

What is the value of these facts and figures which the Commerce Department furnishes? To quote an expert appraisal of Census programs submitted to the Secretary of Commerce several years ago "a free society is dominated by individual motivations and actions. Freedom of choice is its hallmark; freedom of choice of occupation and career; freedom of entry into business; freedom to buy or not to buy and freedom as to what to buy; freedom in the management of our far flung business system; and all other freedoms of choice that mark our liberties. These very freedoms impose on us the necessity of widespread information." You have these freedoms and choices. We have the information you need to exercise them wisely. Ask for our information and use it.

Furthermore, we analyze and interpret statistics and observations without partiality or favor in order to make clear their implications. We have experts who view current developments calmly and judiciously so that they assume proper proportions.

These facts, figures and analyses pertaining to our economy are yours virtually for the asking. Of course, there is necessarily a limit to the details we can collect and digest, but even that limit is being pushed back daily. I understand that we have been doing just this in our monthly publication devoted to your industry—Construction Review.

In the field of construction, particularly, we are now engaged in a major program of improving the quality, expanding the scope, and increasing the detail of the statistics. When the major objectives of this undertaking are attained all of us will have the "fever chart" for your industry. With total construction, including maintenance and repair, accounting for 75 billion of our 500 billion dollar economy, this body of information will assuredly give us, individually and collectively, greater insight into current economic conditions.

In connection with our dedication to economic progress, we are looking ahead ten years to estimate the direction of construction activities and what factors will influence them. Upon completion, this outlook study will be made available to you and the rest of American industry for guidance in making important business decisions.

The value of much of this information is sometimes difficult to appraise unless it is lacking. A case in point is our effort to stimulate foreign construction by American contractors, which I mentioned earlier.

This export expansion effort is an important part of a program I consider essential to our very existence. A number of you met at the Department of Commerce several months ago with our staff to determine how the Government could assist you in obtaining more foreign contracts. Up to now, great difficulty has been experienced in producing specific proposals, largely because of the lack of reliable information—information about the volume of work involved, information about prices, and information about financing terms. I might add that we are attempting to gather these facts now.

Facts and figures by themselves do not solve problems or bring about progress. They bring problems into focus, suggest solutions, and measure progress. It is up to us, you and the Government to act on these indicators by making sound private and public decisions.

A basic question which now arises is, Can we in Washington, civil servants and political leaders, discharge our responsibilities by simply operating within the Government? The answer is "No." As many of you are aware, it is very easy to lose touch with reality in the Nation's Capital. This places a number of responsibilities on you and your association, where they rightfully belong.

First of all, we in Government cannot make your individual business decisions for you nor would you want us to. You must make your own decisions with the facts you have and with whatever assistance we can give you. Secondly, we cannot make public decisions without your assistance. You must give us basic information; you may even have to tell us what questions must be answered and what kind of economic intelligence is required; you must let us know what your industry problems are; you must offer your solutions to national problems; and you must give us your views on our solutions.

To accomplish these things, we must have lines of communications. If you have them in your association, use them. If not, I would strongly recommend that you set them up. We have in the Department of Commerce, within the Business and Defense Services Administration, the Construction Industry Division. Your association officials are familiar with the officials of this division. They are there to serve you and are your best lines of communication with the Department of Commerce.

You must realize that you, too, have been called upon by the President to ask yourselves not what the country can do for you, but what you can do for your country. I suggest you examine closely any wasteful practices which impair productivity and retard progress. I suggest you not hide from technological advances in the unfounded fear that they may crimp your profits, but welcome and utilize them in the interests of improving the quality and value of your work. Admittedly, you have many obstacles to surmount, but as a major industry, you have the stuff to be pioneers for the New Frontier.

To give emphasis at the expense of repetition, I wish to conclude by saying once again that the Department of Commerce is dedicated to the administration program of providing our free enterprise system with the means of strengthening and enriching our national economy. We aim to do this by not only collecting, analyzing, and disseminating vital information but also by encouraging domestic and foreign trade as well as by studying and developing solutions to widespread business problems.

To do this, the Department needs and welcomes your participation and cooperation. Let us work together in the service of the Nation.

Constitutional Questions Involved in Connection With the Pending School Assistance Bill

---

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 22, 1961

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting legal opinion in the form of a letter sent to me in relation to the constitutional questions involved in connection with the pending school assistance bill, and particularly applicable to secondary and elementary private schools, by Prof. Arthur E. Sutherland, of the Harvard Law School.

Professor Sutherland is recognized as one of the outstanding authorities in the country on constitutional law. The views and opinions of Professor Sutherland, particularly on constitutional questions, is worthy of most profound consideration.

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., March 13, 1961.

Hon. JOHN W. McCORMACK,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN McCORMACK: This letter I write in answer to the request from your office for my views on the constitutionality of Federal legislation providing long-term loans of public funds alike to public and nonprofit private schools, for school purposes generally, even where the private schools aided are in many instances connected with or controlled by a church. I am very much obliged to you for sending to me copies of H.R. 4970 in connection with your inquiry; I have read the bill with much interest. Of course it is not, in its present form, intended to make any such provision as this letter discusses.

What I say in this letter is related solely to the issue of constitutionality. Quite different considerations arise in debate on legislative policy, or in marshaling reasons which might underlie the Presidential veto of any legislative measure. A Senator or a Representative has many responsibilities in the preparation of legislation in addition to those of compliance with the Constitution. Much legislation that could be within the constitutional power of the Congress may still be unwise and undesirable. Similarly the veto power is not entrusted to the President solely on questions of constitutionality; Presidents often veto legislation because they deem it unwise and not conducive to the general welfare of the United States even where it is clearly within the range of constitutional lawmaking. I am sure that these considerations are all entirely familiar to you; I here mention them at the outset only to make sure that we understand alike the purport of your inquiry, which went only to the constitutional power of the Congress.

For the purposes of this letter then, I assume, for example, a measure providing loans on terms similar to those provided by title 4 of the Housing Act of 1950 (12 U.S.C. 1749), and following. Suppose that the Congress should be convinced that better elementary and secondary education was necessary to the general welfare of the United States, to its capacity to produce necessary scientists and technicians to aid in our national defense, and to produce the necessary educated men and women to conduct our complex governmental and private economic system. The Congress might consider that our children and youths must look to the elementary and secondary schools in this country for a firm grounding in such basic building blocks of education as an accurate and understanding use of the English tongue; elementary mathematics; the history of the United States and its neighbor nations; some knowledge of the geographical fundamentals of the United States and of the rest of the world, and of our own resources and those for which we depend on other nations; a reasonable familiarity with the structure of our National and State Governments, with our constitutional ideals and practices; some knowledge of the basic prin-

ciples of the sciences on which we depend more and more for existence; and some acquaintance with some of the languages used by our friends of other countries. The Congress might also be impressed by the useful technical skills taught in many of our school systems.

Suppose, further, that the Congress should decide to promote the national welfare in aid of these educational objectives by making loans for, say, 50 years, at not more than 2¾ percent interest to such of our public and private nonprofit schools alike as attain reasonable standards. Would these loans violate the Constitution of the United States if a large number of the private schools to be aided should be church schools, including in their curriculums not only such standard lay learning as I have described, but also instruction in the doctrines of a religious faith?

The principal constitutional clauses which bear on this question are article I, section 8, clause 1, which provides that "the Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts, and provide for the common defense and general welfare of the United States"; and clause 18 of the same section "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

This general grant of power is to some extent limited by various other clauses. The one here relevant is in the first part of the first amendment: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

This portion of the first amendment contains two quite different provisions. The last six words eliminate from possible congressional power any law prohibiting the free exercise of any religion. Such a restriction is not relevant to this letter. I hear of no proposal for compulsory participation in religious exercises, nor for compulsory abstention from, or penalty for, religious exercises. Such a measure would raise considerations quite different from those discussed in this letter. The only question you put to me, as I understand it, is whether the Congress is devoid of constitutional power to make such long-term loans as I have described because they would be provided in a statute which should be considered a "law respecting an establishment of religion."

Relevant to this study are several possible sources of information. One of these concerns the frame of mind of the Senators and Congressmen who proposed the first amendment, and that of the State legislators who ratified it. This is a difficult inquiry; the men involved were very numerous; the records of their motivation are not complete; different men may well have been prompted by different ideas; and one who engages in this research may begin to doubt whether the Congress in 1961 should have its powers delimited by an uncertain guess at the frame of mind of men who lived 170 years ago.

Another source of guidance as to the meaning of the establishment clause is study of the decisions handed down by the Supreme Court of the United States. Under our system that Court has the last word in constitutional construction, but judgments on establishment are hard to find. Justices of the Supreme Court, in the course of opinions, have on various occasions expressed ideas having a general connection with establishment; but American lawyers traditionally draw a rather sharp distinction between those things which a court actually decides, and those expressions made by the way, obiter dicta, off the immediate issue, not directly involved in the adjudication. Thus the Everson case (330 U.S. 1 (1947)) which arose under the 14th amendment, presented an issue described by Mr. Justice Black in the Court's opinion as follows (the case involves schoolbus fares).

"The only contention here is that the State statute and the resolution, insofar as they authorized reimbursement to parents of children attending parochial schools, violate the Federal Constitution in these two respects, which to some extent overlap. First. They authorize the State to take by taxation the private property of some and bestow it upon others, to be used for their own private purposes. This, it is alleged, violates the due process clause of the 14th amendment. Second. The statute and the resolution forced inhabitants to pay taxes to help support and maintain schools which are dedicated to, and which regularly teach, the Catholic faith. This is alleged to be a use of State power to support church schools contrary to the prohibition of the 1st amendment which the 14th amendment made applicable to the States."

The majority of the Court found no constitutional obstacle preventing this reimbursement for bus transportation. But in his opinion Mr. Justice Black also wrote: "The 'establishment of religion' clause of the first amendment means at least this: Neither a State nor the Federal Government can set up a church. Neither can pass laws which aid one religion, or prefer one religion over another. Neither can force nor influence a person to go to or to remain away from church against his will or force him to profess a belief or disbelief in any religion. No person can be punished for entertaining or professing religious beliefs or disbeliefs, for church attendance or nonattendance. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups and vice versa. In the words of Jefferson, the clause against establishment of religion by law was intended to erect 'a wall of separation between church and State.'"

While all lawyers properly pay respect to such dicta, still statements of this sort, not directly relevant to the decision of the Court, do not carry the weight, as precedent, of an actual adjudication.

A third source of guidance can be found in the decisions of the Congress and the President of the United States appearing in the enactment and approval of legislation. Members of the Congress and the President are of course bound by oath to support the Constitution, and they conscientiously carry this out. Hence their judgment, expressed in the enactment or approval of legislation, properly has weight as precedent, particularly where, as in the field we are discussing, there is very little judicial decisional matter directly relevant. I shall in this letter briefly discuss these three sources of constitutional material, the opinions of the sponsors of the first amendment; judicial opinions; and legislative enactment and Presidential approval as an indication of constitutionality.

The subjective intention of the congressional draftsmen of the first amendment, and of the State legislators who ratified it are not clear. In 1789 when the Congress proposed the Bill of Rights, favored religions were supported by taxation and other measures in a number of States. Massachusetts continued such tax support until 1833. The Members of Congress who proposed the first amendment had before them as an example of establishment the Established Church in England; they knew or could have known of controversies over tax support for churches in various States. Part of the motivation for the first 10 amendments, which took effect in 1791, was a desire to protect States rights, as appears from the terms of the 10th amendment. Some who favored the first amendment may have thus desired to protect their existing State support for a favored church from Federal interference by a law respecting an establishment of religion. Others may have felt an opposition to any and all governmental intervention in religion. But the earliest Congresses provided for chaplains in the U.S. Army (see act of March 5, 1792, vol. I Stat. at L. 241); the earliest legislators must have recognized that no completely tight wall was possible between church and state. The words of the first amendment are not explicit on federally supported schools. It would be difficult, and probably not useful, to guess at whether the people who 170 years ago proposed and ratified the establishment clause would have thought it forbade the suppositious school-loan bill I have described.

Adjudications of the Supreme Court on Federal legislation challenged under the establishment clause are hard to find. (I here do not refer to such obiter dicta as I mention earlier in this letter, but to adjudications on the merits.) Perhaps the small number of such adjudications can in part be explained by the doctrine in the Federal courts that a Federal taxpayer, not otherwise affected by an act of Congress has no standing in court to argue that the statute is unconstitutional. Thus in 1928, the U.S. Court of Appeals in the District of Columbia held that a taxpayer had no standing to challenge the constitutionality of the payment of salaries to the Chaplain of the Senate, of the House of Representatives, the Army, or the Navy on the ground that this payment constituted a religious establishment violating the first amendment. *Elliott* v. *White* (23 F. 2d 997).

There are a few cases which approach the problem of this letter, though none is precisely in point. In 1899, a man named Bradfield sued the Treasurer of the United States to enjoin the payment of moneys to a hospital in the District of Columbia on the ground that, as the hospital was under the control of a Roman Catholic religious order, the payment would constitute an "establishment of religion." Passing over the question of the taxpayer's standing to bring the action, the Supreme Court, through Mr. Justice Peckham, unanimously held that the hospital was a secular corporation, and although its individual members might all be members of a religious order of the Roman Catholic Church, this would not characterize the hospital as a religious or sectarian body. The Court, therefore, affirmed the judgment of the lower court dismissing the bill.[1] In 1908 the Supreme Court decided *Quick Bear* v. *Leupp* (210 U.S. 50). By treaty with the Sioux the United States in 1868 had agreed to furnish a teacher and schoolhouse for every 30 Sioux children "who can be induced or compelled to attend." To carry out this provision the Congress appropriated funds, and in 1896 Francis E. Leupp, Commissioner of Indian Affairs, proposed to make a contract with the Bureau of Catholic Indian Missions, a Roman Catholic organization, by which the United States would pay funds to that Bureau in order to maintain and educate Sioux Indian pupils at the St. Francis Mission Boarding School on the Rosebud Reservation in South Dakota. Quick Bear, a member of the Sioux Tribe of the Rosebud agency brought an action in the Federal courts to enjoin Commissioner Leupp from carrying out the arrangement. The Supreme Court, dismissing the action, said of the constitutional question "Some reference is made to the Constitution, in respect to this contract with the Bureau of Catholic Indian Missions. It is not contended that it is unconstitutional, and it could not be."

[1] *Bradfield* v. *Roberts*, 175 U.S. 291 (1899).

In support of this statement, the Court cited *Bradfield* v. *Roberts*, the District of Columbia hospital matter which I described above.

There are a few cases discussing the constitutionality of "establishment" by a State, after the enactment of the 14th amendment in 1868. I have already mentioned the *Everson* case (333 U.S. 1, (1947), which upheld New Jersey payments for bus transportation of parochial pupils equally with others. In Mr. Justice Black's opinion in that case sustaining the constitutionality of the payment the Court stressed its concern for the safety of schoolchildren on the highways. The case could be thought of as upholding the New Jersey statute authorizing the payments, on the ground that the State legislature primarily considered the benefit to the children, not the benefit to the parochial school which was only incidental to the other primary objective. Another case involved provision by the State of Louisiana of lay textbooks for children in parochial as well as public schools. This was *Cochran* v. *Louisiana Board of Education* (281 U.S. 370 (1930)). Citizens and taxpayers in Louisiana brought suit in the State courts in an effort to enjoin Louisiana officials from paying out State moneys for this purpose. The plaintiffs argued that this violated the 14th amendment in that private property was taken by the State and used for private purposes, that it was so taken "to aid private, religious, sectarian and other schools not embraced in the public educational system of the State by furnishing textbooks free to the children attending such private schools." The Supreme Court upheld the State statute providing for the textbooks. Pointing out that among the books none was adapted to religious instruction, the Court held that the taxing power of the State was exerted for a public purpose. "The legislation does not segregate private schools or their pupils as its beneficiaries or attempt to interfere with any matters of exclusively private concern. Its interest is education broadly; its method, comprehensive. Individual interests are aided only as the common interest is safeguarded."

Some mention should here be made of the opinions in *Illinois ex rel. McCollum* v. *Board of Education* (333 U.S. 203 (1948)). Here a parent of a child in the Champaign, Ill., public schools, the parent being also an Illinois taxpayer, succeeded in enjoining a program under which teachers of religion not paid by public funds of any Illinois municipality came into the public schools each week, for 30 or 45 minutes, depending on the grade, to give religious instruction on the school premises to children of their respective faiths. Children not desiring to participate were allowed during that period to go to other places in the school building to pursue secular studies. Mr. Justice Jackson, in writing a specal concurring opinion in the McCollum case, pointed out that here, unlike the Everson case, there was no showing of any resulting measurable burden upon the complaining taxpayer. He points out that perhaps the religious classes might be said to add some wear and tear on the public buildings and they should be charged with some expense for heat and light, but he adds that the cost was neither substantial nor measurable and "no one seriously can say that the complainant's tax bill has been proved to be increased because of this plan." To sustain the jurisdiction of the Court in the McCollum case, recourse might be had to the personal embarrassment imposed upon the child for whom the parent spoke. The boy was obliged to dissent from his classmates, to claim exemption from religious instruction, in their presence, to embarrass himself by being different. The McCollum case, therefore, can be thought of as presenting a case of individual hardship imposed on a schoolchild, on religious grounds, which is quite a different thing from a religious objection put forward when no one is individually harmed. That McCollum may have to be sustained as a case of individual hardship appears from the later judgment in *Doremus* v. *Board of Education* (342 U.S. 429 (1952)), in which the Supreme Court refused to pass on the constitutionality of a New Jersey statute providing for reading of Bible verses in public schools on the ground that the facts presented no "case or controversy," essential to jurisdiction of a Federal court. The only standing of the plaintiff was that of a taxpayer, he had no child in school when the case reached the Supreme Court; and there was no demonstration of any State expenditure. The decision in Doremus appears to take away whatever force McCollum might seem to have as a judgment concerning a State establishment of religion, except as the Illinois arrangement may have caused individual hardship.

One ends with the conclusion that the Supreme Court of the United States has never held that a loan such as that in the statute which I outline above, would be in excess of congressional powers because of the first amendment. Insofar as actual adjudication on State statutes is concerned, the Everson and Cochran cases indicate the contrary. It may be significant that in those cases the aim of the legislation was not religious indoctrination but the safety and the lay educational advancement of the schoolchild, the aim which I assume the Congress would have if it were to provide for such loans.

Congressional and executive action furnishes more precedents concerning Federal aid which includes religious schools than can be found in judicial determinations. An unsuccessful proposal for a constitutional amendment is somewhat enlightening. The "Blaine amendment," passed by the House of Representatives in August 1886 by a vote of 180–7, proposed, among other things, to make a constitutional directive that "no public property, and no public revenue of, nor any loan of credit by or under the authority of the United States, or any State, Territory, District, or municipal corporation, shall be appropriated to, or made or used for, the support of any school, educational or other institution, under the control of any religious or antireligious sect, organization, or denomination, or wherein the particular creed or tenets of any religious or antireligious, organization or denomination shall be taught."

The amendment failed to gain the necessary two-thirds vote in the Senate however. But the offer of this Blaine amendment could be thought significant because its congressional sponsors evidently thought the first amendment insufficient clearly to inhibit appropriation, by the U.S. Congress, of funds for the purposes supposed earlier in this letter. The Blaine amendment is set forth in footnote No. 6 in the opinion of Mr. Justice Black in the *McCollum* case (333 U.S. 203 at p. 219).

A number of Federal statutes make grants of Federal funds in aid of some educational end, and include among the proposed recipients of distribution, nonprofit private institutions which may be under sectarian control. Instances are more numerous above the high school level than at or below it. Grade school children get the benefit of funds distributed under the National School Lunch Act, June 4, 1946 (42 U.S.C. 1760). Under this legislation (see 42 U.S.C. 1753) if the State is barred by its laws from distributing funds to nonprofit private schools of any category the United States may distribute funds directly to such nonprofit private schools.

The National Defense Education Act of 1958 provides for loans of Federal funds to elementary and secondary schools including private schools of a nonprofit character, for the purpose of equipping these schools with scientific and modern language instructional equipment. Congressional committee reports on this legislation (see United States Code Congressional and Administrative News, 1958, page 4731 and following) show the purpose of the Congress to increase the excellence of education in subjects thought necessary in our defense and foreign relations efforts.

Title IV of the Housing Act of 1950 (12 U.S.C. 1749), and following, provides for loans of Federal money for a period up to 50 years, at a rate of interest of 2¾ percent or less, to provide "housing and other educational facilities for students and faculties." At any public or nonprofit private educational institution, if it offers at least a 2-year program leading toward a baccalaureate degree. These loans, thus by the terms of the statute, go to institutions above the high school level, but the distinction in principle between a junior college and a senior high school is not entirely clear.

The United States is authorized by legislation (see 42 U.S.C. 2051) to make grants for reactors to "institutions or persons." The United States provides scholarship funds to various classes of deserving students: these funds in due time come to the institutions which the students attend. The GI bill of rights is a familiar example. Also familiar, so much so that it goes almost unnoticed, is the Federal provision of Reserve Officer Training programs leading to Army, to Air Force, and to Navy commissions. (See 10 U.S.C. 4382 and following.) Many of these programs are in effect at colleges and universities under the control of religious orders.

Certain common characteristics are observable in all this legislation. In the first place it does not make grants or loans to churches, religious missions, etc. The benefits go either to students, or to institutions training students; the benefits go to public and private institutions alike; they go to private institutions regardless of their religious or nonreligious affiliation. The religious affiliation of a school or college receiving a loan, or of a school or college to which students resort under scholarships, is therefore incidental and is not singled out by the Federal legislation. In the second place, there is in each of these pieces of legislation an observable end other than the cultivation of religion. Federal funds go to strengthen the Armed Forces, to build up our national scientific or linguistic capabilities or, as in the grants under the Housing Act of 1950, to build up our educational system generally.

The comment might be made that in none of these instances is there a Federal loan or grant of money to an institution to be spent however the institution sees fit, or to be spent as the institution sees fit except for religious instruction. This fact is notable; but perhaps the distinction between existing Federal provisions and an across-the-board benefit is more apparent than practical. Suppose, for example, a junior college with limited funds, needed essential faculty housing and student dormitories. A 50-year Federal loan for such precribed building under the Housing Act of 1950 would release the college's funds for other purposes: some of the college's general funds which otherwise would necessarily be used for student housing might then be available for religious instruction. An elementary or secondary school needing science and language equipment, but with a limited budget, has funds released for general educational purposes when the United States provides funds for scientific and linguistic purposes.

It seems to me that a congressional loan such as that outlined earlier in this letter, to raise the standard of instruction in basic lay educational subjects might well in its terms exclude the direct expenditure of its

funds for religious or sectarian purposes. But the indirect effect on a sectarian school would however be to release for general purposes some funds perhaps otherwise used for lay instruction. This possibility has not in the past inhibited the Congresses which passed such legislation as I have mentioned, or the Presidents who approved it. No governing distinction is apparent to me between these legislative precedents and the hypothetical measure which I described at the beginning of this letter.

During the mid-1930's, many writers sharply criticized the American doctrine of judicial review of the constitutionality of social and economic legislation enacted by the Congress. None of that criticism was directed against unconstitutionality on establishment grounds. Indeed I know of no case in which the Supreme Court ever had held any act of Congress invalid as a "law respecting an establishment of religion." But the Supreme Court for a number of years up to 1935 and 1936 did hold unconstitutional some Federal legislation on the ground that it exceeded the powers entrusted to the Congress by the Constitution, that, according to the then comparatively more limited view of congressional power over interstate commerce granted by article I, section 8, clause 3, it was ultra vires the national government. Examples are *United States* v. *Butler*, (296 U.S. 1 (1936)) and *Carter* v. *Carter Coal Co.*, (298 U.S. 238 (1936)), holding unconstitutional the Agricultural Adjustment Act of 1933 and the Bituminous Coal Conservation Act of 1935.

Since 1936 the Supreme Court has held no Federal statute unconstitutional except where it imposed what the Court found to be an unreasonable hardship or injustice on some individual. The cases invalidate laws

(a) creating a presumption that, where an exconvict is in possession of a firearm, he received, shipped, or transported it in interstate commerce. *Tot* v. *United States* (319 U.S. 463 (1943)).

(b) prohibiting payment of any salary to three named persons, save for jury duty or military service. *United States* v. *Lovett* (328 U.S. 303 (1946)).

(c) penalizing, in self-contradictory terms, one who refuses to allow a Federal officer to inspect a food factory. *United States* v. *Cardiff* (344 U.S. 174 (1952)).

(d) providing for separate schools for Negro and white children in the District of Columbia. *Bolling* v. *Sharpe* (347 U.S. 497 (1954)).

(e) subjecting a former serviceman to trial by court-martial, after his discharge, for offenses committed while in service, *United States ex rel. Toth* v. *Quarles* (350 U.S. 11 (1955)).

(f) providing for trial by court-martial of dependents of servicemen, stationed overseas, for capital crimes. *Reid* v. *Covert*; *Kinsella* v. *Kreuger* (354 U.S. 1 (1957)). In 1960 the Supreme Court extended this holding to include dependents charged with noncapital crimes, *Kinsella* v. *United States ex rel. Singleton* (361 U.S. 234 (1960)); and civilian employees charged with capital or noncapital offenses, *Grisham* v. *Hagan* (361 U.S. 278 (1960)), *McElroy* v. *United States ex rel. Guagliardo; Wilson* v. *Bohlender* (361 U.S. 281 (1960)).

(g) depriving of U.S. nationality one convicted by court-martial of wartime desertion, and dismissed or dishonorably discharged from the Armed Forces. *Trop* v. *Dulles* (356 U.S. 86 (1958)).

As the school-aid legislation I here discuss would not impair any person's free exercise of religion, it would have to be judged as a question of ultra vires. The absence of any ultra vires holding on Federal legislation by the Supreme Court since 1936 increases my feeling that if in some way such a school-aid statute could be brought before that Court, it would be upheld.

I apologize for the length of this letter. The subject is long and complex. The effect of the relevant constitutional provisions is not clear and evident; it must be guessed at, as a matter of emphasis and degree. But assuming that the existing Federal aid to education is constitutional, which seems to me a reasonable assumption, the distinction between these existing programs and the proposal which I discuss is not sufficiently evident to persuade me that a measure providing for long-term loans of the character which I have described, to aid education in basic lay subjects, would conflict with the provisions of the first amendment.

Respectfully yours,

ARTHUR E. SUTHERLAND.

Driver Training, Philadelphia Style

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. TOLL. Mr. Speaker, the safety of our citizens is of universal importance. In Philadelphia the education of our young people in safe driving habits promotes the welfare of our community. The program is of such importance that I have included in these remarks a report written by one of our distinguished insurance leaders, Mr. Thornley B. Wood, and which appeared in the March 18, 1961, issue of the U.S. Review:

DRIVER TRAINING, PHILADELPHIA STYLE

(By Thornley B. Wood)

"Sleepy Philadelphia" is an epithet that makes the better informed cringe, yet all the while hoping that the others will speedily come to appreciate Philadelphia's true merit. For example, an area in which our city (far from being asleep) is awake and leading the pack is the driver training program of our Philadelphia Board of Education.

Insurance companies aware of the value of driver training allow a 10 percent reduction in the automobile insurance rates, yet one is astounded to learn that many cities and even whole States are doing little or nothing to further driver training, which has so definitely demonstrated its value in the curtailing of accidents. Contrast the indifference of other areas with the progress our Philadelphia School Board has made with driver training in recent years. The following is lifted from the bulletin of the Agents and Brokers Association:

"Most active members know (as another one of our public relations activities) our local association has successfully sponsored the distribution of a booklet entitled 'Understanding Automobile Insurance.' As a help in traffic safety and driver training, it is terrific.

"Our Philadelphia Board of Education, as many do not know, maintains a tremendous driver training program. Since our booklet avoids any attempt to sell insurance, they welcomed our offer to supply the book to their students taking driver training.

"Now for an amazing word. Do you really know how completely our school board sponsors and supports driver training? Well, this deserves 'honorable mention.' "

"The board employs 34 full-time teachers.

"The board maintains 37 driver education cars.

"The student carries a 5-month course of training.

"The course comprises 36 hours, of which the student is 8 full hours behind the wheel.

"Each student who passes, receives a wallet-size card entitled 'Driver Education Certificate.'

"Every passing student surely carries this with pride and satisfaction. His badge, if you will, of a safe driver:

" 'SCHOOL DISTRICT OF PHILADELPHIA DRIVER EDUCATION CERTIFICATE

" 'This is to certify that _____ has satisfactorily completed the course in driver education consisting of ____ hours of classroom and ____ hours of practice driving instruction as prescribed by the board of public education.

" 'Date of issue _____, superintendent of schools _____; operator's plate number _____; and _____.

_____ _____

Signature of student. Signature of principal.'

"You may get a better appreciation of what our school district is doing, when you recall that New York State, as a supplement to their present high school driver training program, received in February, this year, a proposal to raise $10 million to finance driver training in every high scool in the State."

The successful big league ballplayer must be more than a good hitter or a good fielder. Indeed the term "good glove no stick" may well sound his death knell as a pro. He must be a well-rounded performer. And here, too, our board hits the ball. In addition to the 37 cars and 34 teachers (full time) the board maintains nearly 20 different supplementary safety education facets. To name just a few—

1. The division of safety education consists of a director and a supervisor of safety patrols supplemented by six regularly assigned police officers and three firemen. The staff works with the advice of a schools' advisory committee on safety consisting of representatives from all levels and areas of the school system.

2. The assignment of six traffic policemen to full-time service in schools has been unusually successful as a cooperative venture between the schools and the Philadelphia Police Department. The policemen give safety talks in the schools to boys and girls and are of special service to safety coordinators, safety patrol sponsors and patrols, faculty groups, school councils, home and school asosciations, classroom groups, driver education classes, traffic survey committees and community groups.

3. Six thousand safety patrol boys who render fine, efficient service guarding the safety of children crossing the street.

4. Seven hundred and twenty women crossing guards under the jurisdiction of the Philadelphia Police Department. They are rendering a fine service to the schools and the community.

5. Teenage safety conferences: A most elaborate program, terrific in its impact on the teenagers.

Rome was not built in a day; hence one should point out that this work did not develop overnight—to summarize:

The driver education program was instituted in the Philadelphia public schools in September 1950 by the board of education. Many groups advocated and supported the formation of the program in the public schools, including such organizations as the Automobile Club of Philadelphia (AAA), the Keystone Automobile Club, the safety council of the Chamber of Commerce of Greater Philadelphia, the Philadelphia Automobile Trade Association, automobile dealers and numerous other civic and commercial interests.

Cars for the driver education program were furnished to the school district of Philadelphia by the Philadelphia Automobile Trade Association from 1950 to 1954. During 1955

and 1956 cars were furnished by the Associated Ford Dealers of Philadelphia. In September 1957 the school district of Philadelphia purchased its own cars for the program. A program of car replacement was instituted in 1960 on a basis of one-third annual turnover.

So we might go on and on. All this has come into full bloom largely because of the efficient coordination and supervision of Dalbor W. Kralovec, director, division of safety education.

Now finally the $64,000 question. Does safety education and driver training pay? Is it worthwhile? Here is your answer—from State statistics—

1. The accident rate for the untrained group is three times as great as for the trained group.

2. The arrest rate for the untrained group is five times as great as for the trained.

Startling? Sobering? Commit those four lines to memory and may they impel you to greater support everytime safety education driver training is the topic.

"United States Unprepared for Showdown in Laos," Pearson States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Drew Pearson that appeared in the Wilkes-Barre Record of March 18, 1961, on the position of the United States in the face of serious developments in Laos.

The column follows:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

Drew Pearson says: "United States unprepared for showdown in Laos; U.S. Ground Forces have old-fashioned weapons; Red army is far more modern."

WASHINGTON.—The United States is now facing a serious showdown in Laos and a possible showdown over Berlin with ground weapons so inferior and obsolete that the American public would hardly believe the facts.

Communist intelligence has a pretty good idea of the facts, however, so the American public has a right to know them.

The raw truth is that our ground armies are not even equipped with second-rate weapons. They are nearer 10th rate.

Of the Army's present weapons, 70 percent date back to World War II, another 10 percent are of a vintage even more ancient, some designed as far back as World War I. Even the new weapons are mostly warmed-over World War II models, slightly modified and modernized to give them a new look.

The paradoxical fact is that the Army drifted into this state of unpreparedness under a President who had spent most of his life in the Army and once served as Chief of Staff.

On the Plaine Des Jarres of Laos, meanwhile, Red rebels are bristling with modern, airlifted Soviet arms. These not only are superior to the surplus U.S. arms we have turned over to Lao Government troops, but superior to the equipment our own GI's would carry if they should be rushed to Laos.

Or, suppose Cuba's beligerent, bewhiskered Fidel Castro should order an attack upon the U.S. Naval Base at Guantanamo. His motley militia would be better armed than the defending marines.

In contrast to the American arsenal, Russia has completely reequipped the vast, 175-division Red army since World War II and has long since started to produce a second round of weapons. On top of this the Soviets have had enough left over to supply their satellites and a few neutral nations with modern arms.

The U.S. Army, of course, has made a big noise about its wonder weapons. In effect, this was whistling to keep its courage up. Press releases have described such marvels as a combined howitzer-mortar rocket which can be fired from the shoulder, rifle cartridges which shoot three bullets at once, mobile radar that tracks enemy shells back to their source, jeeps which float on compressed air and can soar over obstacles. But these are in press release stage only. Unfortunately the weapons themselves have never progressed beyond the testing stage.

Even less exotic weapons, such as the M–14 rifle, have reached but few troops—notwithstanding planted Army stories to the contrary. A rash of Pentagon publicity in January 1960 described the M–14 as "a versatile weapon capable of firing faster than a machinegun" and announced it was already going to the 101st Airborne Division.

But the real fact is that the M–14 is merely a beefed-up M–1 rifle of World War II days with a longer bullet clip and a new bore for firing NATO ammunition. Furthermore the first M–14's weren't issued to the 101st Division until a year after the planted propaganda, then only in limited quantities.

PUBLICITY VERSUS PROCRASTINATION

The Army has also issued proud press releases about its new, heavy antitank gun, the M–56. This is a product of General Motors' Cadillac Division and was ready to roll in 1952. But the generals couldn't agree whether to put the gun into production or make it lighter for easier airlift.

Former Secretary of Defense Charlie Wilson, who came to the Pentagon from General Motors in 1953, was afraid to break the deadlock among his generals lest he be accused of favoring his former company which had developed the gun. General Motors then dispatched its vice presidents to go over Charlie's head and bring pressure on members of the Senate and House Armed Services Committee to activate the contract.

Even so, and despite the Army boasts, the M–56 still hasn't been approved for production.

In ground strength, Russia has 175 combat divisions, the United States has 14, of which only 11 are considered combat worthy.

All Soviet divisions down to the battalion level are equipped with chemical rockets. The U.S. Army has developed similar rockets, but none has been issued to the troops. Only the 101st Division is supplied with gas masks, and these are of dubious value against new gases.

All Soviet Divisions are equipped with modern heavy and medium tanks, less than a dozen M–60 medium tanks are scattered throughout the Army.

All Soviet combat troops carry up-to-date, automatic rifles and machine guns. Most American troops are still using World War II guns. Visitors have even spotted World War I weapons at U.S. outposts on the edge of the Iron Curtain.

IKE'S BUDGET CUTTING

Most Soviet troops ride in modern, armored personnel carriers. American GI's still travel in inferior M–59 carriers left over from World War II. More modern M–113 carriers are on order, but only the first few models have come off the production line.

Soviet divisions are equipped with self-propelled, multiple-rocket launchers which shoot 240 milimeter and 280 milimeter rockets. U.S. divisions have nothing like it.

The Russians also have a mightly 400 millimeter self-propelled mortar. The United States has nothing comparable.

In most other weapons the Red army surpasses the U.S. Army in quantity, quality, mobility, and firepower.

Reason for the American decline can be traced directly to Eisenhower's budget-first policy. Ike didn't allot the Army enough to keep its conventional weapons up to date and build up a nuclear arsenal at the same time. The Army preferred to spend its money on modern missiles and nuclear warheads.

Congress appropriated $382,600,000 for Army modernization during the 1960 fiscal year. All Ike permitted to be spent was a mere $38 million.

For fiscal 1961, Congress set a compromise figure of $158 million. But Ike released only $67 million for modern conventional weapons.

This is the reason President Kennedy is now desperately short of the arms needed to keep Laos from falling to the Communists. He has called Premier Khrushchev's bluff in a message delivered by American Ambassador Llewellyn Thompson. If the Reds go ahead with their offensive, however, Kennedy cannot stop them except with the nuclear weapons which are reserved for all-out war.

Best U.S. Product Not Dollar, the People

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. THORNBERRY. Mr. Speaker, several exchange students from Chile recently have been guests at the University of Texas. They have lived with our students, they have gone to cattle auctions and basketball games, and they have seen our American life and our people. The conclusions which our guests from Chile have drawn from their visit are described in an excelent article, appearing in the Austin Statesman, Austin, Tex., by Marj Wightman.

I ask unanimous consent to insert this article in the CONGRESSIONAL RECORD:

[From the Austin (Tex.) Statesman, Mar. 3, 1961]

BEST U.S. PRODUCT NOT DOLLAR, THE PEOPLE

(By Marj Wightman)

We always thought dollars were America's best product, but they're not. Your best product is people."

This change of emphasis from decimal points to heartbeats sums up the impressions soon to be taken home by a group of Chilean students who have just spent 1 month on the University of Texas campus.

"I lived in the Delta Zeta Sorority House, was even initiated into the group," Ana Maria Jiminez, a University of Chile at Valparaiso English major said.

"There are some things we don't understand, things like the integration problem you have up here. But, then, we have only one race in Chile so perhaps there is no reason for us to understand your problem.

"But, on this and on other things I tried to think like the girls in the sorority house, like an American student. And you know," this Chilean coed who speaks English with little accent said, "It wasn't too hard."

Students, after all, are pretty much alike all over.

But university men and women in South America are much more conscious of national and international problems, according to Jose Jara, a philosophy student at the University of Chile in Santiago believes.

"In Chile if we don't get what we think the university should have all of the students go on strike. Our student leaders are members of the national political parties and it's all very effective," this intense looking young philosopher smiles.

"But, what has impressed me most up here is the intense interest of the people in all of Latin America. I just don't understand," the young man from Chile grinned, "why your newspapers don't reflect this.

"Yes, all the papers up here seem to concentrate so much on local interest and local activities," Senorita Jimimez added. "We miss the overall view of the Chilean news coverage."

Frederico Willoughby will carry more than a notebook filled with notes and maybe a few copies of American newspapers back to his classes at the University of Chile at Santiago.

"Just honorary, of course," the young future newspaperman grins. "But it was wonderful the way those boys in the fraternity house made me feel at home.

"I even went home with one of my fraternity brothers to Lampassa and saw a cattle auction.

"And the people in the big cities were so friendly, too. I had always thought anyone who lived in New York was cold, but they'd hear us speaking our own language and came over and ask us if they could be of help."

"This happens in Houston, too," Senorita Jimimez, adds. "And at the sorority house. One day I said I'd like to go to a basketball game because I'd never seen one. The next night—off we went to see Texas play."

"Yes, I think the memories of people are what we'll take home to Chile," Willoughby said. "They are America's best product."

Traffic Safety Hearings Scheduled March 27 and 28, 1961

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. ROBERTS. Mr. Speaker, on next Monday and Tuesday, March 27 and 28, the Subcommittee on Health and Safety will conduct hearings on H.R. 903, by the gentleman from Florida [Mr. BENNETT]; and H.R. 1341, the so-called safe cars bill which I am sponsoring.

Both bills deal with the installation of certain safety devices into automobiles and are aimed at curtailing the terrible toll of life and health being taken annually on American highways, roads and streets.

H.R. 1341, which would require certain safety devices on automobiles purchased by the Federal Government, is the same bill which this House passed last year but which was not acted upon by the Senate before adjournment.

We believe we will have an interesting and informative hearing, with outstanding witnesses.

Mr. Speaker, under leave to extend my remarks, I wish to include an article which appeared recently in Parents' magazine, entitled "My Wife Was Saved by a Safety Belt."

This is a subject in which I am vitally interested. Safety belts are proven lifesavers. I certainly hope Congress will enact legislation such as H.R. 1341 and H.R.134, my safety belt standards bill, to encourage the use of safety devices such as seat belts.

The article follows:

MY WIFE WAS SAVED BY A SAFETY BELT
(By George J. Hecht)

No medical miracle * * * short of a cure for cancer or heart disease * * * can save so many lives.

"Don't forget to fasten your safety belt when you take the car out today." I had said this to my family hundreds of times in the 10 years since our first seat belts were installed. And on this particular morning I issued the warning again, more or less automatically, as I left for my office.

Just as automatically, I reached for the phone that rang on my desk a few hours later. Shocked, I learned that my wife had been in a serious accident. While she was driving on the throughway a car had sideswiped her, causing her to swerve to avoid a collision. Although she'd only been going about 35 miles an hour, she hit a light pole with sufficient force to break it off and plunged into the river on the other side.

How could she possibly have avoided serious injury? She escaped—I might say she survived—because she had heeded my warning: The impact of the crash did not pitch her through the windshield or out on the pavement, as so often happens, because her seat belt had been securely fastened. Although shaken by the ordeal, she suffered only a minor cut over one eye.

Since Mrs. Hecht's narrow escape, I've been painfully aware of the appalling frequency of accident reports and the human implications in such terse statements as "the driver was killed when the car went out of control." As this was being written, I learned that flags were flying at half-mast in Winooski, Vt., for seven fine young men hurled from their car when it hit a tree. The toll mounts, day by day.

I asked one of our associate editors to investigate the subject of traffic accidents and what might be done about them. She summarized her research by quoting John O. Moore, then director of automotive crash injury research at Cornell University, where an exhaustive study had been made on the 10 million auto accidents that occur annually in this country, killing 40,000 persons and injuring 4,500,000 more.

"The safety seat belt is the single most important item to be had to save lives," said Mr. Moore.

In the opinion of many, it is one of the greatest lifesaving devices ever invented. It has been publicized and endorsed by the American College of Surgeons, the U.S. Public Health Service, the American Medical Association and countless other Government and private agencies. But at the present time, fewer than 1 percent of our Nation's 60 million passenger cars have safety belts.

Dr. E. Vincent Askey, president of the American Medical Association, blames "instinctive human laziness * * * carelessness and ignorance" for the continuing slaughter on the highways.

The National Safety Council found that not one of the 442 victims of last July 4 highway massacre wore a seat belt, but a detailed investigation of each accident indicated that about half of these persons would have survived if they'd been wearing them. Other studies show a reduction up to 60 percent of the most serious crippling and maiming injuries. Another analysis of thousands of crashes concludes that the risk of death is cut four-fifths when a safety belt is worn.

Think what excitement would result if medical authorities were to announce the development of a pill which reduced mortality from two leading causes of death—heart ailments and cancer—to less than one-fifth. Yet for a third leading killer—accidents—there already exists a lifesaving device which relatively few people use.

Why don't all car owners buy safety seat belts for their cars? It's because they really don't know the facts. Here are the answers to the most common questions people ask about safety belts:

Aren't you safer if you're thrown clear of the car? IBM machines which have stored up crash analyses by medical and traffic experts in 22 States answer: you are five times more likely to be killed if you are thrown out of your car. The ejection of occupants is also the most frequent factor in serious injury. A study of fatal accidents on Indiana rural highways showed that one or both front doors opened in 72 percent of the crashes. In a significant number of cases, doors popped open at relatively low speeds in accidents of lesser severity.

Don't seat belts themselves cause injuries? In a severe crash a purple bruise on the hip may result—instead of a fractured skull or worse. The belt, when properly installed and worn snug, pulls down and back across the pelvis and hips, not across the abdomen. For this reason, even women in the last months of pregnancy may safely wear them, according to an article in the American Medical Association Journal.

What if the car is submerged or catches fire? In 10,000 accidents recorded by Cornell University's research project, only one-fifth of 1 percent involved fire and only three-tenths of 1 percent were underwater. Since a belt greatly reduces the risk of serious injury, it follows that you have a better chance of remaining conscious and being able to get out. Seat belt buckles can be released with one hand in 2 seconds.

Isn't wearing a seat belt in a soft-top convertible useless? Only 2 percent of all accidents on record involved a soft-top car overturned, but rollovers in convertibles are obviously dangerous with or without belts. However, since four out of five injury-producing acidents do not involve rollovers, and you are twice as safe in this type of accident with a seat belt, odds favor the seat belt wearer.

Aren't seat belts expensive, unattractive and uncomfortable? A current mail order catalog lists seat belts meeting the Society of Automotive Engineers' standards for under $10 a pair. Local installation costs from $2.50 up. Your best bet may be to buy the belts from your car dealer and have them installed by him. They are now obtainable in high fashion colors which coordinate with car interiors. Safety belts are adjustable to fit any size adult or child. While they are perhaps needed more in the front seat of a car, they afford valuable protection for those in the back seat, too. Far from being uncomfortable, safety belts worn snugly contribute greatly to your feeling of body security. They also prevent fatigue and backache by holding you in place so that less muscular effort is needed to maintain equilibrium on bumpy, twisting roads and for sudden stops. Long-distance drivers use them for comfort as well as protection.

If you're a careful driver and don't do much long-distance driving, why bother? Because the National Safety Council and other investigators have found that three out of five fatal crashes occurred on roads familiar to the driver. Half of those who died on last July 4 were only 10 miles from home and more than one-third were within 5 miles; this on a holiday weekend when most people take longer than usual trips. The

typical accident victim is not the speed demon who wraps his low-slung sports car around a telephone pole while doing 100 or better. He is a young homeowner hurrying to the hardware store before it closes, preoccupied with his do-it-yourself project, or a wife with a car full of youngsters on her way to pick up an impatient husband at the station, her mind on the dinner at home, or a teenager backing out of his driveway with a confident flourish, not seeing the delivery truck bearing down.

The demolished cars in scare safety campaigns tend to give a false sense of security to those who do not drive fast. But the fact is that 50 percent of all fatalities occur at travel speeds of less than 40 miles per hour. While there is an increased incidence of mortality as speeds go up to 50 and 60 miles per hour and over, one can also be killed or seriously injured in a car that's barely moving. Being a safe driver is no guarantee that you won't be struck from behind or sideswiped as my wife was. The best insurance is a seat belt which will hold you on impact. As a matter of fact, some insurance companies reduce your premiums 10 percent if your car is equipped with safety belts. In some European countries they are required by law.

But there is no use in investing in seat belts if you don't use them. A 1960 California Highway Department report on 54,348 accidents showed only one-third of the cars equipped with safety belts were using them at the time they crashed. Another report, in the American Medical Association Journal, stated that 80 percent of the crash victims observed did not have their belts fastened. On the other hand, John Moore, top safety consultant, found 3 out of 4 using their belts in a survey in a different part of the country. Some areas, such as Fort Wayne, Ind., at the present time are undergoing intensive educational campaigns on the safety advantages of such belts.

What about legislation? Ten States require one or more agencies to equip their cars with seat belts; many State trooper vehicles are equipped in other States. One Federal agency, the Department of Health, Education, and Welfare, requires seat belts in all its vehicles. Legislation to make seat belt floor fittings mandatory in every automobile is being considered by the State of Michigan. California's law under discussion would prohibit the sale or operation of a car without seat belts. New York, Connecticut, and Illinois have legislation pending. In Washington, D.C., legislation to require motorscars to have minimum safety devices was considered during the last session of Congress. The two bills, H.R. 1346, and H.R. 1341, were favorably reported out by a House committee. A congressional subcommittee declared in favor of the belts after several years' investigation.

The strongest seat belt available is completely useless unless it is properly installed—this means solid anchoring to the steel floor structure with reinforcing plates or, in older cars, to the frame.

Several automobile manufacturers are currently offering the option of factory-installed seat belts with this year's models. What the public demands, the manufacturers will be happy to supply. But so far, too few people are asking for safety belts.

Yet in the time it has taken you to read this article, some 680 drivers have been involved in accidents in this country. In the past 10 years, 374,650 persons, enough to fill a city the size of Louisville, Ky., have been wiped out in crashes. The U.S. Navy had around 8,500 combat casualties in the Korean war in 1951, and the Navy lost almost exactly that same number, during the same period, in off-duty car mishaps. Four-fifths of such loss of life and incapacity might have been prevented by seat belts.

I strongly advise all of you who read this article to have safety belts installed in your car during the next day or two while this counsel is still fresh in your mind.

SAFETY HINTS FOR DRIVING WITH CHILDREN

A reminder: Automotive accidents are the leading cause of death in ages 15 to 24; second, in ages 10 to 14; and third, in the 5- to 9-year-old group.

Infants are safest in a padded basket or car bed, with head protection, placed on the floor of the back seat. If necessary, an adult passenger wearing a safety belt and sitting in the rear seat should be the one to hold the baby. Never lay the baby on the seat—you wouldn't do this to fine china or eggs.

Babies who sit up should be in a car seat with an adult safety belt shortened so that it fits around them, seat and all. Special safety vests are being developed: They must be quickly removable and designed so that there is no danger of choking. To be effective, all harnesses and vests, as well as belts, should be properly installed. Just pinning or tying to the seat will not hold in a crash.

Three- and four-year-olds should be able to wear and operate a regular seat belt. Children will use belts conscientiously if you set a good example. Never permit standing in the car. Some special car seats for children are on the market; in using them care should be taken that they are securely fastened to the seat. Always push down the buttons that lock the doors from the inside. This helps to keep them closed on impact. Keep the car free of toys and other objects which might fly about in case of an accident.

The safest seat? Accident studies show that in head-on collisons, the driver gets the worst of it. In ordinary accidents—that is, in the medium range—the rear seat is safest. However, in a severe crash there is no safest spot—back-seated children can swan dive into the windshield with terrific force, much harder than if they were in the so-called suicide seat next too the driver in front. Obviously, the only way to feel secure is to drive carefully and have all passengers wearing seat belts at all times.

Serious Inaccuracies Claimed in Federal Census

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1961

Mr. KOWALSKI. Mr. Speaker, I bring to the attention of the House of Representatives an article in today's New York Times in which Mr. Herman Wolf makes serious charges of inaccuracy in the 1960 Federal Census.

I have known Mr. Wolf for many years and I have a high regard for his judgment. I shall do my best to insure that the charges he makes are investigated most thoroughly.

Under permission to extend my remarks, I submit this article from today's New York Times:

CENSUS IS ATTACKED FOR TABLE OMITTING CONNECTICUT TOWNS

GREENWICH, CONN., March 21.—Serious inaccuracies were charged today to the U.S. Census Bureau by the chairman of the Connecticut Travel Council.

Herman Wolf, the council official, said the Bureau's final report for 1960 contained a table purporting to list the "population of all incorporated places and urban towns, and of unincorporated places of 1,000 or more."

But he said the table omitted 2 Connecticut towns of 20,000 population, 7 of 15,000 to 20,000; 12 of 10,000 to 15,000; and at least 17 towns of 5,000 to 10,000. Mr. Wolf said 30 other towns had been listed inaccurately.

He noted that table 8 on page 10 of the report omitted Westport, Darien, New Canaan or Trumbull in Fairfield County. Other casualties farther afield were said to be Berlin, Bloomfield, Farmington, Glastonbury, Newington, North Branford, North Haven, Orange, Woodbridge, Killingly, Waterford, and Watertown.

Mr. Wolf said more than 93 Connecticut towns were affected by errors in table 8. He said "serious errors and omissions" had been most "damaging to Connecticut's reputation and business."

The situation came to light when his young son began disputing his knowledge of local statistics, which was hard to take inasmuch as Mr. Wolf was an aid to former Gov. Abraham A. Ribicoff. The boy gave as his authority an annual supplement published by a standard encyclopedia, which quoted table 8.

Too Poor To Be a Communist

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Al Capp as it appeared in the New York Herald Tribune of March 19, 1961:

TOO POOR TO BE A COMMUNIST—HOW LACK OF A DOLLAR KEPT "SUBVERSIVE" OFF RECORD

(By Al Capp)

One day the State Department called me from Washington.

"Mr. Capp," said the cultured voice, "please regard this as confidential. The President (it was Ike then) is considering your name for the chairmanship of a committee of his people-to-people campaign. Would you accept if he appointed you?"

I asked him what the duties were. They sounded irksome and I was to be paid nothing. So I said okay.

"There's one more detail," said the State Department man. "Since this appointment will come directly from the President himself, your name will have to be put through for top security clearance * * *."

He left that sentence dangling. He was giving me a chance to reconsider my acceptance, in case there was anything subversive buried in my past that such an investigation would bring to light.

"Go right ahead," I said, confidently.

My confidence in the purity of my political past was not misplaced. A few weeks later the President appointed me chairman of that committee, and I still serve.

I was clean.

But only because I couldn't afford to be snared into "subversion." All that prevented me from unwittingly becoming "subversive," and saved me from wrecking my career, was a dollar I didn't have.

Here's how it happened.

It was in the 1930's. In spite of the depression my family's way of life didn't

change. All that changed was that everybody else in the neighborhood was now as broke as we had always been.

I was a freshman at the School of the Museum of Fine Arts in Boston, lonely and miserable. I was new in town. I didn't have a car, or money, or buddies who had any.

My life was dull, but there seemed to be a lot of action for luckier kids. There was a particularly gay cluster of pretty girls and skylarking boys around a merry lad named Byron. They always seemed to be frenziedly getting ready for parties and giggling over parties they had been to.

I yearned to become a part of that rat pack.

One day Byron, the leader, sidled up to me.

"We're giving one of our li'l parties tonight," he said, "want to come?"

I was in.

He gave me the time, the address, and then added, casually: "You've got to have this card, and sign this paper. Makes you a member of the group, and then you can come to all the parties."

I whipped out my pen and looked for the place to sign.

"It'll cost you a buck," he said, holding his hand out.

I put the pen away. I didn't have a buck. My heart broke as he withdrew the card, which would have made me a member of the Young Communist League.

I tried all year to get up the dough to join that oddly named group and get to all those parties. Sometimes I came close—up to 70 or 80 cents. But I never quite made it, and the next year Byron and his merry crew had vanished.

If I had had that dollar, my name would have ineradicably been on their lists, entitling any congressional committee 30 years later to denounce me as a traitor, and any investigative agency to reject my services to my country, because I was once a card-carrying subversive.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Fogarty Bill To Promote the Education of the Blind

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. FOGARTY. Mr. Speaker, blind children require for their education special equipment in the form of books in raised print, tangible apparatus and devices of various kinds. It was recognized early that the supply of such equipment would never be adequate if each State were left to its own resources. The first legislation providing aid from the Federal Government was approved on March 3, 1879, under the title "An act to promote the education of the blind," chapter 186, 45th Congress. According to this law, a perpetual trust fund of $250,000 was set up to be invested in U.S. interest-bearing bonds, the income from which, at 4 percent in the amount of $10,000 per year, would go to the American Printing House for the Blind in Louisville, Ky. The law also provided that the superintendents of the various tax-supported schools for the blind of the country become ex officio members of the board of trustees of the Printing House, and that books and tangible apparatus equivalent in value to the governmental grant be distributed among the schools for the blind in proportion to their pupil enrollment.

In 1906, the original law of 1879 was changed to provide a direct $10,000 appropriation to the Printing House to be made annually in perpetuity—Public Law 59–288. In 1919, the first appropriation in addition to the original $10,000 was authorized in the amount of $40,000—Public Law 66–24. Later amendments further increased the appropriation authorization to $65,000 in 1927—Public Law 69–584—and to $115,000 in 1937—Public Law 75–339—these sums always to be added to the $10,000 permanent annual appropriation. Then in 1952, Congress increased the authorized annual appropriation to $250,000—Public Law 82–354—thus making the possible total annual grant $260,000. An important change was made in 1956—Public Law 84–922—when the law was amended so as to authorize wider distribution of books and other special instructional material for the blind, thus regularly authorizing the Printing House to make available educational materials on a per capita basis to all blind children, either in special schools for the blind or regular public schools. Before this, regular public schools had received such materials as a result of an opinion handed down on January 30, 1912, stating that these schools were entitled to share in the free distribution of materials under this act. At present, more blind children are being educated in regular public school systems than in special schools for the blind. Furthermore, the law of 1956 increased the authorized appropriation to $400,000 per year, which, with the permanent annual appropriation, could make a total of $410,000.

The act of 1879 vested the control of the appropriation in the Treasury of the United States. The administration of the appropriation to the Printing House was transferred by joint resolution to the Federal Security Agency.

In the present interpretation, the term "books and tangible apparatus," includes books in raised print as well as talking books, talking book reproducers, and books in large type, in addition to special apparatus and devices. The present law is also interpreted to require that all books and apparatus furnished under its provisions must be manufactured by the American Printing House for the Blind.

Over the years since 1879, when the original law was enacted, there have been very few substantive changes except for the periodic increase in the authorization of appropriations occasioned by the growing population of blind school-age children. Despite the strong trend toward educating blind children in regular public schools with sighted children instead of in special schools for the blind, the law, which belatedly authorized the distribution of books and materials to them, provides only for a per capita quota system of allocating these materials. Thus, the practical effect virtually negates the advantages which should result from this entitlement. The per capita basis for allocating books and materials similarly discriminates against the smaller special schools for the blind and the separate Negro departments in special schools where there is racial segregation, since a substantial portion of the monetary equivalent to which these schools are entitled is used by in purchasing expensive instructional materials, such as braille globes and maps, braille dictionaries, braille writers, and the like. If the allocation is taken in textbooks, then not enough money is left for these equally important but expensive items.

The restriction to items manufactured by the American Printing House for the Blind is also archaic. Three dimensional models of plants, animals, the solar system, and so forth are in regular us in most public school systems for sighted children and are readily available from established scientific supply houses. These would be invaluable educational aids for the tactual instruction of blind children. In order to supply them under the act, the Printing House would have to tool up and manufacture them for a small consumer market, a costly process resulting in a high unit cost compared to purchasing commercially available items manufactured for a mass market. Similarly, the Printing House is prevented from purchasing for distribution under the act special aids and devices made by other agencies for the blind or adapted by commercial manufacturers for the use of blind persons.

In view of the foregoing, we believe that a substantial overhaul of the act of 1879 is highly desirable in order to meet the educational needs of blind children in 1961 and future years in a realistic and efficient fashion consistent with current practices in Federal grant programs. The proposed bill is offered as a means of achieving this objective.

ANALYSIS OF PROPOSED BILL

1. AUTHORIZATION OF APPROPRIATIONS

Section 1 of the proposed bill would increase the authorization of appropriations by removing the present ceiling of $400,000 annually and leaving the annual appropriation to the discretion of the Congress. The sharp growth in number of blind children of school age due to retrolental fibroplasia in premature babies and regular population growth plus increased production costs make the present appropriation of $400,000 woefully inadequate.

In view of the fact that the program has been in existence for more than 80 years and that the Committee on Appropriations has had to approve an annual appropriation for more than 40 years, it would seem that a specific ceiling on appropriations is no longer necessary. Elimination of the ceiling would make it unnecessary for the Congress to take action periodically to increase the authorization in such a long-established and vital program and would have prevented the current situation for fiscal 1961, when it was obvious that the $400,000 annual appropriation would be inadequate, but that nothing could be done until the enabling legislation was amended.

2. RULES AND REGULATIONS

Section 1 of the proposed bill also authorizes the Secretary of Health, Education, and Welfare to make rules and regulations governing the administration of the act. There are presently no such regulations and, therefore, no clear guide on questions involving administrative procedures in carrying out the intent of the Congress. Such regulations would be extremely helpful to everyone interested in the education of blind children and would be consistent with procedures in other Federal grant programs.

3. AUTHORIZATION TO PURCHASE MATERIALS

The phrase "manufacturing and furnishing" and similar phrases have been changed to "manufacturing or furnishing" in order to authorize the American Printing House for the Blind to purchase items of equipment specially adapted or useful in the education of blind children from commercial supply houses and other agencies for the blind. The present law is interpreted to restrict everything furnished under the act to books and devices manufactured by the Printing House itself. As a result, blind children cannot be provided under the act with valuable, tangible educational aids readily available elsewhere. If the Printing House chose to provide these items, it would be required by the law to tool up and manufacture them. The purchasing authority provided under the proposed bill would be a much more economical way of furnishing such items, like three-dimensional tactual models for science instruction mentioned above.

4. ANNUAL APPROPRIATION

Section 2 of the proposed bill merely corrects an oversight when the law was amended in 1919 to provide for an annual appropriation in addition to the permanent annual appropriation of $10,000. The first sentence of section 102 of the act seems to limit the distribution of the books and materials to the value of the $10,000 permanent annual appropriation, whereas the intent of Congress is to distribute the total annual appropriation.

5. PER CAPITA QUOTA

Section 3 of the proposed bill authorizes the distribution of large expensive items of equipment, such a braillewriters, braille dictionaries, braille encylopedias, and the like on a school, classroom, or other practicable basis. This would make it possible for blind children in smaller special schools for the blind or in regular public schools to have the advantage of these essential educational aids without having their quota for textbooks and smaller aids used up. An Advisory Council on the Education of the Blind would determine what equipment would be provided in this manner. Textbooks and smaller educational aids would still be provided on a per capita quota basis determined by the ratio between the number of blind children enrolled in public institutions at the elementary or secondary school level in each State and the total similarly in elementary or secondary schools for the entire country. In addition, the proposed bill would authorize each State to receive up to 10 percent of its per capita quota in actual cash to purchase specific items locally or where available. For example, Hawaii or even Oregon or California could purchase record players for talking book records much more economically in their local areas instead of having such bulky items shipped from the Printing House in Louisville under the quota, with expensive shipping charges adding to the cost and decreasing the amount these States could have for actual items of equipment The Advisory Council would develop a list of approved items of equipment which could be purchased directly by the States.

The present law provides for a per capita quota system based on the ratio between the number of blind children enrolled in schools below the college level in all of the States and possessions and the number of blind children enrolled in special schools for the blind in each State, as well as a separate quota determined by the ratio of children enrolled in all special schools and regular public schools and blind children enrolled in regular school systems in each State. This cumbersome dual quota would be eliminated in the proposed bill in favor of a single quota system for each State.

The term at the "elementary or secondary school levels" in the proposed bill substitutes for "below college grade" in the present law to plug a loophole by which State-operated rehabilitation centers for blind persons are obtaining books and equipment under the act, which was clearly intended by Congress for blind schoolchildren in elementary and secondary schools. Federal regulations would undoubtedly have prevented this abuse. Federal funds for rehabilitation facilities are available under other laws.

6. STATE OWNERSHIP

Section 3 of the proposed bill not only eliminates the dual quota system for each State, but also gives title to books and equipment to the State receiving them. The State is authorized to assign title, thus providing for flexibility in the use of books and equipment where needed, whether it be in the State's special school for the blind or in regular public schools in the State. Under the present law, equipment and books presumably remain the property of the Federal Government and frequently pile up when use for them is past instead of being reassigned to another school within or without the State.

7. STATE AGENCY

Section 3 of the proposed bill provides for a State agency or agencies designated by the State to receive and distribute books and materials furnished through the American Printing House for the Blind under the act and otherwise to administer the program at State level. If the State designates more than one agency then the State department of education must attest to procedures for obtaining and distributing books and other materials within the State, in order to provide for coordinated utilization of books and materials by overseeing their transfer to other schools in the State when there is no longer any need for them in a given school.

A State agency administering the program under the act could be the State department of education, the special school for the blind, or any logical agency involved in educational programs for blind children which the State might designate.

8. ADVISORY COUNCIL

The Advisory Council on the Education of the Blind mentioned in sections 3, 4, and 7 of the bill would be established in the Department of Health, Education, and Welfare to select publications, to develop lists of approved tangible apparatus and other educational materials provided under the act, and otherwise to advise the trustees of the American Printing House for the Blind in administering the act.

The Advisory Council would consist of the superintendent of the American Printing House for the Blind, serving as chairman, and 12 members appointed by the Secretary of Health, Education, and Welfare, 4 of whom shall be teachers of blind pupils in special schools for the blind or regular public schools; 4 of whom shall be administrators of educational programs for blind children, such as superintendents of special schools for the blind or the heads of State departments of education; and 4 of whom shall be individuals particularly expert in the development of educational aids and teaching methods for blind children. Thus, the Advisory Council would bring to this program a representative group especially knowledgeable about the problems involved in both types of educational programs for blind children—the special residential schools and the regular public schools. The Council would provide a mechanism which has proved to be effective and efficient in many other Federal grant programs.

The Advisory Council would supplant the ex officio trustees of the American Printing House for the Blind consisting of the superintendents of the special residential schools for the blind, who, under the present law, are responsible for administering the act. This body of ex officio trustees may have been a logical mechanism for supervising the administration of the act in 1879, when there were only 38 States and when blind children who were educated at all were in residential schools for the blind. Now there are 50 States plus Puerto Rico, Guam, the District of Columbia, and the Virgin Islands in the program. Now more than half of all blind children are being educated in regular public school systems rather than in special residential schools. Also, the Department of Health, Education, and Welfare rather than the Treasury Department is the Federal agency to which the Printing House is directly responsible. For these reasons, the representative Advisory Council and the regular seven-member Board of Trustees of the Printing House will provide an effective and efficient mechanism for administering the program as Congress intends in order to serve the blind children of the Nation more adequately.

Furthermore, the existing ex officio trustees mechanism does not provide for representation of educators involved in educational programs for blind children in the regular public school systems, where the problems are completely different from those in special schools. There have been proposals to add the 54 heads of State departments of education—including the District of Columbia, Guam, Puerto Rico, and the Virgin Islands—to the ex officio trustees of the Printing House; but this would create an unwieldy group of more than 100 members. The Advisory Council, consisting of actual practitioners in teach-

ing blind children as well as administrators, is a much more practical solution.

The 12 members of the Advisory Council appointed by the Secretary of Health, Education, and Welfare are to serve for 4-year terms, except for the first group.

9. BUILDINGS, AND SALARIES AND EXPENSES

Section 4 of the bill broadens paragraph 2 of section 102 of the act, which forbids the use of funds for the erection of buildings, to authorize the expenditure of funds for salaries and expenses of experts and other staff to assist the Advisory Council and for the expenses of the Advisory Council and special committees which may be appointed. Under the present law, the Printing House has had to use private funds to pay the salaries and expenses of staff people involved in carrying out the program.

10. SALE AT COST

Section 5 of the bill merely broadens the wording of the act which requires the Printing House to charge only the cost of materials it manufactures and furnishes under the program to conform with the broader authority granted in the bill to permit the Printing House to purchase useful educational aids already available from commercial and other sources. Thus, although commercial sources of finished products would be able to charge a profit on items purchased for distribution by the Printing House in the same manner as suppliers of raw materials to the Printing House do under the present law, the net result would still be more economical than if the Printing House were required to tool up and manufacture items already available, as the present law requires.

11. WITHHOLDING OF FUNDS

Section 6 of the bill simply repeals the existing obsolete provision of paragraph 4 of section 102 of the act, calling for funds to be withheld from the Printing House if they are misused. Other Federal laws make this specific punitive provision in the act superflous.

12. CONFORMING AMENDMENT

Section 8 of the bill merely corrects an oversight in section 104 of the act which was not corrected by the 1956 amendments and still refers to the Federal Security Agency instead of the Department of Health, Education, and Welfare.

13. EFFECTIVE DATE

Section 9 of the bill makes its amendments effective for fiscal years following enactment of the bill.

Carl Vinson, "Mr. National Defense"

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. DORN. Mr. Speaker, the Honorable CARL VINSON is encouraging the textile industry and its growing list of unemployed by his leadership of our House group seeking quotas by country and by category. The following editorial from the Greenville, S.C., News, indicates the gratitude of our people:

TEXTILES AND NATIONAL DEFENSE

Congressmen and Senators of the textile States chose well when they selected Representative CARL VINSON, of Georgia, to lead the group which will present to a White House study committee their case for import quotas on cloth and finished goods from low-wage countries.

Their choice should make it certain that their case will reach the office of the President himself, and that it will be carefully heard, for when Mr. VINSON speaks, other statesmen listen, and his words usually are heeded.

The representatives of the textile areas are asking the administration to take executive action under the laws clearly authorizing such moves to curb, or control, imports country by country, and category by category.

They are not objectiong to imports as such, and they have as much at stake as anyone in a balance of trade, but the industry which is the primary mainstay of the economy in their States is in trouble.

In the absence of the kind of quotas they are requesting, the American textile industry is not free to plan either expansion or production. The manufacturers do not know which of the several other textile producing countries, where the industry has been built up with American aid, will be allowed to export large quantities of goods to the United States.

They do not know how much these countries will be allowed to export, nor what kind of goods will be shipped.

This, naturally, leaves them in a quandary when it comes to planning new facilities, buying new machinery, or even setting up their production schedules for a new quarter or season. Not knowing what the cheap foreign competition will be like, it is difficult for them to decide whether to concentrate on cottons or synthetics, coarse goods or fine goods.

And how they can quote a price on goods for delivery 3 to 6 months ahead is a problem that should baffle even a Harvard economist.

For these and many other reasons, the request of the textile States is a reasonable one. Yet it has been repeatedly denied by governmental agencies having the power to make recommendations to the President for final action.

It now appears that the advocates of a strong American textile industry are going to make a new plea, this one based on the importance of the industry to national defense. And again they are on sound ground.

Going to grassroots, textiles are fundamental to the national economy. The United States can no more afford a sick textile industry than it can afford a sick steel or automobile industry.

On a more practical level, textile production, research and development are no less important to national defense than steel, electronics, aerodynamics, and chemistry.

Should war come, can we depend on Japan to produce the materials to clothe our Army and Navy, can France supply the highly developed fabrics for flight suits for the Air Force and can we go all the way to India for the webbing for rigging a parachute for a paratrooper?

Obviously not.

And that is where CARL VINSON comes in.

He is chairman of the House Armed Services Committee and has been for more years than most of his colleagues in the administration and Congress have been in public life. He is, in a very real sense, "Mr. National Defense," for he has made the shoring up of the Armed Forces perhaps his primary concern. The Nation is indebted to him.

Now some of his colleagues are calling on his proven leadership ability to strike a blow for national defense, for an essential industry and for the economies of his own and several other States.

We believe, from our knowledge of his record as an advocate of the Armed Forces and as a supporter of the Kennedy administration, that they went to the right man.

On the Failings of Big Business

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post which is an extract from an address by W. H. Ferry, director of the Center for the Study of Democratic Institutions at Santa Barbara, Calif., an activity of the Fund for the Republic, Inc. It was presented at a seminar at Princeton University last week:

ON THE FAILINGS OF BIG BUSINESS

A cherished corporate legend is that governmental bureaucracy is inefficient, full of featherbedding dullards, and tends toward venality; while the bureaucracy of the large company comprises highminded and overworked gentlemen, whose eyes are on a brighter star.

This line is one of the main strands of the political irresponsibility of corporations. Though it might at first glance seem merely an engaging self-deception, it in fact tears away at respect for law and government, the joint creations of people for their own good, and aggrandizes the private company as somehow superior both in aim and practice.

Closely related to the managerial theory of dunderhead government is that of corporate perfectionism. This is the insistence that the corporation never makes a mistake, so that when something goes wrong the fault may always be found elsewhere—in some government offices, in the perfidy of unions, in unfair competition from overseas, or in the fickleness of the public.

A quaint consequence of this theory is that those few who make the mistake suffer little, while those many who had nothing to do with the decision suffer much. Thus a mistaken judgment about product lines does not result in laying off the managers who made the judgment but the employees who were not involved in it.

More significant by far is the general corporate outlook on the political scene. It is, not to put too fine a point on it, a clear and steady survey through the rear-view mirror. The same men who are enterprising and adventurous in laboratory and office and of consummate ingenuity on the sales front are starchy and nostalgic when confronted with political issues.

An especially prickly problem, for instance integration, will send them to the storm cellars, whence they send forth bulletins announcing that it is not business's business to take part in distasteful political discussions.

The irresponsibility of political short views is best illustrated by considering the big corporation vis-a-vis technology and jobs. We are moving into an epoch in which most of the ancient evils can be eliminated or

minimized: drudgery, want, war. The venerable rule which says the more machines, the more jobs is being repealed.

The probable extent of the effects of automation are a matter of surmise. What is not a surmise is that there will be a very great deal of automation, and that traditional ways of dealing with such developments—collective bargaining, for example—are clearly inadequate.

What will we do when we can meet all our needs with half or a quarter of the available supply of labor? This dark issue is lingering just over the horizon, its harbingers already among us in nests of technological unemployment. We are beginning to understand that automation means more centralized decisionmaking, more and more influence in the hands of fewer and fewer people.

A different style of political irresponsibility is starkly illuminated by our problems in Latin America and in the other less developed parts of the world. No one acquainted with the behavior of Western corporations on their pilgrimages for profit during the last 50 years can really be surprised to read that the African explosions now taking place are doing so in an "anti-American, anticapitalist, anti-Western" context.

For many years these continents have been happy hunting grounds for corporate adventurers, who have taken out great resources and great profits and left behind great poverty, great expectations, and great resentment. Gunnar Myrdal points out that capitalist intervention in underdeveloped countries thus far has almost uniformly had the result of making the rich richer and the poor poorer: a spectacular record of political irresponsibility on a global scale.

I doubt whether we shall ever be able to figure out the cost of these unfriendly raids on the resources of others, which of course have their domestic counterpart in undiminished raids on our own timber, oil, and grazing lands and mineral deposits.

The prospect of the destruction of civilization is looking us dead in the eye, all of us. The contribution of our industrial potentates to the debate, as far as I am aware, is almost exactly zero.

Letter to President Kennedy by North Atlantic Ports Association

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter to President John F. Kennedy by Michael M. Mora, president of the North Atlantic Ports Association, concerning a budget item for the St. Lawrence Seaway Corporation, to enable this agency to actively promote commerce for the seaway:

NORTH ATLANTIC PORTS ASSOCIATION,
March 6, 1961.

Hon. JOHN F. KENNEDY,
President of the United States,
Washington, D.C.

MY DEAR MR. PRESIDENT: It has come to our attention that the Bureau of the Budget has been requested to augment the budget of the St. Lawrence Seaway Corporation in order to enable this agency to actively promote commerce for the seaway and as a natural corollary, for all Great Lakes ports.

The promotion of commerce for U.S. ports has traditionally been the responsibility of local port interests, both governmental and private, without use of funds or other resources of the Federal Government. This is completely right and proper since those who will receive a direct economic benefit from such promotional activities should logically bear the cost of carrying on these activities.

Port agencies currently exist in the Great Lakes, the majority of which are engaged in promotional activities in behalf of the ports they represent. They, like the agencies promoting commerce for other American ports, are now using and should continue to use local funds for their programs. The provision of Federal funds to be used by a Federal agency for the promotion of commerce to benefit only one area of the country, to the detriment of other areas, is obviously unfair and against the national interest. The net effect of such a program would be to require taxpayers on the Atlantic, gulf, and Pacific coasts, to finance efforts to divert cargoes and thus potential revenue, away from their own ports.

The North Atlantic Ports Association stands in complete opposition to involvement of the Federal Government in commerce promotion activities for the benefit of any port or ports in the Nation. The members of the association have expended great sums of money in the promotion of their own ports and feel that all the ports in the Nation should do the same if it is their intent to compete for trade and commerce in the free American economy. We, of course, do not object to the provision of adequate funds for public information activities of the St. Lawrence Seaway Development Corporation, since such activities are clearly within the realm of the responsibilities of this agency.

Respectfully yours,
MICHAEL M. MORA,
President, North Atlantic Ports Association.

When Distress Proves Our System

EXTENSION OF REMARKS
OF
HON. ARMISTEAD I. SELDEN, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. SELDEN. Mr. Speaker, for generations the white and colored people in the South have lived side by side, amid a prevailing spirit of harmony, respect, and cooperation. This relationsip has been maintained despite the divisive efforts of outsiders.

Those of us who live in the southern section of the United States and who know conditions there have tried repeatedly to show others the real picture. Much too often our words have fallen on closed ears and minds. I am convinced, however, that racial agitation would be greatly reduced if those who are sincere but mistaken in their criticism had the opportunity to personally observe the true relationship between the races in the South.

As in any just cause, we who believe that our area has been misjudged continue our efforts to enlighten our adversaries.

Recently, severe floods devastated large areas of the State of Alabama. The manner in which the Negro and white races worked closely together during these floods to prevent death and alleviate suffering graphically illustrates the racial cooperation that has existed in the South for hundreds of years. The following editorial from the Greensboro (Ala.) Watchman, of March 9, 1961, emphasizes this point:

WHEN DISTRESS PROVES OUR SYSTEM

All over Alabama, the cry has been raised in the days of this distressing flood, as to where has been the NAACP, when so many of our Negroes have been in desperate need of help.

The question is really beside the point. The NAACP does not operate legally in Alabama, and it is largely just where we want it to be—in New York City. Neither the whites nor the Negroes of Alabama want or need it at this time. The real point is that, in the hour of trouble, the local white people helped the Negroes and, while this was the general pattern, there were other instances in which the Negroes helped the whites. To this we can testify. It has been shown that, in spite of the divisive efforts of certain outsiders, the human element is still the governing factor. The white people of the South are not going to stand idly by while the colored people drown or suffer from the cold or go hungry. There is a friendship based upon generations of living in a bi-racial society which makes this utterly abhorrent to us. Nor will the colored people permit their white friends to suffer, if they can do anything about it. The agitators dislike these attitudes as too much Uncle Tom, but as far as we are concerned, it proves again our old contention that nowhere in the history of mankind have two races, so utterly different in origin, been able to live so easily in peace and accord when thrown into juxtaposition. There is unfairness and inequity in the South, but it is the best, from a very practical standpoint, that has ever been achieved under similar circumstances. Ours is the successful system, fired and tempered in the crucible of experience.

Migrant Plight Examined

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. COHELAN. Mr. Speaker, certain important aspects of the pressing migrant farm labor problem have been clearly pointed out in a recent article appearing in the Christian Science Monitor.

I urge my colleagues to read this article carefully as a part of their study of this serious problem:

UNITED STATES ECHOES MIGRANT PLIGHT
(By Richard L. Strout)

WASHINGTON.—Bumping over back roads with the 2 million migrant workers and families who follow the crops are 100,000 school-age children. A study indicates they average 1 to 4 years behind in school by the time they reach 14.

Migratory workers are the people the affluent society forgot. The crisp fruits and vegetables that come to the American dinner table were, like as not, picked by people working 10 hours for $6 or $7 at backbreaking labor in a blue sky sweatshop.

Farmers who hire them do not want to exploit them, but their cheap wages at the climax of the weeding and picking season means the difference between survival or bankruptcy. Many farmers narrow slim profits to provide better shacks and toilets for the workers only to complain that they are so ignorant or irresponsible that they do not use the facilities.

"I've built them new housing, put in toilet facilities, nice new bedding, plenty of garbage cans—and what happens"? asks one farmer.

"They mark up the walls, kick holes in the window screens, stop up the toilets, pull the knobs off the showers and stoves, tear the blankets, and tip over the garbage cans."

AGREEMENT WITH MEXICO

County health officials shake their heads as they tell the Senate Subcommittee on Migratory Labor, now considering reform bills, about the ditch used for drinking water, or the child who knows no cleanliness.

"Growers are not proud about much of the housing they offer," explains Senator HARRISON A. WILLIAMS, JR., Democrat, of New Jersey, chairman of the subcommittee, "but they don't know how to provide more."

Some 22 States depend on skilled or semiskilled labor forces ranging from 6,000 to 25,000 to harvest their perishable fruits and vegetables. Climate and crops differ. In Arizona migrants work on citrus and cotton; in Connecticut, tobacco; in Georgia, peaches; in Illinois, peas; in California, fruits and vegetables; in Texas, cotton, and so on.

American migrants often are Negroes. Lower in the economic scale are approximately 400,000 Mexican "braceros" imported temporarily each year under arrangement with the Mexican Government, and 12,000 British West Indians. They are willing to do the back-breaking "stoop labor" which the native born allegedly won't do. Increased use of cotton harvest machinery in Texas, Arkansas, New Mexico, and Arizona cut down the use of braceros sharply last year.

Braceros are fortunate in one way. The agreement with Mexico guarantees them certain minimum protection, free housing, and even free insurance against occupational hazards. They have somebody to look after them. The native Americans are exempted from almost all the welfare provisions that came in the New Deal social revolution.

The United States-Mexican agreement provides that braceros may not replace workers on strike or locked out. On March 4, Labor Secretary Arthur J. Goldberg ordered withdrawal of 2,800 braceros from 18 big farms in California's Imperial Valley at Mexico's request, because of a strike there.

CONSCIENCE TOUCHED

Church groups have increasingly interested themselves in migrants. Their plight touches the American conscience. Some consider it ironical that the Peace Corps of idealistic American youngsters should go abroad when so much remains to be done here.

This applies particularly to the monotony of the wandering children, brought up in road camps, waiting for somebody to breathe the spark of incentive for learning into them.

The Williams committee got a sanguine report from a superintendent of schools in Michigan where a pilot 5-week summer school was set up. One paragraph reads:

"I've never seen a nicer group of children to work with. For the most part they were smart children, eager to learn, appreciative, and loved books. Somewhere they have either learned good work habits in schools or are just that eager to learn. * * * They were constantly reading or looking at books. * * * From their conversation it was very evident that they were happy with the opportunity to go to such a school and also to be able to ride to and from school in a bus."

CAPITAL FIGHT STARTS

A congressional fight has started over proposals to aid migrants. It takes several forms.

The law governing Mexican braceros expires December 31 and must be renewed this session. The big issue is over proposed added protection to American farmworkers against wage competition from the Mexicans. Nearly all farm organizations except the National Farmers Union oppose stiffer restrictions. Hearings are proceeding before a House Agricultural Subcommittee.

Meanwhile, Senator WILLIAMS is pushing half a dozen proposals for Federal regulation of employers of native migrant workers, with emphasis on doing something for the children. This is attacked, too. The attack is the old one: too much Federal interference in private enterprise.

Nearly everybody agrees, though, that reform is needed.

The root difficulty, Senator WILLIAMS believes, is a lack of education in fundamentals of modern living. This is largely adult education. Until migrant workers get some outside help their plight is self-perpetuating.

Employment Statistics

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. HOSMER. Mr. Speaker, last evening I listened to a raido reporter commenting on our troubles in Africa and elsewhere in the world. One point he made was that quoting our unemployment figure as "over 5 million" gives many persons abroad a distorted idea of the state of the American economy. Persons whose homelands contain small populations are particularly unlikely to evaluate fairly such figures in relation to our population of over 180 million. Here are population figures for just a few countries: Switzerland, 5,235,000; Syria, 4,267,000; Uruguay, 2,700,000; Venezuela, 6,607,000; New Zealand, 2,381,000; Denmark, 4,457,000; Finland, 4,433,700; Ghana, 6,690,730; Ireland, 2,846,000; Israel, 2,105,530; Laos, 3,000,000.

Other inadequacies of the present reporting system are enumerated in the following editorial appearing in the Long Beach Independent Press Telegram on March 13:

DO OUR JOBLESS REPORTING METHODS NEED AN OVERHAUL?

Recession psychology is a subject disturbing to many people. They feel that frequent reiteration by official sources of adverse economic news, notably unemployment figures, tends to build up fear, with consequent belt-tightening by individuals and business and industrial firms that simply compounds the problem.

Unquestionably, they have a point. But a solution is not so simple as some may think. Attempts to ignore or to gloss over bad news would be quickly spotted by the public and the resultant effect on public morale could be worse than a recital of bleak facts.

This brings us to another question. How bleak are the facts? Honest official reporting would not gloss over bad news, nor would it make the news worse than it really is.

There is, for example, strong feeling in many quarters that U.S. unemployment figures are deceptive.

McGraw-Hill publications, in a current editorial, goes into this exhaustively in connection with unemployment comparisons with other countries. It charges that the broad concept of unemployment we use exaggerates our jobless situation as compared to most other nations.

It cites monthly Bulletin of Statistics issued by the United Nations last November, which showed that Sweden's annual average of unemployment in 1959 was 2 percent, while that of the United States was 5.5 percent.

On its face, this comparison shows a wide gap adverse to this Nation. But a U.S. Labor Department report from Sweden indicates that had Sweden used the same reporting methods as the United States, its jobless figure would have almost doubled.

Says McGraw-Hill: "In general, countries listed (in the United Nations table) use registrations at public employment offices as the basis for calculating their unemployment. The U.S. figures include unregistered, young people who are waiting for jobs or training opportunities and housewives who are looking for jobs but who have not registered anywhere in search of them. On graduation day, unless students immediately rush to jobs, they graduate into unemployment and swell the jobless figures."

The point made here is that deceptive jobless figures not only unnecessarily harm our own national morale, but viewed from abroad they unjustifiably downgrade the effectiveness of our economic system and weaken our influence.

The editorial makes the interesting suggestion that not only should there be some international standard for counting the idle, but that the official reports in this country should show not only the number of jobless, but the number of unfilled jobs.

We have not seen a report of the number of jobs that are open in this country, unfilled because of a lack of qualifications among the jobless or lack of interest or a desire to take this work. A properly balanced report on unemployment could well include this figure. It would give the economic picture a different slant, and it would point the way toward action, such as training programs, that would move jobless into available openings.

In view of the importance of avoiding unjustified undermining of national morale, and of avoiding distorted pictures abroad of our economic performance, the time is at hand for an official, high-level examination of our unemployment reporting methods.

Tax Loophole Closers

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. MASON. Mr. Speaker, I have just introduced two bills which I designate as "tax loophole closers." Their adoption would provide a substantial amount of the new money that will be required to finance the administration's various programs, and would do so without requiring any present taxpayer to dig deeper into his pocket.

One of these bills, which may be cited officially as the "Credit Union Tax Equalization Act of 1961," would tap a financial source that has never paid a penny of Federal income tax; a competitive lending business whose net income before taxes has increased 2,400 percent in the past 15 years; a parasitical, pseudo-banking institution that is growing like the wind and is very well able to pay its share of the cost of government.

The other bill, which is cited as the "Second Tax Equalization Act of 1961," would produce no such magnificent sum of tax revenue for the Treasury, but it would clear up a competitive situation between mutual and stock fire and casualty insurance companies that the tax experts of Congress have fretted and worried about for nearly 20 years, without ever quite coming to grips with the facts of the matter—the facts being that the tax discrimination in favor of the mutuals is without justification and always has been.

Mr. Speaker, this year's demands for extraordinary expenditures at home and abroad leave the Congress no option but to close every generous loophole in the tax code. Let it not be said that the 87th Congress is a weak-kneed and soft-headed as some of its predecessors, which accepted the specious argument and pleas of smart promoters that competitive businesses which were organized under such names as mutuals and cooperatives and credit unions would somehow always be without profit and therefore without taxes.

Credit unions, like their blood brothers, the savings and loan associations, the mutual savings banks and the cooperatives, were first granted tax favortism on the basis of their claim that they were organized for the sole benefit of the underprivileged little fellow. They may have started small, but they have long since outgrown their little britches. Let me quote, Mr. Speaker, from the American Banker:

> Credit unions are fast becoming big business. Some are subsidized by big business itself, which gives them rentfree office space, as well as clerical help to run the credit union at the expense of the business. Notable in their promotion is the Credit Union National Association, organized to carry out their national public relations, advertising, and provide certain management and insurance aids. They are supported directly or indirectly by small business, college professors, teachers, farmers, firemen and policemen, industrial employees, labor unions. Credit unions are found in city halls, State capitols, public schools, fire stations, police departments. Taxpayers, of course, are unwittingly supporting credit unions, which pay no Federal income taxes, whether chartered by State or Federal Government.

According to the Department of Health, Education, and Welfare, credit unions had total assets in 1958 of $4,347 million and net income of $178 million.

Mr. Speaker, that net income should pay income tax. It is earned like the net income of banks and small-loan companies. It should be taxed like the income of banks and small-loan companies.

Only a few days ago, the President asked the Congress for half a billion dollars of added appropriations for this and that. He did not specify—or even suggest—where or how the money should be raised, but we all know that it will not come out of the clear air. Someone will have to be taxed to pay the bills.

Well, Mr. Speaker, the cost of the expanded school-lunch program which the President suggested, plus the cost of new schools for Indian and Eskimo children, plus the cost of an expanded National Park Service, plus additional appropriations for the Bureau of Land Management, the Fish and Wild Life Service, and the Bonneville Power Administration, plus the cost of expanded U.S. Information Agency programs in Africa and South America would all be met by the imposition of the income tax on credit unions and there would probably be enough money left to pay for the proposed new African programs of the State Department.

Mr. Speaker, if we are going to spend more money we must raise more money by taxation. The best place to get more money by taxation is from sources that are now not paying the tax. As a loophole that may be profitably closed, I recommend the credit unions.

Getting Foreigners Off Our Backs

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. DERWINSKI. Mr. Speaker, in the last few days we have been apprised of the newest in a long line of proposals to save the world for democracy by the lavish foreign aid approach, and we have also been informed of waste of foreign aid funds in Peru, Laos, and a few other countries yet to be disclosed. In view of the intellectual nature of the new administration, I feel that in the public interest I must remind the Members of Congress and the citizens of the country of the forthright comments once made on the subject of foreign aid by President Kennedy. These are accurately described in an editorial in today's Chicago Daily Tribune which I submit for the RECORD:

GETTING FOREIGNERS OFF OUR BACKS

On November 10, 1950, a young Massachusetts Congressman told a gathering of students and professors at Harvard University that he thought that sooner or later we would "have to get all these foreigners off our backs." The Congressman was John F. Kennedy.

Yesterday, more than a decade later, Mr. Kennedy, as President, sent a message to Congress on foreign aid. After 15 years of postwar scattershot generosity, at a cost of $85.8 billion, Mr. Kennedy admitted foreign aid was a mess.

No one, he said, "can be satisfied" with a "multiplicity of programs," all of them "bureaucratically fragmented, awkward, and slow," their administration "diffused over a haphazard and irrational structure," many of their purposes "obsolete, inconsistent, and unduly rigid." The weaknesses of the whole "have begun to undermine confidence."

So has the time arrived, in Mr. Kennedy's estimation, to junk the whole thing and get those foreigners off our backs? No indeed. We shall, says Mr. Kennedy, reorganize the chain of command of the almoners and introduce efficiency into this rambling wreck. Furthermore, we must continue the handouts so that the 1960's will be a "decade of development" in backward lands.

Instead of appropriating the billions each year, we must, says Mr. Kennedy, commit ourselves to the recipient nations for "not less than 5 years" in advance, so that they may have confidence that the cash cornucopia will continue to flow. But we shall still need annual appropriations, too.

A year will be required to institute the new giveaway mechanism and to make "the necessary long term commitments." So Mr. Kennedy will not find it necessary to ask for "additional funds" this year. He will merely stand on the "rock bottom" figure already submitted by Mr. Eisenhower—$4 billion.

None of these plans, says Mr. Kennedy, need necessarily have more than a "marginal" impact on our international balance of payments. The United States has been losing dollars at the rate of $3.8 billion a year—that is, it has been spending that much more abroad than it earns from foreign sources. The result has been the loss of gold used to support the value of the dollar. If the gold drain continues unchecked, the loss could undermine the U.S. economy and our position in the world.

Only a month ago the Kennedy State Department said that this payments deficit arises wholly from America's foreign aid commitments. Yet Mr. Kennedy would have us believe that the threat is marginal. It is also marginal whether a high-wire walker keeps his footing or falls and breaks his back.

There is little here to encourage taxpayers whose existence, under Federal exacations, is also marginal to the point of the precarious. The only soothing sirup Mr. Kennedy is able to offer is that maybe some of our well-to-do allies, themselves the past beneficiaries of foreign aid, will chip in and assume some of the burdens of western man. Also, that maybe the giveaway can be converted from a basis of outright gifts to long-term loans, though at low interest or none at all, repayable, perhaps, in 50 years, when, to paraphrase the late Lord Keynes, most of us will be dead.

This is to go on until the ultimate day when all nations can be self-reliant and when foreign aid will no longer be needed. When does ultimate become final, if ever?

Just a Promise

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. WALLHAUSER. Mr. Speaker, one of the most important quotes of the recent campaign was the maintenance of fiscal integrity and the promise to balance the budget.

The editorial writer of the Newark (N.J.) Evening News under date of

March 21 has expressed the concern of many of our citizens very ably in the following editorial:

JUST A PROMISE

President Kennedy is presenting his 1961–62 budget recommendations to the taxpayers in easy installments. Yesterday he proposed increases totaling nearly a half billion dollars; tomorrow he is scheduled to present his bill for foreign aid. Later he will give his views on defense spending and following that a message will go to Congress on the overall 1961–62 budget.

The $80.9 billion budget President Eisenhower sent to Congress in January apparently is to undergo very few changes. What savings can be made on some items are expected to be offset by increased spending on others. The major boost contemplated is likely to be that for defense.

Mr. Eisenhower had estimated defense would cost $42.9 billion. Mr. Kennedy has indicated that if the budget can be balanced with that figure, Congress would accept his request for a supplementary deficit appropriation for another billion dollars. By handling the defense bill in this fashion, the President is represented as showing (1) that he is trying to balance the budget, and (2) that the reason he can't is the need of greater defense spending.

The increases Mr. Kennedy asked yesterday doubtless are all for worthwhile purposes—$442.5 million for Agriculture, $40.6 million for the Interior Department, $11 million for the U.S. Information Agency, and $1.3 million for emergencies in the diplomatic and consular services.

We recall that the President did say something about pay-as-you-go government and balanced budgets. But that was way back last fall.

The Crew of American Ship of State Should Beware of Calm in Red Storm

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. WILSON of California. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the San Diego Union of March 19, 1961:

THE CREW OF AMERICAN SHIP OF STATE SHOULD BEWARE OF CALM IN RED STORM

(By Ruthven E. Libby)

(EDITOR'S NOTE.—The author, Ruthven E. Libby, is a vice admiral, retired, in the U.S. Navy.)

"Caesar said to the soothsayer, 'The ides of March are come'; who answered him calmly, 'Yes, they are come, but they are not past.' "—Plutarch.

If by chance the captain and crew of the ship of state have never read Nathaniel Bowditch, I suggest they break out his "American Practical Navigator," first published in 1802, and read up on the laws of storms.

To the mariner unfortunate enough to be caught in the direct path of a hurricane, but fortunate enough to weather the violence of the forward semicircle, the calm in the eye of the storm comes as a welcome and most useful respite. But as Nathaniel pointed out, and as every experienced sailor knows, the worst is yet to come.

I hope, fervently, that I am wrong; but I cannot shake off a gnawing uneasiness over the possibility that the international weather phenomena are being misread.

Certainly the tempetuous goings-on in the first half of the current General Assembly session were stormy enough to be graded as of hurricane strength; and by comparison, there subsequently has been a period of relative surface calm.

In his March 7 statement to the resumed session of the General Assembly, Ambassador Adlai Stevenson urged a continuation of this clam, saying that the United States was "firmly determined to do all it can to alleviate the cold war instead of aggravating it."

Urging that the agenda be stripped of all items except those essential to the routine conduct of the United Nations' business, and that as many controversial items as possible be put over until the next regular session, he added: "We think a period of relative quiet would contribute to a better international climate for serious negotiations on such vital subjects as disarmament."

On the face of it, this proposal seems reasonable enough. It is consistent with the New Frontier approach to the "new diplomacy" of "politeness and business-if-possible."

It would be a wholly rational approach if we were dealing with individuals who, by Western standards, were rational; and it would be a logical road to agreement between parties, provided all parties concerned sincerely wished to reach agreement. But there's the rub.

Each day brings additional examples of the curious ambivalence displayed by the Soviet leaders. Less than 2 months ago, Premier Nikita Khrushchev indicated to the new President that with the departure of the bad old administration, the way was now clear for improving relations between the United States and the U.S.S.R. He announced that his country was eager to work toward that end.

On February 27 our Ambassador returned to Moscow with a personal message of good will from President Kennedy, intended among other things to set in motion a new series of diplomatic exchanges aimed at seeking settlement of the crucial issues between us.

Well knowing that the United States, at least, considered this message of some importance, Khrushchev showed his eagerness to cooperate by taking off for parts unknown, leaving Ambassador Thompson to cool his heels in Moscow for more than a week before graciously summoning him to the wilds of Siberia, to deliver the message. Whether or not he will condescend to negotiate with Thompson is something else again.

As a further earnest of his desire to improve relations, Khrushchev took time out from giving our Ambassador the runaround to reassert that the Soviet has sufficient atomic weapons to blast any aggressor off the face of the earth, and the rockets with which to deliver them. Well, so much for sweetness and light, Moscow style.

Red China, on the other hand, is not ambivalent. It is just downright hostile. The categorical rejection of our latest move toward improving relations in that quarter leaves no doubt on that point.

Their position is classic in its simplicity: unless we get out of Formosa, they have less than no interest in any move toward easing tensions, or in settling our differences by any means other than war. Be it noted in passing that it is these charming people for whom the entire British Commonwealth, with the single exception of New Zealand, seeks membership in the United Nations.

However, laudable our policy of "avoiding cold war acrimony" may be, its implementation entails the serious risk of being misinterpreted by our adversaries—of being regarded as an indication of weakness. Nothing could better insure our defeat across the negotiating tables than a belief on the part of the Communists that we are lacking in resolution.

In sum, whether swept under the rug or discussed in open forum and let the acrimony fall where it may, the issues remain.

Perhaps we shall be in better shape to face up to them later; but it is well to remember that the Communists improve each shining hour of delay by improving their military positions on odd corners of the globe, just as they did on the mainland of China and as they are now doing in Laos. One thing is certain—the issues will not just go away.

The present uneasy calm cannot long continue. There is rough weather ahead.

Should Not Be

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. SCHNEEBELI. Mr. Speaker, it is often true that the most perceptive and penetrating analysis of a legislative issue comes from a source well removed from the location of congressional battle lines. Often separation from the actual scene of the debate allows calm reflection and encourages frank advocacy of a reasoned course of action. An excellent editorial in the Bloomsburg, Pa., Morning Press, of March 20, 1961, clearly demonstrates this point. The editorial vividly and concisely highlights the threat of Federal control inherent in the process of centralization and calls for Federal abandonment of some areas of the tax field so that State and local government may raise sufficient revenue to meet educational needs. Because of the significance of this outstanding editorial, I submit the entire material for inclusion in the RECORD.

SHOULD NOT BE

On one hand we cry to the high heavens against regimentation and on the other keep calling more and more to Washington for handouts, knowing full well that centralization of power leads to the thing we profess to unalterably oppose.

The battlelines are already formed on the President's aid to education bill. Despite the appeal of the Chief Executive for restraint this will get bitter and cause open sores that will be long in healing.

President Kennedy's stand that any Federal aid to schools must be limited to public schools is correct. The big error in this proposed legislation, however, is that it should not be offered in any form.

We are definitely for improved and enriched education. One way to get that is to have folks take care of their own. If the Federal Government is sincere in its declaration that education must be improved then all it has to do is allow the folks at home some local and State tax revenues to apply to the program.

Much more of the locally collected taxes goes to the intended place. Overhead of distribution is higher at the Federal level than at any other.

President Grover Cleveland a long time ago declared: "The people must keep the

Government for it is certain the Government cannot keep the people."

We have been trying for more than a generation to prove him wrong. We have not succeeded and we will not succeed.

The handouts that come from Federal Government are not plucked from the sky. They come from our pockets. What we need in this education program is to have Washington retreat a little from the tax field so we can do some cultivating of our own and get the funds to meet our educational needs.

That will put the program up to us and it will eliminate regimentation. It can be done. Whether it will be depends on whether we want what we say we do or whether it is just idle comment that has a nice sound.

Livestock Industry Is First

EXTENSION OF REMARKS
OF
HON. GARNER E. SHRIVER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. SHRIVER. Mr. Speaker, the Kansas Livestock Association recently held its annual meeting in Wichita, Kans. Mr. Rolla Clymer, editor of the Eldorado (Kans.) Times, took the occasion to cite the importance of the livestock industry to Kansas economy. I believe that as the Congress considers various solutions to the farm problem it would be pertinent to place before the Members some of the facts of an industry which flourishes without a program of Federal subsidies. I insert in the RECORD the editorial from the Eldorado Times entitled "Livestock Industry Is First":

LIVESTOCK INDUSTRY IS FIRST

Livestock is Kansas' largest industry.

This is no new statement. What it declares has been a fact of many years' standing.

That fact, however, should not be forgotten. Governor John Anderson stressed it again in an address to the Kansas Livestock Association at Wichita last week.

This $549 million industry contributes 55 percent of the gross cash receipts from farming in Kansas, the Governor told his audience.

Butler County—which shares prominence among the manufacturing industries of the State largely because of its oilfield operations and four oil refineries—represents one of the kingpins in the Kansas livestock structure.

The 1959–60 report of the Kansas State Board of Agriculture shows that Butler County again ranks No. 1 in the number of all cattle and calves on farms. Only those with more than 60,000 cattle are listed in the top 10; Butler's average total nearly doubled that figure.

Thus, Butler is the leading unit in the procession which makes livestock the chief industry of the Sunflower State—and this is an achievement in which the Kingdom may well take pride.

At the moment, the beef cattle industry is flourishing. Unfortunately, the history of that industry has run through a period of cycles. Last year, nearly 5 million of cattle grazed on the State's ranges. Fully that many may be expected again this year. The influx of the beef animals to the Bluestem pastures will begin within another month. Cowmen believe that not too many cattle will be grazed on ranges or fed in the feed lots this year to disturb the market to any degree.

If so, cattle prices may hold steady for a time—and perhaps permanently, which is the desired condition.

But, whether the market is up or down at any given time, whether or not the cattlemen are facing handicaps, the livestock industry still leads the Kansas procession.

That ranking should be gratifying to the sturdy men who, without "Federal aid" of any sort, manage to keep their occupation true to the highest traditional standards.

"CAB Spurs Freight Rate War," Marsh

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. AVERY. Mr. Speaker, there is increasing concern among the members of the Interstate and Foreign Commerce Committee in respect to the future of our Nation's railroads. There is increasing concern among all Members of Congress over the increasing demand for Federal subsidies in the several segments of our economy. We are all aware that it is important to assure each phase of our transportation industry their fair share of the gross volume of goods transported.

With our concern that each phase of our transportation industry receives fair treatment, goes the concern that this is done at a fair cost to the customer and does not require a Federal subsidy that is beyond a reasonable assurance that this particular industry has an opportunity to become established. That has been the overriding philosophy in the various subsidies that were extended in the early development of our Nation's rails and still in some extent to motor carriers and airlines as well.

I am personally concerned with a recent CAB proposal to virtually discard all minimum air freight rates and to, in fact, assure airlines of a subsidy sufficient to compensate for any loss incurred by them in handling freight at a reduced rate. Even at the existing rate, a substantial subsidy was necessary to sustain the air freight industry but by removing all minimum air freight rates, I can only conclude that the Federal Government will now be asked to pay by increased subsidy the difference between the lesser earnings under the new schedule and the earnings under the existing rate. Not only do I feel that this action goes beyond the legislative intent for the original authority of the CAB to make subsidy awards, but it also distorts the historical concept of fair and reasonable competition.

In this connection, I would like to enclose a recent statement made by Ernest S. Marsh, the president of the Atchison, Topeka & Santa Fe Railway, that emphasizes the concern of the rail industry over this recent action by the CAB:

[From the Chicago Daily Tribune, Mar. 15, 1961]

"CAB SPURS FREIGHT RATE WAR," MARSH—SAYS TAXPAYERS WILL FOOT BILL

(By Louis Dombrowski)

A Civil Aeronautics Board proposal to scrap minimum airfreight rates and subsidize all-cargo air operations was assailed yesterday by Ernest S. Marsh, president of the Atchison, Topeka & Santa Fe Railway.

He accused the CAB of "rank discrimination against the surface carriers," adding that eliminating rate floors "would precipitate a rate war, with the American taxpayers footing the bill."

Such a rate war is already in the making. United Air Lines has asked a rate reduction on many commodities to 13 cents a ton-mile from 16 cents on shipments from west coast cities to the Midwest and points East. It asked that the rates become effective on or about April 1.

SOME CUTS OF 40 PERCENT

Flying Tiger Line cut some of its freight rates as much as 40 percent on March 2. This reduction was approved by the CAB as part of Flying Tiger's plans to put new CL–44 turboprop cargo planes in service later this year.

A Flying Tiger spokesman conceded that the airline will lose money initially at the new rates, but contended that they will provide an opportunity to explore the extent to which shippers might use airfreight at lower rates for commodities which are not now extensively shipped by air.

"This is discrimination that goes beyond a destructive rate war," Marsh charged. "The air carriers under the CAB plan would have a ratemaking freedom not accorded to any other type of carrier."

CITES SUBSIDY PROPOSAL

The railroad executive cited a statement by Merritt Ruhlen, CAB examiner, who suggested that the air-cargo industry be regrouped for a new, federally subsidized invasion of freight business being handled by railorads and trucklines.

Ruhlen acknowledged that the subsidies would help divert traffic from surface carriers, but he added that Congress charged the CAB with the "promotion, encouragement, and development of civil aeronautics," and said that subsidies were fashioned by Congress as a tool for the CAB to use in carrying out its responsibility.

The examiner argued that air cargo, still in a developmental and experimental stage, should be subsidized as a matter of principle.

RECALLS CAB REFUSAL

"The irony of the whole thing," said Marsh, "is that after World War II, when the Santa Fe started its own air-cargo line, the Santa Fe Skyway, the CAB refused to give the airline a common-carrier certificate because it had a regulation prohibiting surface carriers from engaging in air transportation.

"We were willing to provide airlift, without any kind of Government subsidy or equipment development handouts, in the cargo field only. We offered a plan of air-surface coordination that would have expedited freight to hundreds of communities now without air service."

In the Santa Fe's annual report for 1947, Fred G. Gurley, then president, wrote: "Due to the obviously unfriendly and discouraging attitude of the Civil Aeronautics Board toward the Santa Fe and other surface carriers, decision was reached in January 1948 to abandon the Santa Fe Skyway."

CONDITIONS FOR REENTRY

Asked if the Santa Fe would consider starting an air-cargo line today, Marsh replied that the road "would give serious consideration to reentering the air cargo field under

favorable legislative conditions that would allow it to operate on an unrestricted private enterprise basis."

Marsh pointed out that airfreight rate minimums were put in effect in 1948 to stop a rate war. He cited the CAB as saying last month that there are no signs today of a rate war or an imminent threat thereof.

"If what the domestic and oversea airlines and cargo lines are engaging in now is not a rate war, what do you call it?" he asked.

Tribute to a Public Health Worker

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. FOGARTY. Mr. Speaker, I wish to call to the attention of the Members the long and distinguished career in public health work recorded by Miss Mary S. Gardner of Providence, who died February 20, 1961.

Miss Gardner herself was invalided in her twenties, but after she had recovered her strength to continue her education, she entered the Newport Hospital Training School for Nurses and was graduated cum laude in 1905. She organized and became the first director of the Providence District Nursing Association, a post she held until 1930.

While director of the association, Miss Gardner served as president of the National Organization for Public Health Nursing from 1913 through 1915. In 1916, her book "Public Health Nursing," was published as a standard textbook, and was subsequently translated into French, Spanish, Chinese, and Korean.

During World War I, Miss Gardner took leave of absence from her post to become chief of the nursing section of the American Red Cross Tuberculosis Commission in Italy. Later, in 1921, she became adviser to the American Red Cross on public health nursing in Europe, and was chairman of the standing committee on public health nursing of the International Council of Nurses from 1925 to 1933.

Miss Gardner wrote many educational pamphlets as well as several novels in which public health furnished the background.

In 1933 Miss Gardner won the Saunders Gold Medal "for distinguished service in nursing." Some of the modern practices that evolved in the first three decades of this century were first instituted by Miss Gardner.

Miss Gardner's devotion to service for the benefit of others is not without background. She was born in Newton, Mass., February 5, 1871, a daughter of the late Justice William Sewell Gardner of the Massachusetts Supreme Court and Mary Parker—Thornton—Gardner, a direct descendant of Matthew Thornton, signer of the Declaration of Independence from New Hampshire. Her interest in nursing stemmed from an association with the late Miss Eleanor B. Green, a sister of former Senator Theodore Francis Green.

Rhode Island primarily and the United States generally can indeed be proud of the outstanding contributions to health and well-being that have been made by Miss Mary S. Gardner. Her fine record of service should also serve to inspire all of us to help in the battle against disease, disability, and premature death.

Education for Politics

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I want to insert in the RECORD the speech delivered by Allen Drury at Rollins College's Animated magazine recently. Mr. Drury points up in very thought provoking fashion the proposal that there be established in Washington a National Institute of Government—a living memorial to the great men of Government in America. It is a proposal in line with my Freedom Academy that I think merits the very careful consideration of every Member of Congress:

EDUCATION FOR POLITICS

(Text of speech by Allen Drury for Rollins' Animated magazine)

I thought that I would talk to you today—briefly, as Dr. McKean suggested, and briefly, as befits the spirit which now animates Washington speechmakers, and which I consider a very good thing—about "Education for Politics."

I use the word politics in the classic sense of the science of governing; and I say education for politics rather than education and politics because I think that in the age in which we live, and in the face of the perils we confront, it would be best for us if the two did not run parallel, but convergent.

As one of those who has believed for a long time that it will indeed be decided in these very few next years whether this Nation and the whole free world can continue to live, it seems to me imperative that we train and educate men and women capable of understanding and administering the great mechanisms of our liberty. And by this I mean not only the national level, but down through every level, from national to State to local.

We need people who realize what it means to have free government, and who know how to go about seeing that it is strengthened and maintained in every area of our national life. We need a general tightening up all along the line to get rid of the flabbiness which has crept into our attitude toward our own country in recent years. We have drifted too long on the theory that freedom is easy. It is time we realized that it is not, and time to begin consciously to prepare the citizens coming to maturity who will have charge of it in the fearful years immediately ahead.

We now have a President who sees this, and that in itself is a great step forward in setting the psychological climate without which the job cannot be done. But it is not enough—it is never enough—to slough off our own responsibilities upon the President, whoever he may be. The President has plenty to worry about without doing the jobs the citizenry should be doing for itself. And it is in our schools, and on just such campuses as this, everywhere throughout the land and at all grades, that the task must be accomplished.

Initially, it seems to me, there must be a drastic and immediate reappraisal of the teaching of American history, from the earliest grades on up. There is a great story here in this Republic, yet millions of citizens have come to voting age in the past couple of decades with only the haziest notion of what it is.

Along with the educative fad that it would be best not to teach anyone English, so that everyone could be sure to talk and write at the same level of scholasticized illiteracy, it has also been the fad to play down one of the greatest sagas of struggle and triumph that any people has ever known in all of recorded time.

Somehow—and, I suspect, good teachers with some sense of dedication to their country can do it without too much extra trouble and strain—Americans must be brought back to a realization of the glories of their own heritage.

They must be reminded, and made to feel, what it meant to cross the ocean in a tiny boat and land in an unknown and hostile wilderness to start a colony.

They must be reminded, and made to feel, what it meant to take up arms against what was then the overwhelming world might of the British Empire—and win.

They must be reminded, and made to feel, what it meant to sit down in Philadelphia in a steaming summer long ago and patiently, step by step and argument by argument, hammer out a constitution and a government that works.

They must be reminded of all the struggles that went on in the Congress as the Nation spread westward, the frontier opened, and Civil War threatened and finally came.

They must be told again of the awesome bravery of the pioneers, which was not a nice comfortable TV show that could be watched in your living room, but a matter of fortitude beyond imagination and courage beyond belief in which people died in terrible deserts and ate one another at Donner Pass.

They must understand anew the things earlier Americans did, and why they did them, in all the long pageant of nearly 200 years in which the Lord has seen fit to raise us up, from a handful of colonizers, scattered along a thin thread of seaboard, to what every day becomes more truly what Mr. Lincoln called it, the last best hope of earth.

They must be given again a sense of cohesion with their past, of unity with the Nation and with one another. They must find again a sense of their own history, for only out of it can come the inner conviction and courage to carry them on into a future, not of the death and extinction that the Communists intend for us, but of justice and strength and compassion in which we can both save ourselves and lead a world in shadows back toward the light.

In some such fashion, it seems to me, the schools and colleges of America can do their part; plus, also, a greater stress on political science and civics courses, the basic understanding of government; and a much greater emphasis upon what, in today's academic and social climate, may seem to be the rankest heresy; namely, the individual's obligation to be individual.

I spoke in October to the Whig-Cliosophic Society at Princeton, and after the session one of the students drove me back down to Philadelphia, where I was spending the night. He was a very nice kid, I would say about 18, from Illinois; very much disturbed about the college world.

"You know," he said, "I'm really bothered about it. The whole emphasis is on the

group—on everybody being equal—on nobody excelling anybody else—on everybody showing the same level of activity and achievement—on nobody showing initiative—on nobody being outstanding. The whole emphasis is that we should all conform to the same median pattern. It bothers me, and I don't like it."

His complaint—and certainly he is not the only one of his generation to voice it—might also be considered, I think, in connection with education for politics.

If the highest aim of American education in this fearfully threatened world is to grind out a bland paste of conformity in which all lumps and scratchy pieces have been ground away in a sort of vast academic Waring blender, then that is one thing.

But if the highest obligation of American education is to create leaders self-assured enough to lead and a citizenry intelligent enough to follow them constructively, then that is quite another.

Somehow, it seems to me, we have got to get away from this frightening insistance that everybody be exactly the same as everybody else. This was not the spirit that landed on alien shores, or went across the plains, or, on both sides, fought a civil war; or that helped us create the bounties we have.

The pressures for conformity which surround the young in school and college are bad enough without their being the organized objectives of an entire society. Somehow we have got to break the grip of the drab and lackluster level of sameness which is oozing like wet cement through all levels of our national life. A little while longer, and it will begin to harden; and then no amount of education for politics, or education for anything else, will be able to break through.

We need leaders. We need them desperately. We need every bright and unusual student we can get, because we are up against the grimmest foes that ever lived and we can't beat them with the second rate.

It is going to demand every bit of brilliance in this Nation to see us safely through what lies ahead. If we really want to win—and I don't know about you, but I do—it is going to mean the scrapping, completely and at once, of that other sickly educative fad of recent years, the one that says that everybody must be just alike and nobody must ever raise his head above the herd.

If we stick to that much longer, we are going to have a nation of mediocrities governed by mediocrities; and that is not the way to survive in this jungle century.

Education for politics; in conclusion, one specific proposal of my own, springing from a purely personal attempt to find some constructive alternative to the empty and endless proposals to clutter up the Nation's Capital with lifeless stone excrescenses in the names of great men who are gone.

Instead of a statue to President X or a stone monolith to President Z—why should we not have in Washington a National Institute of Government to do honor to them all—a living memorial in which all our great men could be honored in a way that would mean the most, both to them and to posterity—namely the education of men and women in the practical science of governing freemen?

It could be done, it seems to me, without much difficulty, and it could pay in living dividends of leadership 10,000 times over.

Let it be created by congressional charter as an educational institution supported partly by Government contributions, principally by private charitable donations.

Let it be established somewhere within the District of Columbia or in the immediate countryside nearby—a number of private estates would undoubtedly be available if the project were seriously proposed.

Let it have a grand entryway, if you like, with statues standing about and fine sentiments inscribed on the walls as you go in.

But inside, let it be alive.

Suppose it to consist of a 2-year postgraduate course, its students drawn by competitive examination and interview from all over the country. Suppose the staff to consist of a small administrative group and a constantly changing body of lecturers.

Suppose the lecturers to be drawn partly from universities, perhaps, but in far greater measure from those who really know the science of politics, because they have successfully passed the test; the Members of the Senate, the Members of the House, members of the President's Cabinet, other high administrative officials, possibly also members of the Washington press, who both record and at times participate in the processes of free government.

Let the students draw upon these men for lectures, ideas, just plain talk. Let them draw also upon all the vast resources that Washington provides for the study of government; the Library of Congress, the Archives, all the various departmental and agency libraries and files.

Further, let the 2-year course consist, and perhaps more importantly, of several direct and practical applications.

Let it consist of, say, 6 months attached to the executive department or departments of the student's choice, with the privilege of continuing to attend lectures when convenient. Let it consist of 6 months attached to the office of a Senator or Congressman on Capitol Hill. Let it consist, either in its first or last 6 months, depending upon whether the student starts his course in a congressional election year or an off year, of 6 months working in the home district or State of a Congressman or Senator, participating in the everyday drudgery of dealing with constituents, appealing to the electorate, rounding up votes.

Let it, in short, be informative, educative and practical, drawing upon all the wealth of men, material and knowledgeable experience that resides in the city of Washington. Let its students study government and politics at the fountainhead. Let it be truly a National Institute of Government.

Then there would be one memorial for all the men whom it is now proposed to honor by hunks of lifeless stone all over downtown Washington. Teddy Roosevelt's family is unhappy about the one they're proposing to him, Franklin Roosevelt's family is unhappy about the one they're proposing to him. Woodrow Wilson's family is upset, and sooner or later the Eisenhowers will be called upon to be unhappy about the one somebody will propose to him.

But, good or bad in design, they will still be cold, lifeless, sterile and unproductive pieces of stone, steel and marble, incapable of contributing to the country one one-thousandth of what could be contributed by a living memorial of governmental training in which all leaders could be honored and new ones could be constantly trained.

Let us reaffirm our past; let us educate our future. The times are hard, the cold winds of history blow about us. Whether we live or die depends, in some degree it is true, upon our enemies; but the ultimate answer as to which it will be depends upon us.

We must not fail history's challenge, my friends, for this is a lovely land we have; and it would be a shame indeed to lose it.

A Tribute to the Victims of the "Maine"

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. MATHIAS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an address delivered to commemorate the "Victims of the *Maine*" by a Cuban patriot, Dr. Carlos Márquez Sterling, whose father played a prominent role in winning Cuban independence. This speech was brought to my attention by the Reverend Father Joseph F. Thorning, Ph. D., D.D., associate editor of World Affairs and professor of Latin American history in Marymount College, Arlington, Va.

This address by Dr. Carlos Márquez Sterling emphasizes to what a degree fundamental human rights are at stake in Cuba today. Candid readers of this speech will see that much more is involved in the struggle for Cuba's freedom than mere commercial interests. Those who allege that it should be easy to resolve differences between Fidel Castro's Cuba and the other American Republics because these differences are "primarily economic," overlook the major fact that civil and religious rights have been destroyed by the Sino-Soviet Gauleiters in the Castro dictatorship. Property rights are important; human dignity and humane principles are paramount.

The address was given before the Maine Monument in Arlington National Cemetery.

A TRIBUTE TO THE VICTIMS OF THE "MAINE"

(By Dr. Carlos Márquez Sterling)

Ladies and gentlemen, 63 years ago today the 15th of February, 1898, the U.S. Navy's battleship *Maine* exploded in Havana Harbor while on a good-will visit.

We Cubans had been in arms against the mother country since the 24th of February, 1895. We were engaged in a war to win independence, an ideal which we had pursued for more than a century, and whose purpose was the creation of our own republic.

The *Maine* incident led to the U.S. declaration of war against Spain and the uniting of Cubans and Americans on the battlefields of the island. The result was that finally, at the beginning of the century, we won independence, founded our nation and established self-government.

THE JOINT RESOLUTION

There is, in the history of the United States, a document that admirably defines the situation as it was at that time. The document is known as the joint resolution and was issued by the Congress of the United States. In its first paragraph it declared that "the people of the island of Cuba are, and of right ought to be, free and independent."

"The abhorrent conditions which have existed for more than 3 years in the island of Cuba, so near to our own borders—says the joint resolution—have shocked the moral sense of the people of the United States, have

been a disgrace to Christian civilization, culminating as they have in the destruction of a U.S. battleship, with 266 of its officers and crew, while on a friendly visit in the harbor of Havana, and cannot longer be endured, as has been set forth by the President of the United States in his message to the Congress of April 11, 1898, upon which the action of Congress was invited."

Unfortunately, the situation that today confronts the island of Cuba is much worse than that described by the joint resolution in 1898. Owing to historical accident, Cuba was the last American country to win its independence, and at the present moment, it is the first to have fallen under the domination of international communism.

We have not, of course, come here today to the foot of this monument honoring the memory of the *Maine's* victims to grieve, but to express a solemn oath, and to define a program that shall allow us to recover our lost homeland and to punish the traitors that have sold her, tied hand and foot, to Soviet imperialism.

A FIGHTING PROGRAM

The first objective to be won is the uniting of all Cubans who as yet have not understood our dramatic plight. We are duty-bound to make a reality of the dream of Jose Martí, which in his own words was "to surround the star of the new flag with the symbols of triumphant love, signifying Cuba's genuine aspiration toward all people and for the welfare of all people." Then we would turn toward the other countries of America, reminding them of that powerful statement of a great Argentinian, Roque Saens Peña who, on the occasion of the first meeting of the Pan-American Congress in Washington in 1889, exclaimed "Let America be for humanity."

It is high time that we understood that Cuba's drama has become something involving even more than the problem of communism. It has become a problem involving humanity. In the words of the Joint Resolution of 1898, it "has shocked the moral sense of the people of the United States (and it has) been a disgrace to Christian civilization," as it has been to all the peoples of the world who adhere to Western civilization, and who respect to the letter the personal and spiritual freedoms that distinguish man from the animals.

Whatever may be accomplished without the necessary recognition of all those internal and external elements vital to Cuba's liberty, and vital to the Inter-American system as well, may cause not only the consolidation of communism in the Caribbean, but also a threat to our continent by Siberian imperialism, and the necessity for a third world war. Such can be avoided now if the Organization of American States, out of respect to the treaties in force, executes its continental objectives and applies the resolutions that solemnly committed it to the exclusion of communism from America. The pacts and agreements signed in this regard are of the nature of a policy that has been restated in Rio de Janeiro, in Caracas, in Santiago (Chile), in Bogotá, and in Costa Rica and are binding not only on the United States, but also on all the countries of Central and South America.

CUBA'S CASE HAS BEEN DISTORTED

The case of Cuba, thanks to infamous Communist propaganda that has falsified and distorted it, is not well known to a large part of America's citizens. Thousands of people believe—and undocumented and superficial books have been written to substantiate the belief—that our basic problems during the revolutionary struggle were more economic and social than political and partisan in nature. And nothing is more inexact.

Although Cuba suffers inequalities, as do all present-day countries, the issues at stake during her armed struggle originated in a policy that opposed public liberties. But as can be easily ascertained by anyone who studies the matter, the case was that, concurrent with this struggle for public power, our country was enjoying great prosperity, the year 1957 being the best in all of our history in terms of economics and finances.

Actually, as a result of the truly socio-economic revolution of 1933, the last 25 years of our existence as a republic saw Cuba attain very great heights, that in some aspects put her among the topmost ranks of the American continent.

In answer to some mistaken notions held by Mrs. Eleanor Roosevelt, Dr. Manuel Antonio de Varona, coordinator of the Democratic Revolutionary Front (Frente Democratico Revolucionario), whose headquarters are in Miami, wrote a letter that appeared in the Washington Daily News some weeks ago, in which he was able to put those aspects in a clear light, thereby destroying the false picture of Castro's revolution as being beneficial in the social and economic order of things. Actually, as he points out with incontrovertible statistics and figures, Castro's action has had dismal results and has destroyed all our wealth.

Our constitution, promulgated in 1940, over whose assembly I had the honor of presiding, and for which I was the fortunate recipient of a good deal of public recognition, is one of the most advanced in the world. Our social laws, our banking and financial legislation, and our system of taxation, based recently on the income tax and on the graduated tax, and our sugar crop of 5 million tons, with the American quota assured at a price of 6 cents a pound, allowed us a budget of 400 million pesos a year, when our currency was at a par with that of the dollar. In a country like ours, with a population of 6 million, our per capita income was placed at no less than immediately behind that of the United States.

Since our principal source of income was sugar cane, the law of sugar crop coordination was in effect, voted into being by the Cuban Congress when I was fortunate enough to be presiding officer. This law divided profits among landowners, planters, and workers in accordance with the average sugar price, so that exploitation, in this great sector of Cuba's industry was rendered impossible.

In many, but not all, places on the island, the land was certainly badly divided, since unproductive landed estates were in existence, subject to the old laws of social progress studied by Henry George, and where agrarian reform was an indispensable necessity.

Such a reform would not have been difficult to put into effect, because fortunately, owing to the law of sugar crop coordination which we have already mentioned, and other laws that controlled urban and rural land, there existed in Cuba the right of land tenure. This made it impossible for planters, tenants, joint owners, and fieldworkers to be dispossessed even by the State itself, much less by the great monopolies which in Cuba, as is the case even here in the United States, are always after impoverished areas. They made it necessary for Cuba, just as it was necessary for this great democracy, to enact antitrust legislation to regulate these rights. In brief, if we could make general reference to our economy, it would not be difficult to demonstrate that Castro's regime has ravaged Cuba from one end to the other, increasing her unemployment figure to more than a million, and lowering the rate of exchange of her money to seven Cuban pesos to the dollar. Very well then; if acts of robbery, confiscation, execution by firing squad, and seizure of banks, businesses and free enterprises without any indemnization or payment, not even in bonds, represents liberalism and social progress, we must affirm that Castro is the man who has done the most for Cuba. He has made of a prosperous country an island wallowing in destitution and at its lowest standard of living since it became independent, and this because he has done away with legal measures, and because he has turned workers and laborers into volunteer uniformed soldiers who have to serve the State without remuneration.

CASTRO AGAINST HISTORY

Just as Castro has nullified all of Cuba's economic and social progress, just as he has shattered her public and private liberties by submitting the island to an ominous tyranny, and converting it into a Communist colony, officially sanctioning the murder of his compatriots and depriving everyone of property without compensation, so would he also destroy and silence forever the history of relations between our two countries. There would remain not even the vestiges of efforts concluded in behalf of human liberties.

A few days ago, Castro dismantled the monument to the Maine erected from the remains of that ship that we Cubans raised on one of our most beautiful avenues in Havana. He has also removed from the same place the bronze eagle that crowned the monument, and the statues of Presidents McKinley and Roosevelt and Governor Wood that used to be in an adjacent park. These historical figures were linked to the epic of our war of independence by ties of blood and affection with our young and ill-fated republic.

McKinley was the President who sanctioned the joint resolution. Roosevelt and Wood were the valiant roughriders who fought shoulder to shoulder with Cubans on the hills of San Juan, in Santiago, Cuba, under the command of one of our greatest generals, Calixto García, who years later, just as he was about to become President of Cuba, died of pneumonia here in Washington.

This modest speech would not be complete if before finishing it I did not leave a record of the great Americans, who among many others, are associated with the history of Cuba, and to whom the Cubans are indebted. They are Ohio Senator Joseph Foraker who in 1900 authored the beneficial law prohibiting civil concessions in Cuba during the first military intervention; Franklin Delano Roosevelt, Cordell Hull, and Sumner Welles, President, Secretary, and Under Secretary of State respectively, who in 1934 negotiated with our Ambassador, who was, of course, my unforgettable father, Don Manuel Marquez Sterling, the law of sugar quotas, the commercial treaty, and the abrogation of the Platt amendment that for many years had damaged the sovereignty of the Cuban people.

REVALIDATION OF THE MONROE DOCTRINE

We who are met here today at this statue, Cubans representing all tendencies and all groups, have no differences in our observations concerning relations between Cuba and the United States. We know that the right of intervention as such ceased to exist with respect to Cuba years ago. We also know that the diplomatic and international features that characterized past administrations are dead letter. We know too, however, that in the absence of old problems already disappeared, there exist new issues that oblige a revision of the international policy of America's countries. Such is necessary to prevent the fear of intervention on the part of one of our countries in the affairs of another from causing subversive intervention on the part of a power from outside the continent. An extracontinental power would take advantage of citizens who

betray their country and the traditions of the free world for illicit ends that they could never attain through free election, as Castro and his gang of common delinquents have done. These traitors at first facilitate the entry of an extracontinental power which, once established, first does away with the traitor who sells his country, and then eliminates the sound opposition that has opposed the treachery. In this way, owing to a failure to defend continental ideals, the overwhelming power of communism can consolidate itself. Communism, whose crushing tactics result in the domination of one class by another, has as its final and consolidating objective, the extermination of everything that would even serve as a memorial to Western civilization. Such is happening in Cuba, where the intention is to go to the extreme of erasing the history of her liberties from the book of her glorious deeds, as the recent incident of the monument to the Maine illustrates. These acts no longer merely affect the sovereignty of the Cuban people. They go further, much further, and owing to acts of violence and crime, they involve the moral sovereignty of all the rest of the countries in America. Of these countries some have been allies, not for the purpose of intervening in each other's affairs, but for the purpose of establishing the civil and political liberties that were born of Washington's revolution in North America and the wars of independence in Central and South America. The latter are symbolically immortalized in the names of Bolivar, San Martin, Máximo Gomez, Sucre, Hidalgo, Morelos, Artigas, Maceo, Morazán, Martí, O'Higgins, Lamar, Santa Cruz, and many others.

In honoring the memory of the victims of the *Maine*, it is necessary as well to remember the predecessors that served as worthy models. It is necessary that we give new value to the Monroe Doctrine, by breathing into it the spirit of the age. The countries of America, through their legal agencies and the Organization of American States, must declare that all those regimes, whether Communist or not, that do not seek public sanction by majority vote for the lawfulness of their revolutions within 3 years of victory by arms, are movements contrary to the popular will. They are traitors to democracy and to law and order. They are enemies of republican government and continental sovereignty. They are anticonstitutional, proslavery, reactionary and feudal. They deny all the human progress of past centuries whose objectives centered about man and his civil, political, social, economic, and spiritual rights; rights that are conclusively lost when international communism, that vile, atheistic expression of medieval absolutism, gains control of any given country. Communism, with its other deceitful characteristics, has raised its head in defiance to the world of liberties.

I should like to make a modest suggestion, the product of my studies and of the anxious times I have spent in the service of the American democracies. In tribute to the martyrs of American liberty, I suggest that the Organization of American States revalidate the Monroe Doctrine, making it a collective instrument, and orienting it in three broad directions, that is:

First, by stipulating that no revolutionary government be recognized until it stages popular elections.

Second, by maintaining relations with said governments, without express declaration, but only as a modus vivendi.

Third, by expressly breaking said modus vivendi when at the end of 3 years popular elections have not been staged, and by decreeing moral and material boycott of those countries that turn their backs on universal liberties.

If the Monroe Doctrine was the product of the Holy Alliance against the danger of restoration of absolutist governments in America, it is not at all surprising that by modifying it in accord with the demands of the times, it can be revalidated precisely to defend the same ends against the advance of Communist absolutism. Communism is more daring and more defiant than were the monarchs of years ago, and it would try to submerge the world in eternal darkness, drowning and choking the American continent, home of a political philosophy that gave birth in this new world to a cluster of free and sovereign republics, where totalitarianism has never gained a permanent foothold.

TRIBUTE TO THOSE WHO HAVE FALLEN IN THE PRESENT STRUGGLE

Let us now conclude these heartfelt words in memory of the victims of the *Maine* and of those Americans who accompanied us in our wars. A new group of this country's citizens have again fallen in the struggle for Cuba's liberty. Cubans and Americans have fallen before Castro's executioners, just as in other times Cubans and Amercans also fell in the defense of liberty. The crime of these boys, the children of this great Nation, was that they were protecting our liberties. Castro, who claimed to be defending those liberties, instead liquidates those who do defend them. Just as the *Maine* is enshrined in the hearts of all Cubans, so these young people who recently died will be remembered in the days to come. For in the end, with or without the help of America, we Cuban democrats will win this battle. In fact, the liberating war already rages in Cuba. In the Escambray and the Maestra hills, always a haven for Cuban rebels, there are thousands of fighters, preparing to wage a new war of independence; and only a few days ago, the Russo-Chinese backed troops of Castro, suffered a great defeat at the hands of those brave men, to whom we from here, send a heartfelt message of glory and liberty for the days to come.

I do not want to conclude without mentioning the names of the American citizens whom Castro, without any respect for this country, executed. They are Anthony Zarba, Richard Pecoraro, Allan Dale Thompson, and Robert Otis Fuller.

Some day, Fuller's cross and cap, raised in Miami by his parents as a symbol of his death, in the absence of the body which Castro cruelly refused to surrender, will be erected as a bronze and marble monument as the worthiest expression of the fact that America's young generation is on Cuba's side, just as it was in 1898.

Americans, Cubans, the die is cast. Neither you nor we can forget. Here beside this monument we renew the solemn oath of liberty or death. Let us raise the cry of recognition to the victims of the *Maine*, and of admiration to the memory of those sailors who lost their lives in that tragedy, once more declaring our communion in an event of extraordinary significance for the history of this continent.

We come, then, to reassure them that we are in circumstances that require us to repeat the declaration of the joint resolution of 1898, that we in 1961 must always keep before us: "The people of the island of Cuba are, and of right ought to be, free and independent."

Dinner for Freedom

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I submit an editorial telecast by the television station WLOF in Orlando, Fla., on March 18, 1961. It was telecast on the occasion of the Dinner for Freedom in Orlando which is the birthplace of the Freedom Academy idea:

DINNER FOR FREEDOM

Mid-Florida takes a pioneering step this Saturday night, a forward step for freedom everywhere, in its battle against communism. The event is a $10 fund-raising dinner to boost the Freedom Academy bill now before Congress. Mid-Florida's Representative SYD HERLONG will be on hand to introduce his cosponsor of the legislation in the House, Minnesota's Congressman WALTER JUDD, the man who electrified the Republican National Convention last summer as keynote speaker.

His present aim: To enlist support for perhaps the most important legislation ever brought before the Congress. The Freedom Academy (as outlined in the bill) would train Americans to combat communism at home and abroad, and would also educate the leaders of emergent nations in democratic methods.

Most of the isolated objections have been "nitpicking" at some minor point. The basic bill appears sound and well worth a try. The Freedom Academy idea, born and nurtured in Orlando, has attracted wide support throughout America—from members of both major parties, of all faiths, from every walk of life. Their one interest: To protect and defend freedom everywhere so democracy may endure.

Orlando is fortunate to be host for this first "Dinner for Freedom." Here is everyone's opportunity to support the defense of freedom with more than simply lipservice. Here is a way citizens can combat communism.

If the bill is passed and the Freedom Academy succeeds, Orlando may well be known as the place where free men turned the tide against our greatest enemy, the tyranny of communism.

Chemical, Biological, Radiological Attack

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. SIKES. Mr. Speaker, I call attention to an article appearing in the March 1961 issue of Today's Health entitled "The Three Deadly Faces of Modern Warfare." This article, from the pen of Mr. Dennis Orphan, results from an exclusive interview with Maj. Gen. Marshall Stubbs, the Army's Chief Chemical Officer, and Leo A. Hogh, former Director of the Office of Civil and Defense Mobilization, Washington, D.C.:

CHEMICAL, BIOLOGICAL, RADIOLOGICAL ATTACK—THE THREE DEADLY FACES OF MODERN WARFARE

(By Dennis Orphan)

INTERVIEW WITH GENERAL STUBBS

"Please describe exactly what you mean by chemical warfare, biological warfare, and radiological warfare? Give examples of each."

Chemical warfare involves the use of toxic chemical agents to cause physiological effects. An example of a compound that could be used in chemical warfare is nerve gas,

which produces casualties by paralyzing respiratory muscles.

Biological warfare involves the intentional use of micro-organisms (germs) or their toxic products to cause disease or possible death among humans, animals, and plants. Some of the diseases carried by the germs may produce slight and temporary effects, while others disable for varying periods of time, and still others may cause death. An example of a possible bacteriological warfare organism is bacterium tularensis, which produces tularemia (rabbit fever) in man.

Radiological warfare is the employment of agents or weapons to produce residual radioactive contamination, as distinguished from the initial effects of a nuclear explosion (blast, thermal, and nuclear radiation). An example would be the deliberate use of radioactive pellets to contaminate an area.

"What problems will face the medical profession should an enemy resort to biological and chemical warfare?"

A nation must be prepared at all times to immediately detect, identify, and take steps to neutralize or minimize the effects of biological and chemical warfare. In a sense, through the medical profession and public health workers, we are constantly on the alert to detect outbreaks of disease, identify the disease, and treat or eradicate the disease. With the potential employment of biological agents, these steps must be intensified.

In the fields of animal husbandry and crop management a whole series of workers—veterinarians, livestock officials, plant pathologists, laboratory workers, and others—wage a constant unseen and unheard of war against all forms of biological agents that threaten our animal population and crops. New and additional procedures must be instituted to guard against enemy chemical attack. The medical profession has done and is doing much to inform its members of the probelms concerned with chemical warfare.

"What should physicians do to be prepared to treat and care for biological warfare and chemical warfare casualties?"

There are several programs of instruction open to physicians that teach approved methods of treating biological warfare and chemical warfare casualties. Recently the U.S. Public Health Service has added more emphasis to these aspects of civil defense. Articles are printed in medical journals, lectures have been given before medical audiences, the Armed Forces medical officers have presented some splendid clinical material on the subject.

Exhibits have been prepared, seminars conducted on the subject, and all types of teaching methods have been used. Each physician in the country should fully inform himself of these threats of biological warfare and chemical warfare, how to recognize them, and how to treat them. The AMA, through its council on national security, has done much to aid physicians in the field.

"What kind of germs or poisons might be used in chemical and biological warfare?"

Agents used in chemical warfare could include blister gases, such as mustard, or nerve gases. Germs used in biological warfare could include those which produce tularemia, encephalitis, plague, typhus, undulant fever, and others, in man; and hog cholera, hoof-and-mouth disease, fowl plague, etc., among animals.

"Is there one single type of germ that will make everyone sick? Is there a germ that will knock out the entire country?"

There is probably no single type of germ that will make everyone sick. Almost everyone has some degree of resistance to germs, through natural or acquired immunity, or public health measures.

The influenza epidemic of 1918–19 is an example of a naturally occurring epidemic in modern times that took a large toll. Many people in direct contact with the influenza germs escaped the disease through an apparent immunity.

"Give some examples of what chemical and biological agents can do to kill or incapacitate a person."

Chemical agents can kill by stopping a person's breathing, as happens with nerve gas, or can incapacitate, as happens with tear gas. The nerve gases were developed during World War II by German scientists. At the end of the war, many of these scientists and a complete production plant were captured and moved to Russia. Biological agents can kill, as may happen when a person inhales tularemia germs.

"What are the advantages of chemical and biological weapons?"

Some of the features of chemical and biological weapons are:

Logistics (supply) economy—they can largely be used with existing and projected weapons systems, thus requiring no elaborate new systems. In comparison with conventional high explosives, they are less bulky and heavy for comparable results in many situations. Their research, development, and production require a relatively small fraction of the national effort and resources.

They are "search" weapons that can seek out the enemy underground or in concealment. They can be used to achieve a wide range of effects—from temporary to persistent, from mildly incapacitating to highly lethal. They can be used alone, or in conjunction with high explosive, or nuclear weapons systems. They can be used for deterrence, or preventing aggression, as well as for defeating it. They do not destroy installations and facilities, such as ports, factories, roads, and bridges. This is an important factor in preserving the facilities of friendly nations, or in restoring the facilities of a defeated aggressor.

"What are the defenses against chemical and biological warfare?"

Early detection, identification, and warning systems; protective masks and clothing; shelters, air filters, and similar protective measures; public health measures; means of decontaminating equipment, food and water supplies; immunization, first aid, and medical treatment.

"What is being done to meet the total infectious disease problem should it be used in warfare?"

By the total infectious disease problem it is assumed you mean the problem of disease germs being used against our civilian population as well as against our Armed Forces. It must be understood, that the U.S. Army has responsibilities only in the area of military defense. The Office of Civil and Defense Mobilization (OCDM), the recently combined organization of the former Federal Civil Defense Administration and Office of Defense Mobilization, has primary responsibilities at the Federal level in the area of civil or nonmilitary defense.

Other executive branch departments and agencies, such as the Department of Agriculture (USDA) and the Department of Health, Education, and Welfare (DHEW)—including the Public Health Service—also assist in civil defense in their specialized areas.

The U.S. Army Chemical Corps works closely with these other Government agencies and supplies them with information that may be helpful to them in civil defense, as do the Army Medical Service, Quartermaster Corps, Corps of Engineers, and other Army elements.

Accordingly, the Armed Forces would be primarily concerned with the total infectious disease problem within the Armed Forces. OCDM; Department of Agriculture; Health, Education, and Welfare, and other Federal, State, and local agencies would be primarily concerned with the total infectious disease problem within the civilian population.

"What are the psychochemicals? What do they do?"

Psychochemicals attack the nerve centers of the body and cause an individual to react or behave abnormally. The psychochemicals leave no harmful aftereffects.

"We know pretty well the destructive power of a thermonuclear bomb. Describe the destructive power of chemical and biological weapons."

Considered on the basis of physical destructive power, there can be no comparison between chemical and biological weapons and between biological weapons and thermonuclear weapons. A thermonuclear weapon could be employed solely for its destructive force to lay waste the enemy military or industrial installations by heat, blast, and radiation, in which case the accompanying radiation effect would be incidental.

Chemical weapons, such as incendiaries, can be physically destructive and are effective munitions, but their destructive effect is certainly not of a magnitude comparable even to tactical nuclear weapons. However, potent chemical and biological agents employed in intensity under favorable conditions against military and civilian populations could affect the outcome of a military operation while not destroying facilities.

"Can you estimate the number of casualties the country would have in a chemical and biological attack?"

The number of casualties that could be inflicted by biological methods would be dependent on the nature of the agents used; their virulence and the susceptibility of the population; the method of delivery and its intensity; whether the agent employed has a temporary, prolonged, or permanent effect; and the ability of the population attacked to take remedial measures. It is not possible to provide a conclusive statistical basis for gaging their effectiveness, but the potential of these weapons is known and further data is being sought to determine their role as both offensive and defensive factors in modern warfare.

"Is it true that biological and chemical warfare may each have the potentialities for injury as great as nuclear warfare?"

The answer has to be qualified, because much remains to be learned about the potential and ultimate military role of chemical and biological agents. Available knowledge does not provide a basis for comparing chemical, biological, and nuclear weapon systems. All unquestionably are tremendously effective weapons systems. It should be remembered however, that the effect to be achieved by chemical and biological weapons can be selected, depending upon the agent and how used. They need not always kill or even cause permanent injury.

"Why would an enemy use chemical and biological warfare over thermonuclear weapons?"

World War II was the most costly and destructive war in history. More than half of the 52 million people killed were civilians. The belligerent nations spent more than a trillion dollars on armaments and war materials. Other material costs were immeasurable. And the world has seen how costly it is to rebuild destroyed nations.

From this object lesson, the reason why chemical and biological weapons might appeal to an aggressor is apparent. The indiscriminate use of nuclear weapons would undoubtedly destroy the facilities that were the aggressor's objectives, or certainly render them useless for postwar use. To make aggression worth while, coveted productive

facilities would have to be reasonably intact at the end of hostilities.

If an aggressor covets physical spoils of war, he would use chemical and biological munitions which attack only people. By causing illnesses or death among industrial workers, an aggressor would decrease or destroy their productive capacity. Through chemical and biological attacks on military forces, an aggressor could curb their ability to fight. The resultant decrease in production would seriously weaken defending forces, who would lack munitions, equipment, food, and medical supplies, but the fruits of conquest would remain intact.

In addition, it is likely that an aggressor would consider the need for captive labor to man the factories he hopes to capture intact. Nuclear munitions would kill or maim great numbers of people, rendering them a liability rather than an asset in the postwar economy.

Chemical and biological agents are weapons of minimum destruction to facilities, but instead attack the people who operate the facilities. Further, the degree of their effect on people can to some extent be controlled.

Assuming chemical and biological weapons will assure an aggressor the same measure of military success as thermonuclear weapons and will successfully quell retaliative forces, conquest achieved by chemical and biological weapons will permit the aggressor to enter conquered areas that have not been devastated or contaminated. Destroying industrial potential, commerce, and communication facilities by nuclear force not only deprives an aggressor of the material rewards of aggression, but presents a need to restore the capability for human existence and rehabilitate captured populations.

"What effect do the nerve gases have on an unprepared population?"

To understand the effect nerve gases would have on an unprepared population, one must be aware of the characteristics of these agents. They are a family of chemicals which destroy the normal relationship between the nerves and the muscles they control. The gases have no irritant action but rather profound systematic effects. Symptoms develop rapidly.

Death will usually result if a victim has inhaled a heavy concentration of the vapors or if his body has come in contact with the liquid agent. Breathing the vapors from three good-sized drops of one type of nerve gas can, under certain conditions, cause death. Those receiving a dose less than lethal would require immediate treatment.

"What is adequate protection against nerve gases?"

Defense against nerve gases consists of detection and identification, individual and collective protection, and decontamination. Until the discovery of the nerve gases, most chemical agents had a distinctive smell that could be detected. Nerve gases normally cannot be detected through smell.

Adequate protection against the nerve gases depends on devices which give an audible or visual signal when gas is present. Detector paints, crayons, and papers which change color in the presence of gas are under study.

Complete protection would require both a protective mask and protective clothing as the gases can enter the body through the respiratory system, the eyes, or the skin.

There is a drug which can be administered to nerve gas victims to counteract the effect of the nerve gas. An initial dose of this drug can be self-administered, but a victim who has received a heavy dose of a nerve gas must be given a massive dose together with mouth-to-mouth artificial respiration.

"Are there any vaccines being developed to protect the population against biological agents?"

Yes, there are some. However, the Department of Health, Education, and Welfare says there is an inadequate program for research, development, and testing of vaccines in animals and man under conditions similar to those which could be expected in wartime.

"How could a chemical and biological attack be initiated? By planes, rockets, submarines?"

Methods of launching a chemical and biological attack are almost limitless. They may be incorporated into warheads of missiles, in bombs, mortars, and grenades for delivery by land, sea (or under the sea), or air forces. Their adaptability to the element of surprise would increase their effectiveness for an aggressor.

The use of chemical and biological weapons could provide a decided tactical advantage, as the population under attack could be victimized before being alerted to the presence of the agent. Chemical and biological warfare presents the additional hazard of being capable of being initiated from within a country through sabotage as well as from outside the country.

"How long will germs stay around after an attack?"

The duration of a biological attack would be governed by the nature of the germs used, the density of the germs, susceptibility of the population, the weather and terrain, and other conditions.

"Describe an adequate home shelter."

An adequate home shelter would necessarily have to be airtight to prevent gas seepage, yet provide a means of assuring a supply of pure air. Incorporation of diffusion board in the construction of small shelters would permit the entry of purified air. This gas aerosol filter material is composed of fiber and activated impregnated charcoal material. It effectively filters out toxic gases, biological germs, and radioactive dust, while allowing carbon dioixde and moisture to diffuse outward. Diffusion board is not commercially available at this time.

"What Government agencies are responsible for the defense of our country in case of an attack?"

Primary responsibility for the defense of the United States rests with the Military Establishment—the Department of Defense and Departments of the Army, Navy, and Air Force. Planning for civil defense is vested in the Office of Civil Defense Mobilization. Perhaps this definition with reference to civil defense responsibility is too confining. In the event of an outbreak of hostilities, it is assumed the Military Establishment will be required to employ all of its resources in the execution of its military mission.

Civil defense responsibility would be borne by nonmilitary national, State, and local civil defense agencies in concert with local law enforcement and public health services. The military's role would be to provide the maximum possible assistance consistent with execution of military responsibilities. The Armed Forces would employ manpower, material, and facilities to the maximum extent possible, but could not jeopardize the immediate, effective accomplishment of their primary task.

"Do the Russians have biological agents that could cause mysterious epidemics our doctors couldn't identify or treat?"

The United States cannot risk the comfort of assuming to know what weapons may be stockpiled in the arsenal of a potential aggressor. Because of the cloak of secrecy that has historically obscured interest in chemical and biological weapons, perhaps less is known about such developments than about any other area of military concern, including nuclear developments. While we are aware of chemical weapons developed by all major belligerents in World War II, we cannot confidently assume that much more fearsome chemical and biological weapons about which we know nothing have not been developed and stockpiled by potential aggressor nations.

As evidence of the secrecy that shrouds this area the allies did not know the Germans had stockpiles of nerve gases available even before the start of World War II, while the Germans mistakenly assumed the allies also had stockpiles of nerve gases and did not use theirs because of their fear of retaliation.

"Isn't it true that, if the enemy attacks, chemical and biological weapons are more humane than explosive weapons?

Attack by chemical and biological weapons could be considered to be more humane than attack by high explosive weapons. Chemical and biological weapons will not cause the human mutilation associated with explosive munitions. However, lethal chemical and biological weapons, though neater, need not be less deadly, nor can it be assumed that chemical and biological weapons will be so thorough as to eliminate suffering.

"What research and development are we doing toward improving our chemical and biological weapons, especially the nonlethal ones?"

A probing discussion of research efforts would infringe on security information. It can be said that the Chemical Corps—with industry assistance on both a contract and noncontract basis—is seeking more effective chemical and biological agents. However, a breakdown of the relative effort being devoted to incapacitating—as opposed to lethal—agents is impossible. If the Chemical Corps succeeds in standardizing effective incapacitants, it will represent a significant advance; however, the unqualified definition of a weapon as either humane or inhumane is questionable. By its very nature, it is difficult to consider a weapon humane. However, an effective incapacitant would certainly be more humane than any lethal weapon.

"Are we prepared to retaliate with a full arsenal of chemical and biological weapons?"

Again, because of security, there cannot be an extensive discussion of the ability of the United States to retaliate in the event of attack by chemical or biological weapons. But, it is the announced national policy to retaliate to chemical and biological attack in kind and it can be said that the United States maintains the ability to retaliate. With reference to a full arsenal of chemical and biological weapons, the Chemical Corps pursues an aggressive research and development program designed to provide the military with a wide range of weapons of maximum effectiveness.

INTERVIEW WITH LEO A. HOEGH

Most efforts in civil defense seem to be to guard our Nation against thermonuclear attacks. Why isn't more being done to guard the country in event of chemical warfare or biological warfare attacks?"

Civil defense efforts against biological and chemical warfare—like those against thermonuclear warfare and its consequent radiological dangers—are in proper proportion to the threat posed by these means of attack. We certainly don't discount the dangers of biological and chemical warfare. "Planning Basis," annex 1 to our National Plan for Civil Defense Mobilization, states that "a potential enemy could produce and stockpile biological and chemical warfare agents."

It also assumes that "in an attack on the United States, chemical and biological warfare might be used before, during, or after a nuclear attack, but would be on a smaller scale, in order to increase confusion, impair morale, reduce the will to resist, and impede military operations, and civilian survival and recovery activities; use before a

nuclear attack would probably be by clandestine means." These asumptions are compatible with curernt intelligence estimates.

There has been much talk about the seriousness of bioligical and chemical warfare, but this black art hasn't yet reached the level of efficiency of nuclear war. A recent special study for the Senate Foreign Relations Committee has described chemical and biological weaponry as exaggerated as to present military utility and still far from any possible use capable of strategic decisiveness. This picture may change in the next few years, if biological and chemical warfare weapons and means of delivery can be perfected.

We intend to be ready for that eventuality. Meanwhile, the graver dangers of nuclear war merit our more intensive efforts. But we certainly aren't neglecting biological and chemical defense.

"What is being done for the civilian population to meet the total infectious disease problem should it be used in warfare?"

Policy guidance and procedures are established by the National Biological and Chemical Warfare Defense Plan, annex 24 of the national plan. The Department of Health, Education, and Welfare, under OCDM delegation of authority, has initiated the program to protect the civilian population. Its major objective is education of individuals and families in self-protective measures.

This program also includes the control and prevention of diseases resulting from biological warfare attacks; the safeguarding of our food, pharmaceutical, and water supplies; special training and education of doctors, nurses, and other professional personnel in the recognition and diagnosis of the diseases involved; rapid detection and identification of the causative agents; care, treatment, and rehabilitation of casualties; and the stockpiling of necessary emergency drugs, pharmaceuticals, equipment, and supplies.

The Department of Agriculture has a similar program that deals with the biological warfare hazards for livestock and crops. Other Federal agencies are making related preparations within their areas of responsibility. OCDM also is providing special training for Federal, State, and local government personnel in defense procedures against biological warfare. Our nationwide fallout detection and monitoring network is being equipped to detect gas and germ weapons effects. This will take time and money, but the work is proceeding.

OCDM is preparing for mass production of its civilian protective mask. These masks are of a new design. They do not have the cumbersome canister formerly necessary to filter out biological warfare and chemical warfare agents from the air. The canister is replaced by filter pads located at cheek positions. These masks will provide easy breathing, good vision, and easy conversation.

Public distribution will be through selected retail stores at about $2.50 each. They will be available in six sizes. A public information program concerning the use of the protective masks will be timed with their retail distribution. Highest priority has been given by OCDM to the research and development of immunizing agents against diseases for which no protective biologics now are available.

"Should the population be immunized for protection against biological warfare? What shots should be received now?"

Citizens should have all standard immunizations offered by your doctor and local health authorities, such as typhoid fever, smallpox, polio, diphtheria, tetanus, tularemia (rabbit fever), cholera, plague, and yellow fever, to name but a few.

"What is being done to alert the population on what to do in case of chemical and biological attack?"

In cooperation with the Army Chemical Corps, HEW, USDA, and other Federal agencies, training programs are being initiated to train not only professional and technical personnel, but the general public in defense measures. We feel that an informed public is a cooperative one. Once our people are informed of the hazards and the measures for self-protection, their fears of these new weapons will be greatly reduced.

"What must I do to protect my home against attack?"

Above all, install a fallout shelter now—preferably in your basement or yard if you have one. Stock it with enough food and water for at least 14 days. Include a battery-operated radio. a first aid kit, and other survival items. Inexpensive air filters will convert many fallout shelters into safe refuges from chemical and biological weapon effects. At least one member from each family should complete a course in first aid.

"How would we get word of an impending attack?"

Our national warning system, vigilant night and day, can alert the whole country in minutes. The attack warning will be sounded by sirens. Conelrad emergency radio stations will broadcast local survival instructions to the public on 640 or 1240 on the radio dial, during the attack alert period.

"What should I do during an attack if I am away from home when the attack comes?"

First, learn your community's emergency plans now and be prepared to act accordingly. Depending on attack circumstances and other prevailing conditions, you may be instructed to take shelter or to evacuate. Find out the location of your building's shelter or its safest area.

Know the warning signals and what they mean. These are two: (1) The alert signal, a 3- to 5-minute steady blast or tone, meaning "attack is probable—take whatever action is directed by authorities of the local government," and (2) the take cover signal, a 3-minute rising and falling tone or a series of short blasts, meaning "attack is imminent—take cover immediately in the best available shelter." During an attack, keep your radio tuned to 640 or 1240 for instructions. If protective masks are available, put one on.

"How about my wife at home with the children? What should she do?"

At home, the same general steps should be followed. That's why it's so important that your family know what to do even if you're not there.

"What precautions should be taken after an attack?"

Remain in shelters or basement areas until advised it is safe to come out. Listen for instructions over your radio and follow them. Avoid exposed liquids or foods which might have been contaminated.

"What publications are available to help people be prepared for chemical and biological attack?"

The Conservative Baptist Association of Northern California Warmly Endorses the House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution endorsing the House Committee on Un-American Activities which was unanimously adopted by the Conservative Baptist Association of Northern California on March 7, 1961 at the First Baptist Church of Yuba City, Calif. The chairman of the resolutions committee, Dr. Roy H. Austin, is one of a group of ministers who were present at the congressional hearings of the committee at city hall in San Francisco on May 12 and 13, 1960. As eye witnesses to the mob demonstrations against law and order, they have publicly certified that the film "Operation Abolition" is a truthful and accurate representation of activities taking place at the hearings:

RESOLUTION BY CONSERVATIVE BAPTIST ASSOCIATION

Whereas the criminal conspiracy of world-wide atheistic communism is a plain and growing menace, not only to those precious liberties guaranteed by the Constitution of the United States, but to the practice and extension of the Christian faith (as recently demonstrated by the tragic loss of our Congo mission field); and

Whereas the House Committee on Un-American Activities of our U.S. Congress has courageously and capably persevered in investigating Communist penetration into many segments of American life and culture; and

Whereas the House Committee on Un-American Activities has been the object of relentless attack by communistic elements and their sympathizers and dupes: Be it therefore

Resolved, That we, the Conservative Baptist Association of Northern California, meeting in annual session at Yuba City on March 7, 1961, wholeheartedly commend these devoted public servants in Congress for their proven devotion to the ideals of freedom and justice, and that we urge that they fearlessly pursue their investigation into all areas of Red penetration, including such religious leadership as has become involved in the Communist apparatus, and that we assure them of our gratitude, our prayerful support and solid backing in their thankless but essential task of safeguarding our moral and spiritual heritage.

EYEWITNESS REPORT OF THE SAN FRANCISCO RED RIOTS—OPEN LETTER TO DEAN M. KELLEY OF THE NATIONAL COUNCIL OF CHURCHES ON RIOT FILM

DEAR REVEREND KELLEY: In reply to your recent letter as to my impressions on the House Committee on Un-American Activities, perhaps some of the following would be helpful to you.

I was an eyewitness at the House Committee on Un-American Activities meeting

in San Francisco in May 1960, and attended the hearings every day. The film, "Operation Abolition," was shown Sunday evening, February 26 in the First Baptist Church of San Jose. After seeing the film, I can assuredly say that it is a fair and excellent presentation of the events and circumstances surrounding the riots at the hearings in the city hall. The one or two very minor divergencies from the sequence of events in no way alter the basic truth and accuracy which the film intends to convey. I was amazed that a film of so short a length could give so true a picture of what transpired over several days of hearings and hours of court procedure. I personally feel that the behavior in the court room, which was without doubt, incited by the Communists, was far worse than the film showed. I know that the great majorty of the students were not Communists, but the film accurately shows the advantage that the Communists take in a situation where differences are fanned into a riot. This the Communists did.

I feel that the accuracy and fairness of the film can be defended to anyone who wants to know the truth. Those who don't, could not be persuaded even though an angel from heaven were the messenger. The film does an excellent job in conveying what a law and order. I was in Russia a little over citing mass riot and disregard for decency, law and order, I was in Russia a little over a year ago and I feel that this film should awaken America to what could be accomplished in our country even as it was in Russia.

Trusting these few impressions will be helpful, I am,

Sincerely yours,

CLARENCE R. SANDS.

Byelorussian Independence Day

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. RODINO. Mr. Speaker, I welcome this occasion to greet you on the 43d anniversary of Byelorussian Independence Day, that memorable and glorious day in Byelorussia's modern history. After enduring the oppressive yoke of Russia's czarist regime, the Byelorussian people earned their long-cherished and well-merited freedom, culminating in their national political independence in 1918.

During the czarist autocracy, the Russians did their worst to eradicate and eliminate all Byelorussian traditional and national traits, including their fervent desire for freedom. Fortunately, the Russians were unsuccessful in their ruthless attempts. The more they oppressed the Byelorussians, the more tenaciously these people clung to their ethnic and national ideals, and longed for the day of their independence. The overthrow of the czarist regime in Russia in 1917 ushered in a new era for them. Early in 1918 they asserted their freedom and on that historic March 25 they proclaimed their independence by establishing the Byelorussian National Republic. But the independence thus regained and proclaimed did not last long. Early in 1921 the Byelorussian National Republic was treacherously attacked and overrun by the Red Army. Thus came to an end the Byelorussian Republic, but the idea of freedom and independence has not deserted the Byelorussian people.

I am glad to affirm once more that they still cling to their firm belief in freedom, in their eventual independence. In greeting you on this historic anniversary, I wish freedom to the Byelorussians.

The Small Business Investment Act of 1958

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. EVINS. Mr. Speaker, there is a great deal of interest in the recent progress of the Small Business Administration in carrying out the objectives of the Small Business Investment Act of 1958. Under unanimous consent, I place in the RECORD the following statement summarizing the objectives of this act and the recent accomplishments in carrying out these objectives. These comments are based on the investigations of Subcommittee No. 1 on Organization and Operation of the Small Business Administration, of the Select Committee on Small Business, House of Representatives.

THE SMALL BUSINESS INVESTMENT ACT OF 1958

After much study by the House Small Business Committee and the Banking Committees of both Houses of Congress, the Small Business Investment Act of 1958 (Public Law 85–699) was passed and approved on August 21 of that year. This act provided for the licensing by the SBA of small-business investment companies which were to be a source of equity capital and long-term credit for small business concerns throughout the Nation.

At the end of the 1960 fiscal year (June 30, 1960), 109 licenses for small business investment companies had been granted by the SBA. Requests for licenses or proposals had been submitted by 217 companies. An updating of this information indicates that on March 14, 1961, 200 companies had been licensed and 431 proposals received.

Section 302(a) of the act authorizes the Small Business Administration to advance funds to the investment companies for the purpose of helping them obtain the minimum capital requirements. The maximum amount that SBA may make available to a single company is $150,000. These funds are to be advanced to small business investment companies through the purchase of subordinated debentures by the Small Business Administration. As of June 30, 1960, the Small Business Administration had committed $11,190,000 to be supplied in this manner to the investment companies licensed as of that date. Another $59,202,364 from private sources brings the total capital available to the 109 companies licensed as of June 1960 to $70,400,000. See the following table for a breakdown which shows the number of proposals received, number of licenses granted, and the capitalization of these companies through fiscal year 1960:

	December 1958 through June 1959	July through December 1959	January through June 1960	Cumulative through June 1960
Proposals received	92	48	77	217
Notices to proceed	46	59	75	180
Licenses approved	16	45	48	[1] 109
	Dollar value			
Initial capital	$5,196,000	$18,142,000	$15,355,000	$38,603,000
Subordinated debentures	(1,319,000)	(4,185,000)	(5,686,000)	(11,190,000)
Additional private capital	4,000	16,258,000	15,445,000	31,707,000
Total capital available	5,200,000	34,400,000	30,800,000	70,400,000

[1] 1 license surrendered Mar. 18, 1960; 108 licenses in force.

Source: Small Business Administration.

Under section 303(b) of the act, the Small Business Administration is authorized to lend funds to investment companies up to one-half of their capital and surplus. The act provides that SBA shall set the rate of interest on these loans. The rate has been set at 5 percent. As of June 30, 1960, based upon the $70 million capitalization of the 108 companies then licensed (one of the 109 companies surrendered its license on March 18, 1960), these companies were eligible to borrow $35 million from SBA under section 303(b) of the act. But only 11 licensees had made applications for loans totaling $2,390,828 under this section of the act, and only $800,000 of this amount has been disbursed by SBA as of June 30, 1960.

The act authorizes small business investment companies to finance small businesses by (1) furnishing equity capital under section 304 of the act, and (2) through long-term loans under section 305 of the act.

An analysis of the total immediate and potential capital of small business investment companies, and the loan potential for small businesses as of June 30, 1960, including 96 proposed companies which had not yet been licensed (12 proposals had been withdrawn or rejected), indicates a gross potential total of financing available for use under this program of only $234,765,000. This includes not only the present capitalization of the 108 companies licensed, but also includes public offerings not yet subscribed to by the 108 companies and the potential capital of 96 proposed companies not yet licensed, including the full amount of loans authorized under section 303(b). See the following table:

Total immediate and potential capital of small business investment companies and loan potential for small business June 30, 1960

Immediate and potential capital funds of 108 small business investment companies:	
Initial capital:	
Private subscription	$27,503,000
SBA (subordinated debentures)	11,190,000
Total initial capital	38,693,000
Additional public and private subscription	31,707,000
Total capital funds as of June 30, 1960	70,400,000
Public offerings:	
In progress	14,355,000
In registration	27,000,000
Total public offerings	41,355,000
Total capital funds of 108 licensed SBIC's	111,755,000

***Total immediate and potential capital of small business investment companies and loan potential for small business June 30, 1960*—Continued**

96 proposed small business investment companies: Initial capital	$44,760,000
Potential capital funds of licensees plus initial capital of 96 proposed SBIC's	156,515,000
Loan potential: Section 303 loans, 50 percent of total capital	78,250,000
Total	234,765,000

An analysis of the report of the small business investment companies submitted to SBA on March 31, 1960, indicates that $14.7 million in equity capital and loan commitments had been made to 250 eligible small businesses. The details of the small business financing by the investment companies as of March 31, 1960, is as follows:

	Number of small business investment companies	Number of transactions	Dollar amount
Convertible debentures	22	58	$4,356,176.91
Long-term loans	39	183	5,797,861.67
Capital stock of small business concerns (by conversion)	2	4	87,740.00
Commitments to finance small business concerns	17	41	4,498,450.00
Total			14,740,228.58

Thus we find that as of June 30, 1960, after almost 2 years of operation under the Small Business Investment Act of 1958, 108 companies were in operation with a total capitalization of $70,400,000, with only $13.6 million of that being financed by the SBA. We also see that the total potential capital of all the companies which were licensed on June 30, 1960, plus those with proposals pending, including maximum possible loans from SBA under 303(b) of the act, is only $234,765,000. This is much less than one-tenth of 1 percent of the gross debt of all corporations in the country at the end of 1959.

These facts indicate that, while progress has been made, much more remains to be done before small business is to receive the full fruits of the Small Business Investment Act of 1958. The recent acceleration in licensing of small business investment companies is very encouraging.

On March 16 the SBA announced it had licensed the 200th SBIC, and forecast a sharp increase in SBIC activities in the months ahead. The 200th SBIC brings to $188,636,677 the present capital of operating licensees for financing small business. Only $21.6 million of this came from the SBA.

It looks as if this program is really getting off the ground, and we are looking forward anxiously to the stimulating role this program will play in aiding the small business sector of the American economy.

Rising Expectations

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. ROGERS of Florida. Mr. Speaker, as you know, our policies toward Cuba have been of concern to us all, and it is interesting to watch Cuban reaction to them. Mr. Carlos Todd, is doing an effective job in setting forth the feelings of the Cuban people. Mr. Todd, a Cuban now living in Miami, Fla., recently delivered an excellent speech at the MIT School of International Relations. A copy was sent to me by Mrs. W. W. Brown, of Fort Lauderdale, Fla. I am grateful to her for forwarding it to me, and feel it merits insertion in the RECORD:

RISING EXPECTATIONS

(Address by Carlos Todd)

Ladies and gentlemen, I feel a deep sense of privilege that the League of Women Voters of Massachusetts has seen fit to ask me to address this distinguished audience. The subject assigned to me is "Rising Expectations," an awesome task to cover in 15 minutes, with its very wide ramifications and the many implications that the title itself implies.

First, I would like to state that—although I may speak English without much accent—I am a native-born Cuban, who has lived most of his adult life on that unfortunate island. Therefore, the viewpoint that I shall be able to give you is that of a Latin American, but more definitely that of a Cuban who has lived through nearly 2 years of the frightful fiasco that is the so-called Castro revolution—in reality, the Communist conquest—of Cuba.

The very title of this subject, "Rising Expectations," betrays the fact that you in this audience are conscious of the reality that there is something amiss in the relations between Latin America and this great country of yours. My only quarrel is the use of the word "rising," since that would seem to imply that great expectations have only just begun to show themselves in the sister republics of this hemisphere. They have always been there, and if they are no longer dormant, it is simply because the cold war that rages in the world today has finally pierced the chrysalis that you thought safe from intrusion for so many years.

For there is an invasion of Latin America today, just as surely as there has been an invasion of Eastern Europe, of many Asiatic zones and of the African Continent. Belatedly, very belatedly, the people of this country are beginning to get glimmerings, hazy images at best, of the enormous threat that has been posed for the United States by the Communist invasion of this hemisphere. It has been very slow in coming—and pray God that it has not come too late.

Not so long ago, in the era of Franklin D. Roosevelt, U.S. relations with Latin American countries were at an alltime high. The political, the commercial and industrial prestige of this country remained unchallenged in the hemisphere. The cordiality between your neighbors to the south and your Government was a strong bond that made for hemispheric unity.

Curiously, the policy of the good neighbor became, unconsciously to the Latin American nations the policy of the good father. An umbrella of protection—real or imaginary, as you wish—did not permit the intrusion of world power politics on the Latin American scene. The peoples of our countries felt, at that time, that the United States was concerned with their welfare, and reacted accordingly.

It was only after World War II, when militant communism began to march inexorably in every single continent in the world, that the Latin American mind began to have serious doubts of American intentions. Aid in enormous quantities went to reconstruct the ruin of Europe; the Asians received their share of largesse; African countries began to acquire new importance in world politics; and in their comfortable acceptance of a sure thing, the United States did not turn an eye on Latin America. We became poor relations of no consequence.

Further, and more grievous still, the United States, whilst leaving the Latin American Republics to fend for themselves, resigned its position as the paterfamilias of the hemisphere; and in doing so, effectively relinquished its position of leadership. You were no longer captain of the vessel. You became a mere member of the crew, defaulting all the privileges of the master of the ship. You refused to assume the responsibility and the risk that had made you the undisputed leader of this hemisphere; and, instead of a former father, you became a rather questionable uncle.

Nothing has been basically changed in the everyday world of diplomacy, business, and industry; but there was a subtle difference in the overall picture that we Latin Americans were quick to notice. In the world of human relationships, there is nothing so appalling and insulting as to be considered safe by another person. It is an unspoken insult; and the dividing line between tolerance and contempt become very blurred under the circumstances.

That was the position in which you found yourself when the specter of communism began to haunt the hemisphere; and you frantically tried to buy and hold tin pot dictators in different Latin American countries to protect your holdings against the advance of the Red hordes. In doing so you played right into Communist hands by actions which brought the inevitable reaction to dictatorships: revolutions, and the installment of the so-called independent governments of the left. The leadership that you had once assumed and kept for so many years continued to slip from your grasp—and in your paralysis of action and with your political blunders, you continued to make matters worse.

For the liberty of action which you once possessed as the hemispheric leader, had now passed out of your hands. You were the leaders no longer; and our peoples began to look upon you with ever-increasing doubts. In 1958, following the innocent theory that making a better Humpty-Dumpty would clear up matters for all concerned, your aid and your confused torpor unleashed the one force in this hemisphere that you had been so earnestly trying to repel, international communism.

Following the insane belief that the creation of an independent government of the left in Cuba would show the rest of Latin America the prestine purity of your intentions, you were—to use one of your expressions—conned into believing in and vitally aiding and abetting the rise of Fidel Castro in Cuba.

Not that you were not warned. Your own special government departments informed your higher authorities of the nature of the hoodlums that run Cuba today before their accession to power. The information and the advice were ignored; and on January 1, 1959, Fidel Castro took over Cuba; and then, Ernesto (Ché) Guevara, of the Argentine and international communism took over Fidel Castro. Your independent government of the left became the first firm foothold of the Soviets and the Red Chinese in this hemisphere—and you helped them to do it.

Imagine, then, the feeling that has been rising in Latin America since then. Every day that passed brought new insult and calumny from the Cuban Communists; and the United States, the greatest power on this earth sat back and remained wrapped in silent dignity. "El que calla, otorga," says the Spanish proverb—"he who remains silent, relinquishes"—which is exactly the manner in which your actions were interpreted by the people of Latin America. The great nation of the north was great no more. A small speck on the Caribbean could insult it, confiscate its goods, jail its citizens, arrest its diplomats, snub its ambassador, and get away with it.

Oh, you had your troubles. If you intervened, you would be called bullies and aggressors. If you didn't, then you became the goat of the hemisphere and the world.

The picture of a declining United States, enervated, paralyzed, vacillating, robbed of the ability to act, was a delicious one to be enjoyed. You worried about popularity—about what the other fellow would say—in a world that couldn't care less. You were and still are, to some extent stymied.

For some Latin Americans, the time had come to take sides. Castro said early in 1959, "You are with the revolution or against it." This has become the cry in all Latin America. "You are with communism or against it." And never forget, that people always wish to be on the winning side. So far, you are losing.

The immediate rising expectations of the Latin Americans are to find a United States that demonstrates the same resourcefulness and intelligence, the same determination and vigor as do the Communists in this hemisphere, a United States that can recover its lost position of leadership through positive action against the Communists, something which you have not been able to do to any appreciable extent anywhere in the world.

You have to show the Latin American that you still maintain the heritage of fearless action and devoted struggle against tyranny that you received from your ancestors. You not only have to woo governments, you have to woo the people, the little fellow on the street. And you're not doing it.

A Nation that can sell Coca-Cola better than anyone else in the world cannot sell an idea. And you cannot sell ideas distributing pamphlets to schools and to institutions behind closed doors. You don't sell Coca-Cola or ideas that way. You must mobilize the overwhelming majority of the people of Latin America—for it is the overwhelming majority who are against Communism, and who will gladly fight against it if intelligent and forceful leadership is provided.

It is not enough to have ambassadors that can speak Spanish perfectly. It is not enough to have your experts tell your young State Department men going abroad that we frown on people wearing shorts in the street. It is not enough to have the American housewife in Latin America speak kitchen Spanish and learn to cook the local dishes.

You must approach and you must charm and you must make friends with our people, with labor leaders and with construction foremen, with the farmer and with the peasant, with the prince and with the pauper. You must reach the people.

The Communists have demonstrated themselves to be past masters at this art. You have ignored it altogether. You have been too busy selling Coca-Cola, and doing the round of colony parties. You have not learned to know us Latin Americans, you have not tried. Our rising expectations—and in this I'm referring to Cuba—is that you show more concern about what is one of the most serious situations, if not the most serious, for you in the world today. You worry about Laos and about Berlin. You fret over the Congo and keep an eye cocked on Quemoy and Matsu. The Communists might take over in these places. Yet you have not lifted a finger to halt the entry of communism, 90 miles from your shores, in what was once one of the most prosperous countries of Latin America.

You can deal with Communists in Cuba militarily, you feel, at any moment. But other Latin Americans, whose countries are being subverted by communism, somehow feel that you simply don't care; and that your power is truncated by your indecision and fear * * * your great worry about not being liked.

Rising expectations? You sit back and watch little Cuba settle hemispheric problems. We are the laboratory of communism in your backyard; and you wish to see how the experiment works out without dirtying your hands.

To the Latin American, the Communist onslaught on Cuba was not an attack on our little island. It was, as it is, a direct attack by Soviet Russia and Communist China on the United States of America. That you have permitted that attack with impunity—no matter what other consideration must be taken into account by you—was not lost on Latin America. If the United States is not ready to repel the Communist invader, if it does not lead us in the fight against these forces of evil, why should we act? In fact, how can we act * * * against the mighty power of the Soviet Union and its Chinese ally?

That is what the Latin American is asking today. For the attack is primarily against you, not against Latin America. If you are unwilling to defend yourselves and take action against the Communist invader, the Latin American will argue, why should we? If you do not take action, he will further believe that you are going to lose. And if you are going to lose, he will not be on your side. All the world loves a winner.

You are asking the Cuban people to take on singlehanded the arms and the power of Soviet Russia and Communist China—and this fact does not go unperceived in other Latin American nations. Cuba, today, is an economic and social ruin; yet you have not lifted a finger to keep communism out of the hemisphere.

The people of Latin America are taking good note of your actions and your seeming impotence. You simply don't look like a winner. And the time is fast approaching when those peoples are going to take sides against you.

Where there have been independent governments of the left, these have always presented a delicious morsel to the Communists. Such governments are inevitably open to immediate and dangerous infiltration.

And, never forget, that if we are incomprehensible to you, perhaps you are incomprehensible to us. You're not born with our blood, you haven't lived with our peoples, you don't speak the language, and you don't understand our mentality. The best you can do is try—and try very fast.

The deadly virus of communism has already invaded and conquered Cuba, and is beginning to spread throughout the hemisphere. Our expectations are, that if you wish us to conquer it and eject it, we also assume that you will enter the lists with us. We expect you to resume the leadership that you have so unfortunately renounced; and we expect you to assume the risks and the responsibilities that go with that leadership. The Russians are doing it, the Chinese are doing it. You are not.

You have not bothered to make use of the positive values of the people of Latin America; and you have concerned yourselves exclusively with the governments and misgovernments that rule us. You are too preoccupied with our politicians and ignore the creative forces within our countries.

Open your minds and your hearts, your schools, and your great universities to Latin America. Use more scholarships, use more tours, use all the weapons that your frightful enemy is using, but use those weapons as effective forces for good, and not as arms of evil.

One thing, if Fidel Castro, the Soviet puppet and his master Ché Guevara, faithful servant of the Communists, are allowed to remain as the undisputed lords of Cuba for 1 more year, kiss the rest of Latin America goodby 5 or 10 years hence. You will have lost it and you will have lost it for good. In the words of Franklin Delano Roosevelt, "It is no exaggeration to say that we, in America, are living at the point of a gun."

Our rising expectations hold that you look to the South; that you recognize quickly what is going on; and that you help us lick the Communist invaders. That is the immediate, pressing, and most urgent of the rising expectations of Latin America.

You hold to much of the future of mankind in your hands to allow it to slip so heartrendingly from your grasp.

Tennessee Legislature Supports Federal Aid

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. EVINS. Mr. Speaker, the legislature of the State of Tennessee recently passed a joint resolution supporting Federal aid to education and urging the Members of the House from Tennessee to work for the enactment of a Federal aid to education bill.

The resolution points out that Federal assistance to the Tennessee school system would be a great benefit and that "various programs of Federal support have been in operation since the founding of our Nation, and these programs have not resulted in undesirable controls."

Mr. Speaker, under unanimous consent, I include House Joint Resolutoin 28, as passed by the Tennessee General Assembly, be in the Appendix of the RECORD. The resolution follows:

HOUSE JOINT RESOLUTION 28

Resolution on Federal support for education

Whereas education is vital to the general welfare and national defense of the United States; and

Whereas the Federal Government collects more than two-thirds of the total taxes paid in Tennessee while paying only about 4 percent of the cost of education in this State; and

Whereas U.S. Senate bill No. 8 which passed the Senate in the 86th Congress would have made available to Tennessee an estimated $25,501,000 for the 1961–62 school year; and

Whereas this money is sorely needed in Tennessee to improve our educational program; and

Whereas the application of the fair principle of taxing the wealth where it is and educating the child where he is would be of special assistance to Tennessee in its attempt to provide a more adequate educational program; and

Whereas Tennessee lost some 300,000 persons to other States during the past decade, and most of these persons were young people educated at Tennessee's expense, with other States reaping the benefits without sharing in the obligation of their education; and

Whereas various programs of Federal support have been in operation since the founding of our Nation, and these programs have not resulted in undesirable controls; Now, therefore, be it

Resolved by the House of Representatives of the 82d General Assembly of the State of Tennessee (the Senate concurring), That this assembly urges Tennessee's congressional delegation to work for the enactment of a Federal support to education bill, which would partially equalize the cost of education among the several States, and which would retain complete State control of education, allowing the States themselves to decide how the money is to be spent for teachers' salaries and school construction.

Adopted March 2, 1961.

JAMES L. BOMAR,
Speaker of the House of Representatives.

WM. D. BAIRD,
Speaker of the Senate.

Approved March 4, 1961.

BUFORD ELLINGTON, *Governor.*

Pennsylvania's Areas of Substantial Labor Surplus

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release of March 17, 1961, issued by the Bureau of Employment Security, Department of Labor and Industry, Commonwealth of Pennsylvania, which was sent to me by the secretary of the department, Mr. William L. Batt, Jr. The figures incorporated in this release are broken down by labor-market areas, and it is to be noted that 26 of Pennsylvania's 29 classified labor-market areas are areas of substantial labor surplus.

This report, Mr. Speaker, certainly underscores the need for the passage by the House of the area redevelopment bill, approved last week by a wide margin, 63–27, in the U.S. Senate. These depressed economic areas in Pennsylvania and elsewhere in the country are looking toward this aid for real and solid help to assist them in meeting their long-term, chronic unemployment problems.

The indicated press release follows:

According to January ratings, and following the national trend, 4 additional labor-market areas in Pennsylvania were classified as areas of substantial labor surplus, bringing the total to 26, according to a report released today by Secretary of Labor and Industry William L. Batt, Jr.

The classifications of the areas are made jointly by the U.S. and Pennsylvania Bureaus of Employment Security on the basis of the adequacy of labor supply as of January 15, 1961, and showed 9 major and 17 smaller areas in the substantial labor surplus category. This represented the addition of three major and one smaller area since the November ratings.

Layoffs in durable goods industries which were expected to continue over the next few months were primarily responsible for the reclassification of the three major areas, Philadelphia, York, and Allentown-Bethlehem-Easton. In Lock Haven, the smaller area, cutbacks in aircraft manufacturing and the anticipated closing of an electrical machinery plant prompted the labor surplus rating.

Of these 26 areas, 19 are designated as "areas of substantial and persistent labor surplus." This constitutes an increase of three over November, one major, Pittsburgh, and two smaller labor market areas, Indiana and Sayre-Athens-Towanda.

Since November, classification changes in the Nation as a whole resulted in an increase in the number of major areas of substantial labor surplus from 51 to 76. The number of smaller areas meanwhile rose from 123 to 152. Of the total number of substantial labor surplus areas in the United States, 103 are classified as "areas of substantial and persistent labor surplus."

In January, the U.S. rate of unemployment again remained well below the Pennsylvania rate. The national percent of labor force unemployed in January was 7.7 and the Pennsylvania percentage was 11.4. Seasonaly adjusted, the national rate was 6.6.

The areas in Pennsylvania which are presently classified appear on the list below. Data presented include the estimated total number of unemployed workers as of mid-January and their percentage of labor force unemployed. These data reflect a revised method of computing unemployment. The computations were made in accordance with a new, standardized methodology developed by the U.S. Bureau of Employment Security in cooperation with State agencies. The new method which incorporates newly available data and the results of special studies is designed to establish a uniform system in all the States for estimating the number of jobless workers.

Labor market area	Percent of total civilian labor force unemployed Jan. 15, 1961	Percent of total civilian labor force unemployed Nov. 15, 1960	Estimated total number of workers unemployed Jan. 15, 1961	November 1960-January 1961 net change in number unemployed
Uniontown-Connellsville [1]	27.9	22.1	13,000	+2,900

Resolution by Miami Chapter of the Lithuanian American Council

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. FASCELL. Mr. Speaker, with great pride do I call the attention of the Members to the resolution adopted by the Miami Chapter of the Lithuanian American Council at their recent meeting commemorating the 43d anniversary of the declaration of independence of their beloved homeland:

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent, of the city of Miami and surrounding territory, sponsored by the Lithuanian American Council, Miami chapter, and held February 12, 1961, at the Miami Lithuanian American Citizens Club, to commemorate the 43d anniversary of the declaration of independence of Lithuania:

"Whereas Moscow and Peiping of communistic dominated countries are openly reaching out to take over all nations of the world, as is illustrated by their activities in the Near East, Africa, and Latin America, by supplying arms and propaganda; and

"Whereas by their activities in neutral countries they are becoming a threat to the peace of all democratic countries; and

"Whereas Western nations, seeking the way of compromise with the despots, trying to overlook the millions of innocent people hurt by their oppression, are being forced to coexist with their aggressors: Now, therefore, be it

"*Resolved*, That this gathering of Americans of Lithuanian descent demands that Prime Minister Khrushchev free the Russian satellite countries, before demanding freedom for colonies of Africa and elsewhere; be it further

"*Resolved*, That the Soviets be urged to desist in oppressing the people of Lithuania, wiping out their nationalism and taking over their belongings; be it finally

"*Resolved*, That the Soviet Union by any means possible, be forced to vacate the illegally occupied countries such as Lithuania, Latvia, and Estonia, and afford these people the opportunity of ruling themselves acording to the principles of freedom."

LITHUANIAN AMERICAN COUNCIL, INC.,
MIAMI CHAPTER,
Mrs. HELEN VERBELA, *President*.
Mrs. JENNIE GOODWILL, *Secretary*.
V. SKUPEIKA, *Treasurer*.

Presto—Prosperity

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of March 10, 1961. In my opinion it graphically illustrates the manifest evils of inflation and the vicious circle involved in trying to create more purchasing power, which is one of the programs of the New Frontiersmen:

PRESTO—PROSPERITY

Let's suppose that tomorrow morning the President ordered the Bureau of Engraving to print up a few extra billions of dollar bills. And that then he parceled these billions of dollars among the other Government bureaus with orders to hand them out to people on relief, to home and highway builders, farmers, veterans or anybody else handy.

Well, we've no doubt there would be a spurt of business activity. These people would rush down to the store and demand goods for dollars, and the first comers might even get goods for dollars at yesterday's prices.

This would strip the grocer's shelves bare, and he would order more cans of peas. Orders on the canner's books would rise. So would the statistic of national income, as measured in dollars, and as the dollars changed hands, so would the dollar figures on the gross national product.

Yet we don't think anybody, these days, would be fooled into thinking the country was suddenly more prosperous as a result of all this new purchasing power. It would be evident to everybody that the national wealth had not been increased an iota by the mere process of printing more pieces of paper.

But now let us suppose that the President went to Congress tomorrow and said that since we have a recession the Government must spend more money than it takes in. That the Government must create new purchasing power by running a deficit. That this new purchasing power, created by Government, will create business activity, stimulate the economy and set things humming to the greater prosperity of all.

In this case the supposition is not wholly imaginary. Such a program has already been discussed gravely in the public councils, and you can be sure that if business doesn't spurt pretty soon, this is exactly the kind of proposal Congress will get.

This proposition differs from running the printing press only in that here the dollars will be credit dollars pumped into the banking system instead of pieces of green paper put directly into people's hands. In either case, the Government is going to pay out dollars that it has made out of nothingness.

Yet, stated in the abstract, this purchasing power theory will be supported by learned arguments. There will be some disputes, perhaps, as to whether it is necessary, there will be disagreements as to how much Government deficit spending it will take to do the job. A few will argue that the resulting inflation will be too high a price to pay for the results to be achieved.

But hardly anyone will doubt the proposition that the Government can create new purchasing power, and that if it just creates enough of it the Government can in fact pull us out of any recession and set things humming again. That proposition will be no more questioned in the business community than it will in academic circles or in the cloakrooms of Congress.

Yet where does this new purchasing power come from? Where was it hidden before? What is it created out of? This credit money that the Government is going to spend that it hasn't got, what is it made of? The only people who ask such questions are ridiculous old curmudgeons who want to stand in the way of getting us out of the recession.

It is not that the members of any Council of Economic Advisers, past or present, have the answers to these questions. It is simply assumed—like one of the fundamental propositions of Euclid—that the Government does create new purchasing power whenever it creates new credit. So if there isn't enough money available to build roads, the Government just creates it, and that's that.

Hence the whole country now accepts it as an article of faith that the Government can make up the deficit in private spending or put public capital into the economy by doing with credit dollars what is so self evidently a delusion with printing press dollars. Curious, is it not?

And more than curious, more's the pity. For if we could really do such magic with a little inflation, it might be worth the price—although in that case the printing press would be a quicker way of getting the new dollars into hands that would spend it.

But all across the land there are people serenely confident that, whatever the morality of inflation, the Government can indeed cerate the purchasing power we need to pull us out of a recession and lift us to greater prosperity. And there's nothing more pitiful than a patient who has suffered a painful cure only to find, after all, that its promise is just another delusion.

Italy Celebrates the Centenary of Her Unification

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. CELLER. Mr. Speaker, I am pleased to insert in the RECORD the following editorial which appeared in the New York Times, Sunday, March 19, 1961, as a tribute to Italy and the Italian people:

THE ITALIAN CENTENARY

It is a fascinating quirk of history that the year in which we commemorate the centenary of the beginnings of our Civil War is also the year in which Italy celebrates the centenary of her unification.

President Kennedy paid tribute on Thursday to Italy and to the ties that bind our two countries. In 1861 they were weak; in 1961, as the President said, "they have never been stronger."

We New Yorkers have our own special reasons to join Italians in their commemoration. There was a time within the memory of many of us when New York was the largest Italian city in the world, and even today, between the Italian-born and those of Italian descent, there are few cities in Italy that can beat us.

Mr. Kennedy took special note of the fact that "Western civilization as we know it" had come "from the banks of the Tiber." It was no accident of history that the three men who were most responsible for uniting Italy—Mazzini, Cavour, and Garibaldi—gave expression to the two great principles that had come out of the French Revolution and that dominated the 19th century. These were the principle of liberty and the principle of nationality.

One looks back now on those thrilling days of the Italian Risorgimento with a sense of nostalgia as well as admiration. Nationalism did not then mean, as it generally does today, an aggressive, destructive, xenophobic emotion. Liberty was struggling against the reactionary classes—and winning. The deadly enemy we call totalitarianism had not come on the scene.

Now we are in the midst of the cold war and Italy is again on the side of liberty. It was her greatest statesman, Count Cavour, who wrote: "There can be no liberty without social justice." This is what President Kennedy said to Latin America a few days ago. A century and an ocean apart, the United States and Italy stand close to each other.

Special Study Mission to Latin America: Venezuela, Brazil, Argentina, Chile, Bolivia, Panama

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. MORGAN. Mr. Speaker, on February 13, Congressmen ARMISTEAD SELDEN and DANTE FASCELL issued a report on Latin America resulting from a study mission they conducted to that area during November–December 1960. The report examines the economic, political, and social conditions in Venezuela, Brazil, Argentina, Bolivia, Chile, and Panama and discusses the Communist and Castro threats to orderly evolutionary development in the region. It also makes recommendations for a foreign policy designed to strengthen inter-American relations and the democratic forces in Latin America.

Within a week after publication, copies of the report were exhausted. It was gratifying to find such widespread public

interest in United States foreign policy in Latin America.

The following are samples of editorials and commentaries received regarding the report:

[From the New York Times, Feb. 17, 1961]

There cannot be too many studies on Latin America these days. The area has become a major battlefield in the cold war; it is being subjected to great social and even revolutionary pressures, and withal it has a vital importance to the United States. Without the raw materials, the trade and investments to and with Latin America we could not keep our preeminent world economic position.

In the circumstances it is especially useful for our Congressmen to visit Latin America. Last week a group of Senators and Representatives were in Mexico for an interparliamentary conference. This week the results of a fruitful trip to six countries by two Representatives have been published for the use of the House Committee on Foreign Affairs. The trip and the report were made by ARMISTEAD SELDEN, JR., of Alabama, chairman of the Subcommittee on Inter-American Affairs, and DANTE FASCELL, of Florida.

There is a mine of information in the studies on Venezuela, Brazil, Argentina, Chile, Bolivia, and Panama. The general observations at the beginning and the recommendations at the end are especially important.

The two Congressmen start with an observation that is beyond doubt the most important to be made, and it cannot be repeated too often. This is that the "old social structure is being challenged" and Latin Americans "want an end to grinding poverty." The visitors found "a general opinion that the United States has not appreciated the gravity of the situation in Latin America," but also that "elation in Latin America over the election of President Kennedy presents at once a hazard and an opportunity."

The recommendations made at the end are sensible, and in their restraint they are from our point of view realistic. The great question is whether we can win this battle in the cold war without a truly bold, costly, and imaginative program, and also whether the governing groups in Latin America will meet us halfway.

[From the Washington Post, Mar. 8, 1961]

It is worth noting that the long-somnolent House Foreign Affairs Subcommittee on Latin America has come to life under the chairmanship of Representative ARMISTEAD I. SELDEN, JR. Members of the subcommittee recently visited six Latin American countries and one conclusion in their report stands out: "We found a general opinion that the United States has not appreciated the gravity of the situation in Latin America—that we have, until very recently, miscalculated the depth of the unrest in the hemisphere."

This diagnosis suggests why it is so imperative for Members of Congress to break through the curtain of misinformation concerning Latin America. Personal contacts can dissolve abstractions and give meaning to the debates on hemisphere policy. In the case of Latin America, these trips seem very necessary indeed.

[From Mobile (Ala.) Press-Register, Feb. 21, 1961]

REALISTIC SUPPORT

Two U.S. Congressmen, including Represenative ARMISTEAD SELDEN JR., of Alabama, have made some observations following their 30-day sojourn in Latin America which should be very helpful to the United States in developing policies for the hemisphere.

While recognizing the need for U.S. participation in the economic development of her neighbors to the south, Representative SELDEN and Representative DANTE B. FASCELL, of Florida, caution against an aid program of the scope of the Marshall plan.

These two gentlemen are of the opinion that the election of President Kennedy presents at once a hazard and an opportunity in United States-Latin American relations. They found that people to the south were gratified over the Kennedy victory in that it represents reason for renewed hope of help from the United States.

But SELDEN and FASCELL state:

"The success of a cooperative program of economic and social progress will require self-help efforts on the part of the American Republics, and, in many cases, the improvement of existing institutions and practices, particularly in the fields of taxation, the ownership and use of land, education and training, health, and housing.

"We are convinced, then, that massive infusions of capital into Latin America are not only beyond our capacity to supply but are also beyond that region's present capacity to absorb."

Mr. SELDEN, as chairman of the House Subcommittee on Inter-American Affairs, thus takes a practical view of conditions, he saw during his visit in South and Central America.

Perhaps this report will help to convince our neighbors to the south that there are limits to which the United States can and will go to assist with their problems. Once faced with this fact of international life, perhaps some Latin Americans will intensify their efforts to ward off communism by doing more for themselves.

They have only to look at tragic Cuba to see what happens to a country that falls into the hands of a Communist-dominated regime.

From letter by His Excellency Victor Andrade, Ambassador of Bolivia, February 15, 1961:

"I have read the report with deep interest. Just to compliment you on your understanding of the situation would be inadequate for it is one of the most excellent I have read on this subject, particularly your insight of the Bolivian situation. It was so gratifying to find such an awareness of our complex problems. The social and economic changes in my country since 1952 are so profound I fully realize it is difficult for those who have not been associated with our drama to appreciate the innovations occurring today. This, to me, is the virtue of your chapter dedicated to Bolivia."

From letter by His Excellency Jose Antonio Mayobre, Ambassador of Venezuela, February 20, 1961:

"I have read it [the report] carefully and found it to be accurate and objective specially the part dedicated to Venezuela. It is amazing and gratifying at the same time, that in such short trip as you made, you were able to dig so deeply into the problems of all the countries you visited."

From letter by Dr. William P. Glade, assistant professor of commerce and Hispanic studies, University of Wisconsin, February 23, 1961:

"I have just finished reading it [the report] and wish to commend you for a truly exceptional piece of work. Those of us who are Latin America area specialists have been deeply concerned for years over our deteriorating relations in the hemisphere, as you well know. It is therefore especially reassuring to know that future policy will be formed with the participation of such perspicacious Members of Congress as you and Representative FASCELL. The New York Times did not exaggerate in its recent praise of your report.

"You might be interested to know that next fall we are contemplating offering a course at the undergraduate level on Latin American problems and feel that your report might well serve as required basic reading for the students."

From letter by Hon. T. Graydon Upton, executive vice president, Inter-American Development Bank, February 27, 1961:

"I spent Washington's birthday perusing your very interesting and informative report on your study mission to Latin America, which I am passing on to my associates in the Inter-American Development Bank.

"Though it is difficult to comment on one section of the report without appearing to minimize the others, I was particularly interested in the section on Bolivia, and in your recommendations.

"It seems to me particularly valuable to sum up your impressions which you have done in a summary section. The problem of coordination which you mention in paragraph 10f is one which has preoccupied me for many months, as one of my functions in my former role of Assistant Secretary of the Treasury was to attempt to achieve such coordination. At the present time, the Inter-American Development Bank, as the only institution whose entire activity is in Latin America, is making an intensive effort to bring about a far greater degree of coordination in Latin American loans than has existed in the past, between both national and international agencies."

From a letter by His Excellency Emilio Donato del Carril, Ambassador of the Argentine Republic, February 28, 1961:

"I read [the report] with great interest, specially the information concerning Argentina.

"I feel you have made with it a substantial contribution to enlarge the knowledge of Argentine problems."

Additional copies of the Selden-Fascell report are now available at the Foreign Affairs Committee, and I strongly recommend it to all those concerned with maintaining a strong and free hemisphere.

The Late Honorable B. Carroll Reece

SPEECH

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, I was at home in Georgia last weekend when Congressman CARROLL REECE, of Tennessee, passed away at Bethesda Naval Hospital, and did not have an opportunity to participate in the memorial service on the floor of the House on Monday.

I learned with great sadness of his death. During my service in Congress, I became well acquainted with Congressman REECE. I admired him for his integrity, his courage, his understanding of our problems, both domestic and international, and for his unceasing effort to provide satisfactory solutions for those problems.

I treasured the friendship which existed between us. He was a person of whom it can truly be said that he was a great American. He will be greatly missed in the House on both sides of the aisle. His district, his State, and the country have suffered a great loss in his passing.

I extend deepest sympathy to the members of his family in this time of bereavement.

Keynote Address of B. T. Fitzpatrick of Washington, D.C., to the 30th Annual Convention of the National Housing Conference

EXTENSION OF REMARKS
OF

HON. ALBERT RAINS
OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. RAINS. Mr. Speaker, recently Mr. B. T. Fitzpatrick, of Washington, delivered an excellent address on the goals of our national housing policies. As chairman of the 30th Annual Convention of the National Housing Conference, Mr. Fitzpatrick, who is a member of the board of directors of NHC, presented a very realistic approach to the housing problems facing this country and I commend his remarks to the attention of my colleagues.

Following is Mr. Fitzpatrick's address at the 30th Annual Convention of the National Housing Conference at the Statler-Hilton Hotel on March 12, 1961:

KEYNOTE ADDRESS OF B. T. FITZPATRICK OF WASHINGTON, D.C., TO THE 30TH ANNUAL CONVENTION OF THE NATIONAL HOUSING CONFERENCE AT THE STATLER-HILTON HOTEL, WASHINGTON, D.C., MARCH 12, 1961

Mr. Chairman, New Frontiersman, Dr. Weaver; Old Frontiersman and honored friend, Warren Vinton; Mr. Mills; members and guests of the conference: Welcome to this 30th annual convention of the National Housing Conference and to Washington, the citadel, in the past, of the New Deal and the Fair Deal, and, now, of the New Frontier and our immediate future.

My friends, the advent of the new administration, with its concepts of new frontiers, high hopes and an America again moving ahead, seems to me to be of some special significance to the National Housing Conference. Prior to last Thursday, it was certainly to be anticipated that we might share a unity of purpose. Since last Thursday and the transmittal to the Congress of the President's message on housing and community development, there can be no doubt that, among us, there is surely the kinship which derives from unity of purpose. And I say to you, with absolute confidence, that time and the events of the future will prove that we are, indeed, brothers in arms, not only in high purpose, but, also, in the equally important area of the resolute and determined action required for the ultimate achievement of that purpose.

For 30 years, this conference has developed and established high hopes in the field of housing and community development. It has consistently sought to establish national goals and objectives realistically related to national needs. These goals and objectives necessarily have been high, because national needs have been great. In the future, these goals and objectives must be higher because national needs are increasing and, over the past years, we have accumulated a large backlog of unmet needs.

For 30 years, this conference has consistently sought to develop and secure the full range of effective means required to translate such high hopes into reality—the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family. One great stride forward was taken 12 yeears ago with the winning of the Housing Act of 1949, which laid down the basic foundation on which there has been built the progress we have made in the intervening years. But we know that, in housing and community development, national accomplishments have not kept pace with increasing national needs. It is our earnest hope that, in this year 1961, there will now be taken the next great legislative step forward which will provide the basic foundation on which the sure progress required for the future can, and will, be solidly based.

In 1946, the first realistic studies were being released as to the extent of housing needs in the postwar period. These studies estimated a need for an average rate of new home construction over a 10-year period of 1,200,000 new dwellings a year. Do you remember the reaction to this estimate of housing need? There were many who applied to it the label fantastically idiotic. At that time, representatives of some of the major national organizations concerned with homebuilding and financing told the Banking and Currency Committee of the Senate and the House of Representatives that, over such a period, this Nation could not produce and consume at an average rate much in excess of 500,000 new dwellings a year. I hasten to observe that the National Housing Conference was not among these organizations.

Can you remember, also, when President Franklin Delano Roosevelt assured our harried allies that a resolute and determined America would deliver planes at the rate of 50,000 a year, and the reaction of those of little faith to that? Yet, we did deliver at the rate of 50,000 planes a year.

Similarly in housing, over the 10-year period 1950 to 1959 our average rate of new construction exceeded 1,200,000 dwellings a year. While it may have taken some time before they saw the light seen long before by others with more vision but, perhaps, less political power, we have made some progress. I say this because certainly, over the past few years, a drop in the annual volume of new home construction below a level of 1,200,000 units or thereabouts has been viewed as a national calamity by many of those same organizations which, 10 or 15 years ago, stoutly contended that production of an average of some 500,000 new homes a year over a sustained period represented just about the absolute epitome of national endeavor.

I mention these matters merely to demonstrate clearly to all doubting Toms and others of faint heart that the National Housing Conferences was not crying "wolf, wolf" then, and that it certainly is not crying "wolf, wolf" now, when we say that what was good, in terms of volume, for the 1950's will not be nearly good enough for the 1960's and certainly not for the 1970's.

These are facts. They are not difficult to discover. The difficulty is not to run away from them. They are part of the history of the past, and it is from such history that we should learn well the lessons which can guide us more surely in the future. The lessons here are clear. They are that we tend consistently to underestimate our national needs; we tend consistently to underestimate our national resources for meeting those needs; and we tend consistently to underestimate our national ability to produce and to consume.

We have gone through the 1950's producing new homes at an average rate of 1,200,000. Probably for the first time in our history, we have, over a sustained period, produced new homes at an annual average somewhat in excess of the rate of new family formation plus dwellings removed from the housing supply during the same period. This represents some progress, but it is not nearly enough.

We have an accumulated large backlog of unmet needs. We still have more than 9 million substandard dwellings. We have more than 5 million dwellings which are deteriorated, and which can soon slip into the substandard category. We still have no effective means for securing the production of a substantial annual volume of new housing within the financial means of a broad range of middle-income families in the middle and lower ranges of this important segment of our total population.

The pace of the urban renewal program is far behind our needs and our ability for accomplishment. Our public housing program for our lowest income families has, over the past few years, been ignored and harassed to the point where it virtually disappeared. We have had numerous promises of needed housing agency reorganization and departmental status, all inevitably followed by a barrage of subsequent explanations which, however ingenious, always translate into variations of the simple theme "Maybe next year but, definitely, not this year."

The present FHA authorizations to assist in financing the rehabilitation of housing in urban renewal areas have been absolutely useless. This is a known and established fact. Yet, notwithstanding the need and notwithstanding the fact that more and more urban renewal projects involving rehabilitation of existing housing, rather than total clearance and redevelopment, are being approved, no effort whatsoever has been made in the past to make the present FHA authorizations fully effective or to develop new authorizations which will permit the FHA to provide the required assistance.

Programs to encourage and facilitate needed urban and metropolitan planning have been held to the timid and small. No effort has been made to assist in meeting the increasingly important public problem of mass urban transportation. No effort has been made, and we have no means, to assist urban communities to acquire and preserve open spaces, or to reserve them for future public or private needs. We have tolerated small and sporadic programs to assist urban communities to provide community facilities where needs, especially in suburban areas, have far outdistanced production.

These are some of the things which, in housing and community development, have urgently required national attention. Over the past several years they have not received that attention. Of a certainty, this has been due, in large part, to the fact that, over those years, no authoritative voice within the National Government has firmly called out for the necessary corrective and remedial actions. In those years the voice raised for housing and community development was, indeed, a "vox clamantis in deserto." Therefore our backlog of accumulated unmet needs has increased as we have moved toward the future where the known population explosion will present problems of far greater dimensions. If, after an annual physical checkup, any reasonable individual should receive this sort of an inventory of his physical failings, quick corrective action would seem to be just about as certain as death and taxes. Why should reaction to national ills be different?

We are approaching the period of the greatest population explosion this Nation has ever experienced. The estimates are that by the midseventies our population will stand at about 235 million. We know that, in the past, such estimates have always been low. We face the inescapable fact that both the volume and the kind of housing and community development production achieved in the 1950's will not be nearly sufficient for the 1960's and certainly not for the 1970's. We know this is so for housing and community development as, equally, it is for all other major contributors to our national economic growth and stability. If, as contemplated by the declaration of national housing policy and as necessitated by our

required national growth and development, housing and community development is to be truly enabled to make its full contribution toward an economy of maximum employment, production and purchasing power, then surely the time has now come when we must get quickly down to the solid business of forging the additional hard tools required for translating high hopes into the kind of housing and community development production that is necessary for the tomorrow which is no nearly today.

The question is not "Can we do this?" or "Should we do this?" The question is "Have we the national will to do this?" for, as the President said in his inaugural address, "man holds in his mortal hands the power to abolish all forms of human poverty and the energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world."

When the people of this country are aware of the real needs of this Nation, which are but a summation of their own individual needs and aspirations, this can be done. When they want it done, it will be done, for here, in America, the people are still the masters of their own destiny.

The arousing of this kind of a national conscience is an essential part of the national leadership function enjoined upon the President by the Constitution of the United States. The message on housing and community development which the President sent to the Congress last Thursday was in keeping with the highest traditions of this constitutional function of the Office of the President of the United States.

Similarly, the arousing of this kind of national conscience is an essential part of the work of the national housing conference. Therefore, let us now go about our father's business, joined in common cause with the new administration, to again arouse in this Nation this kind of a national conscience, remembering also the still timely admonition of Thomas Jefferson:

"I know of no safe repository of the ultimate powers of society but the people themselves; and if we think them not sufficiently enlightened to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

So, also, that the work of this conference may truly "inform their discretion by education," most especially in the critical areas of unmet needs, let us here this evening finally resolve that, in our policies, in our recommendations and in our every action, the national housing conference shall be governed always by this eternal truth: "I am, indeed, my brother's keeper, and all mankind is, indeed, my brother."

Kennedy's Peace Corps Could Uplift Youth

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. FASCELL. Mr. Speaker, I call to the attention of the Members an interesting editorial taken from the March 17, 1961, issue of the Home News, of Hialeah-Miami Springs, Fla.

This article points out what a rewarding experience service in the President's Peace Corps could be to the youth of our country who may be lucky enough to be selected as participants in this challenging pilot program.

The article follows:

KENNEDY'S PEACE CORPS COULD UPLIFT YOUTH

We can visualize in President Kennedy's Peace Corps the potential for a great uplifting force for America's youth, aside from aiding the people of the world's backward countries. The condition is that the program be properly conceived, organized, and directed.

In certain types of youth, there has always been a yearning to engage in idealistic pursuits. A life of service to others and sacrifice of self has always held out a religious and a romantic appeal to the very young.

In a limited way, this desire to serve humanity has found outlet in social and church service and in the healing professions. But in a broader sense, this drive toward self-sacrifice has most frequently been turned to purposes of war.

In the President's new concept of a Peace Corps, we find the first large-scale effort by government to marshal this noblest of mankind's urges and harness it in the cause of peace.

RICH RETURNS POSSIBLE

We envision rich returns for all concerned in this project, if it is properly administered and if the right types of individuals are chosen as missionaries. And by "right" we mean young men who are tough physically, strong in character, emotionally stable—and possessed of a useful technical skill.

The enlisting corpsmen stand to gain much themselves. They should acquire, in the course of their service, a self-reliance, which no cushy job could give them. They should gain the kind of insight into alien peoples not found in the dramas of the TV or movie screen.

We imagine, too, the youths will come back with a deepened love of their own country, the kind that no amount of reciting the Pledge of Allegiance or singing the Star Spangled Banner can instill.

NEW PERSEVERANCE

Finally, they should return in possession of a new-found sense of perseverance and purposefulness, an element much needed today to buck up many of our young who have grown unduly soft.

The work in the world's depressed areas will be difficult, the living conditions unlike those of a resort area, the language barriers frustrating and the customs difficult to comprehend.

But for idealist youth willing to give himself to a real cause—not a synthetic one—enlistment in the Peace Corps should be both a noble and enobling experience.

A Statement on Farm Policy

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. ANDERSEN of Minnesota. Mr. Speaker, under leave to extend my remarks I would like to call attention to a statement on the general subject of farm policy made by our colleague, Hon. PHIL WEAVER, before a founders day luncheon at Omaha, Nebr., on Monday, March 20.

I have known PHIL WEAVER since he came to the Congress and have served with him on the Committee on Appropriations. I know of his deep concern over the years at the situation in which our farmers have found themselves—through no fault of their own.

In this speech PHIL WEAVER points up the need for a sound and workable policy for the Nation's farmers. He also points up the need for cooperation of all involved in order to work out such a program that might have some chance of success.

I commend these remarks to all.

Following is the text of our colleague's speech:

We in Nebraska who would hold fast to the Republican cause can be justly proud, as I am, of the vote of confidence we rolled up for Richard M. Nixon last fall. We gave him the largest percentage margin of any of the 50 States.

During the fall campaign our standard bearer, Dick Nixon, made a statement which I'd like to recall for you now. It was a statement that made a tremendous impression upon the Middle West. His resounding voice here in Nebraska can attest to that. Dick Nixon said, and I quote: "The Government got the farmers into this mess, and it is up to the Government to get them out of it."

Why did Dick Nixon and our Republican Party blame the Government?

Well, during World War II the Government asked the farmer of our country to produce as he never had before. The American farmer responded. He not only produced enough to keep our armies on the march, he supplied our allies with vast quantities of food and fiber and the essentials for making war. It was, in truth, a miracle of production.

A farmer today in the broad expanse of America is capable of producing enough food and fiber for himself and for 24 other people. This fact alone frees better than 90 percent of our working population to pursue other goals, to undertake other endeavors. This, and this alone, has permitted us to expand our industrial capacity and to raise our standard of living to the point where we are the envy of all the world.

We are able to buy and drive more and better automobiles, live in better homes, wear better clothes, go to better schools, read more books, than any other nation on earth only because the American farmer, through his efforts and efficiency, has made this possible.

It takes one-half of the total work force in Russia to supply food for the other half. And, at that, they are poorly fed. In America one-tenth of the population is able to do a more thorough job.

And what has the American farmer gained from all this?

Today we find our farmers on the short end of the economic stick.

The American farm operator has the lowest per capita income in our economy today. His average hourly wage—and this is a point I would like our friends who support an increased minimum wage to note—his average hourly wage is less than half of what the average factory worker earns—or 81 cents an hour for the farm operator as compared to $2.29 for the factory hand.

The buying power of our farm citizens has gone down and down—and with it the buying power of our Nebraska communities and cities.

Last fall Dick Nixon promised that the Republicans would do something about it. Well, I'd like to say this—Republicans who were elected and who want to represent the will of the people who expressed this solid support must keep that promise.

We can either approach the problem as Republicans who want to conserve our way of life, or we can turn our backs on the farmers and let every radical idea that comes into the minds of the Kennedy planners become the law of the land. The choice is ours. Dick Nixon and the Republican platform pointed the way.

As Republicans, we are dedicated to the preservation of America. More than that, we are dedicated to the development of a strong, free, and vigorous America. To achieve that kind of America and to pass that kind of life on to future generations, we must help maintain a vigorous, strong and healthy agriculture.

This is the key to American survival.

Let me tell you that our top military leaders who are charged with the responsibility of maintaining our strength and our position of leadership in the free world are fully aware of this need. I participate in hearings of the Subcommittee on Defense Appropriations of the House of Representatives and I have heard witnesses discuss the danger of growing Soviet might and power. It is not alone of missiles and submarines they speak. They are concerned with the potential industrial growth of the Soviet Union and her slave satellites as well.

Khrushchev knows this too. And he knows that only by building and maintaining a strong farm economy can he free enough of his slave labor to industry to begin to compare or compete with the United States on an equal footing—whether in the making of the instruments of war—or in the competition for world trade and world economic leadership.

Within the past month Khrushchev had to fire a half dozen of his top Communist planners and administrators because they have failed in the one area where the United States has been so dramatically successful—in developing a powerful and vigorous farm economy.

The Soviets know—and we must understand completely—that it isn't the missiles or ships that win wars, whether they be shooting wars or the silent, deadly cold war of economic survival. It is the farmer who can produce enough for himself and his country who can tip the balance of power in favor of one way of life or the other—toward freedom or communism.

As Republicans we can—whenever and wherever the opportunity develops—work toward the goal of a strong, well-rounded and healthy nation based upon productive, economically sound agriculture. This is the very essence of conservatism—the very essence of the platform which the Republican Party adopted in Chicago last summer—and this is the very essence of victory here in Nebraska and elsewhere in the Midwest and Plains States in 1962 and 1964.

The alternatives to this actively conservative approach to the farm situation are twofold. Either we can sit idly by and watch our agriculture destroyed—and with it the chances of survival in a tense and dangerous world, or we can sit idly by and watch our 49-percent administration turn out a 100-percent radical program to regiment our farmers completely and give another great segment of our country a Harvard accent.

Please do not misunderstand me. We cannot keep the present administration from moving toward the left and ultimate regimentation simply by noisy opposition. The noise may deafen our own ears but will not silence the economic planners and left-wingers.

We can and we must stand for realistic action to solve the farm problem and thus conserve and preserve our American system against all challengers—whether they be the radical economists in Washington or the Communist empire.

Let us not fool ourselves that the Republicans have the votes in either the House or Senate to do that now. We didn't have them even when Dwight Eisenhower was President. The American farmer cannot wait until we regain the House and Senate and the White House. His problem is urgent—immediate.

We must find a way to work with the present administration to solve these problems to bring about economic order for our farm citizens. It is not my job as a Midwestern Congressman to oppose legislation which the farmers themselves have proposed—simply for the sake of opposing.

The recent feed grain bill is an example. It was proposed by farm groups themselves. As it passed the House, there is no doubt the bill was lacking in some ways. In fact, I voted to recommit the bill and delete the controversial section 3. But, let me point out we had no Republican bill to work with and our job was to find and support a workable measure that didn't create more problems than it solved.

Last fall's vote here in Nebraska demonstrates that the farmers and ranchers had faith in the Republican Party. We must not let the farmer down. We must keep that faith.

We must reassess programs and positions of the past to make stronger our position in the future. And the future, my friends, is when we shoot for the top job again in 1964.

The Republican platform of 1960 looked to the future as we must. That platform said in part: "To utilize immediately surpluses in an orderly manner, with a minimum impact on domestic and foreign markets, we pledge * * * payment-in-kind out of existing surpluses as part of our land retirement program."

The recent feed-grain bill attempts to do just that. I was proud to be able to support the Republican platform and pledge myself to its continued support.

Mrs. Madaline A. Williams

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. RODINO. Mr. Speaker, I should like to call to the attention of my colleagues the following resolution which was approved on March 13, 1961, by the New Jersey State Senate. This resolution states that the New Jersey State Civil War Centennial Commission cannot participate in the National Civil War Centennial Commission's Fourth National Assembly if equal hospitality will not be accorded all members of the State delegation by the host city of Charleston.

The necessity for this resoultion arose, of course, when it became clear that Mrs. Madaline A. Williams, a member of the Negro race, and a duly appointed member of the State Centennial Commission, would be accorded hospitality on a separate basis. I cannot emphasize too strongly my extreme distress at this development, both as a very good friend of Madaline Williams, and as an American citizen.

Madaline Williams is a member of the Essex County delegation of the New Jersey General Assembly. She is currently serving in the elective post of Essex County register. She also happens to be one of my old and very dear friends. I deeply regret that this incident should have caused embarrassment to such an outstanding citizen; but I think that the greatest embarrassment must fall upon those who are responsible. They are abrogating the fundamental concepts of human dignity and civil liberties which we are proud to call the American way of life. And they are abrogating as well the very ideals which the Civil War Centennial Commission was designed to commemorate.

Mr. Speaker, I hope that all my colleagues will take note of this situation, because the National Civil War Centennial Commission was created pursuant to a resolution of the Congress.

SENATE RESOLUTION—STATE OF NEW JERSEY, ADOPTED MARCH 13, 1961

Whereas the New Jersey Civil War Centennial Commission, on March 9, 1961, adopted the following resolution:

"Whereas the Civil War, the greatest internal crisis through which this Nation has passed, was fought at tremendous sacrifice to preserve and to amplify the fundamental law of our land, as set forth originally in the Bill of Rights; and

"Whereas the perpetuation of this Union was guaranteed therewith forever; and

"Whereas the sons of both North and South have subsequently fought side by side for human freedom, justice, and the dignity of the individual among people everywhere; and

"Whereas the Civil War Centennial period has been conceived as a period for commemorating these basic American ideas above all; and

"Whereas the National Civil War Centennial Commission has scheduled its fourth national assembly on the dates of April 11 and 12, 1961, in the city of Charleston, S.C.; and

"Whereas the National Civil War Centennial Commission is a creature of the Congress of the United States; and

"Whereas custom and/or law in the city of Charleston forbids equal hospitality to members of the Negro race; and

"Whereas a national assembly under these conditions would abrogate the fundamental law of our land and the fundamental concepts of human decency and the fundamental guarantees of civil liberties under the New Jersey Constitution; and

"Whereas Mrs. Madaline A. Williams, a member of the Negro race, is a duly appointed member of the New Jersey Civil War Centennial Commission; and

"Whereas Mrs. Williams has served as an elected member of the Essex County delegation of the New Jersey General Assembly, and is currently serving in the elective post of Essex County Register: Now, therefore, be it

"*Resolved*, That this commission cannot in good conscience, under its sworn obligations, participate in the fourth national assembly; and be it further

"*Resolved*, That members of all other State Civil War centennial commissions be urged to call upon their respective congressional delegations to demand that the fourth national assembly, as presently conceived, be canceled forthwith as an act of responsible national statesmanship and scheduled for a later date in a location which will respect the fundamental constitutional rights of persons of all races and creeds."

Now, therefore, be it

Resolved by the Senate of the State of New Jersey, That the foregoing resolution

adopted by the New Jersey Civil War Centennial Commission is approved; be it further

Resolved, That the secretary of the senate provide the New Jersey Civil War Centennial Commission with a copy of this resolution attested by him in order that the said centennial commission may forward copies hereof to the other State Civil War centennial commissions; and be it further

Resolved, That the secretary of the senate forward copies of this resolution attested by him to the U.S. Senators from New Jersey and the Members of the House of Representatives from the several congressional districts of New Jersey.

Temporary Gas Tax

EXTENSION OF REMARKS
OF
HON. STANLEY R. TUPPER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. TUPPER. Mr. Speaker, I would like to bring to the attention of my colleagues a very timely and pertinent editorial from one of the leading Maine daily newspapers, the Kennebec Journal, entitled "Temporary Gas Tax."

As this editorial points out, Congress has a moral obligation to honor its pledge to let the Federal gas tax go back to the former 3 percent.

The editorial follows:

TEMPORARY GAS TAX

President Kennedy's February 28 special message to Congress, concerning the financing of the Federal highway program, contained one more reminder of the unhappy fact that a temporary tax is seldom temporary in fact.

When Congress in 1959 tacked a fourth cent on the gasoline tax, the Nation's highway users were asked once again to believe that this hike would be temporary, expiring June 30 of this year.

But the President's special message not only urged that the fourth cent of the tax be continued beyond the scheduled expiration date, but also intimated the White House would approve of an increase of an additional one-half cent.

The gasoline tax has been temporary since 1932, in Federal Government gobbledygook. The 1932 temporary tax of 1 cent was never lifted, and became permanent in 1941.

In 1951, to help finance the Korean war, the Federal gas tax was increased—temporarily—to 2 cents. Also temporary was the 1956 increase to 3 cents. And in 1959 the levy went temporarily to 4 cents.

But the 1959 promise that the rate would drop back to 3 cents in June 1961 looks somewhat meaningless now—with the President proposing that the fourth cent be continued, and indicating that an increase to 4½ cents "is clearly acceptable, and would have my support."

In the beginning, the gas tax was referred to as the painless penny. Now, with Federal and State taxes averaging over 10 cents on every gallon of gasoline, painless is hardly the word for it.

Congress should honor its 1959 pledge to let the Federal tax go back to 3 cents. Temporary should mean temporary.

Instead—as applied to taxes—temporary nowadays might better be spelled: "Entering wedge."

Letter in Television Age

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. LINDSAY. Mr. Speaker, a strong advocate of responsible television is Mr. Sol Paul, of New York, publisher of Television Age. Although I have been a sharp critic of television practices, particularly relating to the networks, I recognize that television has made a contribution in many areas. Mr. Paul has made an eloquent statement on behalf of the television industry on the subject of TV's contribution. His letter was published in the March 6 issue of Television Age, and I am pleased to insert it in the RECORD:

LETTER FROM THE PUBLISHER—IN THE PUBLIC INTEREST

In 1960 U.S. television stations contributed $256 million—a quarter of a billion dollars—to public-service causes. This was revealed by the Television Age seventh annual public-service survey.

Television has given unstintingly of its time to check the scourges of mind and body. It has opened its facilities to drives of the American Red Cross to help the distressed at home and abroad, to Radio Free Europe to counteract the propaganda of the Communists, to CARE for food for the hungry, to the USO for providing better recreation facilities for our bases around the world. Television has willingly donated time to aid in the never-ending battle against muscular dystrophy, heart disease, cancer, rheumatic fever, tuberculosis.

Each year the amount of money donated in time to these public-service causes has been increased. The figure stands as a great tribute to a powerful communications medium.

Yet there is more than money involved in the public-service achievements of television. Over the past few years stations across the country have developed and produced powerful local documentaries that have thrown a glaring spotlight on local problems.

How can one measure in dollars the efforts of a station which has produced a series of programs that have resulted in a decrease in juvenile delinquency in the community?

What yardstick is placed upon results of exposing a local problem of dope addiction?

What monetary value can be placed on a crusade which exposes deplorable conditions in a community's public institutions?

In long-range terms, how do we measure the value of a get-out-the-vote campaign, which inevitably stimulates an interest in the entire democratic process, and a concern for political issues and political personalities?

In equally farsighted terms, what is it worth to the health and future of a community to have its attention directed toward the problem of slums, and the evils which result from them?

These immeasurables are all part of the story of public-service television—that programing, that on-the-air time, which actually serves the public. Another part of this story is public-affairs programing, and more specifically editorializing, whereby a station assumes a reasoned and not always safe position on important issues. In undertaking this responsibility many stations, as business entities, have come under fire, but at the same time they have become vital forces in their communities.

It is reasonable then, to suggest that the quarter-billion-dollar public-service contribution of television stations in 1960 is only a fraction of the real and largely unknown contribution they are making to the growth and development of this country. On this last point some people like to point to a paradox: that it is the station's commercial operation that makes public service possible. The paradox, if it is one, can be refined further: these very commercial interests have a profound and progressive influence on American life.

Favorable Reaction in Washington to New Frontier Program of President Adolfo Lopez Mateos

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. FASCELL. Mr. Speaker, I respectfully call the attention of the Members to an article which appeared in the March 7, 1961, issue of Diario Las Americas, reporting the main points of Mexico's development program as recently announced by that country's President, Lopez Mateos.

As correctly noted in the article, this is Mexico's positive answer to President Kennedy's call for stepped-up efforts by the Latin American countries themselves to develop their resources and great potential, which this country will gladly support, morally and financially.

The article follows:

FAVORABLE REACTION IN WASHINGTON TO NEW FRONTIER PROGRAM OF PRESIDENT ADOLFO LOPEZ MATEOS

WASHINGTON, D.C.—With wide publicity display, the main dailies of Mexico officially announced President Lopez Mateos' border program, which has been entrusted to the capable direction of the distinguished continental personality, Antonio J. Bermudez. The program will start immediately and its main objectives are:

1. Accelerate and vitalize the links of the north and south border zones with the economy of the rest of the country and transform its physiognomy in accordance with the requirements of modern urban development and the needs of demographic growth.

2. Convert these cities into genuine testimony to the Mexico of today, in advancement of its decorum and its greatness, its art and its technical capacity.

3. Strive for the establishment of new industries.

4. Give to the youth at the border new orientations of culture, of art and of personal improvement, through adequate institutions which are now lacking.

5. Bring true incentives to tourism (hotels, towing fields, movies, theaters, museums, auditoriums, libraries, etc.).

6. Establish commercial centers where the best national products are offered at moderate prices.

Great importance has been given in authorized Washington circles to the official announcement made at the press conference held by Mr. Bermudez at the Mexican National Palace, since it was surrounded with special characteristics, such as its being held in the Palace's Pan American Room, a hall dedicated to inter-American solidarity, and the presence of President Lopez Mateos' brother, Don Mariano Lopez Mateos, director of national warehouses, of Mr. Manuel Fernandez Landero, president of the Federation of Industrial Chambers of Mexico. Also present at the press conference were the Messrs. Ramiro Alatorre, Engineer Antonio Gutierrez Prieto, Miguel Blazquez, Pablo Morera and Licenciado Mario Mendiola. The frontier development plans were brilliantly presented by the dedicated Architect Mario Pani.

The most outstanding fact of all, according to the reaction in Washington, is that the announcement was made on the eve of the so-called peace conference sponsored by ex-President Lazaro Cardenas. The border program dramatizes, undoubtedly, with facts, Mexico's positive answer to the New Frontier program enunciated by President Kennedy.

The Lamp Bulb Stranglehold

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Mr. T. K. Quinn as it appeared in the New Republic, February 27, 1961, issue.

Mr. Quinn resigned at the age of 43 as a vice president of General Electric, "because," in his words, "of just such practices as those disclosed in the Philadelphia price collusion case."

The article follows:

THE LAMP BULB STRANGLEHOLD

(By T. K. Quinn)

General Electric executives now languishing in jail for their price collusion crimes in the sale of electrical machinery, owe their education in these illegalities, whether or not they know it, to the company's long continued monopolistic practices in the electric incandescent lamp industry. From the start, freedom of enterprise in manufacture and sale has been restricted by General Electric. Its position today is formidable, like that of other monster-big enterprises, because of the forceable exclusion of other companies over half a century. Today, it would take many millions of capital, not available to new concerns, to develop new know-how and build and equip factories to move successfully into the tightly controlled electric lamp business.

Competitive efforts have always been hampered and stifled, competition itself rejected as a constructive force. Any representations to the contrary are simply not true. The effect and purpose have been to keep prices and profits high and investment down. Under these conditions, there have been no major innovations or scientific advances for more than 30 years.

However, the lamp profits to General Electric, hidden in its overall figures, have been enormous, even when loaded with extraneous overhead. There have been bad times, notably during the thirties, when the lamp profits carried the whole company, although the lamp sales volume was only about 10 percent of the GE total. In fact, lamp profits not only made up for losses in other departments but actually provided an excess that permitted the company to continue its record of steady dividends throughout the deep depression years. There is no other household, commercial or industrial necessity that has extorted such excessive profits over so long a period for any private interest.

A Federal court decision in 1911 held that General Electric and a group of associated companies had violated the Sherman Antitrust Act. After this decision GE's control rested on a patent purchased from two Viennese scientists for $400,000 and upon the Coolidge and Langmuir developments. General Electric thereupon proceeded under cross-licensing agreements to fix prices and divide markets in this country and around the world. The last written agreement of record, with Westinghouse, dated January 1927, exchanged nonexclusive licenses on all present and future patents covering lamps and machinery, appliances and processes for the manufacture of electric lamps. Open control was continued until recently, when the patents were finally declared invalid by the U.S. Supreme Court.

The electric lamp bulb monopoly continues effectively to this day because of its head start and lengthened period of protection during which competitors were excluded. They were frightened, bought off or beaten in lower court lawsuits which they did not have the money to carry to higher courts.

Today, General Electric still has about 60 percent of the lamp bulb business of the country, Westinghouse about 20 percent, Hygrade about 12 percent, and the remaining 8 percent of the business is done by a few small concerns. Prices remain substantially uniform—regulated reportedly, by methods like those used in the sale of electrical machinery for which 7 executives were jailed and fined, 37 were fined, and 40 companies were fined—a grand total of close to $2 million.

When the TVA authorities protested the high prices on turbines quoted by GE and Westinghouse in 1959, and showed that even if labor costs were excluded entirely, the uniform prices were still higher than for the competing British product, GE lowered its prices but promptly increased the prices of electric lamps. Lamps are bought, for the most part, in small quantities where increases are measured in pennies and markets are scattered. The increases, however, may amount to exorbitant percentage increases. For want of exact but concealed data, we may estimate the take of industry at a quarter of a billion or more in annual sales.

At a congressional hearing in 1949, Chairman CELLER of the House Antitrust Committee noted that 16 cases had been instituted against General Electric under the antitrust laws from 1911 to 1947. In addition, eight proceedings were started against the company by the Federal Trade Commission. A number have been filed since 1947. Mr. CELLER wondered why the company could not operate under these laws, if they believed in them. Mr. Charles E. Wilson, then president of GE, spoke testily of his intimate knowledge of the company and its people. He testified (not under oath): "We all detest illegal monopolies. * * * It is my belief that the antitrust laws were designed to protect against monopoly or illegal conspiracy, while at the same time protecting—indeed encouraging—the growth and adaptation that comes from competition." This testimony, along with a since-proven wholly unwarranted attack on a previous witness, fell heavily on those who knew that GE then had and still has substantial control of the electric light bulb industry. It struck another harsh note at the Philadelphia price collusion hearings where it was disclosed that the practices which brought jail sentences and fines reached far back into Mr. Wilson's term of office as president of General Electric.

Federal District Judge Ganey's statement in the Philadelphia case that "one would be naive indeed to believe that such a vast conspiracy was not known to those in charge," is of course exactly right. He was convinced that in the majority of defendant cases, they were "torn between conscience and an approved corporate policy, with the rewarding objectives of promotion, comfortable security and large salaries—in short the organization or company man, the conformist." Still, the judge did not penalize either Mr. R. J. Cordiner, the incumbent chairman who is also Chairman of the Business Advisory Council to the Department of Commerce, or Charles E. Wilson, his predecessor.

Beyond the extortion, collusion, and crime there is the moral effect on the country. The cream of our youth aspires to executive positions in big business, positions which they now know to be occupied by men who must be fined and sent to jail. The hypocrisy of our business community has been shown and the end is not yet. We are left with the transparent mystery of why prices continue so uniform in the electric lamp, steel, drug, cement, roofing material and other industries.

Address by William A. White

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. FASCELL. Mr. Speaker, with tremendous pride do I call to the attention of the Members an exciting movement which began in my district of Florida and is now spreading throughout the country "like wildfire".

I introduce to the Members the "BIBA" program. BIBA means, business is better already with Kennedy. This novel and exciting campaign slogan was created by Mr. Paul Rimmeir, of my district who is president of Seaview Industries, a manufacturing plant of aluminum awnings and shutters and other merchandise of that nature. Joining him in this week-long project was the Miami Junior Chamber of Commerce. The program, aimed at reviving consumer confidence in the upturn which business is now taking, was applauded by Florida's Governor and congresional delegation.

BIBA was launched in Miami on February 3 of this year with a citywide rally and bonfire, with an Indian war dance by local businessmen. Nationwide TV coverage was given to this dramatic and stimulating event and national magazines have further carried the story of BIBA to the Nation. Mayor High of Miami proclaimed a citywide BIBA Week in Miami beginning on February 22.

During that week, the BIBA program was further highlighted and complemented by the participation of Mr. William White, Administrator of Business and Defense Services in the Commerce Department, in the festivities. He addressed the Jaycee meeting which was attended by other business and professional organizations, and I am pleased

to insert in the RECORD, the fine speech which Mr. White delivered:

I bring to you from the Honorable Luther Hodges, the Secretary of Commerce, best wishes for success in BIBA Week.

The enthusiasm which was evidenced by the Miami citywide rally of February 3—with its objective of stimulating business—received national attention.

In my position as Administrator of the Business and Defense Services Administration of the Department of Commerce at Washington, I am concerned every day with providing services to business and assisting wherever possible in stimulating economic growth. When I heard of the rally and BIBA, my reaction was that I hoped that the Miami idea would spread like wildfire throughout the country.

Congressman FASCELL stated in his letter on BIBA to Secretary Hodges: "I know that you will share my enthusiasm for this excellent program." I can assure Congressman FASCELL—and you—that both the Secretary and I share his enthusiasm for this project.

I agree thoroughly with "Big Chief" Paul Rimmeir in putting the torch to "bad news" and emphasizing the positive—good news. And there is much good news to report. Let us look at some of it.

Through our free enterprise system and democratic processes, we in America today enjoy the highest standard of living this country or any other country has ever known. In this respect we are the envy of every other country on this globe.

I am in a unique position to report to you that there is much good news to report and substantial reasons for business confidence. In the BOSA which I head there are 25 industry divisions—covering practically all manufactured products of the United States. At the end of each year—following careful research and consultation with industry—the industrial specialists prepare a review of the preceding year and outlook for the next year. This year we published 91 such studies. I can tell you that in the preponderant number of these studies the outlook and projection are favorable.

We are all prone to look at statistics and data which describe trends. This is high fashion in business today. News letters, statistics, indices, etc. Sometimes in this welter of trend data we tend to forget to look at where we stand. Where do we stand today? There may be some trees on the plateau on which we stand, which can obscure our vision and make some people pessimistic. But it is a mighty high plateau, with a gross national production in excess of half a trillion dollars for the first time in history. Even though in Washington we are accustomed to hearing of ideas discussed in millions and billions of dollars—half a trillion has a new and to me a somewhat startling but inspiring significance.

Let us look for a moment at U.S. export-import position.

U.S. commerical exports for 1960 stood at $19.6 billion—close to the all-time record of 1957 (Suez crisis) and 19 percent higher than 1959. The export outlook for 1961 is considered very favorable. It will take hard work and influence to maintain this level—but we are pledged to this. In this connection we, in the Business and Defense Services Administration, with other elements of Commerce, under the energetic leadership of Secretary Hodges, are working in collaboration with U.S. industry, in a program to stimulate an increase in export of U.S. goods, eliminate discrimination abroad against U.S. goods in foreign markets, and develop additional export markets for U.S. products—I promise you that we will combine and intensify yours and my efforts in this respect.

A dynamic element in our economy today consists in the tremendous growth in Government and private research and development. We are truly living in a Buck Rogers era. Science fiction of yesterday is today's reality. Ideas considered exotic and radical become obsolete almost as soon as they became operational. In this age of scientific breakthrough, space problems, missiles, and automation, the United States will continue to make mighty strides forward. Industry representatives inform me that a whole succession of new products will enter the market in the near future. One industrialist (chemicals) recently explained that his company within the next 10 years expects to do 85 percent of its business in items that are in development and that his company is not now producing. To me, this means an abundant promise of an even brighter and fuller American future and standard of living.

We should bear in mind that some old indicators have lost some of their overall significance and meaning. Increasingly important elements in our national economy which are characterized by dramatic growth are the service industries. These have grown to such proportions that today there are more people in the United States employed in the service industries than in manufacturing. Moreover, some industries have demonstrated some counterbalancing influences during periods of production. The promise for continued growth in the service industries is abundantly evident.

Another indicator that pessimists use is the percentage of idle steel capacity. To compare a percentage of present U.S. steel capacity with previous years is meaningless. In the first place there is ambiguity in what is meant by capacity. In the second place steel capacity has been substantially expanded in recent years (a) by new plants and equipment, (b) by new processes. What counts is that the United States is first in steel production in the world and that we produced 99.3 million tons in 1960. Steel production figures in January show evidence of continuing strength. With the coming of milder spring weather construction should accelerate, requiring more steel and other building materials. The auto industry has curtailed production to match current sales. There should be a seasonal rise in auto sales in the spring and early summer months. Consequently, auto production should also increase with the increase in demand and production of steel. There are industries which the economists refer to as growth industries. These industries are developing and expanding at a rate far in excess of the growth rate in our national economy. These are solid building blocks in the foreseeable further growth of America. There are about 44 such industries—some of them are residents of the great and beautiful State of Florida.

Recently, Business and Defense Services Administration, at the request of the U.S. Study Commission, southeast river basin (which includes a part of northern Florida) made a study of growth industries and products. We identified the following as having growth characteristics: Scientific instruments, electrical measuring instruments, computing and related machines, electronic tubes and semiconductors, packaged seafood, photographic products, women's seamless hosiery, elemental gases, plastic materials and products, and many others. One of the purposes for our determining growth industries is to help a community or State to select appropriate industries to strengthen and expand the industrialization of the area.

President Kennedy in his special message to Congress (on balance of payments and gold) expressed the need for confident measures and vision when he said "Economic progress at home is still the first requirement for economic strength abroad, the real wealth of a nation resides in its farms and factories and the people who operate them; a dynamic economy producing goods competitively priced in world markets will maintain the strength of the dollar."

It is my feeling that the President—with a sense of high purpose—desires to transform the American people's way of thinking and the image which we present to the world.

I have spent many years in private business—a number of them here in Florida. I have spent some years also as a Government official. From both perspectives I see many signs in Washington that are reassuring.

I heard President Kennedy speak recently at the National Industrial Conference Board. He emphasized then the importance of modernization of U.S. industrial plant and equipment. He recognized the need for increasing our productivity, reducing production costs and placing our production plant in an improved competitive and defense posture. Legislation to advance these objectives appears to be favored in the new administration.

Some immediate-action measures which have been undertaken also underscore a basis for increasing business confidence. Some of these are:

Increase in contract letting in building U.S. defenses—notably in missiles and also in conventional areas.

Food-for-peace shipments and direction to the Department of Agriculture to expedite rental payments due farmers for crop storage, plus an additional $50 million for farm housing loans in 1961, and other measures which shuold benefit the agricultural industry.

Reduction of maximum FHA interest rates from 5¾ percent to 5½ percent and direction to HHFA to expedite projects. Following an exchange of letters between the President and the Federal Home Loan Bank Board—a series of steps will be taken to make more housing credit available at lower interest rates through savings and loan associations. (Increase from 18,000 to 22,000 maximum savings and loan association can loan; on $22,000 home downpayment reduced from $4,000 to $2,400; downpayment requirements will be reduced.)

Direction to Veterans' Administration to expedite payment of national service insurance dividends ($258 million).

Immediate increase ($1 billion per year) in social security benefits has been advocated by the President.

Reaction to such measures is setting in—at the convention of the National Association of Home Builders just recently concluded in Chicago a survey was made of a cross section of builders. The consensus of the builders responding reflected a highly refreshing and optimistic view for increased housing starts in 1961. I feel that this illustrates proof of Mr. Rimmeir's view that optimism and enthusiasm are contagious.

One barometer of current business conditions and indicator of trends that I find most reliable is the relationship of new orders to shipments in the durable goods field.

Shipments in December 1960 were $13.6 billion as compared to $13.8 billion in November, and $15 billion in December 1959. This reflects an 8-percent decline in shipments.

New orders followed a similar trend.

A point of particular significance, however, stands out when we consider the relationship of new orders to shipments.

In December 1959 new orders were $340 million less than shipments—this to my mind was a prediction of downtrend, in

fact the falloff widened during the year. The margin is now narrowing appreciably. In December 1960 new orders were but $210 million below shipments. It is a definite sign of better business and business confidence.

Let us also for a moment mention the inventories of durable goods manufacturers. At the end of 1960 they were $30.8 billion or only $700 million higher than for yearend 1959. If inventories are compared to sales, however, they represent 2.27 months supply for 1960 yearend at December sales rates. This compares with 2 months supply at yearend 1959. Total inventories of manufacturers and distributors were reduced by $540 million in December and I expect that inventories will decline further and that new orders will probably rise and go above shipments during the first quarter of 1961. This heralds the beginning of recovery in my opinion. After inventories have been reduced until they are in better ratio to sales, the recovery will be accelerated by demand for goods, to rebuild inventories.

No discussion of this sort would be complete without comment on the old bellweather, the stock market. The Dow Jones industrial average for 30 industrials has climbed from a value well below 600 at the beginning of 1961 to over 650 in recent days. The strength and upward trend reflects confidence of business and investors in the future of the American economy.

I wholeheartedly join with your chairman, Mr. Efthimiou, Mayor High, the city commissioner, Congressman Fascell, Senator Smathers, Senator Holland, and Governor Bryant in support of the BIBA thesis.

The Miami Junior Chamber of Commerce is to be commended for its positive and forward looking objectives. I know that other jaycees will pick up the torch and use BIBA as a new cornerstone for public and business confidence.

I extend to you every good wish for a tremendous BIBA week and successful follow-up. I know that you can spark on a national basis the conversion of BIBA from: "Business Is Better Already" to "Business Is Booming Again."

Along with Mr. White and the many others who have helped make the BIBA campaign a national effort, I congratulate and commend Paul Rimmeir and the Miami Junior Chamber of Commerce for their initiative and imagination in accentuating the positive. For there is good news to report and the Miami BIBA program is largely responsible for spearheading nationwide confidence that business is improving and will continue to improve in communities around our Nation.

The Late Honorable B. Carroll Reece

SPEECH
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 20, 1961

Mr. KEARNS. Mr. Speaker, I join all of my colleagues in the House in their grief over the loss of our friend, CARROLL REECE.

CARROLL REECE not only served his constituents well but all Republicans while national chairman of the Republican Party.

His passing will be felt keenly by his own State of Tennessee and by the entire country to which he gave so much of his time and ability as one of the ablest spokesmen of the conservative cause that this Nation has ever produced.

My heartfelt sympathy goes to Mrs. Reece and the family in their great personal loss.

The Situation in the Caribbean

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal which I received from Dean Clarence E. Manion, sponsor of the Manion Forum Network with headquarters in South Bend, Ind., dated March 16, 1961, with which he forwards a transcript of the March 12, 1961, program over that network, the title of which was "We Should Blot Out Communism in Cuba This Week":

SOUTH BEND, IND., *March 16, 1961.*

Congressman DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I am very much obliged to you for inserting the Manion Forum interview with President Ydigoras Fuentes of Guatemala in the March 13 CONGRESSIONAL RECORD. I must credit you with having alarmed me originally about the situation in the Caribbean which grows worse by the hour.

Enclosed is a copy of my own speech of last Sunday, March 12. As you will see, it is addressed to President Kennedy. I honestly believe that all plans for the reformation of our domestic economy will dissolve into wishful thinking unless this administration faces up to the Communist menace and takes an offensive against it. Eisenhower wasted 8 crucial years, and our new President should frankly charge his predecessors with this delinquency and start to do something about it.

Your valiant service to the Nation and to the party entitles you to call this to the President's attention in the manner you deem best. I do know that millions of Poles, Hungarians, Lithuanians, and other relatives of the captive peoples in this country will be forever grateful to you for underscoring the urgency of an expedient program for the liquidation of the Kremlin jail system of so-called governments.

Very cordially yours,

CLARENCE MANION.

WE SHOULD BLOT OUT COMMUNISM IN CUBA THIS WEEK

(By Dean Clarence E. Manion)

During his first full month in office, President Kennedy sent a score of urgent recommendations to the Congress. All of these call for a speedup in Federal spending for the home front.

Recommendations ranged all the way from emergency injections for unemployment compensation to long-term reformation of Federal flood control.

Because of our unfavorable economic climate, all or nearly all of the new President's emphasis has been upon domestic problems and upon plans for their solution. He evidently believes that an unbalanced domestic business situation takes precedence over the needed repairs and reformation of our foreign policies.

President Kennedy has long been on record with his admiration for the courage and intelligence of the late Senator Robert A. Taft. Now would be a good time for him to recall the advice that the distinguished Ohio Senator gave to another new President just 8 years ago.

The statement turned out to be Taft's dying declaration on the subject of American Government and, as every trial lawyer knows, dying declarations are important and influential testimony. Here is what the dying Robert Taft declared to the new President, to the Congress and to the American people in 1953:

"The moral and political imperatives for a Senate audit of our foreign affairs from 1940 are beyond question. We cannot clean up the mess in Washington, balance the budget, reduce taxes, check creeping socialism, tell what is muscle or fat in our sprawling rearmament programs and purge subversives from our State Department unless we come to grips with our foreign policy upon which all other policies depend."

In spite of the fact that this was said 8 years ago and that it was directed to a Republican administration, there is nothing in this bill of particulars that is not applicable to the new Democratic administration today.

The conditions described and the objectives outlined are completely up to date. It is safe to say that, if the statement could be laid before him now, President Kennedy would readily admit that he is more than anxious to clean up the "confusion in Washington" which he described so graphically during the campaign.

He has expressed his determination to balance the budget and, at least on occasion, he has expressed hopes for ultimate tax reductions.

He has already announced plans for the reorientation of our military defenses and, ironical as it might sound to Conservatives, it is certain that the President would emphatically deny anything but firm enmity for socialism of any kind.

The question of subversives in the State Department and elsewhere in the Government would raise unpleasant partisan recollections but, in spite of the defections that have taken place since 1953, notably the departure of Messrs. Mitchell and Martin from our Defense Department's top-secret Security Administration directly to the Kremlin last summer, subversives are still lodged in virtually all of our key Federal agencies.

President Kennedy, being intelligent and well informed, certainly knows about this and if he could spot and expel these spies, which is questionable, he undoubtedly would do so.

We have seen that it was Senator Taft's considered judgment that none of these objectives, which are as appropriate for President Kennedy as they should have been for President Eisenhower, can be accomplished unless and until we come to grips with our foreign policy upon which, as he said, "all other policies depend."

The intervening years have proved that Taft was right. Unfortunately, the Eisenhower administration did not come to grips with the Roosevelt-Truman foreign policy which it inherited in 1953. On the contrary, the Eisenhower administration embraced, extended and embellished that foreign policy.

Consequently, none of the estimable objectives set forth in the Taft declaration has

been achieved. On the contrary, the prospects for their achievement are infinitely worse today than they were in 1953.

Unless President Kennedy quickly comes to grips with the ill-advised Roosevelt-Truman-Eisenhower foreign policy which he has inherited, then all other policies, plans and programs which he now envisions as a New Frontier will be buried under the collapse of this country into communism.

The audit of our foreign policies since 1940, which Taft urged upon the U.S. Senate as a moral and political imperative, has never been undertaken. On the contrary, this strange suicidal direction of our foreign relations has ridden unscathed through one administration after another, Democrat and Republican. It has been and still is the untouchable "sacred cow" of even the most acrimonious political debate.

Officially, its justification has been based in the defense of the free world against communism. Yet, the long expensive course of its conduct parallels the triumphant march of the Red menace in every direction all around the world right up to our own doorstep in the Caribbean Sea.

THERE IS SUBVERSION IN THE STATE DEPARTMENT

Three of our former Ambassadors to Cuba who have testified under oath before the Senate Internal Security Subcommittee have stated that Castro and communism were brought to power in that island with the indispensable assistance of our American State Department.

Cuba is not by any means the only example of this official defense-in-reverse policy against communism. During the many years that have passed since we assumed the full financial and military responsibility for defending the free world against communism, the Red conquest has steadily advanced on all of its critical fronts throughout the world and retreated from only one.

The one country in the world that has successfully freed itself from Communist enslavement is the tiny Republic of Guatemala in Central America. If the United States had anything to do with Guatemala's successful revolution against its Communist government in 1954, then the story of our assistance to that revolution is the best kept secret of the so-called cold war.

But it is an indisputable and well-publicized fact that the ignorance, ineptitude, or infiltration of our State Department—you can take your choice—has now threatened the freedom of Guatemala with another attack by communism, this time from the new Red base and bastion in Cuba.

I hope that you heard His Excellency Miguel Ydiogoras Fuentes, President of Guatemala, describe the extent of this new menace to his country and to all Latin America over this microphone just 2 weeks ago. Said President Ydigoras:

"The presence of civilian and military forces of the Soviet bloc on the island of Cuba signifies not only an imminent danger to the preservation of peace for the American Hemisphere, but also constitutes a flagrant assault on inter-American solidarity. There is no doubt that the treacherous designs of the Communists go beyond the protection of their satellite in the Caribbean. It is urgent, therefore, to take prophylactic measures to prevent the spread of this terrible disease."

It will be a great tragedy if this grave warning statement from the head of a friendly anti-Communist government and made directly to the American people is ignored by Congress and the President of the United States. The people of Guatemala succeeded where the Freedom Fighters of Hungary failed in their valiant efforts to drive the brutal Communist pirates from control of their respective countries.

The voice of freedom in Hungary is now silenced by the grace of our abject subservience to the cowardice, or worse, of the United Nations Organization. But fortunately the experienced people of Guatemala are able to speak out about the terror that now plans to revenge itself upon them and in the process to advance its campaign of conquest against us and the entire Western Hemisphere.

The Communists in Cuba mean business. The Red stranglehold on that country represents a cunning conspiratorial coordination of Red Chines manpower with Soviet-supplied armament and ammunition.

The strength of this Kremlin-directed apparatus grows with every passing day. Its eradication is not going to be accomplished by a popular uprising of the oppressed, disillusioned and disarmed Cuban people waving sticks and throwing stones.

President Ydigoras told us that "urgent measures must be taken by our side" to stop the Cuban Communists. But, to all appearances, our Government does not share the concern that was expressed so earnestly by our good neighbor, the President of Guatemala.

On the contrary, newspaper headlines reveal that our State Department is dividing its official attention between the maintenance of U.N. prestige in the Congo and the sad fate of our expensive stake in Laos.

There is no denying the fact that the Reds have outsmarted us in Africa and that Laos, all of our numerous so-called ugly Americans and uncounted millions of dollars to the contrary notwithstanding, is now ripe for a coalition government of Communists, anti-Communists and neutrals.

Those who know the techniques of the Communist conquest and the history of their inexorable application all the way from Czechoslovakia to Korea, will realize that this coalition government will be the final step before the ultimate disappearance of Laos into the Kremlin-Red Chinese orbit.

SALVATION OF CUBA, OR COMMUNISM HERE

That will be a sad and serious loss for the free world but this success-in-reverse achievement is in the best tradition of our fatuous foreign policy with which our Government still refuses to come to grips.

However, the bright prospects for the Reds in Laos and the Congo are one thing; the accomplished Red conquest of Cuba is quite another. Laos and the Congo are each more than 10,000 miles from the United States, while Red Cuba is a scant 90 miles off the coast of Florida.

The Cuban Communists have turned off the water supply at our Guantanamo Naval Base and are now poised for the conquest of the American mainland, north and south. A polite arrangement of the agenda for discussion at the U.N. is not going to dissolve the urgency of this situation.

Either the Government of the United States acts now to dissolve the menace of communism in Cuba, or we—the people of the United States—must prepare ourselves for the same kind of conquest by communism that overtook Czechoslovakia and Eastern Europe.

Our official paralysis in the face of this deadly peril on our doorstep traces to our slavish narcotic addiction to the demonstrated idiocies of what is called "collective security." In 1958 we called off our helicopters from their projected protection of American lives and property in Cuba because our State Department ruled that our commitments to the U.N. and the O.A.S. prevented any military intervention by us in Cuba for any purpose.

Since then Castro has seized a billion dollars worth of American property and abused American citizens in Cuba with complete impunity. Thanks to Red China and the Kremlin, Castro's military strength is increasing every day. In the face of this danger, our State Department is preoccupied with the threat to Dag Hammarskjold's prestige in the Congo and with the seriousness of Great Britain's insistence that we recognize Red China and admit that bandit apparatus to the U.N. Security Council. The proper defense against this appeasing nonsense is a strong counteroffensive.

Former Cuban Ambassador Spruille Braden described the proper emergency remedy over this microphone 2 months ago. He said we should break diplomatic relations with Castro's government. We have since done that. He added that we should follow this by recognizing a responsible anti-Communist Cuban government in exile. We have not done that and until we do that it will be impossible for any anti-Communist Cuban uprising against Castro to succeed.

There are at least 100 anti-Castro groups of exiled Cubans now actively organized in this country. We must pick the right one of these, recognize it as the rightful government of Cuba and put it in the business of reclaiming Cuba for freedom. If this works—and it will work—we can adopt the same plan of action for every country in the world that is now controlled by Communist pirates who, like the Pirate Galvao with the Portuguese ship Santa Maria, have unlawfully and by force grabbed the steering wheels of government in Poland, Hungary and the other satellite countries, including Soviet Russia itself.

At long last, let us come to grips with our present suicidal foreign policy and announce that henceforth for purposes of official recognition we will make the altogether proper distinction between a civil government and a brutal jailer; that when a so-called government surrounds the governed country with barbed wire entanglements and mines its borders with high explosives to prevent the escape of its people, we will withdraw recognition from that so-called pirate government and invite its exiled people here or elsewhere to set up a government in exile for the recapture of their homeland and its freedom.

That will stop the British drive for recognition of Red China, but it will do more. It will bring forth governments in exile for every one of the Communist controlled countries of the world—including Russia.

The U.N. won't like this and neither will the British, but the oppressed people of the world will love it and, once it is announced, they will promptly proceed to melt down the Iron Curtain from the inside.

Mr. President Kennedy, as Senator Taft said, this is the policy upon which all of your other policies depend. Why not give it a trial?

Well, there you have it. With the Kremlin smothering a nation 90 miles from our shores, how long can the United States escape the Communist net?

This is a time for quick thought and action by the American people. It is 11:50 o'clock.

The Minimum Wage Law—A Necessity for the Development of America

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 23, 1961

Mr. SANTANGELO. Mr. Speaker, on January 14, 1961, the Federation of the Italian-American Democratic Organizations of the State of New York, Inc., held a symposium at the Hotel New Yorker in connection with the minimum

wage laws. On this occasion, the Honorable ROBERT N. GIAIMO, from the State of Connecticut, and the Honorable DOMINICK V. DANIELS, from the State of New Jersey, participated. About 75 representatives of various labor and business organizations interested in this subject participated. After the speeches there was a stimulating question and answer period in which the various phases of the minimum wage law were discussed, and the impact of the proposed increase in minimum wage and the extension of coverage were explored.

At this time, 2½ months after the symposium, many of the statements by Congressman GIAIMO have gained greater meaning. It is timely that the speech delivered by the Honorable Representative from Connecticut be inserted in the CONGRESSIONAL RECORD, especially in view of the heated controversy regarding the minimum wage law, its proposed increases, extended coverage and last minute substitutions. I believe that Congressman GIAIMO's discussion will prove informative and enlightening to those interested in the welfare of the worker and the effect of increase in minimum wage and extended coverage this legislation would have upon industry. His talk follows:

SPEECH OF THE HONORABLE ROBERT N. GIAIMO, MEMBER OF CONGRESS, DEMOCRAT, OF CONNECTICUT, BEFORE THE FEDERATION OF ITALIAN-AMERICAN DEMOCRAT ORGANIZATIONS, NEW YORK CITY, JANUARY 14, 1961

There is no doubt that the Fair Labor Standards Act, enacted 22 years ago, will again be the subject of heated discussion in the Halls of Congress. It is altogether fitting, therefore, that this assemblage interested in the great issues facing our Nation, take note of the coming debate and—as informed citizens—individually determine a position that will strengthen the economic fabric of our society during this crucial period of our country's life. I would like to outline for you some of the arguments which I believe will be voiced on the floor of the House of Representatives within the coming months.

The objective of the Fair Labor Standards Act is to achieve in the United States as rapidly as practicable minimum wage levels necessary for the maintenance of health, efficiency, and the general well-being of workers. This is to be materialized without substantially curtailing employment and earning power. To achieve these dual, but frequently conflicting objectives, the Congress has acted cautiously in applying the law. It has established over the years minimum wages which affect directly only a limited number of employees at the bottom of the economic ladder. The Congress has also limited the application of the act to part of the labor force.

It is estimated that the Fair Labor Standards Act applies to about one out of two employees engaged in nongovernmental jobs. The employees currently excluded from the provisions of the Fair Labor Standards Act fall into two categories:

1. Coverage under the act is limited to employees engaged in commerce, or in the production of goods for interstate commerce, or in occupations directly essential to the production of these goods. This excludes from coverage under the act about one out of every three wage and salary earners in private industry, including the bulk of employees in local retail and services, and about half of the employees in construction. Some 14.5 million wage and salary workers in private industry are not covered by the Fair Labor Standards Act.

2. The act specifically exempts from coverage of the Fair Labor Standards Act several groups of employees who are engaged in commerce or in the production of goods for interstate commerce. This category includes about 6 million employees or one out of every eight wage and salary earners in private industry. The largest groups in this category are engaged in agriculture, as outside salesmen, and in managerial and professional occupations. In addition, the act permits special treatment of handicapped persons and learners. Also, some other groups are exempt from its overtime provisions. Most of retail and service employees are specifically excluded from coverage by specific exemptions in addition to the limitation under the definition of commerce.

The Department of Labor has estimated that 23.7 million employees were covered in 1959 by the Fair Labor Standards Act. Six out of every ten of these were employed in manufacturing. Other large groups were engaged in transportation, wholesale trade, finance, insurance and real estate.

The bills as reported out by the House Committee on Education and Labor and the Senate Committee on Labor and Public Welfare last year constituted a compromise between the initially proposed Kennedy-Roosevelt bill and the Eisenhower administration proposals. The major proposed change in both bills was the extension of coverage to retail and service enterprises with annual sales in excess of $1 million, exclusive of excise taxes.

In the limited time available to me, I would like to discuss this legislation as it affects the retail trade. A study by the Bureau of Labor Statistics showed that in October 1956, about 1 out of every 4 employees in all retail trade was earning less than a dollar an hour. The percent earning less than $1 and the impact of raising the wages would vary widely from region to region.

Of course, retail wages have increased appreciably since October 1956, as they did in the rest of American industry. Average hourly rates in retail trade between October 1956 and March 1960 rose 13 percent. The ratio of employees that would be affected by a $1-an-hour minimum today would, therefore, be considerably lower than 4 years ago. Moreover, the data I cite include employees in all retail establishments, regardless of size; generally hourly rates of employees engaged in retail trade tend to increase with the size of the establishment. However, it is clear that a uniform hourly minimum wage would have an appreciably different impact from region to region. There is no reason to believe that the increases in retail wages have been relatively greater in the South, the region with the lowest wages, than in the West where retail wages are highest.

There also exists a wide variation in earnings of employees in various types of retail establishments. Again, the latest national study on wage distribution in retailing by type of establishment is available for October 1956. At that time, more than a quarter of all retail employees earned less than $1 an hour, but in variety stores 3 out of every 4 of the quarter million employees earned less than $1 an hour, while in furniture and appliance stores the comparable ratio was 1 to 8.

Another problem with reference to the application of the FLSA to retail trade is presented by the overtime provisions. Four years ago, 45 percent of the employees in retail trade worked 41 or more hours a week, and 26 percent worked 48 hours or more. The variations in hours of work differed less than wage rates on a regional basis or by type of retail establishment.

The major objective of the Fair Labor Standards Act is the elimination of substandard wages. Not only are earnings in retailing insufficient to provide the needs of a family, but they are also inadequate to provide for the needs of a single woman without dependents. Recent studies in 11 different States indicated that a single woman required a median annual income of about $2,500 for a minimum adequate budget. This annual figure is equivalent to an hourly rate of $1.25 based on 1,900 hours per year. According to the U.S. Department of Labor, more than 4 out of every 10 employees in retail stores earned in 1959 less than $1.25 an hour and 1 out of every 5 earned less than $1 an hour.

In some cases employees in retail establishments earn less than State welfare agencies provide for the indigent and their income is occasionally supplemented by welfare funds. In such cases general tax funds subsidize the low-wage employer.

Elimination of substandard wages is already a function of the Federal Government. Reliance upon the States in this area to pass the necessary protective legislation is futile. The States are hampered from taking effective action because by raising minimum wages, one State would give neighboring States competitive advantages, since the States which do not require payment of minimum decent wages would enjoy lower labor costs. A fair minimum wage standard must be applied, therefore, concurrently for the whole Nation.

The underlying rationale for excluding retail trade from Fair Labor Standards Act coverage rests on the myth that retail business is local in nature. This belief is contrary to the structure of present-day retail trade in the United States and is based on a nostalgia for the simple agrarian economy of our early days as a nation, when the general store was a social center as well as a place to make purchases. Retailing is dominated by big business with some giant chains doing annually a billion dollar and more business with thousands of outlets spread throughout the 50 States. In food retailing, the small neighborhood store is fast disappearing. When the Fair Labor Standards Act was passed, supermarkets accounted for less than a fifth of the total food retail sales; at present, more than half of the dollar volume of food is sold by supermarkets.

Furthermore, the recent trends of growing concentration in retailing is expected to continue. Business Week commented on the activities of the 20 top retailers in 1959, whose sales ranged between $451 million to over $5 billion: "It was generally a year in which the big got bigger and the rich got richer."

Retailing can be considered as local in character only if it is viewed from a narrow technical approach limited to the fact that sales of an individual store are restricted to a given locality. But a realistic approach must also consider the origin of the goods and the structure of retailing used to sell the goods. There is nothing local about grocery chains which control and own integrated food processing factories. One of the chain stores is the world's largest purchasers of coffee, fresh fruits, and vegetables.

The management of the large retail chains is centralized. This results in uniform national pricing regardless of local conditions. Mail order stores use the same catalogues all over the Nation, and even local advertising by national chains is frequently directed by a central authority. Some giant retail chains advertise on national hook-ups and in magazines that circulate nationally.

The increased concentration in retail trade and the accompanying economies of large-scale selling and efficiencies of operations make it imperative that the coverage of the Fair Labor Standards Act be extended to the

industry. Many firms now paying rates below the minimum provided by the Fair Labor Standards Act could no doubt afford to pay the statutory minimum from current high margins of profits. But extension of coverage is not intended to reduce profits, which is the lifeblood of industry and an essential reward for investment and efficient management. It is expected that the elimination of substandard wages would exert a salutary effect upon the productivity of management and labor in the industry. The experience of American industry has indicated that with increases in real wages and standard of living, management in retailing will be spurred to foster economies of operation which may more than compensate for the increased labor costs.

It must be recognized not only that the existence of substandard wages in retailing is a problem of the employees who are denied the means to achieve a decent standard of living, but that low wages in one industry tend to depress the economic conditions in other areas of economic activity. And in the final analysis, it is the total community which must pay the social cost of substandard wages.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

St. Patrick's Day Address by Senator Claiborne Pell, of Rhode Island

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address entitled "To the United States," delivered before the Friendly Sons of St. Patrick on March 17 in Providence, R.I., by the distinguished junior Senator from Rhode Island [Mr. PELL], be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR CLAIBORNE PELL AT THE 61ST ANNIVERSARY DINNER OF THE FRIENDLY SONS OF ST. PATRICK, FRIDAY, MARCH 17, 1961, 7 P.M., SHERATON BILTMORE HOTEL, PROVIDENCE, R.I.

TO THE UNITED STATES

I am deeply grateful to your committee for having invited me here this evening. Not only am I honored and grateful to you all, but knowing how distinguished through the years have been the previous speakers at this dinner, I am doubly honored.

I also bring you the greetings of my colleague and the friend of us all, whose birthday is today, Senator JOHN O. PASTORE.

President Kennedy some weeks ago said in his brilliant and stirring inaugural address: "Fellow Americans, ask not what your country can do for you—ask what you can do for your country."

This is the thought around which I should like to revolve my remarks tonight.

First, in looking at our country, let us briefly examine her appearance and age. Both of these are relative factors. I can recall that 10 years ago I believed a man in his forties was definitely mature; in fact, perhaps a rapidly aging man. Now that I am in my forties, I think that the forties are an age of youth, vigor, and imagination. And, being human and an optimist, as I grow older I will probably always be convinced that my generation is the generation of youth, vigor, and imagination, no matter whether I am 40, 50, 60, 70, 80, or even 90.

And speaking of 90 years of age, my wonderful predecessor, Senator Theodore Francis Green, has a mind that is as vigorous and young as that of any of us at any age. As long as hope and optimism are in a man's heart, that's what counts.

Now, speaking of age, let us examine our country. In fact, the United States has had its system of government unchanged, has relied on the same Constitution, longer than has any other government in our world.

At the same time, our critics say that we are becoming decadent, old and weak. They cite our rate of unemployment, greater than that of any other industrialized nation. The fact that our young people's physical health and strength is poorer than that of youngsters of other nations is also used as an example. Recently tests showed that British boys scored 14 percent higher than American boys, and that British girls scored 23 percent higher than American girls. Japanese boys and girls outscored our American children by an even wider margin.

However, some tests were run recently in Pawtucket—and here you Pawtucket fathers or grandfathers can take particular pride. Pawtucket youngsters came out 16 percent higher than the 42-percent average scored by youngsters throughout the Nation.

Personally, though, I believe our country has in its grasp the potentiality and prospects, the vigor and life, of a young man, and not of an old man.

I must say, too, that the atmosphere in Washington, sparked and generated by our excellent President, gives off this spirit of optimism and confidence. In fact, I believe that John Kennedy will prove one of our truly great Presidents, ranking with Washington, Jefferson, Lincoln, the two Roosevelts, and Woodrow Wilson. And in good measure, because of this, I see the United States—strong, morally and physically; powerful; and with a long, good, full life to lead.

But let us look hard at the image of the United States. What is our appearance? What do we look like? It depends on who does the looking.

To many of us, blessed with reasonable prosperity and circumstances, the United States looks pretty wonderful. But, let us look around, even in our own State, and see the variety of impressions.

This month, some 10,000 food packages are being distributed free to unemployed destitute families in our own State.

Our unemployment is high; 50 percent higher than the national average. I wonder how our United States, or even our Rhode Island, looks to the unemployed textile worker in Woonsocket or Central Falls, his unemployment compensation exhausted, dependent on public assistance, and with few job prospects.

Now, let us examine the problem of prejudice in our country. This last national election has, I believe, proved that religious prejudice is dead in our country. And, within our own State, my own election demonstrated the same.

For this, incidentally, I am fullheartedly grateful to many of you here in this room.

When it comes to racial prejudice, though, we still have a long way to go. The United States to a Negro, or even to a Jew, does not yet have the fullness of opportunity that it should. Just the other day, I noticed that our new Secretary of State, Dean Rusk, an old colleague of mine in the State Department (we both had desks side by side 15 years ago), bought a house in Washington, and in buying it, he refused to sign a covenant committing him, when he sold it, not to sell it to any non-Caucasian, i.e., a Jew, a Negro, or an oriental. Because our Secretary of State refused to sign this covenant, and was merely putting into his personal life our supposed national beliefs, it made headline news around the country.

So, while the United States seems full of opportunity to many of us, and to our children, it really does not offer the same full open doors to our unemployed and to others of our citizens.

Now, let us see how the United States looks from the viewpoint of other countries. First, let us take Great Britain. We were born in revolution against that country. We fought them hard, and they fought us. During the War of 1812, they even burned down our White House. We thought their policy harsh to our own forebears here in the United States. And the forebears of some of us here in this room shared an equal dislike from an even earlier period—from the days of Oliver Cromwell—than did the early American colonists.

Yet, today, to my mind, outside the United States, Great Britain is probably as strong and great a well of democratic values as exists in the present world. To her we sometimes seem bumptious and isolated, and even immature.

Now, let us go across the channel from Great Britain to Ireland, an appropriate trip on this St. Patrick's Day. How do we look from there?

Ireland's loss has been our gain in that its troubles have produced a great deal of the growth that is the United States by giving us her sons and daughters, who have become amongst our finest citizens. Incidentally, on this 100th anniversary month of the inauguration of the great President Lincoln, it would, I believe, be particularly appropriate to mention the fact, not commonly known, that just a century ago Irish troops were especially helpful to the Union Army during our Civil War. Between 150,000 and 170,000 Irish troops fought then. At Fredericksburg, Irish soldiers under General Meagher—wearing green twigs in their hats—made six of the most heroic charges of the Civil War. One Irish regiment of the Irish Brigade went into the battle with 700 men and came out with 150 men. Many of the Irish troops who fought in the Civil War remained in the United States after the war was finished.

We owe a great debt to Ireland, and we have enjoyed her friendship since our inception. However, let's not fool ourselves; to the Irish Free State, the United States may also sometimes appear a bit bumptious and even pigheaded.

And how do we look from the viewpoint of Africa or Asia? You are as familiar as I with the slowness with which we are implementing our Constitution and our laws when it comes to making available to all our citizens on an equal basis education, public facilities, and even the privilege of voting. In our own South, while the religious institutions, particularly the Catholics, and many moderates are doing as much as they can in the field of education, the great majority of our southern white Americans oppose integration in education.

Even here in our State there are problems. I have a Negro friend who told me that in the suburban block where he lives, not one of his neighbors had been friendly to him and his wife—though they had to their children—in the more than a year that they had been there. So, how do we look to people of color throughout the world. I leave you to draw your own conclusions.

Or, let us go behind the Iron Curtain, an area where I have lived a couple of years and visited most every other year since World War II. There, while their governments and the official propaganda line have done all that is possible to caricature the United States as a moneygrubbing, vicious, warmongering nation, the reservoir of goodwill that exists for us among its people is still as deep as ever.

I remember once taking a train from Warsaw to Moscow. I had no Russian money. Other passengers on the train shared their food and beverages with me for the whole of that long train ride. They did their best to make me feel at home. I wonder what would have been the fate of a Russian tourist on the New York, New Haven and Hartford for an equal length of time?

Actually, I guess it's a pretty tough fate to be dependent on the New York, New Haven and Hartford. And, one is usually on it longer than one intends anyway.

But, seriously, from the Russian viewpoint, we appear almost as threatening to their security as they do to ours. I remember once being struck by a Russian map of the world, which showed the American nuclear-armed bases surrounding its borders. The Russians are constantly told that these bases are for offensive operations, and we often join in saying how we can blast every Russian city from the face of the map. I must say that if I were a Russian and listened to either the bellicose speeches of the Communist propagandist or to some of the saber-rattling speeches of ourselves, much less both, and then looked at that map, I would be a bit worried, too.

Our way of life and outlook are, to my mind, the best and most natural for the expression of wishes and desires of people everywhere. And for that reason, in the long haul, our Judeo-Christian way of life will triumph over the Communists. This is particularly true in fair competition. I have seen Communist officials who go to the United States, come back a lot less convinced Communists than when they left.

Now let us look westward to the Pacific. The first and most amazing point here is our new State of Hawaii. In Hawaii we have a real amalgam, a real melting pot—even more than on the U.S. mainland. And this melting, like the tempering of steel, appears to have developed strong foundations and also charted a way toward improvements. What has happened in Hawaii can do a lot to change the image of us in the other parts of the world and to improve our posture as the world's leading democratic nation.

We go to Japan, and there is some confusion. A short 15 years ago we insisted that they disarm totally and completely, and forever forswear the use of arms. At our instance, the Japanese Constitution was written to say in part "sea, and air forces as well as other war potential, will never be maintained. The right of belligerency of the state will never be recognized." Now, a very few years later, we urge them to arm as quickly and vigorously as they can.

We talk about disarmament in the United Nations, and yet we watch Communist China the most populous nation in the world arm itself with new and more deadly weapons without making any effort to insure that she sit down and discuss her awesome threat to humanity.

Now forgive me for literally covering the waterfront, but I have tried to underline the point that the United States does not appear the same to everybody.

Now that we have made our world tour, let us return home to President Kennedy's inaugural words: "As not what America can do for you—ask what you can do for your country."

There are many things that each of us can do for our country. There are many things that each of us can do to reinforce the vigor and youth of America and to insure that we continue toward our own New Frontiers.

To be specific: our businesses, our bankers, and our credit associations can be more adventurous and not depend too much on the Government. The other day a friend of mine and an excellent banker here wanted the Small Business Administration to extend a loan to a business to which he himself would not extend a loan. In this case, actually, he would not lay on half the loan, although the Small Business Administration said that it would put up a half, if he would agree to accept the other half. Now, I believe bankers should be willing to share in the risk that they ask the Government to take.

Asking what you can do for your country means the full reporting of all our taxable income and the payment of all the money we owe to the Government. I believe that if all the money that is owed by the taxpayers to the Government were paid, it would be unnecessary to raise taxes. For instance, in answer to a question from me at his appearance before the Joint Economic Committee, Secretary of the Treasury Dillon said for the record that the Treasury Department estimates that several billion dollars in interest and dividend income is not reported each year. And, while I believe all of us here in this room are reporting our income, we can do what we can to make sure that those we do business with or have contact with behave the same way.

Our industrialists and businessmen can be more imaginative and confident, more adventurous. This means plowing back a larger portion of profits into capital improvements, developing new marketing processes and uses for our products and the keeping pace with technological advances in other areas of the world.

Our investors can have greater confidence in our industries, in the growth of the American industrial system. One evidence of such confidence would be a willingness to invest in common securities and stocks, rather than bonds. In this connection, not only industrialists and bankers can help by investing in industry, but the unions can share in this. The amazing thing is that at present such supposedly conservative institutions as universities and mutual funds have invested a high percentage of their funds in common stocks. For instance, in 1959, 80 percent of the portfolios of mutual funds were invested in common stock. And in the fiscal year ending 1960, 80 percent of universities had 56.1 percent of their endowment funds invested in common stocks. Yet, the emphasis of the investment patterns of union funds is upon bonds and mortgages.

What we can do for America is to practice in our own lives the elimination of discrimination. My fellow Americans, there can be only one nationality in America—American. Creed no longer enters the picture, but race, color, and age still do, and here each of us can do our own bit to help.

We must have greater faith and confidence in our own system, a realization that our democratic system provides not only the material welfare, but must meet the human and emotional and religious needs of all people. This is the field where communism fails.

We must have a willingness to sacrifice to obtain the good, the great, world that is within our grasp.

What can we do for America? We can act like Americans, talk like Americans, and think like Americans. And, most important, have the confidence in our own vitality that as Americans we must have.

Gentlemen, I give you a toast to our United States.

Boland of the U.N.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article concerning the President of the U.N. General Assembly, Frederick Henry Boland. The article appeared in Our Sunday Visitor issue of March 26, 1961. The article follows:

BOLAND OF THE U.N.

(By Bob Senser)

It may be true, as some critics suggest, that Catholic laymen are napping along the roadside while world events pass them by, but you'd never know it around the headquarters of the United Nations in New York. There Frederick Henry Boland, President of the U.N. General Assembly, moves in the center of current history.

Boland, 57, head of Ireland's permanent mission to the U.N. since 1956, is the fourth Catholic to be President of the U.N. in its 15-year history. When he was elected last September, newspapers quoted Boland's favorite line from Horace: "Aequam memento rebus in arduis servare mentem"—"Remember to keep a cool head in difficult circumstances." And he has, even during the commotion created at Assembly sessions by Soviet Premier Khrushchev.

I visited Boland recently at the unpretentious offices of Ireland's U.N. mission, located on the 15th floor of an apartment building a half block from the U.N. I expressed surprise that I had found him in New York at the time, since the General Assembly was then in a long recess. "There's something doing here all the time," he explains. Except for a 4- or 5-week vacation in Ireland, Boland stays in New York year round.

Boland said that there were certain issues facing the U.N. that he could not discuss because of his role as presiding officer. But some of my questions dealt with issues that never came before the General Assembly. For example, what about the accusation that the U.N. is "godless"?

"Well," Boland said slowly, "we live in a world that is in part godless." He paused for a few seconds, and then went on:

"Actually, the United Nations is certainly not godless in its essential nature, because Catholic teaching is that international society is a natural society, and the Holy Father himself in public statements has approved the idea of world organization and of the U.N.

"Remember, too, that there's a big Catholic representation in the U.N. On an issue like apartheid [South Africa's Government-enforced racial segregation] there are a variety of views expressed, but the Catholics here stand united against apartheid as a violation of the God-given dignity of the human person.

"The U.N., true, is purely a worldly organization—so is a corporation or a labor organization—but it does represent a society which is natural in the sense that it helps mankind achieve its destiny."

How do the people of Ireland regard the U.N.?

"The opinion in Ireland is very strongly pro-U.N. We are a very small country, you know, and the U.N. is more important to small countries than to large ones, who because of their power are able to fend for themselves. Remember that when Dag Hammarskjold, U.N. Secretary General, was first pressured by the Soviet Union to resign, his answer was quite simple: 'I am going to stay for the sake of the small countries.'

"But the position of Ireland isn't based just on political or opportunistic reasons. It is based on Catholic social thought, which places great stress on the need for international cooperation."

Do the Irish people feel the same after nine Irish soldiers were killed in the Congo?

"The Irish people were deeply moved by this tragedy. At the same time they felt that those who died did honor to themselves and to Ireland, because they lost their lives in an unselfish fulfillment of a completely idealistic assignment. There was never any serious suggestion in Ireland that the country should withdraw its troops from the U.N. Force."

Any comment on the incident when Boland gaveled a tumultuous U.N. meeting to adjournment with such vigor that his gavel smashed to bits?

"These things, you should remember, happen from time to time in our national parliaments—even in the oldest and most traditionally minded assemblies. One day many years ago, on November 11, 1912, to be exact, the British House of Commons had to be hastily adjourned to bring an end to a disorderly scene. A member of the opposition threw a book across the chamber which struck Winston Churchill on the head. The book happened to be a copy of the Rules of Procedure of Parliament.

"The U.N. is now more like a parliament of the world and less like a conference of diplomats."

Should new nations be required to undergo a probationary period before being allowed into U.N. membership?

"That would be resented by the small countries. They're very sensitive about their independence. To treat them as applicants would be bad politics. It should be remembered that most of the new countries of Africa have long been under U.N. and League of Nations trusteeship, and for years their leaders have dealt with the U.N. Trusteeship Committee. The leaders of these countries give every sign of great maturity and responsibility, and it would be wrong to treat them as apprentices."

I pointed out that when the U.N. was founded in San Francisco there were many glowing hopes about curing the world's ills, but that today we're in more of a mess than ever. What happened?

"There are a lot of misconceptions about the U.N. It isn't a world government, you know. People expect the U.N. to put things in order when the U.N. simply doesn't have the powers to do so.

"What the U.N. has become is the principal medium in the world for focusing the otherwise scattered forces of world moral opinion on the current issues of international politics."

What's the good of this moral opinion?

"No government can afford, at least in the long run, to remain indifferent to the opinion of mankind. When a government gets condemned in the U.N., as the Soviet Union did over Hungary, and as Red China did over Tibet, it is a setback.

"If the Communists were insensitive to what others think about them, why would they spend such fabulous sums on propaganda to create a good impression?"

I recalled a commentator's point that Boland and members of his "center party" in the U.N. are trying to bridge the gap "not only between the East and West but also between the North and South (as Boland puts it)." What does he mean by the North-South gap?

"Since the war, we in Europe—and the United States, too—thought of the world very much in terms of the East-West conflict, polarized between the Soviet Union and the United States. Today, since there are so many new Asian and African nations in the world, we are reminded of the hard fact that the world is also divided into the highly industrialized nations of the northern half of the world—Japan, Russia, the United States, most of Europe—and the more or less underdeveloped countries of Latin America, Africa, and Asia, which occupy the southern half of the globe.

"Although the West seems to think that the big issues of the world are those of the East-West axis, the newer countries are really not much interested in questions such as the fate of Berlin, but more in the problems of how to end poverty, colonialism, and racial discrimination."

With all these concerns in the UN, isn't the national sovereignty of individual nations endangered?

"None of us can insulate ourselves from the fact that there are forces in the world making us more and more interdependent and hence limiting each nation's sovereignty. Events are really forcing the world more closely together.

"We oughtn't bemoan this development. After all, the idea of a sovereign state is not such an old one. It's only four or five centuries old. Before that, countries were held together by the idea of the unity of western Christendom. Later we started making a god out of the sovereign state. In the intervening years, with all the rivalries between nations, Western civilization has paid very heavily for the luxury of national sovereignty."

(In a speech in New York last November Boland explained this point: "Within our respective national communities we take the concept of government for granted. We believe that the lack of an effective national government would spell chaos and anarchy, and we have dramatic proof of the soundness of our belief in the present situation in the Congo. What we all deprecate and deplore in the Congo, however, we all accept complacently in the case of world society. None of our governments has yet shown any disposition to accept the sacrifices of sovereignty required to establish a really effective world government.")

Should all of a country's foreign aid be channeled through the U.N.?

"Don't forget there are two kinds of foreign aid. There is Government aid of various types. A large portion of that should be channeled through the United Nations—if the Soviet Union also agrees to do so.

"What counts even more, however, is aid that comes from the private sector of the economy. This, from private business, will always be bigger in volume, and there can be no question of channeling it through the U.N. Of course it would be useful if the U.N. could set up some ground rules of international investment to protect both the investors and the countries in which investments are made."

Senator HUMPHREY, among others, has suggested that the United States should make its surplus food available to Red China, which is hard hit by crop shortages. Do you agree?

"This is a matter for the American people to decide. I don't think it would be in keeping with my position to advise the United States what to do. In general, however, I would say that a nation with excess food resources should help those in need."

Why has Ireland voted with the Communist bloc on the issue of Red China?

"We voted only that the issue should be placed on the agenda. The vote so far has been only a procedural one of whether the issue should be discussed at all. Until it is discussed, how can you bring out the facts of what Red China has done? We made quite clear why we thought that the matter was well worth discussing—because it would be an opportunity to have the world examine the credentials of the Red Chinese."

I asked Boland what he considers the greatest single influence on his own thinking.

"My education by the Irish Jesuits at Clongowes Wood College in County Kildare. They gave me a sense of history and of the world. They gave me a classical education. My son is attending the same school."

And then Boland, who reads Thucydides in Greek for relaxation, took a few seconds for a digression on education:

"People think that education is the acquiring of knowledge—no, it's the training of the mind. The question is not how useful is this course but what is it going to do for my mind? Cardinal Newman believed that this is the reason why a classical education is the best education."

As I rose to go, I told Boland that I hoped he would excuse my pressing him for answers on some hard questions.

"Perfectly all right," he said. "You know what Oscar Wilde said: 'there are no indiscreet questions—only indiscreet answers.'"

The United Nations in a Time of Transition

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, March 24, 1961

Mr. BEALL. Mr. President, on March 22, 1961, the Honorable Douglas Dillon addressed the annual dinner of the United Nations Association of Maryland.

On this occasion, the Secretary of the Treasury chose as his topic "The United Nations in a Time of Transition." I ask unanimous consent that Mr. Dillon's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS IN A TIME OF TRANSITION

It is a great pleasure for me to meet with the members of the United Nations Association of Maryland. For it is through the efforts of such organizations as yours that the message of the United Nations reaches the American public. Public understanding and support of the United Nations are, as you well know, fundamental to our country's fulfillment of its international responsibilities and objectives. We in Government are, therefore, deeply appreciative of the splendid work you are doing to help achieve this essential end.

Two decades ago, the idea of an organized world community seemed to many people to be no more than an idle dream. Some felt that such an organization was wholly impractical. Others feared that a successful world organization would impair the national sovereignties of member nations. Still others insisted that world affairs should be managed by a few of the great powers and that smaller nations should be compelled to follow their bidding.

Many obstacles were encountered in the creation of the United Nations. There have been further obstacles to its development and growth. But most of these obstacles have been surmounted. Today, the United Nations is one of the most vital realities in the entire sphere of international relations. We Americans can take justifiable pride in the role our country has played in helping to build and to preserve the United Nations system.

By a great many standards, the United States is classified as a "great power." However, throughout our history the American people have been devoted to the rights of small nations—the right to independence, the right to survive, the right to grow, and the right to pursue material and spiritual well-being for their peoples within a framework of free institutions of their own making. These rights have been achieved—as never before—within the framework of the United Nations.

The United Nations has amassed great support around the world in the 15 years of its life—although often for different reasons. This is at once a tribute to the many sidedness of the world organization, which plays a variety of roles in various parts of the world. It is also a tribute to the capacity of the United Nations to respond to successively different demands throughout its existence.

The world has moved onward—but unfortunately, not always upward—since 1945, when the United Nations was a fledgling hope of barely 50 members. The United Nations has also altered, both in its composition and in its functions. It was originally conceived as an organization dependent for action upon agreement between the permanent powers—notably the United States and the Soviet Union. In those days, a majority in the General Assembly could be obtained from the votes of Western Europe and Latin America.

But the strains of international events demanded that the organization either grow or simply wither away—discarded, like its predecessor, the League of Nations. The United Nations did grow. It has now reached a total of 99 members, with several more almost certain to join in the next few years. A majority can now be obtained from the combined states of Asia and Africa. The functions of the organization have also expanded to meet new needs, as more and more problems affecting its membership and the world as a whole have been thrown into the lap of the United Nations.

Throughout these changes and developments, the United Nations concept has retained the allegiance of the overwhelming majority of the people of the United States.

President Kennedy spoke for all of us when he said in his inaugural address that the United Nations is "our last best hope in an age where the instruments of war have far outpaced the instruments of peace."

Four months earlier, former President Eisenhower told the General Assembly that the United Nations "has accomplished what no nation singly or any limited group of nations could have accomplished * * * to forego the bonds and build the structure of a true world community."

Important as the United Nations is to us, it is of perhaps greater importance to the new and emerging countries. To them, it is the symbol of nationhood. Membership in the world organization has become tangible evidence of their newly won independence.

Only in the United Nations can a small country participate fully in deliberations of international developments. Without the United Nations, it is not likely that small African States would have much say in decisions that will not only shape the future of Africa, but of the entire world. Small or emerging nations desperately need the United Nations for their security and as a sounding board for their hopes, fears, and aspirations.

President Kennedy had this idea very much in mind when he called in his state of the Union message on "the many smaller nations of the world to join with us in strengthening this Organization, which is far more essential to their security than it is to ours—the only body in the world where no nation need be powerful to be secure, where every nation has an equal voice, and where any nation can exert influence, not according to the strength of its armies, but according to the strength of its ideas."

What, then, is this Organization which has grown and developed in ways not foreseen by those who wrote its charter in San Francisco 15 years ago?

It is, first of all—and I say this without apology—a debating forum. This characteristic causes some United Nations supporters to become impatient and to assume that the United Nations because it is often long-winded and, on occasion, even unproductive, is also ineffective.

But free, thoughtful debate is essential on such immense issues as the rights of man, the ways of seeking peace, the need for economic advancement and spiritual growth, and the importance of justice with freedom. These topics must be endlessly explored and debated according to the customs of free parliaments if humanity is to move forward out of the shadows which becloud this uneasy world. Indeed, if the totalitarian spokesmen through their contacts with the free world in the forum of the United Nations learn nothing more than the rules and procedures of a democratically conducted debate, perhaps a small dent will have been knocked into the theory of the autocratic state—a dent which one day may bring about repercussions in the proceedings of monolithic totalitarianisms.

The United Nations is also an operation—a limited operation it is true, but a crucial one. The United Nations has demonstrated that an international organization can mobilize people and resources for economic development; that it can supervise the administration of dependent areas; that it can whip together a military force to repel aggression, and that it can mobilize security forces and civilian administrators to bring about a modicum of order and security where there might otherwise be civil war and communal rioting.

Each time the world organization takes on a new and bigger task, skeptics wonder if it can survive the test. But it has grown stronger from adversity. Today it is meeting the test of the Congo, where there is a United Naions force of approximately 20,000 troops and several hundred administrators, paid for by a United Nations budget of some $135 million.

The development of the operating capacity of the United Nations is perhaps the most striking aspect of the organization since its inception. But there is considerably more to the United Nations. It is also a facility for the practice of multilateral diplomacy. The complex world of today presents us with issues which involve many different peoples. Hence, multilateral negotiations are required to supplement bilateral diplomaacy. They, in turn, require a place and an atmosphere that are suitable. The place should have corridors as well as council chambers, because some of the most important developments in international arrangements come, not from formal meetings and agreements, but from informal, unofficial understandings and exchanges of views. Indeed the very presence in New York for protracted periods in time of leading statesmen is a real if intangible force in bridging gaps of misunderstanding between ourselves and the world around us.

This bodes well for the present and for the future. It is a happy development in the current struggle between freedom and totalitarianism that statesmen from all continents and all sections of the world desire to mingle their voices in a cosmopolitan chorous demanding peace.

It is our duty to strengthen and to maintain this great experiment in international collaboration, particularly in these days when it is subject to heavy attack and severe testing. It is valuable as a unifying factor of free states against totalitarian assaults or infiltrations which challenge their independence and security. However, the United Nations should not be used as a means of extending the cold war but, rather, as a means of ending it. The world organization is needed to preserve national ways of life and the ability of individual nations to choose how they should live. But it is not a device to hold back the hand of time or to maintain the status quo. On the contrary, change is often good and desirable, and the United Nations should serve as the framework of change and progress throughout the world. Peoples are best cemented together, not by mutual fear, but by mutual hope.

Finally, there are contained within the framework of the United Nations many opportunities to develop what may be called "quiet diplomacy," free from the shrill urgencies of the crisis and the headline. We need to cultivate these opportunities, and we will be better enabled to do so as the world organization grows both more responsible and more responsive to world needs. We can perhaps do this best in many cases by operating quietly away from the glare of publicty which sometimes distorts formal United Nations meetings. Most important, we can seek to increase the sense of harmony among nations, particularly between the older industrialized states and the younger emergencies nations of Asia and Africa.

In these ways, we can seek solutions to international problems before they become conflicts. It takes great statesmanship to solve a world crisis. But it is a sign of greater, if sometimes lesser known statesmanship, to prevent the crisis from developing.

Never before has mankind been confronted by such grave dangers—nor by such magnificent opportunities. In the same hand we hold the power of death and destruction and the power of life and progress. We Americans have a profound conviction that mankind will choose the pathway of life. In this conviction, we must dedicate ourselves anew to the principles of the United Nations Charter and to the pursuit of peace, freedom, and prosperity for all the peoples of the earth. Our consciences as Americans and as members of the human race demand no less.

A National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. FINO. Mr. Speaker, an interesting news item appeared in the press last week to the effect that a multimillion dollar gambling syndicate operating in the Pentagon was smashed in a raid conducted by Treasury agents.

The Federal prosecutor who led the raid described the operation in our Na-

tion's Defense Establishment as "unbelievable."

I wonder, Mr. Speaker, whether the Federal prosecutor was amazed at the tremendous amount of money our Federal employees spend to quench their gambling thirst or was he shocked at the discovery that such an operation could happen on Federal property.

In either event, the prosecutor should not have been surprised if he was willing to accept the indisputable fact that the urge to gamble is not only normal but a universal human trait. He should know that because of our own hypocrisy we have encouraged, permitted and allowed professional gamblers to capitalize on this human desire.

Mr. Speaker, the type of gambling activity uncovered at the Pentagon is no different than the kind of gambling that goes on everywhere else throughout this country. As a matter of fact Irish Sweepstake tickets are sold right in the House Office Buildings. I know. I have bought them right in my office.

All of this, Mr. Speaker, proves one point and that is that millions of American citizens enjoy the pleasures of gambling and the sooner we wipe out hypocrisy and accept the fact that man is by his very nature a gambler that much sooner we will cut off the underworld from this lucrative industry.

Mr. Speaker, the legalization of a national lottery under public control will not only satisfy the American desire to gamble but will easily pump into the coffers of our Government at least $10 billion a year in additional income which can help reduce our national debt and bring sorely needed tax relief to our wage earners.

This, Mr. Speaker, is the only realistic, sensible and courageous approach to this whole problem of gambling. It would be, I might add, a profitable and satisfactory solution to a pressing and disturbing human problem.

Address by Henry H. Fowler, Under Secretary of the Treasury

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered last night in Washington, D.C., by Henry H. Fowler, Under Secretary of the Treasury.

The occasion for the address was the annual dinner of the Yale Club of Washington, which gave its annual award for distinguished public service to the Honorable William McChesney Martin, of the Federal Reserve Board. The award was presented to Mr. Martin by Mr. Eugene Black, President of the World Bank. Present also was the Honorable Per Jacobsson, the President of the International Monetary Fund.

The address is in a sense a very high compliment to the Honorable Mr. Martin, but also, and more important still, is the fact that it is a very fine essay upon the virtues of and the necessity for dedicated public service.

I think the record of Mr. Fowler is an example of the finest tradition of public service in this country. His comments on this subject I believe are worthy of consideration by all Members of Congress, and by all those who may have the privilege of reading the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS FOR DINNER OF YALE CLUB OF WASHINGTON, MARCH 23, 1961, BY HENRY H. FOWLER, UNDER SECRETARY OF THE TREASURY

INTRODUCTORY COMMENTS

Prince Bismarck once said that one-third of the students of German universities broke down from overwork, another third broke down from dissipation, and the other third ruled Germany.

Let us not pass judgment on which third of the alumni of Yale are represented here tonight. To do so might revive the fading debate on whether Yale is ruling the country or merely seconding Harvard.

And I shall leave to others the privilege I would like to share of paying tribute to that great son of Yale, Bill Martin, whom we honor tonight for his magnificent contribution to public service.

In Washington, where so many Yale alumni are concerned directly or indirectly with the Federal Government, it seemed consonant with the spirit of this occasion to speak on—"The Motivations of National Public Service."

This Nation is in a new phase of its history. If it is to meet the challenges ahead, it will require a ministry of the best talents available—not just in the glamorous beginning of a new administration, but throughout the entire course of our time and thereafter.

For we in the United States are engaged in a vast and fearsome struggle—with both survival and freedom at stake. Ours is the leadership of the free world. To discharge that leadership, uninvited but obligated nonetheless, a strong and effective National Government is necessary.

And that means able people in government—not just a few in strategic places—but in elective office, in the key appointive posts, and in the career administrative service from the lower grades to the supergrades. Moreover, these persons of ability must have character. They must be ready to discharge their public trust with courage, judgment, integrity and dedication to the national public interest.

This need poses a question for the university, for the secondary educational system, for parents, for leaders in government and private life, for us all—are we doing what is necessary to assure that our national public service has an adequate number of the ablest and best?

I shall concentrate on one facet of this question, not because it is necessarily the most important, but because it is most often neglected.

It is my conviction that a renewed emphasis on the proper motivation for national public service is vital both to an enlistment of the ablest and their subsequent discharge of their public trust in the finest traditions of the public interest.

Why should there ever be in this great country, with all of its wealth of human resources, any serious question from objective sources about the quality and caliber of its public servants? Why should there be a constant churning in the press and parlor about conflicts of interest? Why should there be concern about enough of our finest people standing for elective political officer? Why should there be any conjecture about whether a President Eisenhower or a President Kennedy can get an outstanding leader in private life to come to Washington and agree to stay more than 1 year? Why should there be any failure of our Government personnel offices to recruit a fair share of the ablest and best of our college or university graduates?

Is it because we, as a people, have failed too often and too long to drive home to ourselves, our associates and our children President Kennedy's inaugural admonition—"ask not what American will do for you—ask what you can do for America."

Do our schools, our parents and teachers, in counseling young people on their opportunities, stress the obligation to help guide our country to its proper destiny?

It was over a decade ago when a noted public servant, David Lilienthal, made an interesting suggestion saying:

"I propose that, out of the best and most productive years of each man's life, he should carve a segment in which he puts his private career aside to serve his community and his country, and thereby to serve his children, his neighbors, his fellow men, and the cause of freedom."

The response of the Nation's young people to the Peace Corps proposal reveals that there will be an answer to calls of patriotism, without the sound of bugles and the summons to war.

But if young people of ability are encouraged and counseled to consider national public service, what are the values to be emphasized?

First, let us review a few that should not be stressed.

National public service should not be held out as a door to power and wealth. Out of this motivation comes the putting aside of the public interest and the favoring of private interest either of the public servant himself or of some person, faction or enterprise whose favor the public official hopes to enjoy then or later. Here is the root of the problem of conflicts of interest. This motivation cannot exist alongside a single-minded loyalty to the public interest.

"Taking care of No. 1"—worship at the altar of personal success in terms of power or wealth—this philosophy of the twenties may be still appropriate for much of the private sector of our society, but is not the right motive for national public service. For that we need men and women of integrity who will not let personal ambition or prospects of financial gain cut across their fulfillment of a public trust.

Said Plato in the Republic:

"Whereas if they go to the administration of public affairs, poor and hungering after their own private advantage, thinking that hence they are to snatch the chief good, order there can never be, for they will be fighting about office, and the civil and domestic broils which thus arise will be the ruin of the rulers themselves and of the whole state."

Nor should national public service be held out as an easy or pleasant life where one can avoid the stress of competitive society, being bundled comfortably in the secure lap of bureaucracy.

To participate in national public service today is to enter the roughest and most demanding competition of all time. It outstrips golf, tennis, or business and professional life in its competitive challenge.

America is leading the free world in the decisive competition with communism. It is engaged in a day-to-day demonstration of the values of democracy and freedom, hoping to win to our side in devotion to these values

both the emergent nations and those who have been embraced by tyranny.

Our Government team in this contest requires men and women of initiative, energy and judgment—no part of the national public service should be held out as a sinecure or a haven for mediocrity.

Nor should national public service be held out as the path to glory or the approbation of one's fellow men.

As wise Benjamin Franklin once put it:

"We must not in the course of publick life expect immediate approbation and immediate grateful acknowledgment of our services.—But let us preserve thro' abuse and even injury. The internal satisfaction of a good conscience is always present, and time will do us justice in the minds of the people, even of those at present the most prejudic'd against us."

Courage to stand up to public pressures, private greed and pursue only the public interest—without regard to personal place—this standard rather than pure crowd pleasing is to be preferred.

So much for the false or undesirable motivations for national public service—power, wealth, ease, comfort, personal vain glory.

Let us turn to the more difficult task of defining some of the more appropriate motivations.

In doing so, let us confess that Americans sometimes seem to have lost the habit of asking for or expecting dedicated action. Yet, more than any form of society, one governed in a democratic pattern calls for an optimistic view of men and their motives.

We should not be afraid of using words and concepts such as love of country, patriotism, public duty, obligation, sacrifice, rare privilege, and dedication in motivating our citizens to national public service.

Perhaps, some would quarrel with the idea of sacrifice. So would I, if it implies an acceptance of public breast beating by self-appointed heroes who seek or refuse high places, all the while talking of sacrifice. Compared to the privilege of serving his country, elements of personal sacrifice discount at a great rate.

Rather, it must be stressed that some element of sacrifice must be accepted if public service is to be performed by dedicated men and women. And like teaching or the ministry or military service in wartime, public service is better performed by dedicated people. Those who man the battlements or seek new frontiers in effective democratic government must be dedicated if they are to cope with their zealous and fanatical Communist competitors.

Dedicated to what?

To their country—to its survival and welfare, to the increasing excellence of its government in its performance of a key role in a free society, to ever higher standards of conduct in living up to its ancient ideals in a changing environment.

Can we hope for a better role for this and succeeding generations, than in the words of Plato:

"But when their turn comes, toiling also at politics and ruling for the public good, not as though they were performing some heroic action, but simply as a matter of duty."

But whether duty, obligation or privilege, public service seemed the natural course to our Founding Fathers and to the much admired ancient Romans such as Cato the Younger, of whom Plutarch said:

"Since it was not in the hope of gaining honor or riches, nor out of mere impulse, or by chance that he engaged himself in politics, but he undertook the service of the state as the proper business of an honest man, and therefore he thought himself obliged to be as constant to his public duty as the bee to the honeycomb."

Are there worthy motivations for public service other than love of country and dedication to its highest goals?

Yes, at least one deserves mention. It is the exciting privilege of being an active living part of one's times.

And what times they are.

The maintenance of peace or the holocaust of atomic war.

Economic growth or depression.

Sensible tax, fiscal and monetary measures or destructive extremes of inflation or deflation.

Expanding world trade or America isolated.

Increasingly effective systems of health, welfare, and education or inadequate public services.

Scientific progress on earth and in space or a stagnant society amid diminishing resources.

The rights and dignity of man increasingly respected at home and abroad or retreating to acceptance of tyrannies of man over man, new and old.

The happy resolution of these and other great issues of our time will depend in large measure on those who perform public service at the national level.

Perhaps, one story will make the point.

Toward the end of World War II a friend and associate left the Government to resume a highly successful private law practice in New York after 8 years of fine service at various levels of administration in the New Deal and wartime agenceis. Six months later, I saw him and asked for his impression of his tenure in Government. His reply went like this:

"I'm glad that when I was at the height of my powers, although I was wielding a very small brush, I was painting on a very large canvas."

There are many other good motivations. One was brought home to me recently. I was riding back through darkly lit downtown Washington, past the monument and the White House, on New Year's Eve with a man now in his eighties, who served with distinction under five Presidents beginning with Theodore Roosevelt and ending with Truman. He peered through the window at the passing scene he had viewed so often. I inquired as to his thoughts. Simply, he said: "I was thinking of all the fine, wonderful people I've known in this town."

Perhaps no treatment of this subject on a Yale occasion would be complete without a reference to that Yale man of other years whose public career under Theodore Roosevelt, Taft, Wilson, Coolidge, Hoover, and Franklin Roosevelt has never been surpassed in its high rectitude and fine motivation. I refer to Henry L. Stimson.

In the book written in association with McGeorge Brundy, it is revealed that at his 20th Yale reunion he spoke informally to his friends of his stint as a U.S. district attorney:

"When I was taken, as you might say by the back of the neck * * * and turned loose with nothing but my oath of office to guide me, the first feeling was that I had gotten out of the dark places where I had been wandering all my life, and got out where I could see the stars and get my bearings once more; and there has been, during those 2 years, a feeling that the work I was doing amounted to a little bit, or would amount to something if I put my whole heart into it and did it thoroughly. And it has made a tremendous difference and a tremendous change in the satisfaction of my professional life. There has been an ethical side of it which has been of more interest to me, and I have felt that I could get a good deal closer to the problems of life than I ever did before, and felt that the work was a good deal more worthwhile. And one always feels better when he feels that he is working in a good cause."

And so—love of country, a desire to be an active, living part of his times, associating with fine people in a good cause—these are some of the beter motivations for national public service.

No one has summed it up better than President Kennedy in his state of the Union message when he said:

"Let the public service be a proud and lively career. And let every man and woman who works in any area of our National Government, in any branch, at any level, be able to say with pride and honor in future years 'I served the U.S. Government in that hour of our Nation's need.'"

And so, as we pay tribute to a Yale man who has so served, may we hope that our university and this organization may find ways and means and will to cause an increasing number of Yale's finest to give fresh meaning to its ancient motto.

Becker Collection of Political Memorabilia

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, March 24, 1961

Mr. ANDERSON. Mr. President, on June 8, of last year, the U.S. National Museum—the Smithsonian Institution—which I am privileged to serve as a member of its Board of Regents, opened a unique and historic exhibit of rare relics of our Presidential election campaigns from Presidents Washington to Eisenhower—and now to President Kennedy. All too often the visible manifestation of a political campaign, namely, banners, buttons, brochures, and the other objects associated with our unique system of electioneering, are discarded as worthless immediately following the election. However, historians have found much of this material of great interest and value in understanding personalities of the candidates and the issues of the patriotic election.

Washington is indeed fortunate in having among its citizens one of the Nation's foremost collectors of political memorabilia. Washington attorney Ralph E. Becker has massed a magnificent and representative collection of material which in and under itself gives us an insight into the whole spectrum of American politics over a period of 160 years. He is still acquiring valuable additions to the collection which has also stimulated other citizens to give to our National Museum.

I would like to take this occasion to call to the attention of the Senate the remarks by Dr. Leonard Carmichael, Secretary of the Smithsonian Institution, on the occasion of the opening of the exhibit of a part of Mr. Becker's collection. I hope that this collection may attract other gifts and receive cooperation from citizens and particularly Members of Congress to assure our National Museum that it will continue to grow in size and importance so that future generations may have insight into the politics of yesterday, today, and tomorrow. I ask unanimous consent that Dr. Carmichael's and Mr. Becker's remarks

on the same occasion be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

REMARKS BY DR. CARMICHAEL

Distinguished guests, ladies, and gentlemen, we are gathered this evening for a red letter event in the history of the Smithsonian Institution. Most of you in this audience know much about the Smithsonian. But I may remind you that the Institution was founded 114 years ago as a result of the generosity of the distinguished English scientist, James Smithson. He left his entire fortune to found in the city of Washington an institution for the increase and diffusion of knowledge among men.

Today, the Smithsonian has become, in number of objects, probably the largest museum in the world. In number of visitors it is also almost certainly the leading institution of its kind. In April of this year more than 1 million visitors came to the Smithsonian. In May more than 1 million people came to visit our buildings on the Mall. Until that time never before had as many as a million people come to the Institution in one month. The popularity of the Smithsonian has grown in recent years because of the work of the Regents of the Institution in allowing the rejuvenation of its displays. It has also grown in interest every year since its foundation because American citizens and indeed many residents of other countries have contributed outstanding gifts to the Institution.

Tonight we are met on one of the occasions on which we officially receive a great gift and express, on behalf of all Americans, the gratitude that we must feel for a notable addition to the collections of the Institution.

It may surprise some of the members of this audience to realize that the collection of the political items and memorabilia connected with political campaigns is a recognized field of historical research and of specialized collecting. There is, for example, an organization of some hundreds of members, the American Political Item Collectors Association which is dedicated to the advancement of knowledge in this field.

Through the years the Smithsonian has received many important gifts in this area. For example, we have in our collections notable items made possible by Mrs. Arnold Miles. We also have recently received from the family of Mr. Harry T. Peters over 2,000 lithographs of American scenes between 1840 and 1870, many of which deal with political subjects.

The greatest collection, however, in this field that is to come to the Smithsonian this evening is one presented by Mr. Ralph E. Becker. This collection of some 25,000 items represents Mr. Becker's original, insightful and effective work as a collector for a third of a century.

Ralph E. Becker, Esq., will now officially make the presentation of his collection. Mr. Becker is an internationally known Washington attorney, author, and civic leader. He is a member of the bar of the State of New York and of the District of Columbia and is especially well known for his legal work in international, administrative, and corporate law and in law as related to modern scientific developments. He has been a delegate to various international conferences and is a member of the Legion of Honor of France and a holder of the Southern Cross Decoration of Brazil. He also has a number of decorations awarded him during the time of his American military service during World War II.

We, at the Smithsonian, know and respect Mr. Becker because of his broad interest in the cultural activities of the Nation.

It is a privilege for me to introduce Mr. Ralph E. Becker. Unless the rumor that I have heard is incorrect, Mr. Becker at this time wishes to say something about a presentation of great significance to the Smithsonian Institution. Mr. Becker.

REMARKS BY RALPH E. BECKER

Dr. Carmichael and friends, I want to take this occasion to publicly dedicate to the Smithsonian Institution my personally valued collection—the memorabilia of the American presidential election campaigns of the 19th and 20th centuries. For over 30 years, in travels to every State in the Union, I have tried to amass material representative of the unique system of projecting personalities and issues to the electorate, to the use of objects symbolic to candidates and their views. From our country's inception (most emphatically from the days of Tippecanoe and Tyler Too) the banner, button, billboard, and broadside have played an essential role in broadcasting the nominees and their political philosophies. Our political system assured such development. Widespread suffrage and the State election process made the votes of every locale critical. However, our geographical size barred the candidates from personal exposure to the voters. The substitute for personal contact was the campaign prop, the cartoon, chapeaux, ceramics, and canes, gimmicks, yes; trinkets, yes—used today; forgotten tomorrow, yes. Worthless? Emphatically not. The value of this material is not, with few exceptions, intrinsic. Its significance lies in the story it tells of our political history. Since politics is the sine qua non of a democracy, we can learn of the campaign material much of the men who shaped our destiny.

In the firm belief that my collection is interesting, educational, and of historical purpose, I wish for it to be available to those to whom it rightfully belongs—the people of the United States. I have therefore entrusted my collection to the Smithsonian Institution whose national character, vital location, and vast facilities assure that this material will enjoy the largest and most diversified audience. My designation of the Smithsonian Institution as repository of this collection was done with the expectation that other individuals and collectors possessing like material will contribute all or portions of their collections, so as to insure the expansion and historical vitality of the Smithsonian's store of political Americana. Indications that this collection will continue to grow and be added to in the future are already present in the form of pledges by the chairmen of both major political parties to deposit with the Smithsonian representative material of each succeeding campaign. I should also say that all of the candidates mentioned, or who were in the running from January, have all agreed and are sending material to this Institution so it can be preserved for posterity. It is my fond hope that the Smithsonian will make my collection available to not only the casual visitor, but to the schoolchildren of America and the serious student of political history and science. I trust that by observance and study of my collection, many Americans will be brought to a fuller appreciation of our political heritage and a greater understanding of man's noble experiments in government—American democracy.

In conclusion, I cannot let this occasion pass without expressing my deepest appreciation for the gracious and willing help which I have received from this Institution's distinguished Secretary, Dr. Leonard Carmichael, and his entire staff—but most particularly to Dr. Wilcomb Washburn, Mr. Charles Dorman, and Mr. Robert Widder. Let me also pay tribute to Mr. Paul Weckesser and thank Maj. Gen. Brooke E. Allen for making possible the appearance of the Headquarters Command Band of Bolling Air Force Base, directed by Lt. James E. Johnson, on this occasion.

Problems of American Youth

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Friday, March 24, 1961

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an understanding statement on the problems of American youth which has just been issued by the Guild of American Lithuanian Lawyers and Jurists in Chicago be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROBLEMS OF THE AMERICAN YOUTH

America is the land of opportunity for people of all ages. The older generation is slipping away from the active ranks, and the youth will inherit the prerogative to perpetuate the existence of this great democracy. However, the last decade in the United States brought forth an unforeseen rise in juvenile delinquencies and the governmental agencies are finding it difficult to cope with its harassing problems.

The United States is the most powerful Nation in the world financially, economically, scientifically, and industrially. It is seeking to maintain the leadership for justice, peace, and tranquility throughout the entire world. But it is difficult for many nations to accept our leadership for the problems of the globe if our own leaders are unable to solve our immediate domestic problems.

It is estimated today that about 18 million youths are involved in one or another form of delinquency. The enforcement of law and maintenance of reformative institutions cost the taxpayers annually the astronomical estimated figure of $7 billion. The educators, psychologists and law enforcement agencies have failed to find the cause and the effective remedies for the elimination of this situation.

Former judges, prosecutors, and attorneys of Lithuania now residing in the Chicago area have joined our organization. The combined efforts of these professional men from Lithuania and of Chicago American Lithuanian lawyers will form a strong nucleus of activity in seeking a solution of juvenile delinquency problems.

Some TV is a destructive element influencing the inexperienced and immature minds of our youth. The daily TV programs portray murder, gangsterism, shootings, and such programs are influencing the minds of the youth, that the only way they will get around in the world is to have a gun and the knowledge of how to use it. Our modern society, while pursuing other problems, is bypassing the problems of impetuous youth. Many TV programs are poisoning the minds and injecting criminal tendencies in our children so that becoming so accustomed to the acts of crime glorified by some TV programs they will grow up with the desire to be likewise brave, independent, and rough and ready. In viewing TV programs day in and day out our youth becomes so influenced that they ultimately lose respect both for law and decency. Today's headlines cry robbery, larceny, rape, and gunplay, and the streets are no longer safe for the people. Hiring more law enforcement officers creates a still greater burden on the people. Yet a police officer cannot be placed on duty in every city block 24 hours a day.

We appeal to you individually and collectively, for a constructive plan to eliminate this daily school of crime so freely provided by some TV programs for delinquency,

instead of for decency, responsibility and honor in all walks of life. It is the hope of all parents that their children may achieve a higher education and gain dignity and respectability. We must stop the degrading influences to which our youth are subjected, and instead, provide sound and healthy influences. If it is too late to undo damages inflicted upon our present day teenagers, at least let us unite and avoid a future crop of delinquents. Your suggestions for an immediate citywide conference are desirable.

Wage and Hour Legislation

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the views of the Virginia Farm Bureau Federation on the pending House bill to amend the wage and hour law, as expressed this week at a meeting of its board of directors by Mr. C. E. Johnson, Jr., of Rappahannock County, Va.—an outstanding breeder of registered Angus cattle.

There being no objection, the views were ordered to be printed in the RECORD, as follows:

VIRGINIA FARM BUREAU FEDERATION VIEWS OF PROPOSED LEGISLATION DEALING WITH WAGES AND HOURS (H.R. 3935)

An unemployed person is defined as one who cannot be gainfully employed in his neighborhood. For some months this country has been in a fairly serious business recession. Unemployment is heavy, there are a number of distressed areas, and automation is looked upon as a bad word. The plain facts are that in a number of areas wages have risen faster than productivity, automation is being pushed hard, and time is needed to get folks back to work.

The proposed bill on wages will raise wages and extend coverage. The result will be an increase in automation and more of these people will be laid off since their employers simply cannot afford to hire them. They will be at the bottom of the wage ladder where unemployment is greatest now. This will mean more welfare cases and less self-respect left for some good folks who don't mind work. Then this summer our youngsters will have a harder time finding employment, and hence gaining experience. Employers just cannot afford to use them.

That isn't all. When you pick up the bottom rung of this wage ladder, all the others go up, too. Labor is going to maintain its differentials. We will find that what looked like a modest little raise for a few people is now a big load for the whole country. Going from $1 to $1.25 is a raise of 25 percent, which may be the goal, and it is a high one. When you pay out more money for the same work, the whole thing runs us into higher prices, or more inflation. We will see fewer exports, fewer jobs, and more imports.

This brings up some other matters that are worrying our Government and our smart business people. One of these is loss of confidence in our dollar. The other, going along with loss of exports, is the drain on our gold reserves. Farmers aren't supposed to understand these things, and I am no exception. However, I am sure that my listeners understand.

Now another current and urgent problem comes up. Our old people have been so roughly treated by inflation that they are now very much on the public conscience. This bill on wages, through further inflation, can well wipe out some of the things that are presently being planned for our old folks and their position will be worsened.

You may be sure that farmers will be called upon to pay their part of the bill. This we will do, for our machinery and supplies as well as our marketing will cost more. Would someone recognize the fact that farm trouble is more a matter of costs being high than of our gross income being low?

On top of this, we will have to compete for labor, as always, and our labor costs will go up. For example, one of our labor competitors is the local sawmill operator, who softens his competition by buying logs from us—a fair source of farm income. However, the lumber market is a bit draggy, so if this man has to increase his wages, the only way he can get out of the squeeze is to lower the price of logs. The farmer pays again.

Last, but not least, I want to look at the general principles here. Federal control of wages and hours does not smack of freedom. If our Government can say that we work a maximum of 40 hours for a minimum of $50, can't it just as well say that we work a minimum of 60 hours for a maximum of $15? The farsighted labor leader should consider this.

C. E. JOHNSON, Jr.

Uniforms of American History, by Maj. Alexander R. Lawson, Army of the United States, Retired

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. CAHILL. Mr. Speaker, Maj. Alexander R. Lawson, Army of the United States, retired, of Thorofare, Gloucester County, N.J., who served 40 years in the civilian component parts of our Armed Forces, has prepared a most valuable historical set of pictures entitled "Uniforms of American History, 1600 to 1953." In collecting the material for this remarkable series of pictures he was ably assisted by Sgt.-Maj. Leon W. Little, U.S. Marine Corps, retired.

It has required untold hours of work and widespread research to obtain the basic information for this truly great collection. While the intent in producing this series of pictures was to depict the changes in the uniforms of American history, nevertheless, there are also included many examples of uniforms of other nations. Taking all of these pictures together they number upward of 400. These pictures are not only interesting, but highly educational.

The slides, that have been made from original water colors, have been shown all over this country. And, as an indication of the spirit of patriotism that dominates Major Lawson in this fine work he has performed, he will not accept any remuneration for their use and gladly and willingly makes the pictures available to all interested parties. Major Lawson is entitled to great credit for the fine service he has rendered.

Expanding National Park System

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. CASE of South Dakota. Mr. President, on January 4 of this year the Christian Science Monitor published an interview of Conrad L. Wirth, Director of the National Park Service. The interview was conducted by Courtney Sheldon. In the interview Mr. Wirth described the plans and proposals of the National Park Service for an expanded national park and recreational area system.

Our fine system of national parks is one of our greatest national treasures, increasing in use, value, and meaning as our population expands and becomes increasingly urban. Congress would be well advised seriously to consider the further expansion of this system, especially with an eye to preserving for the future the remaining sites of particular historical significance.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the report of this interview.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Jan. 4, 1961]

EXPANDING NATIONAL PARK SYSTEM—A CAPITAL INTERVIEW WITH CONRAD L. WIRTH

(By Courtney Sheldon)

WASHINGTON.—Conrad L. Wirth, who oversees the country's vast empire of national park and historic sites as Director of the National Park Service:

Says his Department is preparing "a full report on what we think the ultimate national park system should be."

Indicates new additions will be in "the seashore and historic field."

Plans to present a one-package program to Congress, including the overall program and its cost.

Mr. Wirth, where are some of the sites that you feel should come under the National Park Service in the future?

Well, within the next 6 months we hope to come out with a full report on what we think the ultimate national park system should be. There are sites that should be preserved that are historically important in developing America; sites that tell the story of our social, religious, economical, and cultural development as a nation. In addition, we will indicate areas of natural history that should be included in a well-rounded-out national park system. These will include all types of land forms, such as mountains, prairies, and shores with their various animal life and plant growths.

Which among these do you feel should have priority in the sense that if you don't move quickly, the chance of your preserving them will be more difficult?

Of course, the historic and natural areas closer to centers of population are rapidly being used up. If they are to be saved, we must move fast. Secondly, the land values all over are rapidly going up, so we must set our program and provide for carrying it out without delay.

For instance, up in Massachusetts the Minuteman site, which was approved last year, is estimated to cost $5,500,000 at the

present time. We are spending $500,000 this year. Well, if we spent only $500,000 a year on the Minuteman, it would take over 10 years to buy it, but by the end of that time my guess would be that we would have to pay better than $10 million for the area recommended, and in the meantime we would no doubt lose many of the historic values.

Is Congress quite responsive to these needs, or is this something the public should be more aware of and, in turn, inform Congress?

Well, that is why we are very anxious to get our complete program in one package so that Congress can see what the overall program includes and will cost. Congress reflects the reaction of the people.

Our recommendation will contain our estimate of the cost and how fast it would have to be done to stay within the estimates. We expect to submit our recommended program not later than June.

We hope to accomplish the acquisition of whatever program is approved within a 5-year period. Land values almost always go up. Further, land ownership of the type we are talking of is a sound public investment, not likely to depreciate and will have a good economical influence on the country in general, and the region in particular.

Does a big proportion of your long-range program involve new acquisitions or additions to present sites?

There will be some additions to existing areas. There are more adjustments to the boundaries for administrative purposes. By far the greatest part of the land purchase program will be for new areas, and we also expect donations for this purpose. I will say that most of the areas will be in the seashore and historic field and in the category of large recreation areas, rather than national parks as such. There will be, however, some additional national park areas.

Under your Mission 66, your 10-year plan for improvements, there was a provision for you to work out a national recreation plan with other agencies?

Yes, that was one item of the overall Mission 66 program. Since then Congress has established the National Recreational Resources Review Commission and we are cooperating with them, as are other Federal and State agencies.

Undoubtedly an overall plan for expansion of the NPS is going to have a high price tag. Is there any way part of this cost can be borne by either higher rates for the concessions in parks or more concessions?

No not to any great extent. We do not consider the national park areas as resort areas. They are set aside as a great national scenic and historic heritage for all of the people. They are an investment in the physical, mental, and spiritual well-being of Americans as individuals and indirectly contribute to the economy of the Nation.

A person who visits or camps in a park does pay an entrance fee. We feel if he can get to the park, he can pay $1, or $2, or $3 for a couple of weeks' use of the area. The concessionaire is an operator who has a contract with the United States. He is in business just like any other business in a town adjoining a park. He pays the same taxes that they do. He pays for all the improvements to handle the public that wish rooms and meals. We are interested in keeping his charges at a level with other businesses and have him give the best service possible to the public.

Our policy under Mission 66 is to require o the concessionaire to provide only those services necessary for the enjoyment of the parks in accordance with the purpose for which they were established. We have a definite policy of not putting developments and overnight accommodations in the parks when they can be handled equally well outside the park.

I notice you encourage people in some parks out West to stay overnight outside the parks.

Yes, this year there will be better than 66 million people coming into the parks. What this means to the business of the country in employment, income, and taxes along the Nation's highways, far exceed anything that we could possibly collect from increasing our entrance fees. It is hard to put an economic value on the parks, except we know they contribute greatly to the recreational travel industry of America.

How does the public react to what you are doing?

I think the national park concept is stronger today than it has ever been. The first national park in the world is Yellowstone National Park, established in 1872. The important thing now is that we have millions and millions of people living in the cities. There will be more in the future, and as our lands become used up for living purposes the national parks will become even more valuable to the Nation as a heritage to refresh the mind as well as the body. I would like to have my grandchildren and their grandchildren know and see nature at its best, how the earth is formed and provides for all living things as well as mankind. And further, I think it is important that we preserve some places where we can get some good clean dirt in our toes once in a while.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. RAY. Mr. Speaker, there are some 10 million Byelorussians living in their historic homeland in the northwestern part of the Soviet Union, west of Moscow, but these sturdy and stouthearted millions have been so completely cut off from the free world that one seldom hears of them. They were almost lost in Czarist Russia in the old days, and today they seem to be lost in the Soviet Union. But if the free world does not hear of them, or from them, they should hear from the free world at least once a year, on March 25, for that is their independence day.

For centuries these unfortunate people had suffered under the autocratic regime of Russia, but they had not given up hope for their eventual freedom. Toward the end of the First World War when the czarist regime was not more Byelorussians were free to proclaim their independence, and this they did on March 25, 1918. Then for about 3 years they worked, fought, and lived freely in their reconstituted Byelorussian National Republic. But the new and weak state could not survive the attack of the Red Army. Early in 1921 the country was overrun, and then made part of the Soviet Union. Since then free Byelorussia is no more, and freedom survives only in the hearts of its liberty-loving citizens. In observing the 43d anniversary of their independence day we in the free world echo their genuine patriotic sentiment.

"Peace, Security, and/or Freedom?"—Address by Clif Stratton

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. SCHOEPPEL. Mr. President, last November Mr. Clif Stratton, who served in the Press Gallery of the Senate for many, many years, made a speech in Topeka, Kans., entitled "Peace, Security, and/or Freedom" before the Fortnightly Club.

Mr. President, I submitted the remarks to the Government Printing Office, and I am informed the cost for printing will be slightly larger than the amount usually allowed. The cost to print the address in the RECORD has been estimated by the Director of Planning Service to be $222.75.

Mr. President, notwithstanding the fact that it will exceed the amount allowable, I ask unanimous consent to have the address by Mr. Stratton printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members, I give you the theme song of what is perhaps the oldest profession in the world—the prostitute: "Whose bread I eat, his song I sing."

And also, an old French proverb: "The more it changes, the more it is the same."

Recently I read, and clipped, the following advertisement from Warner & Swasey in September 12 issue of Newsweek:

"Yes, there is something worse than an atom bomb; the abject fear of it. Enemies want us to believe they have a secret weapon—a gas which saps men's strength and willpower, leaving them no courage to fight, no desire to resist.

"It is true—Russia has such a weapon—fear. Fear of Russia's nuclear bombs and missiles has turned too many Americans into cowards and appeasers. They cry that anything would be better than atomic death. Would it? Would slavery?

" 'Give me liberty or give me death' was the courage that created and built America. We need to remember and revive it.

"The courage of character can make us safer than all the shelters in the world—safer and happier, because we would have self respect. Appeasers can never be anything but serfs. Would such a life be worth living for anyone who calls himself an American?

"Worse than war is the fear of it. Fear and fearful people have no place in this country."

And now I give, from the same source, in a recent issue of U.S. News & World Report:

"There weren't many fringe benefits at Valley Forge. Not much pay, either. Only cold, hunger, pain, danger. You wonder, sometimes, if the modern jukebox American would have stood it, or would understand that these early Americans were paid by self-respect, and kept alive by the faith that honor brings. Let us hope that the so-called modern parents, progressive schools and liberal courts don't smother that spirit before it is needed again— as it will be."

I say to you that the writer of those advertisements said a lot with us of comparatively few words.

In September issue of Freeman magazine I read an article by the Reverend Mr. Kenneth E. Sollitt, minister of the First Baptist Church of Midland, Mich., from which I quote:

"Are we changing our form of government?" he asks, and then proceeds:

"The writings and speeches of the founders of our Republic make crystal clear the fact that, to them, the primal, if not the only function of government, was to protect men in the exercise of their legitimate liberties. Probably nowhere is this better stated than in the Declaration of Independence * * *. Therefore in the writing of the Constitution, everything possible was done to protect the honest, industrious, freedom-loving American citizen from being deprived of his rights, either by other citizens or by the Government itself.

"A limited government of checks and balances was set up, and almost before the ink was dry on the Constitution itself, a Bill of Rights was added to it as a resounding exclamation point to emphasize the fact that our Founding Fathers were determined that every citizen should be protected in the exercise of his legitimate liberties. Powers not specifically mentioned in the Constitution were reserved to the States and to the people who comprise those States.

"For more than a century and a half 'freedom' was the central idea in the American dream and the big word in our language. Then came the 1930's. Thoughts of freedom gave place to thoughts of keeping body and soul together. Franklin Delano Roosevelt was elected President. Congress was bypassed. The Constitution was circumvented. But important things were done in behalf of the needy and the unemployed. And people showed every promise of voting for more and more of the same. In 1938 Mr. Roosevelt wrote:

" 'Government has a definite duty to use all its powers and resources to meet new social problems with new special controls.' This he justified on the ground that it was 'to insure the average person the right to make his own economic and political life, liberty, and the pursuit of happiness.'

"Unfortunately, this lipservice to the Declaration of Independence kept people from seeing that political liberty and social control are opposites—that you can't keep man in the exercise of his legitimate liberties by imposing on him controls which destroy those liberties. Mr. Roosevelt had invented a new parlor game in which we all stand in a circle each with his hands in the other man's pockets, all expecting to be richer thereby.

"Perhaps it was merely a coincidence, but about this time the Goddess of Liberty disappeared from our dimes and Mr. Roosevelt's picture took its place. The perfect symbol of what had happened to our Government. Another thing some of us didn't understand was that to make a government strong enough to give us all we want we must at the same time make it strong enough to take from us what we have. And what is communism but a government that takes everything one earns and gives back what is left after it fulfills its own desires? Is America moving in that direction, giving its citizens more and more and taking from them more and more until some day we may see it all taken from us on the pretext of protecting us from each other? Have we bought the idea that the redistribution of wealth is a legitimate function of government?

"If so, we have made a complete about-face and a government designed to prevent one man from robbing another has become the instrument through which one man is robbed for the benefit of another."

Next witness is Adm. Ben Moreell (retired), who brings some Hoover Commission reports up to date, after asserting:

"The basic and critical issue is freedom of the individual. We of the ACA (Americans for Constitutional Action) believe that free enterprise, freedom of speech, of doms are but reflections of this basic freedoms are but reflections of their basic freedom. Impair any freedom and you are sure to hurt some individuals."

In 1910 the Central Government cost the average American family $38 per year; in 1955 it had grown to $1,600, or 42 times. (Today it is $1,748.)

Government employees, civilian only, increased from 384,000 to 2,362,000, or almost seven times. (There are now 2,353,000.)

During the same period the population increased only 81 percent, less than double, but the debt of the Central Government went from $1 billion to $275 billion. (It is now $288.8 billion.)

The budget of the Central Government grew from $639 million to $65 billion, (or $6,500 million). (Fiscal 1960 it was $78.4 billion.)

The Central Government now owns about one-fourth of the land area of continental United States. (Government ownership still is growing.)

In 1955 it owned and operated some 3,000 different kinds of business and commercial enterprises in competition with its own citizens. The admiral comments:

"The history of human liberty, as Woodrow Wilson reminds us, is the history of limitations placed on government. As government expands, the liberty of every one of us contracts. It clearly is evident that the American people have been engulfed by the welfare state and its protagonists.

"How did this come about? It was accomplished legally by majority vote of legislators" (the admiral might well have added a Socialist-thinking U.S. Supreme Court) "elected to the U.S. Congress, who conceived it their duty to promote omnipotent government by taxing and spending and making more and more of our citizens dependent upon Government for their livelihoods and even personal needs.

"These legislators," Moreell charges further, "are proponents of enhanced and centralized political power at the expense of individual rights. That is socialism, the natural forebear of communism. The end products have been onerous taxation, politically engineered inflation resulting in a sharp decrease in the purchasing power of our money (some 55 percent since 1933), moral confusion and the decline of personal liberty."

And now let's hear from Maurice H. Stans, Director of the U.S. Budget. We quote from a speech Mr. Stans delivered at a meeting of the Tax Foundation last December 1:

"* * * The $290 billion of current (budgeted) national debt, plus $350 billion future obligations for past services, plus $98 billion of c.o.d.'s, adds to the almost incredible total of almost $750 billion. That, my friends, is the Federal (Central) Government's mortgage on America's future, beyond (in addition to) the annual cost of defense, welfare, and commerce."

The foregoing report from Budget Director Stans brings the following comment from Walter E. Spahr, heading the Economists' National Committee on Monetary Policy:

"The national budget is out of control, and this control was lost when an irredeemable currency was inflicted on our people in 1933" (when United States went off the gold standard).

"If a currency is redeemable in that standard gold unit, every individual, to the extent of his purchasing power, can put pressure on his bank, and through it, on the U.S. Treasury and Congress. With a redeemable currency, every individual with buying power has a wire to the central signal system in Washington. With the infliction of an irredeemable currency on our people, those wires were cut and the central signal system was destroyed. The National Government and banks were freed from fear of appropriate pressures by individuals. The national spending orgy began."

And now let's hear from Felix Morley's book, "Freedom and Federalism," published only a few months ago, dedicated "to my grandchildren, hoping that they and their posterity may also continue to enjoy the blessings of liberty" followed by this from James Madison: "The error * * * seems to owe its rise and prevalence chiefly to the confounding of a republic and a democracy. A democracy will be confined to a small spot. A republic may be extended over a large region."

In the foreword to his book Felix Morley includes the following:

"Gradually I learned that the art of government, in all times and for all sorts of societies, may be reduced to very simple elements. It is at bottom nothing more than the reconciliation of two conditions—one essential for cooperative achievement, the other necessary for individual fulfillment. The social condition is order, without which men cannot work together effectively. The more personal condition is freedom, without which some men cannot work either happily or at their best.

"I further came to realize that the outstanding virtue of federalism, which is the distinctively American contribution to political art, is its facility in combining these naturally antagonistic conditions. Since the reconciliation of freedom and order is anything but easy, a Federal system requires both complicated government machinery and a high degree of interest and understanding among its citizens.

"There is a prima facie case for thinking that our Federal system, having at least survived the enormous changes since its establishment in 1787, will continue to serve for a future now unusually unpredictable.

"At least equally possible is the alternative that Federal theory will be discarded, even without war, by the voluntary action of Americans themselves, in favor of that highly centralized, managerial form of government which to many now seems demanded by the complexities of modern civilization.

"Somewhat paradoxically it is argued that dictatorship, the simplest form of government, is best suited for highly diversified societies, although it does seem psychologically desirable to call such dictatorship 'democracy.'

"Both the Constitution of the United States, and those of the 50 States that now together compose it, separate the legislative, executive, and judicial powers, and balance the one against the others. This has been a uniform interpretation of that rather vague clause in the Federal Constitution which says (art. IV, sec. 4): 'The United States shall guarantee to every State in this Union a republican form of government.' Republican, as contrasted with monarchial or democratic, meant to the Founding Fathers the division, as contrasted to the concentration, of governmental power."

De Toqueville, the Frenchman, wrote of the U.S. Constitution, considerably more than a century ago: "In examining the Constitution of the United States, which is the most perfect Federal Constitution that ever existed, one is startled at the variety of information and the amount of discernment that it presupposes in the people whom it is meant to govern." And he predicted further that if this discernment should languish, as it certainly is languishing today, America eventually would "fall beneath the yoke of a centralized administration."

Now some words from Friedrich A. Hayek's "Road to Serfdom" (1944) dedicated to "the socialists of all parties". But first a few sentences by John Chamberlain in his foreword to the American edition of Hayek's book:

"The shibboleths of our times are expressed in a variety of terms: 'full employment,' 'planning,' 'social security,' 'freedom from want.' The facts of our times suggest that none of these things can be had when they are made conscious objects of Government policy. They are the fools-gold words. * * * The "Road to Serfdom" is a warning, a cry in a time of hesitation. It says to the British, and by implication to Americans: Stop, look, and listen. It does not make for ingratiating reading. But the logic is incontestable: 'Full employment,' 'social security,' and 'freedom from want' cannot be had unless they come as a by-product of a system that releases the free energies of individuals. When 'society' and 'the good of the whole' and 'the greatest good of the greatest number' are made the overmastering touchstones of State action, no individual can plan his own existence. For the State 'planners' must arrogate to themselves the right to move in on any sector of the economic system if the good of 'society' or the 'general welfare' is paramount. If the rights of the individual get in the way, the rights of the individual must go * * *. He cannot plan his own business, his own future, even his own family affairs, if the 'dynamism' of a central planning authority hangs over his head. In some respects Hayek is more 'English' than the modern English. It may be that he is also more 'American' than modern Americans."

And now from Mr. Hayek himself:

"Yet, although history never quite repeats itself, and just because no development is inevitable, we can in a measure learn from the past to avoid a repetition of the same process. One need not be a profit to be aware of impending dangers * * *. Although we had been warned by some of the greatest political thinkers of the 19th century, by De Toqueville and Lord Acton, that socialism means slavery, we have moved steadily in the direction of socialism. * * * We are abandoning rapidly not merely the views of Cobden and Bright, Smith and Hume, or even of Locke and Milton, but one of the salient characteristics of Western civilization as it has grown from the foundations laid by Christianity and the Greeks and Romans. Not merely 19th and 18th century liberalism, but the basic individualism inherited by us from Erasmus and Montaigne, from Cicero and Tacitus, Pericles and Thucydides, is progressively relinguished.

"It came to pass that toward the turn of the century the belief in the basic tenets of liberalism was more and more relinquished. What had been achieved came to be regarded as a secure and imperishable possession, acquired once and for all. The eyes of the people became fixed on the new demands (query, the New Frontiers), the rapid advance of which seemed to be barred by adherence to old principles. It came more and more to be accepted that further advance could be expected not along the old lines within the general framework which had made past progress possible, but only by a complete remodeling of society (query again, Kennedy and his "New Frontiers"?). The change amount to a complete reversal of the trend we have sketched, and entire abandonment of the individualistic tradition which has created Western civilization."

And, further, again quoting Mr. Hayek:

"That socialism has displaced liberalism as the doctrine held by the great majority of progressives does not mean simply that people had forgotten the warnings of the great liberal thinkers of the past about the consequences of collectivism. It has happened because they were persuaded of the very opposite of what these men had predicted.

"The French writers who laid the foundations of modern socialism had no doubt but that their ideas could be put into practice only by a strong dictatorial government. To them socialism meant an attempt to terminate the revolution' by a deliberative reorganization of society on hierarchial lines and by the imposition of a coercive 'spiritual power.' Freedom of thought they regarded as the root evil of 19th century society. And the first of 'modern planners,' Saint Simon, even predicted that those who did not obey his proposed planning boards would be 'treated as cattle.'

"Nobody saw more clearly than De Tocqueville that democracy as an essentially individualistic institution is in irreconcilable conflict with socialism.

" 'Democracy extends the sphere of individual freedom,' he said in 1848; 'socialism restricts it. Democracy and socialism have nothing in common but one word: "equality." But notice the difference: while democracy seeks equality in liberty, socialism equality in restraint and servitude.'

"To allay these suspicions and to harness to its cart the strongest of all political motives—the craving for freedom—Socialists began increasingly to make use of the promises of a 'new freedom' (the New Frontiers again?). The coming of socialism was to be the leap from the realm of necessity to the realm of freedom. It was to bring 'economic freedom,' without which the political freedom already gained was 'not worth having.'

"The subtle change in meaning to which the word 'freedom' was subjected in order that this argument should sound plausible is important. To the great apostles of political freedom the word had meant freedom from coercion, freedom from the arbitrary power of other men, release from the ties which left the individual no choice but obedience to the orders of the superior to whom he was attached.

"The new freedom promised, however, was to be freedom from necessity. The demand for the new freedom thus was only another name for the old demand for equal distribution of wealth. But the new name gave the Socialists another word in common with the liberals, and they exploited it to full."

But this probably only would heighten the tragedy if it should prove that what was promised to us as the road to freedom was in fact the high road to serfdom.

I have at hand pages more from Mr. Hayek, but time does not permit me to quote them.

Before we leave the matter of redistributing the wealth, however, I bring before you another witness—Jesus Christ. I read from Luke, 12th chapter, verse 13 "And one of the company said unto Him, Master speak to my brother, that he divide the inheritance with me." 14 "And He said unto him: 'Man, who made me a judge or a divider for you?' "

And in regard to peace at any price: Matthew 10: 24 "Think not that I come to send peace on earth; I come not to send peace, but a sword."

And for those who hold, or preach—even through the so-called Socialist gospel—that the Master was in favor of socialism and opposed free enterprise and the profit system, I suggest you read and ponder the parable of the talents. I read you from chapter 25, Matthew, starting with the 15th verse:

"And to one he gave five talents, and to another two, and to another one; to everyone according to his several ability."

16. "Then he that had received five talents went and traded with the same, and made them another five talents."

17. "And likewise he that had received two, he also gained another two."

18. "But he that had received one talent went and digged in the earth, and hid his lord's money."

19. "After a long time the lord of those servants cometh, and reconeth with them."

20. "And he that had received five talents came and brought other five talents, saying, Lord, thou deliveredst me five talents; behold, I have gained beside them five talents more."

21. "His lord said unto him, Well done, thou good and faithful servant, thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord."

22. "He also that had received two talents came and said, Lord, thou deliveredst to me two talents; behold, I have gained two other talents beside them."

23. "His Lord said unto him, Well done, good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord."

24. "Then he which had received the one talent came and said, Lord, I knew thee that thou art an hard man, reaping where thou hast not sown and gathering where thou hast not strawed."

25. "And I was afraid and went and hid thy talent in the earth; lo, here thou has that which is thine."

26. "His Lord answered and said unto him: Thou wicked and slothful servant, thou knew that I reap where I sowed not, and gathereth where I have not strawed."

27. "Thou oughtest therefore to put my money to the exchangers, and then at my coming I would have received mine own with usury."

28. "Take therefore the talent from him, and give it to him which hath ten talents."

29. "For to every one that hath shall be given, and he shall have abundance; but from him that hath not shall be taken even that which he hath."

30. "And cast ye the unprofitable servant into the outer darkness."

In other words, instead of the social state and the "community owes every one a living" (the New Frontiers again?) Christ dealt with the individual. He favored free enterprise, He even indorsed the profit system, as evidenced by the parable of the talents. And payment of interest on borrowed or deposited money.

Now a few words from Howard E. Kershner, page 136 of his "God, Gold, and Government," and I quote his language:

"The 'social gospel' sought through the coercive power of the state is impossible of attainment. It develops hatred between those who are despoiled and their beneficiaries. Few people will work hard over a long period of time if they know they are going to be deprived of the fruits of their toil. On the other hand, those who receive more than they produce soon develop the attitude that the world owes them a living, and that they will be taken care of whether they work hard or take it easy."

I interpolate at this point the experience of the Massachusetts Bay Colony at Plymouth, where they started out with common ownership of land, and equal distribution of products, but had to turn to private ownership and individual enterprise—after which they were able to celebrate Thanksgiving Day. And likewise in Virginia where John Smith finally had to proclaim "they who do not work shall not eat"—and made it pay off.

Returning now to Mr. Kershner, editor of the Christian Economist:

"No civilization ever has been built on that ideology. No nation long has survived after it developed the practice of empowering government to take money from the public and distribute it to this, that, or the other group. When governments have obtained that power they have expanded its use under

the steady pressure of their constituents until high taxes, rising debt, inflation, and bankruptcy have destroyed the Nation. The only safety lies in depriving government of all power to take wealth from some and distribute it to others."

And now a few words from Herbert Hoover, speaking at San Diego, September 17, 1935:

"Our Constitution is not alone the working plan of a federation of States under representative government. There is imbedded in it also the vital principles of the American system of liberty. That system is based upon certain inalienable freedoms and protections which even the Government may not infringe, and which we call the Bill of Rights. It does not require a lawyer to interpret those provisions. They are as clear as the Ten Commandments. Herein is the expression of the spirit of men who would be forever free.

"Our forefathers migrated to America that they might attain them (these rights) more fully. When they wrote the Declaration of Independence they boldly extended those rights (Magna Carta, at Runnymede, 570 years before the Constitution was written; habeas corpus, the petition of rights, the declaration of rights, the growth of maxims of the common law).

"In the hurricane of revolutions which have swept the world since the great war, men, struggling with the wreckage and poverty of that great struggle and the complications of the machine age, are in despair surrendering their freedom for the promise of economic security.

"Even in America, where liberty blazed brightest and by the glow shed light on all the others, it is beseiged from without and challenged from within. Many, in honest belief, hold that we cannot longer accommodate the growth of science, technology, and mechanical power to the Bill of Rights and our form of government. With that I cannot agree. Men's inventions cannot be of more value than men themselves.

"But it would be better that we sacrifice something of economic efficiency than to surrender these primary liberties: in them lies a spiritual right of men. Behind them is the conception which is the highest development of the Christian faith—the conception of individual freedom with brotherhood."

Nearly 15 years later, April 27, 1950, Herbert Hoover addressed the American Newspaper Publishers Association. Owing to time limitations, I can quote from that only briefly, as follows:

"I need not remind you that our page one international issue is Communist Russia. There are seven phases of this experience which I must recall before I come to a proposal of action.

"The third historical phase arrived when our leftwingers had their way in our relations with Communist Russia. They produced the recognition of the Soviet in 1933. They produced the alliance with Russia in 1941. They produced the appeasement of Russia in Western Europe until its reversal by President Truman and Secretary of State Byrnes in 1945. I will not join in the explanations about China.

"Up to now there is agreement on only one point. We lost the game—400 million to nothing.

"Lest anyone think I am a recent convert to these views, I may cite that 9 years and 63 days ago in a public address I warned the American people that collaboration with Stalin to bring freedom to mankind was a gargantuan jest. I used the wrong word. I should have said tragic. For as a result, instead of the expansion of liberty, we witness a dozen nations and 600 million human beings enslaved.

"I have a proposal to make. I suggest that the United Nations be reorganized without the Communist nations in it. If that is impracticable, then a new united front should be organized of those peoples who disavow communism, who stand for morals and religion, and who love freedom."

Thanks for your attention, and if at times you feel a sense of frustration, take refuge in this old saying: "It is not whether you won or lost that counts—but how did you fight, and why."

Kennedy Should Heed Sound Money Counsel

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DERWINSKI. Mr. Speaker, rather than be accused of any partisanship in discussing the President's economic program, I feel that the editorial of Wednesday, March 15, in the Chicago Daily News, pointing to the President's personal advisors, is worthy of study.

KENNEDY SHOULD HEED SOUND MONEY COUNSEL

For the first time, a top administration spokesman—Commerce Secretary Hodges—has sounded an optimistic note regarding the immediate prospects of the economy.

"I think we've hit the bottom of the recession," said Hodges. He added that the economy could now start an upward swing.

The same conclusion was reached simultaneously by the Morgan Guaranty Trust Co. in its monthly survey. Taking a look at a broad assortment of economic indicators, it said that business news is "more encouraging than at any time since the recession began."

The estimates are significant because they come just before the April 1 "second look" that President Kennedy promised as a prelude to launching, if necessary, a new and more drastic program of economic pumppriming to supplement measures already advanced. This would include a comprehensive tax cut and additional spending proposals.

The President still has to make his decision, and there are strong pressures on both sides.

The AFL–CIO is long since on record as believing that the program Kennedy has already advanced—increased relief and unemployment payments, increased social security payments and higher minimum wages, stepped up highway spending and the rest—falls far short of the need. Some of Mr. Kennedy's personal economic advisers have taken the same view.

These advocates subscribe to the philosophy that the Federal Government, with its vast taxing and spending powers, should be the prime factor in the Nation's economy. Reduced to its nub, their view seems to be that any given level of productivity and any given level of prosperity can be achieved by Federal action.

There have been some encouraging signs that Mr. Kennedy, while already committed to an extensive spending program, is not a doctrinaire welfarist in the image of Franklin D. Roosevelt.

In urging management and labor to coordinate efforts to hold down production costs, he has shown a basic understanding of the relationship between productive efficiency and a sound economy. In advocating more adequate tax writeoffs for depreciating plant and equipment, he has shown comprehension of the need of private enterprise to form new capital for investment.

The President's job is, of course, to strike balances—to serve the human needs of the people and simultaneously to keep the economy sound and strong enough to assure that those needs will go on being met.

Statements already in the record by Prof. Paul Samuelson, Chairman Walter W. Heller of the President's Economic Council, and others of his close economic advisers, make clear that the philosophy of expanding Government spending will go on being well-represented in the President's inner councils. We hope that Hodges, Treasury Secretary Douglas Dillon, and other champions of sound fiscal management will not be outtalked and outvoted.

Pecular Opposition of Small Business Administration to Effective Small Business Procurement Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. PROXMIRE. Mr. President, S. 836 is a bill designed to give small businesses a better chance to obtain defense subcontracts. The great need for legislation in this regard is illustrated plainly in a letter recently addressed to the Senator from Alabama [Mr. SPARKMAN], a copy of which was also mailed to me.

In this letter the wife of a small electronics manufacturer in Chicago writes:

Just recently we were low bidder on an Air Force negotiated procurement. Everything was approved: our finances, technical proposal, facility, technical ability, etc., but another firm got the contract award. Because it was a negotiated procurement, the men in charge got the firm of their choice to drop down to our price, even though we enlisted the aid of the SBA, it was powerless. The Air Force would not tell them anything.

S. 836 would enable the Small Business Administration to find out just what the position of small businesses are on negotiated subcontracts. The letter is another illustration of the disadvantages suffered by small business when negotiated, rather than competitive procedures are used.

The writer of the letter expresses the same surprise that was felt by the Small Business Subcommittee last week when the Small Business Administration representatives indicated they did not want the authority which S. 836 would give them.

Mr. President, having been assured that Senator SPARKMAN has no objection to my doing so, I ask unanimous consent that the letter from Mrs. Robert C. Shur, of Chicago, from which I have quoted, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 17, 1961.

Senator JOHN SPARKMAN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SPARKMAN: This morning, in the March 16 Wall Street Journal, I read with disbelief an article entitled "Small Business Agency Opposes Bill Giving It Role in Government Contract Policy." It seems completely ludicrous that a man President Kennedy picked to be the champion of small businesses all over the country, should turn down such a wonderful program. We were delighted to hear that a bill was being prepared to be presented to Congress that would finally (1) require all Government procurement actions to be made public, (2) allow the Small Business Administration to secure any information it required, (3) put extra loan money into SBA hands, and (4) give a greater percentage of Government work to small businesses. However, when I read that Mr. Horne, SBA Administrator, opposes all of this much needed legislation, I strongly questioned his motives. Whose side is he on? Certainly, he isn't with us.

As you can probably guess, I have a personal stake in all of this. Six months ago, my husband, an electrical engineer, and another extremely capable young project engineer left their very well-paid positions to start a new frontier of their own in America—the land of unlimited opportunity. They started their own electronics firm in Chicago, feeling sure with their combined experience and background of 20 years in handling Government procurements from design to finished product for their respective companies, that they could make a go of it. Needless to say, it has been a regular obstacle course. The fact that they have stayed in business, attests to their failure to be dismayed. It is the rare governmental agency that is willing to give a young company a chance. Never have these young men been questioned on their own ability, for it is well known that they have delivered some very important programs to the various services, but I feel sure only a General Electric could meet some of the other requirements. We are also in an area, where a day never goes by that two or three people don't come in right off the street, and ask for jobs.

Just recently, we were low bidder on an Air Force-negotiated procurement. Everything was approved: our finances, technical proposal, facility, technical ability, etc., but another firm got the contract award. Because it was a negotiated procurement, the men in charge, got the firm of their choice to drop down to our price, and even though we enlisted the aid of the SBA, it was powerless. The Air Force would not tell them anything. Is this the SBA that the taxpayers are paying for, that is supposed to go to bat for us little guys? They are our only spokesmen, yet they are powerless in negotiated procurements. Why must these procurements be so hush hush? It is difficult to even get to bid on these contracts. The defense agency gets together those firms that they wish to bid on a particular procurement. In our family we used to call the SBA the "little people" because we really thought they were for the "little people," but Mr. Horne makes it quite clear, he is not for the "little people." In the above-mentioned negotiated procurement, Mr. Hale, head of the Chicago SBA office (who is a wonderful man) said, if we wished to write a letter of protest, he would help us, but we felt that writing a letter of protest, we would antagonize the people involved, and that we would never be able to get Air Force business again.

I and a great many people say give the SBA some authority, and really give the "little people" a chance. I hope that you, Senator PROXMIRE and Senator CAPEHART will be successful in your fight to give SBA a meaningful role in Government contract policy. Thank you for your time.

Very truly yours,

Mrs. LENORA SCHUR.

The J. H. Jackson Plan for Racial Self-Help

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. DOUGLAS. Mr. President, I ask unanimous consent that an interesting proposal by Dr. J. H. Jackson, president of the National Baptist Convention, U.S.A., Inc., be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE J. H. JACKSON PLAN FOR RACIAL SELF-HELP

(Presented to the board of directors of the National Baptist Convention, U.S.A., Inc., by J. H. Jackson, president, January 19, 1961, and was unanimously adopted as the farm aid plan of the National Baptist Convention, U.S.A., Inc.)

INTRODUCTION

The writer of this plan believes firmly that the next step forward by American Negroes as well as the whole free world, will be in the field of an improved economic life. American Negroes must harness their economic resources and organize small possessions into powerful economic forces for the good of themselves, their community, and their Nation. American democracy must solve the problem of unemployment and learn a constructive technique of the distribution of goods and services so that each citizen will not only have his rightful share, but feel the responsibility of earning his share and giving to his Nation the full measure of economic services and dues.

While the author believes in protest as a means of arousing the conscience of those who sin against the principles of democracy and freedom, and as a method of driving out the evils in our society; he believes that we must go further than protest. We must move up to the level of production. We must do more than boycott, we must build. We must do more than condemn the enemies of freedom and democracy. We must conserve and construct and create the values on which freedom and democracy rest. We must do more than blame others for what they have done against us. We must build for ourselves, for our community, and for our country.

The writer has emphasized over and over again that the church should take part in economic life, and use some of its resources to aid others who are in need, and to create opportunities where men and women can earn their own livelihood and develop their own self-respect. The economic work of the church is not complete when it has passed resolutions condemning the sins of exploitation and injustice in our economic and social systems. We must use some of our resources to encourage men and women to so invest their little income that they might be able to develop more of the good things of life.

The soil is one of the primary sources of food and economic security. We must help those who live on the farm to lead a life of dignity, independence, and security. This philosophy has been implemented in what the National Baptist Convention, U.S.A., Inc., has done in Haywood and Fayette Counties, Tenn., to redeem property and to purchase land on which the citizens who were expelled from their former homes might be able to earn their livelihood.

THE PLAN

I. The farm-aid program

The farm-aid program of the National Baptist Convention, U.S.A., Inc., is designed to help create as well as to consume values. It is our belief that the "good earth" must be used constructively to help Negroes as well as other Americans to solve the problems of unemployment, freedom and democracy. We must do more than condemn an unjust and cruel landlord. We must assume some of the responsibilities of a landlord and show by precept and example how one can be both just and productive, and how one may combine friendly attitude and financial success in dealing with tenant-farmers. Its purpose is to put Christianity into business and more business into Christianity. The pastors and religious leaders must be linked directly to the struggles of their people for their help and for their betterment. We must do far more than collect our salaries. We must help our people to earn and preserve more of the good things of life.

It is not enough to throw a picket line around a lagging economy. We must help to bolster that economy and make it more sound, more productive and more just in the distribution of its goods and services. It is not enough to be content for a "lion's share" in a failing economy. We must make that economy more robust and more strong. We may picket to dramatize our resentment to unjust practices and in order to force from unwilling hands our share in an unjust economy, but we must both plant and produce if we are to help a failing economy to become more productive and hence, be of more service to a greater number.

If this Republic is to remain a great political, economic and cultural state, it must produce continuously more creators of values, both economic and political as well as consumers of these values. We must more and more feel the responsibility for contributing to the welfare of the body politic. Hence, we must produce as well as protest, plan as well as pluck out. We must toil as well as trust and sow if we hope to reap.

II. The purpose of this plan as implied above

The purpose of this plan is to go beyond protest to production. Protest is important as a means of registering our complaint and our disapproval of the evils of our society. It is a weapon by which we seek to change the minds and attitudes of those who believe in oppression. But protest is not enough. We must move to active production.

Because we believe that the soil is one of the primary sources of economic well-being, we must anchor our cause in the soil and solicit the resources of the earth to help us win our struggles. We must encourage our people to own more land, more real estate and more of the economic goods of this life. We must spend more time and energy and money building for ourselves a more basic and permanent place in the economic life of this country.

The next basic forward step among Negro people must come through a greater improved economic life. Our educational, civic, and cultural future rests very largely on a healthy, sound and constructive economic position. We must invest in real estate, agriculture, stocks and bonds and government securities, so that when the

wheels of industry and economic progress turn forward, we will move forward with the times and will receive our share of the investments. Voters must have some place to stay, and those who fight for civil rights must have the security that crusaders always need. Our organizations must be so supported that our people will be freed from the economic oppression of high interest rates and cruel mortgage masters.

III. The structure of this farm-aid program

A. Producers Clubs

There is to be, first of all, a producers fellowship or cooperative. This fellowship pools the money to purchase the land, modern farm equipment, and the necessary things to make farming possible. The money may be pooled by national church organizations, by State conventions, by individual churches, pastors, individuals, and other organizations who are interested in such a program.

B. How This Money Is To Be Used

1. To purchase large tracts of land that may be used by many families in a group or may be sold to individual farmers.

2. To purchase the most modern implements and equipment for cultivation of farms. There should be secured mechanics, both as farmers and as experts, to keep the farm machinery intact.

3. There should be agricultural experts who will help the people to make the best use of the soil.

4. There should be managers and leaders to aid the people in going forward in such a way that the best possible crops can be realized from the soil. It is possible that this fellowship could grow into farm cooperatives or producer cooperatives.

C. Consumer Cooperatives or Clubs

When the farmers have raised their crops, there should be created for them a market. This can be done through pastors and State conventions and other voluntary individuals who would be interested in making the farm program a success. The consumers cooperatives would be persons who are not related directly to the farms as such, but who would arrange and organize for the purpose of buying their produce directly from these farms and encouraging others to do so. These voluntary associations would agree to take their vegetables, eggs, chickens, and other available essentials from the farming group. The consumers group would also be responsible for making loans to farmers on large or small scale to enable them to produce their cash crops.

While this whole enterprise will be conducted so that a reasonable profit could be realized, the primary purpose is not profit. But the primary purpose is to help the people as a whole to live a more wholesome economic life on the farm, and to help remove the tensions both in the State and in the Nation. For constructive living on the countryside might do much to help to clear the slums in our cities and also to reduce the number of unemployed and greatly reduce the already overcrowded relief rolls of our metropolitan centers. Persons involved in this enterprise would seek to create those conditions that would guarantee the greatest possible degree of character growth and personality development. We must create a new economic leadership in terms of economic fellowship in cooperative groups, and develop an ownership whose primary interest is the welfare of the people in the community.

IV. The relationship of this farm-aid plan to the State and Federal Government

A. These cooperative units should be allowed to borrow money from the Federal Government on long term plans and low interest rates.

B. The Government should make available to such an enterprise some of the stores of surplus where such would be used to aid both the individuals and the community.

C. The U.S. Government should encourage a greater use of the land by more people which would greatly strengthen the Nation's economy.

D. And if the land is not available, the Government should begin a land reform program that would restrict the ownership of large tracts of land as a luxury for the few in the interest of the ownership and use of the land for the benefit and blessings of many. Such land should not be seized by the Government, but should be sold to the Government for the purpose of allowing large groups to purchase and use the same.

We believe that this farm-aid program will do much to destroy the evils of the sharecropping system and make it an enterprise of sharing the profits and goods in the field of agriculture. The evils of the tenant-farmers can be removed by allowing the tenant to be both tenant and part owner.

As a practical step, the National Baptist Convention, U.S.A., Inc., has already launched a program of purchasing land in Haywood and Fayette Counties, Tenn. Our plan is to have a farmers community occupy the land and a local committee of ministers in Tennessee to serve as a nucleus of the consumers' corporation. The Tri-State Bank, 386 Beale Street, Memphis, Tenn., is the depository for the funds of the National Baptist Convention, Inc. What we have started in Tennessee we hope can be reproduced over and over again throughout the agricultural States of the Nation. Any group or organization is invited to pool money to purchase land and to form consumer cooperatives.

We must know that American freedom may be found in the fields as well as in our metropolitan centers. And the blessings of American culture must extend to the countryside as well as our cities. We beg our Government to help us to teach our people that they can live with dignity on the dusty roads of the rural areas, and that they need not flee from the Southland to find security, peace, and economic salvation.

Let's Get Ahead With Business

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. WILSON of California. Mr. Speaker, the industry of our country needs encouragement, especially when it indicates it is capable of growing without Federal pump priming. A recent example of encouragement appeared in an advertisement of the Wall Street Journal. Under unanimous consent, I include the advertising message in the Appendix of the RECORD as a portion of my remarks:

MR. BUSINESSMAN, LET'S GET AHEAD WITH BUSINESS—IS THERE A BIG DECISION PENDING IN YOUR COMPANY THAT YOU CAN GET FINALIZED FASTER?—IF SO, YOU WILL HELP STEP UP THE ECONOMY AND QUICKLY

For example, here is a decision the Wall Street Journal has just made:

We ordered construction started on a big new printing plant in Riverside, Calif. (our eighth plant, our second in California, our third new one nationally within the last year).

This will put a lot of people to work—constructing, roadbuilding, landscaping; making machinery and equipment; shipping, installing, testing; furnishing raw materials and services; operating and distributing. And, as always, still more buying will be generated all back along the line—as these dollars turn over in every kind of business.

Maybe you, too, really need a new facility that, like this one for the Wall Street Journal, can help you serve present and future customers better. One which can actually reduce costs, and provide capacity to serve what just have to be a vastly growing potential in the years ahead.

This much we know: We are never going to regret making our decision—nor our having made it now.

We believe it's a good bet that an important similar decision may be marking time in your company awaiting only a little more confidence and faith.

The only national business daily keeps on getting ahead because it wholly believes it has a tremendous future if it exercises its determination to keep on giving better service.

We hope you feel the same way about your company—and that we may help you.

Economic Conditions in the Country

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. SCHOEPPEL. Mr. President, on February 22 I received a letter from Mr. E. R. McCartney, dean of Fort Hayes, Kans., State College. Because what he expresses in his letter is so pertinent and practical, I ask that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FORT HAYS KANSAS STATE COLLEGE,
Hays, Kans., February 22, 1961.

Hon. ANDREW F. SCHOEPPEL,
U.S. Senator,
Washington, D.C.

DEAR SENATOR SCHOEPPEL: Last Sunday afternoon, February 19, I watched Chet Huntley on TV review the terrible economic conditions which were revealed by Secretary of Labor Goldberg in his jaunt to a few of the depressed areas. The obvious implication is that these conditions were so very unusual and so bad that our whole economic society was in grave danger of a complete breakdown. It was implied that a pending disaster was in store for the whole country unless emergency action was taken by Congress at once.

Now I am only a grassroots economist from western Kansas but I cannot see much reason for being stampeded into following some of the misinformation or half truths being peddled from Washington. Here are the bases of my beliefs:

1. The stockmarket which reflects conditions has been rising for several weeks now. It is a pretty fair indicator in cyclical movements.

2. I believe the unions have been trying to stampede the new administration into action in their behalf. They sold the President Goldberg for the Secretary of Labor and another radical for the chairmanship of the National Labor Relations Board. It should be noted that union membership has been declining for sometime.

3. A very severe winter in the East has been hard on retail sales, including automo-

biles, yet for the country as a whole in January sales were only 2 percent below January 1960. On the other hand several nationally known chainstores have all experienced sales increases in January ranging from 1.8 to 7.2 percent.

4. Unemployment in seasonal industries such as the building trades always reaches a low in the wintertime. This is not unusual.

5. The figures on steel production have been misleading because the percent of capacity gives an erroneous picture since the industry never operates at capacity. I believe they consider 75 to 80 percent of capacity as optimum. Therefore if they are operating at 50 percent of capacity they are really operating at 65 to 70 percent of expected maximum.

Additional evidence might be cited but I have given enough to indicate that we are not too bad off in the country as a whole. I recognize there are areas which need some help but these do not produce a national emergency. We are in a recession which was predicted and out of which we will return to better times within this year. This is the pattern of the past.

May I hope you will do your best to help keep the present situation in Congress from becoming weakened by some of the erratic and unfounded grasping for weak straws to save an economy which has not gone to pot.

Greetings to you from your friends at Fort Hays, Kansas State College.

Sincerely yours,

E. R. McCARTNEY,
Dean.

Public Relations for the Handicapped

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, March 24, 1961

Mr. MONRONEY. Mr. President, in reviewing the laws, services, and funds appropriated for the rehabilitation of handicapped individuals in this country at the time of the 1960 National Rehabilitation Association Conference in Oklahoma City last October, I was impressed both by what we have accomplished and what remains to be done. Restoration of physical and mental health and vocational skills to handicapped persons has such a multitude of benefits. It not only restores the hope and confidence of the disabled person and his family, and demonstrates to ourselves and the world our confidence in the worth of the individual. Rehabilitation also brings strength to the Nation by enabling the disabled to become an asset to our society.

Public relations play an important part in building such a program, whether through the lives of a famous Helen Keller or an unknown Jane Jones next door, through the community spirit of newspapers, magazines, TV and radio stations, or through the magic of words and pictures conceived by supporters of rehabilitation activities.

For that reason, I ask unanimous consent for insertion in the Appendix of the RECORD of pertinent parts of a speech entitled "Public Relations for the Handicapped," delivered by William P. McCahill, Executive Secretary of the President's Committee on Employment of the Physically Handicapped, at the national meeting, October 12, 1960.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PUBLIC RELATIONS FOR THE HANDICAPPED

I'll not try to define public relations because that would just start an argument. Generally, we are dealing with human communications, whether from Madison Avenue or from a village main street. I've spent almost 20 years in Marine Public Relations of one kind or another and I am firmly convinced that the best public relations for the corps comes as a result of the conduct of individual marines and the reaction to that conduct by people around him.

It's the same thing with the handicapped to a large degree. Impressions and opinions are formed by people based on the good or bad reactions they have to certain handicapped persons they know, see or meet. This isn't very scientific and I guess the logic books call this generalizing from the particular, but it happens and we either profit or lose depending on the good or bad social, personal or work habits of handicapped individuals. It is our ability to communicate the good points to others—and also our ability to understand, explain or attempt to correct the bad ones—that helps determine the public's opinion of the handicapped. Communications is the key.

Helen Keller, who celebrated her 80th birthday recently, is one of the most celebrated women in history and yet, until the magic of communications opened up the world outside, she was a trapped soul, an almost half human. Communication was to her the touchstone of freedom, the opening door to a life of purpose. It has been thus for millions of handicapped persons who less dramatically have entered a life of purpose and of usefulness during the past years.

Liberty and freedom for the handicapped has been nourished and kept alive by many of the men and women at this convention with whom we have been communicating this week.

One of my favorite quotations and one which was sent to all State chairmen and secretaries of Governors' committee is a line written by Goethe many years ago. The quotation is simple but powerful. It reads: "There is nothing more frightful than ignorance in action." And, I believe that it goes without saying that where there is a breakdown in communications—in public relations—we are quite likely to be frightened by the resulting actions taken in ignorance. So, it is quite natural that this convention has chosen public relations as one of its discussion subjects. Because, if we are to get on with the job of doing the public's business, we have simply got to find new and better ways of improving our public relations. If our thoughts and ideas aren't getting through, we can very well end up frightened by the ignorance which results.

Mr. Victor M. Ratner, in addressing the 1958 Convention of the National Society for Crippled Children and Adults, said:

"I've spent my working life trying to move different kinds of ideas, with many different techniques, into many different kinds of heads. I might add, without any great success. For comunications, persuasive communications, is one of the toughest jobs on earth. It's been so for a long, long time, at least since the Tower of Babel. I think the biggest lesson I've learned over the years is how really tough it is to commnnicate well."

Mr. Ratner then went on to define communication as "It is to try to move a fact or an emotion or an idea from inside one head to inside another. And what makes communication such a peculiarly difficult job is that the space from inside one head to another can be one of the greatest spaces in the universe."

In a recent issue of the Public Relations Journal is an article titled "The Challenge of Space Communications," by Don Karshan. The subtitle assures us that the conquest of space will offer a new opportunity in communications—television, radio, teletype, among others.

Public Relations Executive Karshan then brings the Tower of Babel up to date, communicationswide, when he says:

"Communications satellites will introduce public relations problems almost as complex and mysterious as the maze of systems that comprize the towering launching vehicles. To cite a few: The peoples of the world speak in more than a thousand tongues. Hundreds of different dialects are spoken just in China; there are thousands in the Asian Continent. Multilingual channeling is within our present capability. We are even developing simultaneous machine translators. One problem is the distortion of content by automatic processing—those fine inflections and colloquialisms in the many dialects and cultures that can be twisted out of shape, meaning and accuracy. Then there will be content. What will offend and not offend among the hundreds of different societies, each with their own religious, moral, sexual and other traditional mores?"

If we think we have problems now, just wait until we are faced with the communications and public relations problems of the space age.

We have learned a great deal during the past 15 years regarding the roles of the handicapped as workers. We have assessed the roles of the several influences which have brought us to where we are today—two world wars, a Korean conflict, modern near miracles in medicine and research, the Wagner-Peyser Act, the Vocational Rehabilitation amendments of 1954, the philosophy that America, truly, needs all of us and most importantly, the performance of the handicapped. And, we have at long last begun to view the handicapped not as random people with differences but as intelligent persons functioning quite normally within their particular work situations, functioning in spite of physical differences. This, I submit, has been a victory for the handicapped on the public relations front.

A sterotype has been destroyed in large degree and today employers and the general public—and the communications media—are more concerned with what a man or woman can do than in what they can't do. The communication of this image of a qualified employee has given untold hundreds of thousands of handicapped persons a freedom economically, socially and spiritually undreamed of a short generation ago.

This century won't be remembered as much, in my opinion, for the marvelous man-made inventions as much as for its proper use of God's most marvelous invention, man himself. This will be remembered as the age of the one-legged halfback, the blind collegiate wrestling champ, of wheelchair basketball and amputee baseball. It will be the age in which one paraplegic worker dared to hope and write, "Maybe some day research can put me back together again."

Our ability to communicate to America—and to the world—that "ability counts, not disability," and that "it's good business to hire the handicapped" has been a powerful weapon against the deadly disease of materialism because we have communicated and substantiated the God-given dignity of the individual to find his place on the job. Each time a handicapped person is rehabilitated into employment and useful living, another resurrection of one of God's children has

been consummated. Ours is indeed a divine mission because if you recall, so much of Christ's life was spent with the lame, the halt, and the blind.

In the Old Testament, the shape of things to come, Isaiah said that in heaven the eyes of the blind would be opened, the ears of the deaf unstopped, the tongues of the dumb loosened, and the lame man leap like the hart. The handicapped have come to expect—and receive—these things this side of the grave. They have combined their faith in themselves with their hope in others to achieve freedom on the job.

We don't have to wait for a second Pentecost to still the babel of voices arising as we enter the space age. All we have to do is to remember that the handicapped can continue to achieve freedom through our ability to communicate their talents to others—from inside one head to inside another head as Mr. Ratner said.

I'd like to share with you a quotation which I read every day on my desk:

"On the plains of hesitation bleach the bones of countless millions who, at the dawn of victory, sat down to rest, and resisting, died."

I think that's where we are today. Public relations is not the end all and be all, the alpha and omega, but it does have a part and a very important part in our work for the handicapped.

Project HOPE: Its Work and Purpose

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. SEELY-BROWN. Mr. Speaker, in my district, as in the other congressional districts of our country, there is great interest in an unique humanitarian project—Project HOPE—which is carrying not only the good will but the good works of the American people to distant lands.

Recently Dr. William B. Walsh, the president and founder of that project, which has been indorsed by the Congress, and which is receiving the assistance and cooperation of various agencies of the Government, returned to this country, after being with the S.S. *Hope* in Asia. The interest on the part of people everywhere in what he has to report is tremendous.

Because I know what the things which he can report, better than anyone else can do it, will be of great interest to all Americans, I am pleased to have inserted in the RECORD a speech made a few days ago in New York by Dr. Walsh to the Pharmaceutical Advertising Club, as follows:

REMARKS BY DR. WILLIAM B. WALSH, PRESIDENT AND FOUNDER OF PROJECT HOPE

Project HOPE was conceived in late 1958 as part of the Committee on Medicine and Health of the People to People Program under President Eisenhower. It was begun because of a feeling that in the field of medicine and health we had a weapon which had been little used in our technical assistance programs. We have had religious missionaries, of course, but in the new countries the religious missionary has an ax to grind—he is saving a soul—which is laudable, of course. But in some of the Moslem countries, and as you are reading now, even in Africa, there is great resistance to this type of approach.

Nevertheless, the missionaries learned the lesson many years ago that before you save the soul it is better to cure a bellyache or a headache or save a life because in that way you gain acceptance for your religious preaching.

The American people seemed for many years just to take this type of thing for granted—this work in foreign lands—as being just for the missionaries. The Russians, Czechs, Yugoslavs, and even the Chinese have learned the lessons our missionaries have taught us. You may know, for example, that when the Russians built a hospital in Addis Ababa it became not only an excellent hospital, as it is, but a seat of Russian influence. The Chinese have been exporting doctors, as have the Russians, for many years—always following lessons they have learned from the missionaries of the West. They have found that the practice of medicine is one way to reach the people.

I felt, as did my colleagues, that as citizens we should stop beating the Government to death—blaming the State Department for everything that went wrong and counting as pure accident everything that went right. You can spread the Government just so thin so it was time that we, the American people, did something ourselves. Something of a symbolic nature was required—something that could be visualized and recognized and at the same time do some good.

We could have indulged in a treatment project alone—ours has had a significant amount of treatment, more perhaps than we wished it had in the beginning. But to go out just for the purpose of treatment into these parts of the world is like walking through quicksand. You never finish—there are too many to treat. There are too many sick. So we concluded that we should go with a mission, a purpose: that of teaching and training.

We would go only by invitation. We would go only if they shared in the cost. This is one of the advantages of being nongovernment. If it is a government project you not only bear the full cost but you pay taxes in the country in which you help.

We wanted to make a real impact to show these people that the American people are interested in the self-development of others in less fortunate countries. At the same time this was quite selfish because we feel that history hasn't changed. It's been shown time and time again that factories are no good if people cannot work in the factories. Great new highways are no good unless there is industry at either end of the road or something along the road that can lead to progress.

While democracy as we know it may be too expensive for every new government in this world, some form of democracy, some form of freedom must be kept paramount in the minds of these people.

We should stop worrying about what we call nationalism. After all, we were the greatest nationalists in the world in 1776. These people in the developing nations are children of freedom and they are nationalist today. Nationalism should be a weapon of America becaue it is simply another way of saying freedom from outside domination. But we must reach these people with some form of American interest—a form of demonstrable interest.

One of the finest ways to do this is through the medium of medicine and health, because here you reach the masses of the people. Whether they are literate or not, they feel pain, they fear death. We sometimes say life is cheap in the Orient, but it is cheap only relatively. They cry just as hard when their loved ones die. They don't like death. Above all, these nations on whom we're counting for the freedom of our children are losing their leaders, their businessmen, their wise and responsible citizens before they have reached a sufficiently mature age to make the contribution to the world of which they are capable.

So we felt that we had a vehicle—medical teaching and training—now we needed a symbol. We thought of the hospital ships from World War II which were in mothballs. The thought of using these ships was not original with me. We heard the usual objections, one of these ships would be too big, too exepnsive—it does cost $3½ million a year. But one bomber costs you four times that much. While we need the bombers to deter war, we must wage peace, or we are labeled, at least in the eyes of those who know no better, as a country interested only in arms and not in mercy.

Our feeling was that rather than pay taxes to keep these ships in mothballs, we must take one out and see if it will work. We had plans, by no means definite, but rather flexible plans. We knew in general what we needed and what we wished. We also knew that if we wanted a partnership and were to receive cooperation from the countries to which we were going, then not only must we be invited but we must let these countries share in the planning of our activities. That is the method we have followed.

In time we raised what we felt was sufficient money to put this vessel out with a small cadre of doctors, 25 nurses who are the prize of our entire project, a dozen technicians and other medical personnel—all of whom are individuals of great initiative, capable of flexibility, of teaching and treating.

In addition, we add to this cadre, on a rotation basis, doctors from this country who have volunteered to come as teachers for periods of from 2 months to 4 months. These periods have to be flexible because we found when we arrived in these nations that inland transportation is a real problem. So some of our doctors had to come and go more at the convenience of transportation available than at the convenience of our needs on board. Nevertheless, we survived all of these early growing pains.

The proof exists in Indonesia where the people were happy with what we had brought them. In fact, within 10 days after the arrival of our first group of rotating physicians with the ship in Djakarta, we were asked by the Ministry of Health to take over a hospital which they had built with their own funds and to staff it as a teaching and training institute. The United States has not been asked to do this kind of thing for many years.

It is proof to us that our work had been well received. It becomes more significant when considering the Russian reaction—and thank God they are reacting to us for a change—which was to offer a 200-bed hospital to the Indonesians. The Indonesians accepted the hospital on the condition that only Indonesian personnel would work in this hospital. This hospital will be completed in 1962, but we hope by that time to have a fully trained staff of Indonesians in the Ibu Sukarno Hospital to take that over before its completion. Thus our teaching and training is significant.

Other incidents which have occurred prove what we have accomplished. At Sumbawa in Indonesia we were told by one of the greeters that he didn't even know where the United States was; that he had never seen an American flag but that he would always remember the American people with a warm heart because this was the first time any foreigners had come to his island except to steal his rice.

Now, this is a positive ten-strike for us here in America. You must remember that each of these countries has the same vote

in the United Nations as we do and if Mr. Stevenson was correct in his estimate of the Red Chinese situation, you can see that our vote is getting to mean less and less as each of these new countries comes along.

It is vital that these countries understand the humanism of the American people. This may be hard for each of you to believe because you dig in your pockets constantly to contribute to one thing or another. But others in far off lands do not know the generosity and the selflessness of Americans.

I was in Djakarta when they were having the Gizenga and Lumumba riots there. Of significance this particular day is that the streets were spread with streamers put up by the PKI, the Communist arm in Indonesia, saying "Convene the Congolese parliament"; another read, "Down with the imperialists who have murdered Lumumba," and "Gizenga must be recognized."

That same afternoon I had to leave to join the ship at Ambonia which is about 1,800 miles north in the Molucca Islands. To get to the ship we had to go through about 35 kilometers of jungle road. As we drove along this road, the moment the children saw there were Americans in the jeep they came running out smiling and waving their hands and yelling "Hopie, Hopie, Hopie." This was gratifying to hear instead of "Yankee go home," believe me. As we came to town, we were in for a shock because we saw streamers spread across the street for about a half a mile. As we read these streamers, printed in Indonesian, it became a pleasant shock because they said "*Hope* represents the heart of America"; "*Hope* represents American beliefs in humanity," and so on.

The messages were put up there spontaneously by the people of the town and not by any organized party. This is the type of impact *Hope* had made throughout the Indonesian archipelago. This impact has been felt throughout Asia.

I think that so often, we in a democracy are fearful that that which may seem to be grandiose is offensive. The *Hope* ship is not offensive—it is not grandiose. The symbol of this white ship coming in with no propaganda leaflets to distribute, with nothing but American volunteers on board to render a service, is something which is seen by thousands and thousands of people in each of these countries, and for the first time it brings home to them what the American people are really like.

Project *Hope* is not government-to-government aid. More important, this is not a field in which the Soviets can compete.

I took the Russian Ambassador, who insisted on coming to the ship on an independent tour rather than coming with all the other Ambassadors who came through in Djakarta, aboard the ship when it first docked at Djakarta. The most frequent question that he asked was: "Do you mean to tell me that this is sent here by the American people—that this is not a Government project?" I repeatedly told him that it was sent by the American people and that it was not a Government project. Then he said: "But you can't do anything really serious on here." Well, we took him through some of the wards where patients were convalescing after some major procedures. He grunted—and then finally he said that: "If you people would only sign a disarmament pact this is a field in which we would like to compete."

I answered him by simply saying that we were perfectly ready to sign a disarmament pact, although I could not speak for the Government, and more than that, we are ready to compete in this field at any time because we have four more ships which are ready to be taken out of mothballs anytime the American people feel it within themselves to support them for use in other continents. He grunted and walked on, but this was something which bothered him.

Shortly thereafter, a Russian team of 10 doctors arrived in Djakarta and moved into a house next door to the house we call HOPE House—where we house our physicians who are rotating through on the way to transportation. The Russian team managed to find excuses to follow the ship, Bali is the last place they went, trying to determine the impact of the project—the impact on the people. We expected that they would make some inferential criticism of us but this they did not do. At least we did not pick up any evidence of such criticism because it is difficult to be against something like this. However, I am sure they learned a lesson and I wouldn't doubt that we will be seeing a Red fleet very shortly somewhere because I think they did learn some lessons from our operations.

With our facilities and our personnel we are trying to teach at every level—at the level of the ordinary nurses, the doctor when he is available. We are not trying to raise the level of medical education to great heights because I would be a liar if I said we could or would. What we are trying to do is to raise the level perhaps a bit now, and maybe next year a little higher. We are trying to give them the opportunity to improve so they can take care of their own. We are trying to make their orthopedic surgeons—they have two in the whole country—better skilled. We are trying to make their nursing students better nurses. Where we can train a specialist we are trying to train him. But above all, we are trying to train him in the area in which his training is to be applied. We are trying to fulfill what I think is a real concept of democracy in doing this.

To bring them over here and show them the Mayo Clinic or the University of California or Johns Hopkins, is almost cruel. If they study here for 5 years they may no longer be Indonesians but might become Indonesian-Americans. They would not be satisfied when they got home. Above all, they could not put to practice much of the training they have learned here. To bring them here on a 4-month rotational course, in my opinion, is an utter waste. They go from coast-to-coast and see things and return with the realization that they are likely never to have these things at home in their lifetime because they are too expensive. So they work years here and then you get a reverse reaction.

We now have, for example, the first fully trained Indonesian anesthesiologist on board. He is now ready to go back to the university where he can train other younger men.

We are giving him the machine on which he was trained. We have taught him to take it apart and put it together again, and we have left him some spare parts because this is also a vital thing.

This is the level of training that we are attempting to carry out and training should not be looked at in the manner in which we regard it in this country because they are years from our kind of training. Everytime one of our nurses or doctors opens his mouth to an Indonesian, that Indonesian is learning something, if not in the actual technique of medicine, then something in the art of medicine. As project *Hope* men were able to go ashore and take an outpatient facility and double its output by improving the techniques in that facility, they taught those people something which is going to benefit their own population.

That is *Hope's* work—that is *Hope's* purpose.

Statement by Lithuanian American Council, Inc.

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an eloquent statement by the Lithuanian American Council, in Chicago, recalling the need for our country's continuing support of the aspirations for freedom of the peoples of Lithuania and of the other captive nations suffering under Communist colonialism. We must not relax our efforts until their sovereign rights, their freedom, and their self-government are restored to these peoples.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A STATEMENT BY THE LITHUANIAN AMERICAN COUNCIL, INC., CHICAGO, ILL.

In view of the approaching of the 43d anniversary of the restoration of Lithuania's independence, the Lithuanian American Council, representing hundreds of thousands of American citizens of Lithuanian birth or extraction, and residing in many cities, towns, and villages throughout the United States, deems it proper to adapt the following statement:

"I

"Since 1918, for a number of years, we, the citizens and residents of this free country, used to celebrate with joy and pride the 16th day of February, because on that memorable day the recognized leaders of the Lithuanian nation, gathered in Vilnius, the historical capital city of Lithuania, and unanimously proclaimed the restoration of independent Lithuania.

"The determination of the people of our native land to get rid of the Russian despotic rule was crowned with success, and Lithuania became free, with her own government based on the principles of genuine democracy.

"The independent Republic of Lithuania, within a comparatively short period of 20 years had achieved a remarkable advance in material well-being of its population, in literature, fine arts and education.

"It has won respect and recognition of practically all nations of the civilized world, and was admitted as a full-fledged member of the League of Nations. The recognition de jure by the Government of the United States was granted in 1922.

"II

"However, the Communist rulers of Russia would not tolerate a free and prosperous country at her borders, and waited for an opportunity to destroy it. This they did in agreement, secretly concluded with Hitler's government of Germany.

"On the 15th of June 1940, the Soviet Union invaded Lithuania by its military forces and imposed upon her a dictatorial Communist regime similar to that of Russia. The human rights and all civil liberties were abolished and, within a few weeks, even the semblance of Lithuania's independence was wiped out. Lithuania was formally incorporated into a Soviet state—in flagrant violation of the peace treaty between Soviet

Russia and the Republic of Lithuania and of several other valid treaties that had been signed and ratified by both states.

"In addition to this, the tyrants of the Kremlin deported tens of thousands of men, women and children to the forced labor camps in Siberia, in order to break the resistance of the people, ultimately to destroy them as a nation.

"Thus Lithuania virtually became a Russian colony with their people robbed of land and other properties, mercilessly exploited for the benefit of their Communist overlords and reduced to utter misery. And these conditions generally prevail until this day.

"III

"As a consequence of the brutality of Soviet Union, the forthcoming anniversary of the proclamation of Lithuania's independence will not be a joyous event for Lithuanian Americans, but an occasion to express their grief over the tragic fate of their native land on the shores of Baltic Sea.

"We shall voice our emphatic protest against the enslavement of Lithuania by the powerful Communist tyranny of Russia and against the inhuman treatment of her people by the enslavers.

"We shall appeal to the Government and people of United States and to the conscience of the civilized world for sympathy and aid.

"As citizens of this great democracy, we are proud that the Government of the United States of America has never recognized the incorporation of Lithuania into Soviet state but, on the contrary, has officially denounced it as a manifestation of barbarism incompatible with the fundamental principles of civilized humanity.

"This attitude of American Government, for years, has inspired in us and our unfortunate brothers and sisters behind the Iron Curtain a hope that freedom of Lithuania has not been lost forever. We are finally convinced that sooner or later she will regain her undisputable right to self-government, and we consider that this is the time for an action to hasten the day of her liberation.

"The Government of Soviet Union has raised the question of 'colonialism' in the General Assembly of United Nations proposing that every nation living under colonial rule or foreign domination should immediately be declared free to establish their independent states and elect their governments of their choosing. Most certainly, this principle should unreservedly be applied to Lithuania which already had existed as an independent Republic and proved her ability to manage her own affairs.

"The Lithuanian American Council, therefore, urges the President of the United States and the Secretary of State to insist at the resumed session of the General Assembly of United Nations in March, that the sovereign rights and self-government of which she has been illegally deprived, be restored.

"Should the rules of Soviet Union reject this just demand, then they would stand condemned in the eyes of the world as hypocrites and enemies of freedom."

No Foreign Tourist Flood for United States

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Crosby Noyes from the Washington (D.C.) Evening Star:

NO FOREIGN TOURIST FLOOD FOR UNITED STATES

PARIS.—This being the time of year people start making vacation plans, we have made a preliminary check on prospects for foreign touring in the United States this season.

From the evidence so far, if President Kennedy is looking for floods of foreign visitors bearing gold to help replenish the supply at Fort Knox, he is likely to be disappointed.

The professionals here are all a little skeptical of the new administration's open door policy to attract foreign tourists. And there is woefully little to indicate that the Europeans themselves have caught onto the idea of spending their vacation making the grand tour of the United States.

There will surely be more foreign visitors than last year. The number, by some estimates, has quadrupled within the last 5 years. Even without any special effort it is expected to keep on increasing, though at a slower rate.

When it comes to the possibility of attracting tourists—people traveling for pleasure, rather than on business—progress so far has been negligible. Out of 179,000 visitors' visas issued last year, maybe 1 person in 15 could be classed as a tourist in the American sense of the word.

When this is compared to the nearly 800,000 Americans who are expected to visit Europe this year the dollar gap of more than a billion dollars is not hard to explain. And whatever may be done in Washington it is unlikely that this gap will be quickly closed.

VISA PROBLEM EXAGGERATED

There is a feeling here among travel agents and consular officials that the fuss being made over the difficulty foreign tourists are having in securing visas has been exaggerated a good deal "We put away our rubber hose some time ago," an official assured us. "For the vast majority of people who want to visit the United States it takes just about 30 minutes to get a visa good for 4 years and as many trips as they want to make. You can't get a French passport in less than a week."

If visas were abolished altogether it might make a difference of about 100 visitors a year from France, according to the guess of a leading travel agent. Consular officials also point out that without a system of work permits and residence cards and a central police organization such as exists in every European country it would be virtually impossible to distinguish between visitors and immigrants.

On the other hand, these professionals think that a serious effort to promote American tourism would produce results.

"The biggest hurdle—and one where a Government tourist office could really help—is to get across the point that a visit to the United States is not necessarily a hopelessly expensive proposition," we were told.

The idea of traveling for pleasure is new to Europeans. Today they have plenty of money and think nothing of spending 3 weeks or a month in the Middle East, but very few of them would dream of crossing the Atlantic."

NO COME-ON OR BASICS

These prejudices could be changed in time by a Government-backed promotional campaign, the experts think. For the time being there is a great lack of any kind of come-on. Any American magazine one picks up has full-page ads plugging the joys of traveling in Europe. But no private company at this stage is able to afford the same effort to attract the small European market.

The airlines this winter had some success by featuring 17-day special price excursion tours which can be paid in advance in local currencies. But much of this extra business was done in Britain where language is no problem and a great deal remains to be done before travel in the United States can be made attractive to the average European.

Among the most obvious deficiencies: Reception centers and tourist facilities similar to those of any major European city, including special guides and interpreters. At present, even the major hotels and travel agencies provide no help at all for non-English speaking travelers. American tourists facing the same conditions in Europe would find themselves hopelessly lost most of the time.

And then there is the problem of food.

"It's what worries them most," an airline official said.

"What they want is a meal at a moderate price that lasts for at least 2 hours and gives them a chance to enjoy themselves.

"We just don't have it. This hands-across-the-sea stuff is simple until you try to get a guy lunch."

NCAA Wants Law To Stop Gamblers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. WILEY. Mr. President, the National Collegiate Athletic Association recently called for more effective Federal laws to control organized gambling and stop efforts to corrupt sports.

Personally, I feel that Congress should give this matter consideration as soon as possible.

As will be recalled, hearings were recently held on such efforts at corruption in boxing. During the last session of Congress, I introduced legislation to provide stiffer penalties for such acts in relation to boxing. Regrettably, however, efforts continue to spread the poison throughout other sports, both in the professional and nonprofessional field.

Traditionally, sports in America have served usefully not only to improve health standards for our youth but also to strengthen the competitive spirit and improve standards of morality.

The brazen efforts to spread corruption in this significant field can and should be stopped.

Recently, the Washington Post published an article entitled "NCAA Wants Law To Stop Gamblers."

Emphasizing the need for tougher legislation in this field, I ask unanimous consent to have the article printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 23, 1961]

NCAA WANTS LAW TO STOP GAMBLERS; COLLEGES HAVE DONE EVERYTHING THEY CAN

KANSAS CITY, March 22.—The National Collegiate Athletic Association today called for a Federal law to control organized gambling and stamp out the despicable characters who seek to profit through the corruption of sports.

"The Nation's colleges and universities, athletic conferences, and the NCAA" said Walter Byers, executive director of the NCAA, "have taken every precautionary means at their disposal to guard against possible point-shaving or game-throwing in intercollegiate sports.

"The NCAA also has recommended to Congress that it take further legislative action in this area and has conferred with the Justice Department in an effort to enlist its support.

"Everybody picks at the kids, at the sport, and at the colleges when something like this basketball scandal happens," Byers said. "I don't defend the kid a bit. He should be indicted. He's selling his soul.

"But there has to be a way to get the source—the gambler, the despicable characters who want to influence the outcome of an event. Everybody who makes a bet—no matter how big or small plays a part in it.

"The more money bet, the more scandal of this type you breed.

"The NCAA can try to help improve the situation, as it has done since disclosure of the scandal of 1951. But we are limited. We can only improve the situation. We can't control the problem if it is not a crime under law to bribe or attempt to bribe a boy or an official.

"I feel the only solution is Federal legislation making it unlawful to attempt to affect the outcome of an athletic event."

The NCAA is an association of colleges and universities with current membership of 552.

Byers, a 39-year-old former newspaperman, heads the association, which has its headquarters just around the corner from Kansas City's Municipal Auditorium, where the NCAA basketball championships will be played Friday and Saturday.

Resolution Memorializing the Congress of the United States To Reduce the Eligibility Age of Persons Entitled to Old-Age Benefits Under the Social Security Act to 62 Years

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 16, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by General Court of Massachusetts:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO REDUCE THE ELIGIBILITY AGE OF PERSONS ENTITLED TO OLD-AGE BENEFITS UNDER THE SOCIAL SECURITY ACT TO 62 YEARS

Resolved, That the General Court of Massachusetts hereby respectfully urges the Congress of the United States to enact legislation whereby the age at which persons become entitled to receive old-age or retirement benefits under the Social Security Act shall be reduced from 65 years to 62 years; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of the Congress and to each Member thereof from this Commonwealth.

House of representatives, adopted, March 10, 1961.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted in concurrence, March 14, 1961.

IRVING N. HAYDEN,
Clerk.

Ten Commandments for Children

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent article entitled "Ten Commandments for Children," as prepared by Rabbi Emmet A. Frank, of Temple Beth El in Alexandria, Va., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEN COMMANDMENTS FOR CHILDREN

1. THOU SHALT REMEMBER THAT THY MOTHER AND THY FATHER ARE NOT STUPID

Often children are too quick to find fault with parents. I think they believe that their parents are against any of their requests. It is obvious that conflicting standards do exist, due to the chasm of age. What is really happening, as Stephen Wise has said, "is nothing more than the wisdoms of the past meeting with the hopes of the future." Parents tend to be more conservative, where children seem too impetuous—filled with the exuberance of life—overflowing with unspent energy and enthusiasm. It is natural then that in certain instances children will find fault with their parents.

2. THOU SHALT HONOR THY CAR-POOLING MOTHER AND THY WAGE-EARNING FATHER

Sometimes I think children forget how very much the lives of their parents are wrapped up in their lives. There is no authority in the world that could drive a man or a woman to give so completely of themselves as do parents. Yet parents never weigh their deeds in front of their children. Parents really look for nothing in return for their service except honor. A wise parent realizes that the debt of a child is uncancelable—a debt that is to be obliterated from the child's mind—a debt for which the child owes nothing but to translate his parents' teachings into their daily experiences. It is thus in such a situation that love, rather than obligation, permeates the action of parents. The very least a child can do is to return that love—pure and with respect.

3. THOU SHALT NOT TREAT THY PARENTS AS ANTIQUES OF A BYGONE ERA, OR BECOME EMBARRASSED WHEN THY PARENTS ACT HUMAN

How often we look upon our parents as antiques of a bygone era—way gone. Yes, I remember the most famous term used to describe parents: "my old man." I want you to know that your father and your mother do not consider themselves old, but rather consider themselves in the best part of their life cycle. As such, parents like to act human—act as they feel—young—and they do not need to be told that they are acting childishly. Their lives course with the same hopes and dreams that fill the hearts of their children. Be not embarassed by your parents, but help your parents to live.

4. THOU SHALT SEEK AND RESPECT THY PARENTS' GUIDANCE, KEEPING OPEN THE DOOR OF COMMUNICATION BETWEEN YOUR PARENTS AND YOURSELVES

Whether children wish to admit it or not, parents can be of great help in making decisions. Parents really do have some good ideas under those partially grayed hairs. Their guidance is to be sought rather than shunned. Certainly at times there will be conflicting standards and opinions. This is only natural, but the tragedy occurs when a child shuts out a parent. The door of communication must be kept open. It must be a two-way relationship. Counseling sought from a parent is not one based upon blind faith. No parent wants a yes-child all the time. There has to be room on the part of the parent to welcome differences of opinion, and so it is true of the child as well. It is wise for parents and children to realize that differences of opinion will exist at times. However, let children not forget that parents do have certain inalienable rights in this field of guidance. Parents should exercise this right, as Stephen Wise has said: "Men and women are not worthy of the dignity and glory of parenthood who lack the courage to brave the frown of a child, the strength to front a child's displeasure."

"Remember that parents usually love their children not wisely but too well and that children love their parents wisely but not too well. Let the gentleness of parents be lifted up and hallowed by firmness, and the firmness of children be hallowed and glorified by gentleness."

How often have children thanked God that they listened to their parents' advice.

5. THOU SHALT HELP TO CREATE A HOME ATMOSPHERE THAT WILL ADD MAJESTY TO FAMILY RELATIONSHIPS.

Of all our experiences as we ramble down the road of life, the home is one that should linger in our memory. But will it be a memory of heavenly bliss or hellish recall? Let's face it. What type of home it will be is determined by mutual respect, by mutual experiences of sharing the responsibilities. The greatest achievement of all man's dreams was the creation of the democratic state. Here in the home, however, in so many instances the democratic ideal has lost out. It is true of the child as well as the parent. The home must be that place where parent and child sit as eager learners. Spencer sums it up when he says the ideal home is "to produce a self-governing being; not to produce a being to be governed by others." Maybe because of such an atmosphere in the home the world outside will be touched by some of its influence. To establish such an atmosphere there must be, on the part of the child and the parent, an attitude toward each other of reverence, courtesy, and consideration. A home so established can be a healing balm—an oasis of peace, and a fortress of strength.

6. THOU SHALT SHOW YOUR PARENTS THAT YOU CAN ACCEPT RESPONSIBILITY BY LIVING UP TO THE FAITH THEY PLACE IN YOU

I think in this realm, parents, as well as children, fail to play their role successfully. Parents want to keep their children as children all the time—never recognizing that they are growing up. The most difficult phase of parental maturity is to learn to wean one's children. I do not believe it is the normal desire of any parent to thwart the will or the growth of the child. However, even when a child does receive responsibility he may not live up to the confidence that his parent has placed in him, or he may suffer from a mixed emotion, for on the one hand the parent may remind the child that he is growing up and should behave as such, and on the other hand the parent at times will cry: "Not so fast. You are still a youngster."

A child who cannot accept responsibility, respecting the confidence that his parent has placed in him, deserves to lose that privilege. It is natural for an adolescent to desire to be an autonomous person. That autonomy has to be earned and won.

A little boy was sitting on the front steps pouting. His father comes home from work, sees him, and asks, "What's the matter, my son?" To which his son replies, "I can't get along with your wife."

7. THOU SHALT SET HIGH STANDARDS AND LEAD A MORAL AND ETHICAL LIFE

The world in which we live seems to base success, unfortunately, on financial achievement. Our first step, then, is to recognize false values for what they are and replace them with real values.

Andrew Carnegie amassed a fortune—I believe more than $450 million. But his greatness did not come until he began to give it all away. His success can now be measured in his service to others. In selfless service to our fellow man we rise to the heights of greatness and success. A man's character is determined by no other measure than the type of life he leads. Moral values and ethical standards will shape his personality with eternal values that neither time nor clime can destroy or take away.

Another real value is the discipline of cultivating a love for the arts—music, art, and literature. Such a discipline is the finest, most broadening experience to which man can aspire. Finally, with all thy getting, be sure to get two more things—wisdom and humility. You remember God's telling Solomon: "Since you asked not for riches, I shall give you wisdom." A life so dedicated will not succumb to the psuedo values which time will efface, but will reach out to a life of nobleness. The greatest inheritance a parent can leave to a child is not a financial will but an ethical will.

8. THOU SHALT REMEMBER THAT IT IS NOT SO MUCH WHAT YOU SHOULD NOT DO, BUT WHAT YOU SHOULD DO

Too often we fill our lives, or rather our consciences fill our lives, with negativism. We know we should not do certain things, but seldom does it go any further. We set the limits of our lives on the periphery of the negative. Our lives must also seek the opposite end of the pole—positivism. I remember a song that was popular when I was a youngster. I imagine that every once in a while it is still played. The thought it expressed was "Accentuate the positive—eliminate the negative." Only when we begin to set positive goals and work for them diligently are we playing the proper roles.

9. THOU SHALT NOT BE FEARFUL OF EXPRESSING YOUR OWN INDIVIDUAL PERSONALITY OR BEING A NONCONFORMIST

The great tragedy of our world today is in its producing the common man. Kids act alike, dress alike, and in too many instances think alike. It is part of the group spirit—the desire to be accepted or the fear that we will not be accepted. In this tide of life we have produced the common man, and in so doing established a cult of mediocrity.

Yesterday I listened to an eloquent speaker discuss Herbert Hoover's article, "The Uncommon Man." He asked if great advances have been brought about by the common man—no, sir, but by the uncommon man. Our Nation is the result of the common man—no, sir, the uncommon man. When we seek medical help, do we look for the common doctor; or legal advice, the common lawyer; or spiritual inspiration, the common minister—no, sir. We look for the uncommon doctor, the uncommon lawyer, and the uncommon minister. Parents should pray that their children will grow up to be uncommon, and children should strive to be counted among the uncommon. Let us crush, once and for all, the cult of mediocrity and the common man. Let us dare to be different. Let us dare to live life, impregnating it with our own individual talents.

And now the most important of all commandments, in which our lives reach the richest culmination:

10. THOU SHALT REMEMBER THE LORD, THY GOD, LOVING HIS TEACHINGS AND OBSERVING HIS LAWS

The ancient cry of Judaism resounds with freshness in every generation: "Hear, O Israel, the Lord our God, the Lord is one." Let your hearts throb with the message of this watchword—to love God with all your heart, with all your soul, and with all your might. Remember the God of our fathers, Abraham, Isaac, and Jacob, for herein lies the mystery of our existence. Israel's faithfulness to God has been her secret of life—eternal as is God, so are the children of Israel who remember His teachings and observe His commandments. Suffice it to say that Judaism's tenets encompass the whole of life—the home, the Temple, the world without. Here are the festivals of the home life. Here are the prayers of the liturgy. Here are the directives for human relations. Here the customs which glorify parent and child, as they partake of the ancient festivals of Hanukka and Passover. The great Sabbath, as parent and child kindle a light to God, raise an overflowing cup of thanksgiving and share the bounties of God's creativity—here parent and child worshiping in the solemnity of the Beth Ha Tefillah, united by eternal prayers and everlasting values. Here parent and child sharing the glories of Israel, which speak of the dignity and divineness of man. Only with such spiritual values will we fulfill God's commandment and become a kingdom of priests and a holy nation. These spiritual values will create a home atmosphere about which the Prophet spoke:

"And He shall turn the heart of the parents to the child and the heart of the child to the parents."

True not only for Judaism but all religions. Amen.

Assisting the Handicapped

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. GOODLING. Mr. Speaker, the Carlisle, Pa., Committee for the Employment of the Handicapped is to be commended for its continuing efforts in behalf of those less fortunate than others.

To Joanne Samuelson—16-year-old junior in the South Middleton High School—sincere congratulations on your prize-winning essay in which you state so clearly and beautifully the challenge of every community and the manner in which your community is accepting that challenge.

Many communities might well emulate the example of this area. The essay as printed in the Carlisle Evening Sentinel follows:

ESSAY OF GIRL WINS FIRST PLACE—GETS TOP AWARD IN COMMITTEE CONTEST

The following essay, "Jobs for the Handicapped: A Community Challenge," written by Joanne Samuelson, 16, a junior in the South Middleton High School, won first place in the contest sponsored by the Carlisle Committee for the Employment of the Handicapped:

"One of the cornerstones of democracy is the fundamental of equal opportunity. This means that a democratic way of life involves no discrimination between the handicapped and the unimpaired when it comes to employment. Giving to the handicapped equal opportunities, demonstrates the principle of humanitarianism. It exemplifies the American belief in the dignity and worth of the individual.

"In this day and age it is necessary to utilize to its capacity our most important natural resource: manpower. An important part of this manpower includes the handicapped, both the physically disabled and the mentally retarded. To return many of the handicapped to gainful employment would mean to greatly strengthen our Nation's manpower.

"Whenever we speak of the handicapped we always hear the word, 'rehabilitation.' Just exactly what is rehabilitation? To me, it means a chance to live again; a period of adjustment necessary to meet new conditions. Rehabilitation of the handicapped presents many problems, none of which is insurmountable. The most effective force in overcoming these problems is the community."

FOREMOST OBSTACLE

"The foremost obstacle in rehabilitation is to teach the handicapped individual to utilize his faculties to the utmost. Occupational therapy is of great advantage in the preparation of the individual for gainful employment. However, the preparation of the disabled person for employment is amazingly easy when compared with the real stymie: acceptance of the handicapped by employers and society. Here is where the community faces the real challenge. It is up to the community to dissolve prejudices and to encourage employment of the handicapped.

"Why is there prejudice against hiring the physically handicapped? There is no discrimination shown against those who are mentally and emotionally handicapped by tension, worry, and frustration. Statistics have proven that the turnover rate among the handicapped is comparatively less than that of the nonhandicapped group. This is a verity because the disabled realize and appreciate the value of holding a job. They recognize the fact that the handicapped as a group will be judged by their performance and therefore are willing to put forth great effort to do their best and to make a good impression on their employer. To back this up statistics have shown that the performance among the disabled equals and, in many instances, excels that of the nonhandicapped. Surveys show that rehabilitated workers maintain high safety records, achieve a remarkably low rate of absenteeism and have extremely good production rates. Whenever the employers in the community are attempting to decide whether or not to hire the handicapped, they should consider what the individual does have, and not what he doesn't have."

ESSENTIALS LISTED

"In the employment of the handicapped proper preparation and placement are essential. It is the responsibility of the community to utilize and protect the handicapped. When properly placed the handicapped can do amazingly well. The paraplegics are not at all inhibited in their ability to do sedentary work. In some instances, a handicap can actually aid the job. For example, the blind make excellent interviewers, for they are forced to rely upon qualifications, and are not influenced by personal appearances. Also, the person who had lost one of his senses becomes extremely proficient in the use of his other senses. A deaf person develops his senses of touch and sight. There are many occupations

which do not require sight, and where a high degree of hearing or sensitivity would be beneficial. Why, therefore, shouldn't these people be hired?

"In rehabilitation it is necessary for the recently handicapped individual to adopt a healthy, psychological attitude. He should try to comprehend the reality of his handicap and make a full-fledged effort to adapt to it. With will and skill, one can overcome any limitations. No one is truly handicapped unless he wants to be.

"The handicapped person does not expect any special treatment or favors; he only wants a chance. It is a challenge to the community to give him this chance. The disabled person wants to enter into the world of competition, to be a part of society, and to be hired for his capabilities. He does not wish to take charity, but has the honest desire to support himself and his family, to earn his own money, and to be independent."

EXAMPLE OF PROGRESS

"An example of the progress being made in hiring the handicapped can be found in some of the business establishments in our town. The employers have found it good business to hire the handicapped.

"One of the women working in a local business has a glass eye; yet, she is doing precision work that requires good eyesight. Although she is self-conscious about her disability, she is quite proud of her work, and does a fine job.

"In the same establishment there is a blind man, who is doing work that was formerly thought could only be done by a sighted individual. However, with a few adjustments in the method of procedure and with the help of one of his fellow workers, this man has become a very useful and valuable employee. Not only does his work sustain his own pride, but it instills a feeling of pride in the sighted coworker who helps him, for he helps, not out of pity but out of understanding.

"The telephone company in our community has provided a Braille switchboard for a blind husband-and-wife team in order that they might be self-employed. This blind couple operates a telephone-answering service, which is not only a means of earning a living for themselves, but also provides a very valuable service to the community.

"These are just a few examples of what can be accomplished by civic-minded members of a community. They have learned that hiring the handicapped doesn't cost; it pays. They are businessmen and know that it is a good investment."

CAPABLE OF EMPLOYMENT

"Why should we continue to pay high cost of keeping the handicapped in institutions and hospitals, when they are capable of entering into gainful employment? Wouldn't it be much more sensible to spend that money on rehabilitation? We would not only relieve the handicapped of being a ward of the State, but would lower taxes at the same time.

"The Federal Government has done much to promote the employment of the handicapped. The Government is strictly impartial in its selection of employees through its competitive civil service examinations. About 5 percent of all employed Federal workers are handicapped.

"Despite the great effort that has been put forth in the past few years in the rehabilitation and employment of the handicapped, there is much work still to be done. There is a wide gap between those receiving vocational rehabilitation and those who need it. It is truly a community challenge. With wholehearted cooperation and interest of the community, all obstacles can be met, and problems of the handicapped will no longer face our community or our Nation."

The Other Side of the Coin—A Report on Unemployment by the Late Eddie Collins

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. CURTIS of Missouri. Mr. Speaker, on March 8 of this year, Edward H. Collins—"Eddie" Collins—an economic columnist and editorial writer of the New York Times died. Eddie Collins was highly respected by both the journalists with whom he worked and the practitioners in the field of economics whose work he covered. A reporter for over 30 years, Collins also was a trained economist, having studied at the London School of Economics on a Pulitzer Scholarship after graduating from the Columbia University School of Journalism. He later taught at Columbia, while working as a reporter.

During his years in journalism, Collins worked for the Journal of Commerce, the New York Tribune and, finally, the New York Times. With the Times, his Monday columns became regular features of the economic page and he wrote with the editorial board on economic subjects.

Eddie Collins' last published piece was an editorial in the Times of March 9, the morning after he died, entitled "Report on Unemployment." I would like to insert this editorial at this point in the RECORD:

REPORT ON UNEMPLOYMENT

The number of jobless in the Nation reached 5,705,000 in the month of February, according to the official figures of the Labor and Commerce Departments, just released by Arthur J. Goldberg, Secretary of Labor. The 5,705,000 figure, the Secretary notes, is the highest since 1941.

On a seasonally adjusted basis, this total represents 6.8 percent of the civilian labor force. The highest adjusted rate for the entire postwar period was 7.5 percent, touched in April 1958. The 6.8 percent does not set a new low for the present downswing in business. The same level was recorded 2 months earlier, in December 1960.

So far as most persons are concerned, we think they are prepared and concede that the Labor Secretary, in his efforts to establish the fact that unemployment is running at a deplorably high level, has made his point. It might be reasonably asked, however, whether he is not displaying more zeal than perspective when he drags in comparisons of the years 1960–61 with 1941. True, the numerical unemployment figure for February is higher than for any month since 1941. For the whole year 1941, however, the total civilian labor force was 55,900,000, while it averaged 70.6 in 1960. This means that the average rate of unemployment for that earlier year—namely, 5,560,000, constituted nearly 10 percent of the number of people looking for jobs.

Discussion of the unemployment picture at this point is almost meaningless except in the context of the behavior of the labor force and total employment. It is not to gloss over the disappointing current figures on unemployment, however, to note that these were established at a time when the labor force was expanding at a rate nearly twice that of recent previous years, and in spite of the fact that February set a new historic high for employment.

The John Birch Society

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. YOUNG of North Dakota. Mr. President, many editorials, articles, and other information concerning the John Birch Society have come to me from all over the United States. A very fine editorial on this subject was carried in the March 16 issue of the St. Paul Dispatch, of St. Paul, Minn. Another very good editorial was contained in the March 14 issue of the Minot Daily News, of Minot, N. Dak. I ask unanimous consent that these two editorials be printed in the Appendix of the RECORD.

I also ask unanimous consent to have printed in the Appendix of the RECORD the regular "Application for Membership" required of prospective members of the John Birch Society. Of particular interest is this paragraph:

If my application is accepted, I agree that my membership may be revoked at any time, by a duly appointed officer of the society, without the reason being stated, on refund of the pro rata part of my dues paid in advance.

This is a strange procedure for an organization which professes to support the Constitution of the United States and the rights guaranteed under it.

There being no objection, the editorials, and so forth, were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch, Mar. 16, 1961]

A JOB FOR HUAC

Congress, at the request of President Kennedy, enthusiastically voted to restore to former President Eisenhower his five-star general rank, which he had resigned while in politics. Only one sour note of protest was sounded, the "No" vote of segregationist Congressman DALE ALFORD, of Little Rock.

All Americans should applaud this congressional gesture of honor to a great patriotic leader. Unfortunately there are a few who do not. They are the members of a secret society which, under the guise of fighting communism, sponsors smear attacks on the reputation and character of many honorable public officials and private citizens. Their program is reminiscent of the worst stages of McCarthyism a decade ago.

Recently Senator MILTON YOUNG, North Dakota Republican, told the Senate that members of the John Birch Society in his State had accused him of communism, and that similar charges were being made against General Eisenhower. Time magazine, digging into the background of the Birch organization, found that its leader, Robert Welch of Massachusetts, had published a book in which both General Eisenhower and his brother, Milton, are attacked as members of the Communist Party. The former President is specifically accused of treason. John Foster Dulles is labeled a Communist agent. His brother, CIA Director Allen Dulles, is called a supporter of communism. Impeachment of Chief Justice Earl Warren of the Supreme Court is demanded.

The Birch "Americanists," as they term themselves, claim cells of secret members in 35 States. They attack teachers and college professors and make anonymous telephone calls telling citizens that certain neighbors are suspected Communists. Welch has denounced social security and the Federal in-

come tax as part of a Communist plot to take over the country.

Such irresponsible divisive activities help the Communist cause by setting Americans against Americans. They smack of the methods of would be dictators. Welch describes democracy as a perennial fraud, yet sets himself up as a superpatriot to sit in judgment on the Americanism of those who do not share his ideas. He has duped some reputable citizens into following his lead by convincing them they are engaged in fighting communism.

Such activities as those of the Birch group should be brought into the open where the public can examine them. This would seem to be an excellent opportunity for the House Un-American Activities Committee to conduct a searching investigation of a thoroughly un-American program.

[From the Minot (N. Dak.) Daily News, Mar. 14, 1961]

TWISTED PERVERSION OF FACTS

This being a free country, citizens have the right to join what free associations they choose.

If they choose to join the Communist Party, the law allows them to do it. And if they prefer to affiliate themselves with organizations of radical right or ultraconservativism bent, that is their privilege.

Yet it has been shown time and time again that some of the splinter organizations set up in this country, and some of the hard core groups of fanatics, are people whose fanaticism has made them dupes of questionable organizers.

People with strong prejudices, it seems, are quite susceptible to the appeals of false ideologies developed by organizers who are professionals and who have questionable axes to grind. Not all the men and women who fall prey to this kind of deception are those of Communist or leftist leanings. Just as many, we fear, are folks who mean to be conservative, but have too readily been persuaded that the Nation is going to the dogs and that its leaders are members of devilish conspiracies.

For example, anybody who is taken in by the kind of propaganda which makes out that Dwight Eisenhower is either a conspirator with world communism, or a tool of any kind of subversive conspiracy, is just plain gullible.

If there are well-meaning people in this country who are falling for that kind of twisted perverson of the facts of our age, they would do well to take a second look. Perhaps the organization which is leading them into that kind of view is more reprehensible than the object of their hatred.

APPLICATION FOR MEMBERSHIP

----------, 19-----

The JOHN BIRCH SOCIETY,
Belmont, Mass.

GENTLEMEN: This is my application for membership in the ---------- Chapter of The John Birch Society, for 1 year from this date, and for automatic renewal each year thereafter, unless I resign in writing. I understand the dues schedule printed on the back of this sheet, as applicable to myself.

If my application is accepted, I agree that my membership may be revoked at anytime, by a duly appointed officer of the society, without the reason being stated, on refund of the pro rata part of my dues paid in advance.

Sincerely,

(Name)----------

Aid for Church Schools Befogs the Main Issue

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DERWINSKI. Mr. Speaker, like all Members of Congress, I have been flooded with mail discussing the Federal aid to education spending scheme. All Members to whom I have spoken bear out the fact that the issue of aid to religious schools has completely diverted the attention of Congress from the original issue placed before us. An excellent summary of this confusing state of events is the editorial of Thursday, March 16, in the Chicago Daily News, which I place in the RECORD:

AID FOR CHURCH SCHOOLS BEFOGS THE MAIN ISSUE

The issue of Federal aid to education is being bogged down in controversy over the legality of some form of assistance to pupils in parochial and other private schools. We were glad to note the statement of Cardinal Spellman that the basic political and economic matter is whether there should be any Federal aid. How to make it equitable is a subordinate consideration.

The fact remains, however, that the decision on Federal aid will be affected by the prospects for extending it to church schools. If no satisfactory plan for so extending it can be found, opposition within the Roman Catholic hierarchy is certain to make itself felt.

At his press conference yesterday, President Kennedy expressed the hope that Congress would deal first with his original request for grants amounting to about $15 a year per pupil to States for public elementary and secondary schools. There seems to be no possibility that parochial schools could share in this fund. Not even the clergy are asking this.

The constitution of Illinois provides that no public body may disburse funds for the support of any church school. Whether this would extend to low-interest loans is a legal question, although this might be avoided by Federal loans made directly to parochial school systems.

In his statement, Cardinal Spellman took note of other means by which aid might be channeled to parochial school pupils. He mentioned tax deductions for parents, tuition subsidies, and "other forms of help" such as grants for the nonreligious aspects of church-school education.

The courts have held that free bus transportation for parochial school pupils, for example, was not an unconstitutional use of tax funds, on the ground that it was a service provided to the individual pupils and not for the school system. The same logic would seem applicable to a tax deduction for fees paid for tuition in any private school.

If congressional leaders agree on some program such as this, it would greatly increase the pressure for passage of Federal aid to public schools. It would resolve the long search of parents of parochial school pupils for some relief from the added cost that they bear for education.

Otherwise, the drive for Federal aid, in our opinion, comes simply from the desire to shift some of the cost to income taxpayers, in the conviction that it will fall mainly on the wealthy. This is a delusion.

Three-fourths of all personal income in this country goes to wage earners; the top brackets of the steeply graduated rates garner only 13 percent of the total Federal revenue. The middle-income group has most of the money, and it is this group that pays the bulk of the taxes.

Inasmuch as any Federal aid plan so far advanced would take more money from Illinois than would be returned, we remained convinced that this State has nothing to gain by the Federal aid proposals.

Republican Problems

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. HOLIFIELD. Mr. Speaker, I have recently noted in the press several articles describing the plans of the Republican National Committee to undertake a series of extensive research projects to try to discover why the Republican presidential candidate carried only 14 of the 40 U.S. cities of over 300,000 population last November. According to these reports, Mr. Ray C. Bliss, Ohio GOP chairman, is heading up a special task force established for this purpose.

At the risk of being presumptuous, I would suggest to our Republican friends that they can avoid time, costly research, field studies, and complex statistical analyses in the effort to find an answer to this perplexing question. The Republican researchers need only to examine the dismal record of their own party in Congress on those issues which vitally affect the Nation's city-dwellers.

Of course, I realize the difficulty which they have always encountered in any attempt to look at voting records from an objective basis. I am therefore taking the liberty of supplying them with the statistical record of GOP votes in the House and Senate from 1947 to 1960 on legislation directly affecting the well-being of urban residents. It clearly shows the lack of GOP concern on such issues as housing and slum clearance, inflation, highways and airport construction, small business, the need of depressed areas, and the extension of minimum wage coverage and unemployment compensation benefits.

I would hope, Mr. Speaker, that in the cold light of post-election soul searching now going on in Republican ranks, the top Republican Party policymakers would prevail upon their congressional leaders to make substantial improvement in their party's urban legislative record by voting to support President Kennedy's constructive and realistic proposals in this important area. Only in this way can the GOP lay the foundation to make possible any effective appeal to city dwellers for support of Republican residential candidates in the future.

The analysis of GOP versus Democratic votes on urban issues follows:

Type of urban issue	1947–52						1953–60					
	Senate			House			Senate			House		
	Number of votes	Percent for—		Number of votes	Percent for—		Number of votes	Percent for—		Number of votes	Percent for—	
		Democrats	Republicans		Democrats	Republicans		Democrats	Republicans		Democrats	Republicans
1. Promotion of slum clearance and home financing	19	85	42	25	80	37	34	80	29	23	86	34
2. Legislation to curb inflation	40	83	34	27	81	39	4	81	26			
3. Legislation for highway and airport construction	8	70	29	2	99	82	11	93	37	9	85	58
4. Legislation to assist small business	9	75	44	3	84	36	7	75	12	3	92	66
5. Legislation to assist depressed areas							9	83	24	4	76	24
6. Expand minimum wage and unemployment compensation	6	64	47	7	69	28	20	72	30	10	78	53

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. BOLAND. Mr. Speaker, it is only natural and quite human that all peoples and nations celebrate their national independence day, and that that day should become their most important national holiday. They do this because they all prize the attainment of their freedom and independence as the culmination of their political and spiritual aspirations. To this the Greek people are no exception.

They have especial reason to celebrate their independence day as their national holiday because they were the first among all peoples to have and enjoy freedom and independence, and therefore were keenly appreciative of the value of real freedom. And when they regained it after the lapse of 2,000 years, they rightly regarded the beginning of their national free life, as the beginning of a new era for them. This, more than anything else, is perhaps the reason why they have observed the anniversary of their independence day, so solemnly within Greece, and abroad, and have celebrated it as their national holiday.

The daring deed of a handful of gallant Greeks that had its beginning 140 years ago, under the leadership of an archbishop of the church, has become the most momentous event in the history of modern Greece, standing out as a brilliant landmark in the history of the Greek people. The war of independence, waged intermittently for more than 7 years, at times was no more than one wholesale slaughter by the Turks almost leading to the enslavement and annihilation of the Greeks.

But through their uncommon gallantry and indomitable will to sacrifice their all, and with the effective aid of their friends in many lands, they finally wrenched victory out of certain defeat. All that to the glory and honor of the Greek people, and to the credit of their friends abroad. I gladly join Americans of Greek origin and Greeks everywhere in the celebration of this day, the 140th anniversary celebration of Greek Independence Day.

The Federal Judicial System

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. McCORMACK. Mr. Speaker, I am very happy to note that our colleague, the gentleman from New York [Mr. CELLER], chairman of the Committee on the Judiciary, has seen fit to send a very interesting communication to the Judicial Conference which is composed of the Chief Justice of the United States as Chairman, and the chief judges of the 11 judicial circuits and an elected judge of the district courts from each of those circuits.

This communication concerns itself with the supervision of the various Federal courts throughout the country. I remember when we passed—in 1939—section 332 of title 28 of the United States Code. It was our intention that the judicial councils, composed of judges from the various courts of appeals for each circuit, would oversee the operation of the judicial systems in the various district courts and circuits. It was to give autonomy to the local councils rather than to centralize such supervision by the Congress or by some other agency in Washington.

In life, judges are human; there has been evidence that the councils have not fully met the responsibilities imposed upon them by statute. While the great majority of our judges are scrupulously honest in the courtroom, it is evident that there are some judges who are arrogant, domineering, dictatorial, in fact, judicial tyrants. One such judge is one too many. Section 332 of title 28 of the United States Code reads as follows:

Each judicial council shall make all necessary orders for the effective and expeditious administration of the business of the courts within the circuit. The district judges shall promptly carry into effect all orders of the judicial council.

I know that following a previous admonition to the Judicial Conference on this very problem, a special committee on the responsibilities and powers of the judicial councils had been appointed and following Chairman CELLER's second communication that a report of that special committee was filed and adopted. Nonetheless, I do repeat that Congress must keep a watchful eye on this whole area.

If a vacuum exists, it is bound to be filled. Unless appropriate action is taken by the local judicial councils in performing the duties set forth, as stated above, Congress will be compelled to act.

The communication addressed by Chairman CELLER to the Chief Justice is as follows:

MARCH 10, 1961.

The CHIEF JUSTICE,
The Supreme Court,
Washington, D.C.

MY DEAR MR. CHIEF JUSTICE: I regret very much that I am unable to be present this morning at the opening of the Judicial Conference of the United States. Unfortunately, an important engagement arose suddenly which required my immediate attention in New York City. However, the message which I contemplated presenting to the Conference today is of such importance and urgency that I am writing to you to request you to read this letter to the members present at the Conference.

You will recall that on past occasions I have raised the question before the Judicial Conference of the organization and powers of the judicial councils. I was very gratified to learn that you had appointed a special committee to look into this question. I have been informed that this committee may report to the Conference during its current session and I am looking forward with great anxiety to its report.

At the outset, I wish to state that my interest and concern over this question arose from personal experience as chairman of the Committee on the Judiciary of the House of Representatives. At no time did anyone intercede with me to initiate the activities which I have pursued in this matter. On the contrary, during the course of legislative consideration of many of the laws which have been enacted to improve our Federal judicial system and to administration of justice, I have had problems presented to me which, in my judgment, should never have been permitted to exist and would never have come to the attention of the Congress if the judicial councils had exercised the powers and responsibilities conferred upon them by section 332 of title 28 of the United States Code.

For example, due to failure of proper direction of the Judicial Councils to provide appropriate geographic distribution of judicial talent there has arisen demands for additional districts and divisions in some circuits. If judges had been properly assigned to certain areas, I am confident there would have been no such demand. Some of the suggested changes are unnecessary and costly.

I do not wish to dwell on specific instances or individuals, but I can advise you that over

the course of the years several matters have been brought to my attention which have given me a great cause of concern. It was because of the undertone of dissatisfaction with the work of the Judicial Councils that I was motivated in presenting this problem to the Judicial Conference.

From my own personal experience and observation, I realize that by far, most of the members of the Federal judiciary are a hard-working, respected body of men. However, whenever the need for additional judges arises there is the immediate hue and cry concerning congestion and delay in our courts. If one goes back to 1906 when the American Bar Association first looked at the problem of court congestion and follows it down through the years to the present time, one finds the same criticism time and time again. Our courts are never criticized for their decisions but mostly for administrative deficiencies and excessive delay. It was these criticisms, together with the mounting public and professional impatience with the delay of justice, which created the necessary climate for reforms in Federal judicial administration. The act which created this body in 1922 and the act of 1939 setting up the Administrative Office of the U.S. Courts and the Judicial Councils of the circuits amply demonstrate the concern of the legislative branch of our Government with these problems of administration.

As one who actively participated in processing the act of 1939, I have no doubts as to the legislative intent of that law.

The legislative history, in my opinion, conclusively demonstrates that the major reliance for improving judicial administration was placed upon the voluntary cooperation of the courts rather than upon any powers of compulsion. There have been many fields and instances where major improvements in court organization have been accomplished by legislation, and here this has been accomplished through the Judicial Conference which, in turn, had consulted with the Councils throughout the country. I approve of such consideration and presentation. These instances demonstrate the value of both the Conference and the Councils when they function in accordance with the responsibilities which the Congress placed upon them.

I fully realize that this is a delicate question. I realized it in 1939 when section 332 was under consideration. I understand that there may be some doubts in the minds of some members of our Federal judicial system regarding the rather general and vague language of that statute. I can assure you that the drafting of that statute was deliberate in order to provide elasticity in the procedure to deal with the many and varied problems which the Congress contemplated would arise for the consideration by the judicial councils. Indeed, I recall that it was the considered judgment of the Congress that the judicial councils were, by their very nature, the proper agents for supervising our Federal courts. These councils know the needs arising out of local conditions. They can fit their actions to these needs. Such actions are necessary and desirable and, therefore, the power conferred on the councils by the Congress was purposely designed to permit them to adopt these powers to the local problems and necessities, but they were never designed to lie dormant, particularly in light of public impatience and criticism with the law's delay.

Let me make it clear that neither then nor now do I wish to see any interference with the judicial functions of our courts. I am a firm believer in the doctrine of separation of powers. However, the growth of this Nation, both politically and economically, has transformed the basic structure of our Federal judicial system. I do not have to tell you that judges are now doing much more than judging. Judges exercise a legislative function in recommending legislation to the Congress and in formulating procedural rules under the authority delegated by the Congress. They exercise an executive responsibility in supervising the many day-to-day tasks of operating the judicial establishment. As Mr. Justice Burton once remarked, "Judging is also administration."

It is my honest opinion that there is an urgent need for the judicial councils to start functioning immediately along the lines which I believe Congress intended them to do. If there are any doubts concerning the statute it behooves the Federal judges to resolve that question and make recommendations, if corrective legislative is necessary. On the other hand, if it is found that the statute is adequate, then there should be no toleration of further delay. Action, and quick action, is warranted, in my opinion, at this time. Here, I most reluctantly sound a warning. If there has been a vacuum in the exercise of these powers it must be filled now lest some other agency be delegated to fill it. I, under no circumstances, wish to see either the Congress or any agency selected by the Congress, or any individual for that matter, interfere or take over the administrative responsibilities of our judicial system. I believe the judges should do their own housekeeping, but do it they must or someone will do it for them.

The progress which has been made in improving our Federal judicial system over the past 20-odd years has been remarkable but we are still faced, as you realize, with criticisms and problems which must be met. At this time I believe the needs for solving these problems are more acute than ever because there is a greater awareness and acceptance by the public as to the validity of the criticisms. Aside from my own personal experience in dealing with the complaints of other Members of Congress, I merely point out the recent Cotter report as well as the report of the Senate Judiciary Subcommittee on Improvement in Judicial Machinery. Only last week during the course of the hearings before my subcommittee on my bill for additional judges, these criticisms could be heard. In the aggregate they toll a warning bell that this hesitation and delay on the part of the judicial councils must cease. I urge the Federal judges with all sincerity to do something about this matter and do it promptly. I assure them of all the help and cooperation I can give in assisting them to do that. I am confident that if they will help themselves the Congress will help them, too. But on the other hand, I am just as confident that if these judges do not do it someone will do it for them, to our mutual regret. I earnestly await their suggestions and their actions in this matter.

Sincerely yours,

EMANUEL CELLER,
Chairman.

Mrs. Clara B. Gonzales

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. MONTOYA. Mr. Speaker, Mrs. Clara B. Gonzales, reservation principal at the Zuni Pueblo, for the Bureau of Indian Affairs, Department of the Interior, is 1 of the 10 winners of the National Civil Service League Career Service Award for 1961.

The award was presented to Mrs. Gonzales by Nicholas Kelley, president of the National Civil Service League, on March 21. The citation on the scroll presented to her stated:

Mrs. Gonzales has planted in the hearts of the Zuni people a love and respect for education. When she came to the Zuni Pueblo very few of its members were in school. Now, largely because of her efforts, the percentage in schools and institutions of higher learning exceeds that of non-Indian communities on the periphery of the village. The Indian people do not hesitate to bring their problems to Mrs. Gonzales, so confident are they of her understanding and help. She has taken every opportunity to help them broaden their horizons. The Zuni people, as well as her coworkers, have a deep regard for Mrs. Gonzales because throughout her career the Zuni Pueblo has been her classroom; and the understanding, love, and affection for the Zuni people have been her basic textbook.

In announcing that Mrs. Gonzales had won the award, Interior Secretary Stewart L. Udall stated on March 13 that she is the first woman employee of the Interior Department and the first person from the ranks of the Bureau of Indian Affairs to receive this award presented annually to 10 outstanding Federal career service employees on the basis of competence, character, and outstanding achievements. Mrs. Gonzales has been a teacher at the Zuni Pueblo for nearly 38 years. She is credited with bringing Zuni school enrollment to nearly 100 percent.

Conservation of Our Water Resources

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. MACK. Mr. Speaker, I have been keenly interested in conserving our water supply and have supported programs for controlling our major river valleys. With the present rate of expansion I foresee a critical water shortage within the next 20 years unless we support a constructive program for controlling the flow of water in the major river valleys. It was encouraging to receive a resolution this week from the Cumberland County Board of Supervisors in recognition of this problem. For the benefit of my colleagues I wish to include this resolution with my remarks:

Whereas Cumberland County is primarily an agricultural area, and

Whereas said county is regularly subjected to alternate floods and droughts with the resulting economic loss to its people, and

Whereas this body is constituted for, and its duties involve, the welfare of these people: Now, therefore, be it

Resolved, That we approve the plans and activities of the Cumberland County chapter of the Wabash Valley Association in having secured the cooperation and assistance of the Federal Government, through the Corps of Army Engineers, in a project of soil and water conservation for the Embarrass River Watershed, and that, such notice also be forwarded to Senators DOUGLAS and DIRKSEN, and, to Congressman PETER MACK.

KENNETH KIRK,
County Clerk.

Major Issues Recommendations by Methodist Women

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. CASE of South Dakota. Mr. President, I wish to insert in the Appendix of the RECORD a news release, dated January 16, 1961, concerning recommendations and resolutions on some major issues that were voted by the Women's Division of Christian Service of the Methodist Church's Board of Missions, during an annual meeting in Buck Hill Falls, Pa.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

METHODIST WOMEN ACT ON SOCIAL-POLITICAL PROBLEMS

BUCK HILL FALLS, PA., January 16.—Recommendations and resolutions on some of the major national and international problems facing the United States of America and the world—from the use of farm surpluses to disarmament and nuclear testing—were voted today by the Women's Division of Christian Service of the Methodist Church's Board of Missions. The board is now in annual session here, attended by some 600 members from all parts of the Nation, and missionaries from some 25 nations.

Some of the actions taken by the Women's Division of Christian Service will be transmitted to governmental officials and agencies by Mrs. J. Fount Tillman, of Lewisburg, Tenn., national president; others will be sent to the 15,000 local church women's societies across the country for study and local action.

Our recommendation requests Congress to take a more active role in determining U.S. policy toward and within the U.N.—a determination the women say is now left almost entirely to the President and the State Department.

"We believe," said the recommendation, "that the Congress should create an active United Nations Affairs Committee which would discuss United States-United Nations affairs in relation to pending legislation or policies. It might be within the Foreign Affairs and Foreign Relations Committees and include all Members of the Congress who have served on U.S. delegations to the U.N. We believe that the position of the U.S. delegation must be raised so that it becomes a body with prestige. They should be people of such experience and ability that they can have a voice in formulating the positions upon which they will speak at the General Assembly. This would make use of their on-the-ground experience. To further increase the prestige of the delegation, Congress should authorize Cabinet rank for the Ambassador to the U.N.

CONSISTENT POLICY

"We believe it is important that the United States have a consistent policy toward the United Nations. Our lack of consistency along this line has been puzzling and frustrating to other nations. Sometimes we have taken action through the United Nations. Sometimes we have bypassed it.

"It would be helpful to have a well-articulated, consistent policy regarding (a) our willingness to vote for debate in the General Assembly on grievances presented by a country or discussion of other issues (including mainland China's membership in the U.N.), so that any available light can be brought to bear on the issues; and (b) our attitude toward 'colonialism' in general. More adequate funds must be made available to permit U.N. operation on behalf of peace wherever necessary.

The women also instructed their department of Christian Social Relations (Miss Thelma Stevens, executive secretary), to provide factual material concerning China, and the problems of its admission to the United Nations, so that all local church societies can study it and determine their own opinions on the subject.

In another resolution, the women's division called upon Congress to expand the work of the Senate Subcommittee on Disarmament and to provide such other resources and agencies as will achieve economic readjustment during the stages of disarmament. The economic aspects of disarmament must be confronted intelligently and courageouly. Economists assert that an economy based upon production for peaceful purposes is, in the long run, a much sounder economy than one based on arms.

CONDEMN BACTERIOLOGICAL WEAPONS

"We view with alarm," the women continued, "the programs by which our Government is making chemical and bacteriological weapons, and we condemn them as inhuman and contrary to the love of God revealed in Christ. We call upon our Government to transform such facilities as Fort Dietrich (Maryland) into centers for world health research. We urge Congress to hold hearings and give full opportunity for the opposition to be heard, on the implications of chemical, bacteriological, and radiological war."

In the field of civil rights it was voted that the women's division "call upon Methodist women everywhere to work toward achieving the basic principles of human freedom in the field of civil rights. The minimum goals to be hoped for must include: a fair employment practices law, the creation of a permanent Commission on Civil Rights and the complete elimination of barriers to voting through increased powers of the Civil Rights Commission to secure the necessary evidence and have power to enforce the law. The peaceful demonstrations for first-class citizenship which have recently taken place in many parts of this country are a signal to all of us to make good at long last the guarantees of our Constitution.

STATE CONTROL OF FUNDS

Approval was given by the women's division of the proposal for Federal aid to education, but with emphasis on the principle of State control of the funds nationally provided. Methodist women were urged to work in their States for the allocation of both Federal and State funds on a basis of nondiscrimination because of race, and in compliance with the Supreme Court decision of 1954.

Methodist and other women are urged to contact Senators and Congressmen in favor of enacting education aid legislation; and in local communities to work toward this end through boards of education, PTA's, newspapers, radio stations, and so forth.

"Fifty million Americans—more than a fourth of our people—have no insurance protection against the high cost of illness," noted the Methodist women. The problem is particularly acute among the 16 million Americans over 65 years old, and among disabled workers, widows and orphans. Most of these have low incomes and the elderly among them suffer two to three times as much illness as the rest of the population.

"Therefore, we urge that the Federal Government provide health protection for older people using the contributary machinery of the social security system for insurance covering hospital bills and other high cost medical services. Those of our older people who have never been eligible for social security coverage should have corresponding benefits from general tax revenues. We feel that there should be no pauper's oath for those receiving such benefits. We also urge that the Federal Government limit payment of these benefits to hospitals and nursing homes which have met the standards of the professional groups accrediting such institutions."

General approval was given to proposals to renew and expand basic law 480, under which farm surpluses in the United States of America have been distributed to some of the world's needy peoples through Government and voluntary relief organizations, including Church World Service.

But it was recommended that in the extension of this legislation, "the strings" be removed from programs dispensed through the Government so that the receiving nations can be free to make the decisions about how the payment that they make shall be used in their country. These programs no matter how imaginatively expanded will probably not be enough either to meet the world's need or to dispose of our surpluses.

FAMINE RELIEF

"The women's division, therefore notes with gratification the adoption by the U.N. General Assembly of the World Food Bank plan to relieve emergency famine situation which will be channeled through FAO. We urge that Congress develop legislation that makes it possible for the United States to cooperate fully with this important program. And we further urge Methodist women to familiarize themselves with this plan and with the 5-year freedom from hunger campaign.

"As one dramatic symbol of the U.S. full support of this freedom from hunger campaign, it is recommended that plans be set in motion wherever possible through U.N. channels for the sending of U.S. surplus foods to help relieve the famine stricken people on the mainland of China."

The Women's Division of Christian Service, in another report, noted with deep regret that the U.S. Congress has authorized a 5-year commemoration and observance of the century-old Civil War.

"Such an observance at this time in our Nation's history may well provide the means for stimulating divisive elements, stirring up slumbering sectionalism, and generating strife that can result in untold damage," said the women.

However, the report urged Methodist women to exert every effort to maintain the high caliber of emphasis which characterized the initial observance of the commemoration both in New York and in Lexington, Va. There, it was noted, the observance emphasized the great gains made during the century in the area of human freedom.

Federal Spending

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. HALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter received from Mr. D. D. Heter, civic affairs manager of the Springfield, Mo., Chamber of Commerce. If our country is to remain solvent, we cannot consistently spend more than our income. I think

Mr. Heter's letter is worthy of careful study by the American people:

MARCH 14, 1961.

The Honorable DURWARD G. HALL,
New House Office Building,
Washington, D.C.

DEAR SIR: I am sure that all Congressmen, if they used the factual rather than theoretical approach to our national problems, would agree that you cannot consistently spend more than you receive and remain financially sound. The day of reckoning must always come.

This being the case, why do not the Representatives of all the people take the necessary action to call a mortarium on all new spending and concentrate on making what we now have efficiently workable and financially sound. Can't this be done? Undoubtedly some toes will be stepped on but better this than continuing to spend ourselves out of existence to try to win votes at a later date.

Savings can be accomplished by a realistic approach in reviewing the funds requested for major national security, veterans' benefits, international affairs, commerce and housing, agriculture, labor and welfare, national resources and general government.

Further, economics can be insured by returning State functions to the States. Standardization of function for all the States is not a Federal right. Let's stop our march to socialism.

Let us stop trying to take care of people so they can take care of themselves.

This is a plea from just one little citizen of the 170 million, but a very fervent plea.

May I respectfully request that the above views be made a part of the CONGRESSIONAL RECORD of the 87th Congress.

Sincerely yours,

D. D. HETER.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DINGELL. Mr. Speaker, Byelorussia is hardly more than a geographic name today, almost lost in the huge and expansive Soviet Union. But 43 years ago this historic home of one of the oldest Slavic peoples was separated from the old czarist empire and its people proclaimed their independence. That was towards the end of the First World War, early in 1918.

The Byelorussian people, some 10 million hardy workers and gallant fighters, had been suffering under the oppressive czarist regime for centuries. Though they endured the heavy weight of the alien yoke, they retained their indomitable spirit of freedom, and they were always prepared to fight for its attainment. Their real chance came in 1918, after the overthrow of Russia's autocratic regime. Byelorussians were quick in taking advantage of this situation. They asserted their freedom, proclaimed their independence on March 25, and established the Byelorussian National Republic.

Thenceforth for almost 3 years Byelorussians divided their time between hard work and bitter struggle. They worked to rebuild their ravaged country and they fought against their foes on many fronts. But their enemies were too powerful, and one in particular among their foes proved fatal to their independence. The Soviet Red Army, reorganized and regrouped, attacked Byelorussia early in 1921 and overran the the country. Then it was incorporated into the Soviet Union. Thus ended the free and independent Byelorussian National Republic.

This brief 3-year period of Byelorussian history marks a turning point in the lives of Byelorussia's inhabitants. Though the happy and joyous period of freedom and independence was quite short, and vanished like a dream, its inspiring afterglow still survives in Byelorussia in the hearts of freedom-seeking Byelorussians. Today, on the 43d anniversary of their Independence Day, and 40 years after their enslavement under Communist totalitarian tyranny, the peoples of the free world still remember these devotees and gallant fighters for freedom.

Department of Agriculture Lamb-Buying Program

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. LANGEN. Mr. Speaker, the Department of Agriculture's recently announced lamb-buying program seems to be pretty much a matter of robbing Peter to pay Paul when viewed in the light of lamb imports. Thus far, the Department, by a program announced on February 27, 1961, in an attempt to improve prices, has acquired 4½ million pounds of lamb at a cost of $1¾ million. At the same time, we have imported over 14 million pounds of lamb at a cost of over $3½ million during the past 13 months.

The way the program is operating, the Department is buying lamb at about the same rate it is being imported. The latest purchase was 1,700,000 pounds, and we imported 1,600,000 pounds in January. First these imports are allowed to come in, and then the Department purchases them because of their bad effect on the domestic market. This must be one of the strangest applications of the quota and tariff system in history.

I certainly agree that net farm income needs improvement and that contributing commodities to nonprofit charitable institutions, as is being done with the purchased lamb, is a worthy means of distribution. But since all we are doing, in effect, is buying imports, we are wasting the taxpayers' money and giving the farmer no real or lasting help. The cost of the program, however, is charged to the farmer.

I am aware of the importance of international trade to international relations, and am in no way advocating a complete termination of farm imports. However, situations such as this one in lamb—and there are comparable ones in oats, barley, and rye, also—certainly point to the fact that a more sensible import policy is needed. The present policy is harming both the farmer and the taxpayer.

Foreign Aid Formula

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DEROUNIAN. Mr. Speaker, I submit for the attention of my colleagues the following excellent article by David Lawrence as it appeared in the New York Herald Tribune on March 22:

PEOPLE SEEN UNINFORMED ON ISSUES IN FOREIGN AID

(By David Lawrence)

WASHINGTON, March 21.—When are the people of the United States really going to be informed about the issues involved in spending billions of dollars for "foreign aid"?

President Kennedy is planning to pursue the same formula, with some minor modifications, that was used by the Republican and Democratic administrations preceding him. The idea is to grant funds and lend money on the theory that the United States has a humanitarian obligation to the poverty-stricken countries of the world. There is also an implication that, unless the United States helps these various countries, Soviet Russia will move in and take over.

The time is approaching, however, for a showdown on just how far the United States should go in extending foreign aid and what it should expect in return from the countries aided.

The biggest single factor that calls for full and thorough exposure is what may be termed "official blackmail." Government after government takes money from both sides. The moment the United States slows down its aid, there is a noticeable manifestation of interest in what the Communists may have to offer. High officials of such a government promptly arrange to visit Moscow, or threaten to do so. This is perhaps the favorite of all the tricks to impress America.

NEUTRALIST RESPECTABLE

Just why any government would want to be neutral as between communism and democracy is difficult to understand, but the word neutralist has suddenly become a most respectable term. There was a time when the difference between freedom and tyranny was clearly understood, and no persuasive reason was offered why any country should be neutral as between the two.

The fact is, moreover, that many countries in Latin America, as well as in Asia and Africa and even in Europe, today are convinced that, if they adopt a neutral position, the United States will come through with large sums of money.

Congress has been bewildered by the growing scope of America's foreign aid program. It is recognized, of course, that some appropriations should be made to strengthen the military position of the United States and of the Western countries in the so-called uncommitted areas. In certain instances money spent to help a national economy or

to build up local military forces is a good investment in security for the United States. But when the program reaches into the broader aspects of culture and education, it becomes far more controversial.

NATIONAL DEBT NOTED

If America did not have a national debt of nearly $300 billion and were operating under a balanced budget, and if taxes in the United States were not so burdensome, and if there were no recession in America with more than 5 million persons unemployed, it might sound reasonable for a part of the surplus bounty of the American people to be given away. But the question now is whether the United States can afford to be as generous in its foreign-aid program as it has been in the past.

Undoubtedly the Marshall plan paid off. It gave the nations of Europe needed support in recovering after the war. But this was, in a large sense, a military proposition. It was important for the United States to build allies in Europe. There is no such justification for the building up of neutrals, for instance, in Africa among countries who never will ally themselves with the United States or the West.

Under the circumstances, America may well be paying out funds to countries which will soon be strong enough to become important adjuncts of the Communist apparatus. This is the chance which the American people are taking. The idea now is being advanced that the Washington government should exact some assurances as to how the money will be spent and as to whether the countries will put their military forces at the disposal of the United States in the event of serious trouble with the Communists.

EGYPT'S STAND NOTED

Unless the taxpayers' money is being spent for the defense of the people of the United States, it is difficult to see how, in the long run, huge expenditures to countries which are playing both ends against the middle can be justified. There are countries like Egypt, for example, which permit the Communist apparatus to function inside their borders, and yet who want financial assistance from this country. The real question is whether the countries that are being assisted are truly friends of the United States or whether they are now or may later become a part of the Communist apparatus.

It is upon these fundamental, issues in the "foreign aid" problem that Congress is being urged to require a great deal of information before embarking upon the programs being recommended to it by the Kennedy administration.

Rome Went Out of Business

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DERWINSKI. Mr. Speaker, it has been my observation that a few newspapers which originate on the eastern seaboard have a dominating influence over the thinking of many Members of Congress. I have always thought that the grassroots philosophy expressed by the editors of weekly community newspapers throughout the country deserve equal attention. It is with this idea in mind that I submit for the study of the Members the editorial "Rome Went Out of Business," which appeared in the Palos Regional on March 16:

ROME WENT OUT OF BUSINESS

There is a common wish among people to peer into the future but the future cannot be visualized except through history—which often repeats itself. Due to the wide belief that the Federal Government should provide an endless list of benefits from welfare to education with centralized bureaucracy replacing local responsibility it is well to ponder possible results. The fate of the Roman Empire suggests what might happen to the United States.

The Encyclopedia Britannica says this about the decline and fall of the Roman Empire: "nothing could compensate for the lack of self-determination, and although during the first century and a half of imperial rule a flourishing local patriotism in some degree filled the place of the wider sentiment, this gradually sank into decay and became a pretext under cover of which the lower classes in the several communities took toll of their wealthier fellow citizens in the shape of public works, largesses amusements, etc., until the resources at the disposal of the rich ran dry, the communities themselves in many cases became insolvent * * * the organs of civic life became atrophied, political interest died out and the whole burden of administration, as well as that of defense, fell upon the shoulders of the bureaucracy, which proved unequal to the task. The gigantic bureaucarcy of the fourth century proved, in spite of its undoubted services, an intolerable weight upon the energies of the Empire."

History, let us remember, has a habit of repeating itself.

Byelorussian Independence Day

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DANIELS. Mr. Speaker, the fate and fortune of the Byelorussians have been almost blended with those of the people of Russia for a long time, but they have always striven to maintain their distinct ethnic identity and their undying love for freedom. Their firm determination to be free, and their readiness to sacrifice all their worldly possessions, even their lives for their ideals, has kept the spirit of freedom and independence alive among them. Though their oppressive overloads, the Russians, have done their worst to eradicate these fine traits, under oppression they have doubled their power of resistence and have succeeded in maintaining their identity. They have always wanted to regain their freedom, and in 1918 they had the opportunity to be independent.

When the decrepit czarist regime was overthrown during the First World War, the Byelorussians proclaimed their independence on March 25, 1918. Then they set up the Byelorussian National Republic with its democratic government under which some 10 million Byelorussians lived and worked happily for about 3 years. Then began the unhappy period in their national life. Early in 1921 the Red army attacked and overran the country, thus putting an end to independent Byelorussia. Soon the country was incorporated into the Soviet Union and the Byelorussians were ensalved under Soviet tyranny.

For 40 years these people have been enduring the oppressive Soviet regime, but they have not lost their love of freedom; they still cling to their national goal, that of attaining independence and freedom. On this 43d anniversary of their independence day let us hope that they will reach their goal and attain their national freedom.

Statement by the Civil War Centennial Commission of the State of New Jersey

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. ADDONIZIO. Mr. Speaker, the President's comments at his press conference last evening are most heartening to all who are disturbed at the insistence of the Executive Committee of the National Civil War Centennial Commission upon holding the fourth assembly in segregated Charleston in April.

In order to clarify the issue, I submit for the attention of my colleagues the following statement issued on March 22 by the Civil War Centennial Commission of the State of New Jersey. The facts speak for themselves:

The New Jersey Civil War Centennial Commission is still in hope that the wisdom of President Kennedy and other responsible statesmen will prevail, and that the National Civil War Centennial Commission will see fit to change the site of its fourth national assembly, scheduled for April 11–12 in Charleston, S.C.

The national commission's decision to stand pat is at best disillusioning. And, in the words of U.S. Senator CLIFFORD P. CASE, Republican, of New Jersey, it is "incredible."

From the outset, the national commission in its statements has doggedly refused to recognize its responsibility as a Federal agency, operating with funds derived from Congress and ultimately from the citizens of all 50 States.

In its formal statement yesterday, the national commission sidestepped a fundamental issue of principle. The commission cannot avoid responsibility for sponsoring the fourth national assembly in Charleston, and it cannot place blame on the discriminatory law and customs of the State of South Carolina.

The New Jersey commission, as well as other state commissions and individuals who have joined in its position, is convinced that the national commission is derelict in its duty to the people of the United States if it does not alter its stand immediately. The New Jersey Senate and General Assembly have both approved this stand by unanimous resolution.

The New Jersey commission wishes to clarify the following points which have been clouded or skirted by the national commission in statements issuing from that agency:

(a) The national commission has spent considerable time and effort in promoting and organizing the fourth national assembly. It has mailed out hundreds of press releases, invitations, and hotel registration forms. The assembly is a commission-sponsored function, entirely separate from the fireworks display being planned by South Caro-

lina authorities to celebrate the firing on Fort Sumter.

(b) Mrs. Madaline A. Williams did not formally apply for housing at the Francis Marion Hotel, nor did she complain to anyone about being rejected. All inquiries were originated and made by other persons connected with the New Jersey commission, with the knowledge and approval of Mrs. Williams. It was at a public meeting on March 9, 1961, that the commission's stand was publicized, and Mrs. Williams was one of the commission members voting in favor of the resolution.

(c) For more than a month, Mr. Karl S. Betts, executive director of the national commission, ignored repeated inquiries regarding Mrs. Williams' acceptance in Charleston. The queries were made by Mr. Everett J. Landers, executive director of the New Jersey Civil War Centennial Commission. It was not until March 8, 1961, that Mr. Landers initiated a call and spoke twice by phone to Mayor J. Palmer Gaillard of Charleston. After checking with authorities at the Francis Marion, Mayor Gaillard called back to report that Mrs. Williams' arrival at the hotel would be "very embarrassing to all concerned," and that she would not be permitted to live or eat at the hotel. The mayor reported Mrs. Williams would be permitted to attend business sessions of the assembly, but it could not be determined if she would be required to sit in a segregated area at that time.

(d) It is conceded that the national commission has "no authority or jurisdiction" to challenge the rights of South Carolina hotel keepers in the management of their properties, but the national commission does have the authority or jurisdiction to cancel the fourth national assembly forthwith, and to reschedule the program in a city which respects the birthright of all people of all races.

Any member of the national commission who had troubled to read Representative Hugh J. Addonizio's statement in the March 13, 1961, issue of the CONGRESSIONAL RECORD, entitled "Segregation Policies in Charleston, S.C.," could not have possibly misinterpreted the New Jersey position.

Mrs. Williams was one of hundreds of persons receiving an invitation and registration forms from the national commission. Since there was no question regarding race or color on the form, it is evident that her application would have been honored until the moment she walked up to the room clerk to claim her key. At that time it would become apparent that "rooms have been oversubscribed."

Early but futile inquiries were made by this commission to determine Mrs. Williams' position as an official New Jersey delegate because it was hoped that the acceptance of Mrs. Williams as a first class citizen in Charleston would have been a glorious way of opening the centennial and proving to all humanity that the terrible American Civil War was really not waged in vain.

Veterans' Insurance: Mr. Teague of Texas, and Mr. Gross

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. TEAGUE of Texas. Mr. Speaker, on March 21, at the time of the debate on the bill H.R. 4539, which proposes to pay a special dividend to holders of so-called RS and W insurance, the gentleman from Iowa [Mr. GROSS] and I engaged in colloquy concerning the general subject of insurance.

The question was raised as to why dividends on World War II insurance were so high. I have since written a letter to the gentleman from Iowa explaining in some detail my reasons. Under leave to extend my remarks I include the text of that letter:

MARCH 22, 1961.

Hon. H. R. GROSS,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR COLLEAGUE: Apropos of the discussion and colloquy between us on the Floor on yesterday concerning Veterans' Administration insurance, I thought I should write you concerning some of the background of this subject.

U.S. Government life insurance which was enacted for the benefit of World War I veterans has the premium rates based on the American Experience Table Mortality with interest at 3½ percent. This is set forth in section 743, title 38.

Section 702 of title 38 provides that premium rates for national service life insurance, the World War II variety, shall be the net rates based upon the American Experience Table Mortality and interest at 3 percent per annum. You will note, of course, that both of these provisions are set by law, and in the case of World War I, has been in effect close to 40 years and World War II since October, 1940. Insurance is the contract and may be subject to a suit. Any policyholder who is dissatisfied with a decision of the Veterans' Administration (or for that matter any beneficiary) may sue the Government in the nearest appropriate district court. You will readily appreciate that the Congress thus is without power to make a mandatory change of the mortality table just as a private insurance company cannot change the rules in the middle of the game; neither can the Government. If you attempted to do so, I think one suit would be sufficient to establish the fact that the Government is without power to change the mortality tables.

I cite all of this because the mortality table and the lengthened lifespan are the reasons for the unusually high dividends which World War I veterans and World War II veterans enjoy. There is nothing that the Government or the Veterans' Administration can do about either of these facts. I am sure you appreciate this.

Since the enactment of the two acts that I referred to above, the Congress has generally tried to put insurance, which has been written in recent years, on a more realistic mortality table basis. I cite the insurance written as "RS" and "W." "RS" insurance was not expected to produce any dividends and was made nonparticipating, but it did produce a surplus and therefore we had the equitable duty to distribute it as a dividend. This is the reason for the passage on yesterday of H.R. 4539. The experience of the Veterans' Administration in death claims has been so favorable on this insurance that approximately $65 million was accumulated.

The so-called "W" Insurance which was provided by Public Law 85–896 sets the premium on so-called X–18 table and you will be glad to know that this table of mortality is accomplishing its aim that Congress had for it; namely, providing low cost nonparticipating insurance.

I hope to introduce, as I said yesterday, a bill shortly which will provide for the payment of the administrative expenses for the operation of the insurance program by deductions from the dividends available to World War I and World War II veterans. There is a considerable question whether this can be done, since as I have indicated above the insurance is a contract. I plan to submit this to the Veterans' Administration as soon as I draft it, and also to the Attorney General so that the constitutional question can be resolved.

You can readily tell, of course, that I feel that there is no easy solution to this problem. If you care to introduce legislation which you think will correct it in any way, I'll be happy to request departmental reports immediately and see that you get a public hearing at an early date at which time you can present your point of view in the fullest possible manner. I would not limit this to insurance but will offer you the same opportunity on any matter coming within the jurisdiction of this committee.

Very truly yours,

OLIN E. TEAGUE,
Chairman.

More Truth Than Realized

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DERWINSKI. Mr. Speaker, recently one of the dedicated community newspapers in my district, the Desplaines Valley News, directed their readers' attention to certain local conditions but in the process discussed in a frank manner issues which we face here in Washington. I therefore feel this editorial is worthy of scrutiny by Members of the Congress:

MORE TRUTH THAN REALIZED

Chicago's Mayor Daley defended his proposed 10 percent property tax rate increase facing city residents on the grounds that "taxes are increasing in all areas of government because people are demanding more services."

Mayor Daley pinpoints the real reason for tax hikes with that statement, for since the time the American Indians drew up treaties with the Federal Government in return for some Federal service, the American people have caught the habit of looking to the Great White Father in Washington for the solution to all their troubles.

More and more people feel that handing the Federal Government their individual responsibilities or community duties instantly frees them of further obligations and also any financial cost.

GOLDEN PROMISES NEED FINANCING

At each presidential election, both political party candidates promise golden benefits for a vote, and when elections are over, various pressure groups operate to make the party hold to its promises.

The current administration is carrying the weight of a large number of individual responsibilities and is enlarging its operations into State and community affairs at every opportunity.

Federal aid to education has become an issue at the grade school level to such an extent that parochial and private schools are part of the problem. Everyone wants a benefit, but everyone complains when the taxes zoom higher to pay for such benefits.

Housing in the past years has reached the highest level in American history, yet Federal aid is being asked to further expand

housing by virtue of slum clearance grants, low cost loans, and federally operated housing developments.

Unemployment and old-age security benefits are constantly being hiked to the extent that the worker's take-home pay is practically as much as the deductions taken for the various benefits.

So health hospitalization benefits are demanded. How the costs are to be paid without further income-tax hikes or payroll deductions is difficult to say.

Streets and roads were a township or community problem. Suddenly the Federal Government moved in and new toll roads and new bureaus are added to the Washington governmental responsibilities.

Recently a large number of volunteers are asking to enroll in an administration Peace Corps plan, mainly for duty overseas.

Yet, both the Army and Navy must draft youths for overseas duty at higher salaries than the Peace Corps will offer. Perhaps the armed services will find that they had been using the wrong idealistic and semantic approach to the problem of enlisting youth for duty.

MORE FEDERAL BUREAUS CREATED

The Peace Corps plan will mean that another Federal bureau will be created, and more obligations assumed.

Those familiar with Federal operations know that there are endless forms to fill out and endless investigations to undergo before they receive a dime.

More Federal employees must be hired to process various project applications or requests. More funds will be necessary to pay those employees and finance the projects.

So the revenue department asks for a tax hike. People scream to the heavens.

Pity they don't scream as loudly when the Government proposes handing out the benefits.

Phrasing Daley's truism another way, one can find that everyone tries to get something for nothing, but few are willing to dig into their pocket to pay for the same thing. Everyone wants the ride, but nobody wants to pay the driver.

Secretary Udall Addresses North American Wildlife and Natural Resources Conference

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an address by Secretary of the Interior Stewart L. Udall at 26th North American Wildlife and Natural Resources Conferences, Washington, D.C., March 6, 1961:

ADDRESS BY SECRETARY OF THE INTERIOR STEWART L. UDALL AT 26TH NORTH AMERICAN WILDLIFE AND NATURAL RESOURCES CONFERENCE, WASHINGTON, D.C., MARCH 6, 1961

I am very glad that you have given me this opportunity to address the General Session of this, the 26th North American Wildlife and Natural Resources Conference. I enjoy talking to people whose business is my business and whose interests are my interests, especially as we are about to share what I hope will prove to be some of the most far-reaching and productive years in the history of the conservation movement in this country.

The theme of this conference, "Planning for Population Pressures," is to me indicative of the breadth of purpose—and depth of understanding—of the conference's sponsors and participants.

Not so long ago, as time is reckoned, our natural resources appeared so limitless that people were no problem at all. As recently as the middle of the last century the French observer, de Tocqueville, was able to write of "that continent which still presents, as it did in the primeval time, rivers that rise from never-failing sources, green and moist solitudes, and limitless fields which the plowshare of the husbandman has never turned. Such is the admirable position of the new world that man has no other enemy than himself."

But man did turn out to be his own worst enemy, and all too soon it became the conservationist's mission to protect and preserve our land, water, and wildlife from the barren consequences of man's conviction that he held a special place in creation and that the land and its creatures were expendable. The conservation movement has—to its good fortune—had great champions in its hours of greatest need. With almost providential timing—men of extraordinary vigor and vision have taken up the cause of conservation and made it their own. To the wise counsel of Gifford Pinchot, John Muir, the two Roosevelts, and Harold Ickes—to name but a few—this generation owes a profound debt of gratitude. But more often than not their advice went unheeded.

Only four generations after de Tocqueville's visit to the "primeval continent" much of our land lay eroded. Many of our once vast forests were harvested wantonly and our great rivers ran unharnessed, and polluted, to the sea. It was not until the administration of Franklin D. Roosevelt that the full development of our land and water resources and the careful protection of perishable natural assets truly became major expressions of national policy.

But with the coming of World War II and troubled times abroad, the attention of the public and of succeeding administrations was largely diverted from our own land. The Department of the Interior—until that time a prime mover in national affairs—slowly settled into a rut of lackluster performance, content to let others shape the country and the ideas which guided it. It has now been more than 20 years since the United States has engaged in any massive and sustained national conservation effort. The broad programs initiated by Franklin Roosevelt—the Civilian Conservation Corps, reforestation of public lands, sustained soil and water conservation measures—have either been allowed to lapse or to drift along on the momentum of the past.

Yet it is precisely those same twenty years that have fundamentally changed what Thomas Jefferson called the face and character of our land. Hundreds of thousands have pushed out from the cities into the countryside—a movement that has inevitably created vast stretches of urban sprawl.

The talk today is of overurbanization, exploding population, and vanishing countryside. And it would seem that this is only the beginning. Inevitably we, as managers of our natural resources, are faced with acute new responsibilities. We are today in a state of long-term crisis. Although we rarely concede the point, our modern industrial society depends for its survival on an equilibrium between man and nature. As Aldo Leopold, that most perceptive and eloquent conservation prophet, once said:

"Civilization is not the enslavement of a stable and constant earth. It is the state of mutual and interdependent cooperation between human animals, other animals, plants and soils, which may be disrupted at any moment by the failure of any one of them."

We have today a new dimension of urgency in the dependence of man on nature: I refer to the need for the human animal to recreate itself in nature. The necessity to meet the outdoor needs of our people now and in the future will in all likelihood be the sharpest and most consistent pressure on our land, water and forests in the years ahead.

The overriding mandate to conservationists today is to preserve the natural habitat of man—to preserve it against the onslaught of bulldozers, cement mixers and subdividers. Because no matter how seemingly industrialized and civilized man has become over the past two centures, he is biologically and temperamentally rooted in the soil. To allow ourselves to be cut off from our relationship with the earth, from our relationship with mountains and lakes, forests and open places, might well cause a fundamental change in our national character.

Never before has the need for imaginative and truly national leadership been as great as it is today. On the one hand we have an almost insatiable and evergrowing population. On the other hand, a limited reservoir of land and its resources. In between, as arbiter so to speak, we have a large group of dedicated and highly trained men such as those of you here today. The need clearly is for leadership in the very highest places of our Government so that we might define our objectives and proceed posthaste with meaningful planning—and action. It is therefore a matter of satisfaction that President Kennedy, in his special message to Congress on natural resources, has set forth a charter under which all of us can work with all the ingenuity, energy, intuition, and enthusiasm we can muster.

For, in my opinion, never before has a President of the United States given such a broad and comprehensive mandate to conservation policymakers. Particularly noteworthy is that section of the President's message which deals with recreation. It is significant indeed that for the first time in history the recreation potential of our land and water has been put on a par with, say the hydoelectric potential of our great rivers. Surely every conservationist who read the President's message must have felt a quickening of his pulse at the vast opportunities which we can achieve under this broad Presidential charter. I think I can safely say that my associates and I at the Department of the Interior felt a surge of purpose and momentum. That very night we sat down and began to assemble our plans and programs, with the realization that now, for the first time, we could put together a truly national program for the wise development of our resources including the acquisition of still unspoiled and water in every section of this country.

It is still too early to present here anything except a broad outline of the principles and objectives which will dominate the thinking of the new Administration.

We are first of all taking a hard new look at existing programs within the National Park Service, the Bureau of Land Management, the Fish and Wildlife Service, the Indian Bureau, and the Bureau of Reclamation. We are, for example, reassessing the objectives of Mission 66. There has been some concern on the part of conservationists whether some of our national parks are not being overdeveloped at the expense of their unspoiled grandeur. We are giving these considerations attention, area by area.

As you know, the administration has ordered an 18-month moratorium on the filing

of nonmineral claims on our public domain. Among the advantages to be gained from this breathing spell is the opportunity to prepare an inventory of the recreational opportunities offered by the public domain to all. Those areas which offer exceptional opportunities must be made available, through proper development, to the men and women who own the land.

Perhaps no other outdoor sport has grown as much over the past decade as has boating and here Federal reservoirs offer opportunities which often did not exist before. The construction of Tiber Dam in Montana, for example, created Tiber Reservoir where on a typical Sunday 300 boats were counted and where on the opening day of the trout season 1,750 fishermen caught 5,000 rainbow trout. But in the past recreational values of Federal reservoirs have received altogether too little attention. It is our intention to prepare plans to fully utilize recreational opportunities of new and existing reservoirs and to seek appropriations for their development.

We are giving very careful study on how we can speed up the vital wetlands acquisition program in the Fish and Wildlife Service.

We have been charged by the President to formulate plans for new starts. Obviously, a national program of this kind does not mean the acquisition of new Federal parks and recreational areas only. Inevitably, and most importantly, such a program must include devices for encouraging the States to develop land acquisition programs of their own.

The need is for a balanced program of National and State parks—wildlife preserves and local recreation areas. Our great national parks represent one of the few remaining opportunities for the leisurely enjoyment and admiration of magnificent landscapes.

But America's families should be able to spend a day in the outdoors—within an easy drive of their homes—whether they are picnickers, hunters, fishermen, or just looking for a place in the sun. They should not have to rely on the Federal Government for this, but rather on their own States and communities. And not so incidentally, such State areas would take much of the pressure off our national parks which now must take the impact of millions of visitors each year, some of them with only a casual interest in their significance and unique splendor.

This will be a real challenge to our States—and one that they must meet for the benefit of their citizens. Already some States—such as New York and California—have led the way with legislative programs or studies which point the way for all.

We hope to encourage not only State programs but joint ventures between neighboring States to acquire relatively large open spaces near cities where recreation land is most needed and hardest to come by.

We are in the process of finishing an inventory of areas of great scenic beauty which should become a part of the national park system. At the same time, we are giving a great deal of thought to whether some of these new national parks and new national seashores should not be managed as year-round recreational areas. It may well be that some areas whose beauty is fragile will serve only as living nature centers. The best management of other areas, however, may well allow more vigorous use, and be opened up to hunters, for example. We will decide in each case how to manage each area for its own best interest and for the interests of those who visit them now and in the generations to come.

I am especially eager to see that a part of the land adjoining our great rivers and streams be set aside for outdoor recreation. Such land offers unparalleled opportunities for the active enjoyment of the outdoors.

We are currently weighing various incentive programs to make it worthwhile for private landowners to open up their land to hunters, fishermen, and others. Programs of this kind are, of course, especially needed in the Northeast and Midwest where almost all land is privately owned.

And, as you know, this administration has urged the enactment of a wilderness protection bill, similar to the one now under consideration by the Congress.

I realize that we are about to undertake a great deal and I also realize that on each particular proposal we are going to receive encouragement from some, and criticism from others. We expect to rely substantially on the findings of the Outdoor Recreation Resources Review Commission as they become available and I intend to keep in close touch with the Commission as our plans develop. We are determined to do the best we can in consultation with all who have a working interest in these matters and we are equally determined to get the job done. The land which we save now is likely all that ever can be saved, and I know that I speak for millions of Americans when I say that this generation is willing to make the sacrifices to insure a good life for our children and grandchildren. As President Kennedy said in his resources message: "We cannot delude ourselves, we must understand our resources problems, and we must face up to them now. The task is large but it will be done."

The Chance for Conservation

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the CONGRESSIONAL RECORD an address by Mr. Ira N. Gabrielson, president, Wildlife Management Institute.

THE CHANCE FOR CONSERVATION

(By Ira N. Gabrielson)

Today's opening session of the North American Wildlife and Natural Resources Conference has a striking similarity with that of the conference held here 8 years ago. The national administration had passed into different custody in 1953. A new Secretary of the Interior delivered his first official public speech on natural resources at the 18th conference. In speaking, he reviewed the responsibilities of his Department and expressed hope for accomplishment.

This morning we had the honor and pleasure of the participation of Stewart L. Udall, Secretary of the Interior under a new administration. He, too, has expressed awareness of the Department's responsibilities in the field of natural resources and has voiced determination to overcome the many wildlife, park, public lands and other problems that concern all of us.

Eight years ago I observed that on the change of administrations, Washington was crowded with representatives of special interest groups who were soliciting support for efforts to get profitable use of the Nation's publicly owned natural resources. Everyone in this room is familiar with the self-seeking proposals that were advanced. It is history now that few succeeded and, in the process of their rejection, conservation emerged as a persuasive and tangible voice for the restoration and improved management of the country's natural resources.

Unlike 1953, many present obstacles to natural resources accomplishment are not entirely private versus public interests, but are conflicts of objectives within agencies of the Federal Government. These differences are not of recent origin, to be sure, but in the last few years they have become clearly visible to the public eye. Most represent fundamental policy and organization questions, which must be resolved if avowed natural resource goals are to be achieved.

Before commenting on the apparent inconsistencies within Government, I want to call attention to a substantial dissimilarity between today's session and that of 8 years ago. At no other time in the early days of a new administration, and at no time during the life of most, has a President sent such a compelling and comprehensive statement of natural resources problems and opportunities to the Congress. Most of us knew it was being developed, but few dared to hope that it would be so complete.

Perhaps less should not have been anticipated, for conservation is now a vigorous force in this country. The 1960 national political campaign marked the first time that major conservation groups were invited to appear before the platform committees of both parties. Most accepted, and their advice and suggestions are evident in the platform documents as well as in President Kennedy's natural resources message of February 23. Get a copy and study it if you have not done so already. Ask your Senator or Congressman for House Document No. 94.

The lack of centralized review of agency policies and programs for water, forest, park, public land, wildlife, and other resources is responsible for contradiction in the Federal effort. Special commissions have undertaken various investigations in the past, but their brief assignments have been limited in scope. Another drawback is that Congress rarely is eager to implement commission recommendations.

What has become almost a traditional practice of Government is that the larger agencies are able to obtain essential program support without too much difficulty. Equally deserving, but less influential, agencies must strive to justify their requests, and they are the first to be cut when reductions are made. This situation creates and perpetuates unfortunate imbalances in resource activities.

The President's message reveals that an Advisory Committee on Natural Resources will be formed within his Council of Economic Advisers. This parallels legislative proposals which seek a natural resources advisory group in the Executive Office. Extreme care must be exercised in appointing any such Advisory Committee so that all natural resources are represented. Disproportionate emphasis would result in further expansion of present inequities.

Water is discussed in a recent report of the Senate select committee, which recommends immediate action to prepare for ever-mounting demands. The President acknowledged this problem in his message. Two aspects of immediate concern to conservationists include the expansion and strengthening of Federal water pollution abatement activities and the renunciation of the previous administration's "no new starts" policy for water resources development.

This Congress will consider proposals for significantly expanding the existing Federal pollution control program. The public is demanding that the Federal Government recognize and accept its full share of responsibility in this vital matter. The President's message, like a number of bills that

have been introduced, calls for greater assistance to State and regional programs, expansion of grants-in-aid to municipalities for the construction of State-approved sewage-treatment facilities, accelerated research, and broader enforcement.

The suggestion for creating a water pollution control agency in the Department of Health, Education, and Welfare is in line with public thinking. That important activity must be taken out of the fifth subbasement of that large agency. Water pollution prevention must have equal rank with or even priority over flood control, navigation, and many other types of water programs. In addition, there should be greater research efforts to find more effective and cheaper methods of keeping pollutants out of our streams.

It is hoped that in rejecting the "no new starts" policy, the administration will not unleash projects that will destroy important resources. Projects made possible by the expenditure of public funds should be made to produce benefits public in scope. Projects which destroy or greatly impair existing resources, for example, those that threaten valuable salmon runs on the Columbia, should not be authorized or constructed until safe fish passage is worked out. Public access to water projects, shoreline recreation, fish and wildlife, and the provision of conservation storage pools must be considered. The Federal Power Commission should be forced to recognize that recreation, fisheries, and wildlife are valued by Americans, and that their continued sacrifice at FPC-licensed projects is not in the public interest.

Long-sought reorientation of the Bureau of Land Management programs has been much in the public view in recent weeks. The millions of acres administered by that agency never have approached their capacity to produce national benefit. Many of you know from personal experience that the BLM is dominated—and frustrated—by one small group of resource users. Requests for appropriations for the worthwhile programs that dedicated employees have sought to initiate invariably run aground. Most get no further than the front office. Few persons are aware of the resource opportunities that are being wasted, because that agency has never been permitted to state its case. Appropriations for BLM and for other resources agencies are investments in the future welfare of the country. They will be repaid many times over in coming years. Efforts to make the BLM a land management agency of multiple interests will be supported by all conservationists.

Retention of wetlands of primary importance to waterfowl in the tristate region of Minnesota and the Dakotas requires forthright action. Federal activities in that area, which is the prime waterfowl breeding and nesting habitat in the United States, exemplify the pointlessness of interagency contradiction. Responsibility for waterfowl preservation is vested in the Department of the Interior. Yet the technical and financial assistance programs of the Department of Agriculture are accelerating the destruction of good wetlands there faster than it can be acquired.

The widely publicized treaty joined in by the two agencies last summer held out tentative hope for progress. The Fish and Wildlife Service was to inspect potholes proposed for drainage and to recommend those that should be saved because of their importance to the national waterfowl program. This was done in 12 of the 90 counties in the three-State area. Of 1,629 potholes proposed for drainage and certified as eligible for Federal assistance by the Soil Conservation Service, 553 were recommended for preservation. Only 128—less than one-quarter—were saved. Privately owned waterfowl habitat will persist only if landowners can receive incentives to retain productive wetlands in their natural condition. A program must be developed without delay.

Proceeds from the sale of duck stamps cannot finance a large enough land acquisition program. The annual income is much too small for the ambitious action that is needed. The best plan that has been suggested is the advancing of $150 million by the Federal Government which the Fish and Wildlife Service could use to buy or lease land as rapidly as possible. Future receipts into the duck stamp fund would be pledged for repayment of the purchase-money loan.

Another must is that the United States initiate action with Canada and Mexico to explore opportunities for preserving vital waterfowl habitat in those countries. The State Department needs to be alerted to the serious situation that has developed with respect to the destruction of waterfowl habitat and the need for mutual action. Proposed developments, particularly in Canada, have wildlife leaders in both countries deeply concerned. Federal and Dominican leadership must be exerted in this important matter.

An interagency conflict that often occupies the headlines is the one between the Interior and Agriculture Departments over the use of toxic chemicals in large-scale plant and animal pest control programs. Most of you know the unyielding positions held by personnel of the two departments. The debates about the effects on wildlife and fish of the billions of pounds of highly toxic materials that are used annually are complex and unending, but they do emphasize one paramount point. Entirely too little is known about the real impact of these poisons on man, livestock, soil organisms, fish, wildlife, and all other living creatures. Chemical control programs receive millions of dollars of support, but the research work of both departments limps along on woefully inadequate budgets.

Pesticide research must be expanded. Future decisions cannot be made without necessary information. Much more attention should be given to the natural biological control of insects, the environmental factors that influence population outbreaks, and the useful management techniques. Little has been done in this challenging field in this country, but certain European experiments show considerable promise. We should insist upon knowing the harm that may be done by broadcasting huge quantities of powerful poisons over our lands and waters. Lack of knowledge can be serious.

A blueprint was prepared for recreation and fish and wildlife programs on the national forests a few years ago. Regardless or how good it might be, the program schedule cannot be met unless adequate appropriations are provided. The Forest Service also should seek additional funds so that it can carry out big-game habitat improvement on the national forests in line with its expressed intention.

The President's message made clear that he was instructing the Secretaries of Agriculture and Interior and other appropriate Federal, State, and local officials and private leaders to formulate a Federal recreational lands program. An objective survey should determine where additional national parks, forests, and seashore areas are desirable. Care should be taken to select the right areas to make sure that their designation as forests, parks, or seashores takes into full account the public need and their capacity to serve that need in future years.

Other important matters demand immediate consideration. These include the complex problem of protecting Rainbow Bridge National Monument in Utah from the rising waters behind Glen Canyon Dam. This problem presents a threat to the half-century concept of the sanctity of the national park system. Its solution is made difficult by the contradictory positions taken by Congress. The act which authorized Glen Canyon Dam bars any dam or reservoir from violating any national park units. Congress, in a complete turnabout, subsequently refused to appropriate funds for the necessary protective works.

This is the fifth year that a national wilderness bill has been before Congress. Extensive hearings have been held in Washington and in the field. The original measure has been modified in order to incorporate suggestions that have been received and to make crystal clear that the administrative prerogatives of existing agencies will not be hampered. I doubt that those who continue to oppose the wilderness bill have read it or studied the hearing record. Communications between the Washington and field offices of one Federal resources agency also appear to need repair. Field personnel have been giving speeches in opposition to the wilderness bill at a time when the central office is on record in favor of it.

This proposal has been misrepresented more than any bill that has been before Congress in many years. Those who continue to misrepresent and oppose it appparently do so because they have designs on coveted value in the wilderness areas of our national forests, parks, and wildlife refuges. The wilderness bill has the President's support. It has the people's support, and it merits immediate approval by Congress.

One of the biggest boons to wildlife and to the building of precious soil fertility and moisture against a time of actual need is the conservation reserve program. Congress denied its extension last year. Only specious arguments can be used in attempting to justify the expensive production of tremendous volumes of unneeded agricultural products and the sacrifice of soil nutrients, moisture, and wildlife habitat. A rational plan for land retirement should be included in any farm program that is developed.

Affirmative action on the Tule Lake and Lower Klamath National Wildlife Refuges has been avoided for years. Those refuges have been compromised to the point where their fate and that of the birds using them depends on preserving the acreage that remains. Which is the most important—a few more homesteads or the waterfowl resources of the Pacific flyway?

I have touched on a number of the major conservation issues. Most are outlined in the President's message. Remember that they represent unfinished work. Listing them on paper means little if you and I and other conservationists fail to work vigorously for their adoption. Executive Office and departmental directives must be prepared and implemented, and legislative proposals drafted, introduced, and favorable congressional action obtained. All this lies ahead.

The paints merely have been mixed. Now they must be applied to the canvas. Only when we get our shoulders to the wheel, as we have done in the past, will there be a chance for a real advance in natural resources management.

Proposed U.S. Host Corps

EXTENSION OF REMARKS

OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, March 24, 1961

Mr. CARROLL. Mr. President, along with a number of other Senators rep-

resenting all parts of the United States I have cosponsored S. 610, introduced by the distinguished senior Senator from Washington [Mr. MAGNUSON]. The bill, as we know, would put the U.S. Government actively on the job of encouraging foreign tourists to come to our shores. It is hoped that this measure would help the United States curb its outflow of dollars and gold, stimulate business in almost every State and improve worldwide understanding of our country and people.

There are problems involved in seeking a mass foreign market for our tourist attractions. Mr. Luther Hodges, our Secretary of Commerce, pointed to some of these problems in a talk delivered this week. He is concerned, and rightly, with the language barrier and with the kind of hospitality we offer our visitors from abroad.

I am happy to be able to say that a woman from my State of Colorado has been working on the very same problem, and that she has what seems to be a most sensible, creative plan.

She is Mrs. Mable Grimes, a retired but vigorous Denver businesswoman. Mrs. Grimes came to Washington a couple of weeks ago, having read about S. 610 and its almost identical predecessor, S. 3102 of the 86th Congress, which I also was privileged to cosponsor. She had an idea which she put into her own words in a memorandum prepared at the suggestion of Representative BYRON G. ROGERS of Colorado and myself. She personally delivered the memorandum to the Department of Commerce, and went on her way—an intelligent, interested citizen seeking nothing for herself but hoping to help her country.

One of the exciting innovations of the Kennedy administration to date is its resourcefulness in harnessing the energies of Americans who want to do something for their country in this era of great peril and change. To the plaintive question, "But what can I do?" the President has replied with creation of the Peace Corps. The press tells us that he may soon follow up with a Youth Conservation Corps, another proposal originated by the distinguished senior Senator from Minnesota [Mr. HUMPHREY], and one which it has been my privilege to cosponsor for several years.

I suggest that Mrs. Grimes and Secretary Hodges have hit on a way of using the untapped talents of our mature citizens in the interest of our country. Americans can trace their ancestry to every part of this globe. Great numbers of Americans are proficient in the languages of their ancestors; many others have learned foreign languages and would like to keep up their proficiency.

This, I submit, could be a new corps—our "Host Corps"—which could utilize the priceless American resources of natural, unaffected friendship and hospitality in greeting foreign visitors and making them feel at home here.

Unlike the Peace Corps and the Conservation Corps, the Host Corps members would stay at home, remain with their families and their normal pursuits, but stand in readiness to make their time available on short notice to travelers from other lands. I see this Host Corps as an excellent opportunity to expand the vistas opened up by S. 610.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Evening Star of Wednesday, March 22, together with the covering letter for Secretary Hodges and the memorandum prepared by Mrs. Mable Grimes, of Denver, Colo.

There being no objection, the article, letter, and statement were ordered to be printed in the RECORD, as follows:

TOURIST PROBLEM HERE—WE JUST SPEAK ENGLISH

(By Bernard Gwertzman)

An Italian businessman, a German teacher, a French lawyer, and a Spanish physician all sit down for lunch in a downtown Washington restaurant. None speaks English. Will they get good service?

This was one of the problems posed today by Commerce Secretary Hodges.

An increase of foreign visitors can be expected to America soon, Secretary Hodges said in a speech to a convention of State planners here, but will the visitors go home contented?

"We must devise ways of overcoming the language barrier," he said, so that a foreign visitor "will be able to buy a meal in a restaurant, get service in his hotel, and understand what he is seeing at a historic site or a commercial attraction."

This will require some effort by local businessmen and tourist agencies, not accustomed to handling foreign travelers, he said.

Menus will have to be printed in several languages, directories established for hotels, restaurants, and other facilities.

"Hotel associations and chambers of commerce can compile lists of people in their communities who have foreign language abilities and might be happy to serve as guides for touring groups," he suggested.

"Where guides who speak other languages are not available, it might be possible to print guidebooks or pamphlets explaining what the tourist will be seeing at various points on a tour of a particular attraction."

"State development agencies have done an excellent job of promoting travel to their States from other States, but they have rarely attempted to tap the potential for travel from other countries," he said.

An effort is being made by Government officials to spur tourism here to cut some of the $1 billion balance-of-payments deficit caused by the numbers of American tourists abroad—twice the number of foreign visitors here.

DENVER, COLO.

HON. LUTHER HODGES,
Secretary of Commerce,
Department of Commerce,
Washington, D.C.

DEAR MR. SECRETARY: As a private citizen from Denver, Colo., who has traveled extensively in recent years, I have become deeply interested in S. 610, the bill which would create an Office of International Travel and Tourism.

It seems to me that this program has endless possibilities for improving international understanding, as well as boosting travel and partially overcoming the outflow of dollars and gold.

But to achieve the full potential, we must not only invite people to spend their money here; we must make them feel glad they came and eager to return.

I have discussed this subject with Senator JOHN A. CARROLL and Representative BYRON G. ROGERS, and have prepared a brief enclosed outline of my proposal, which I feel would utilize a vast reservoir of American talent and enthusiasm at virtually no cost to the taxpayers.

Mr. ROGERS is turning over a copy of this memorandum to Representative OREN HARRIS, Chairman of the House Committee on Interstate and Foreign Commerce, which is considering S. 610.

If you or one of your authorized representatives should be interested in developing these suggestions, I am at your disposal. I am quite willing to return to Washington at my own expense for further discussions at any mutually convenient time.

Sincerely yours,

MABLE S. GRIMES.

STATEMENT OF MRS. MABLE GRIMES, DENVER, COLO., RE S. 610

My name is Mable Grimes. I live in Denver, Colo., where until recently I owned and operated an industrial supply house. I am a private citizen representing no organized group, but feel that I speak for many vigorous, intelligent, retired executives who, like I, yearn for something useful and interesting to do.

I am grateful for this opportunity to show my interest and approval of bill S. 610. Such a bill will undoubtedly stimulate the desire to see the United States, and we must have a concentrated and well-directed effort to make visitors welcome and anxious to return.

From the experience of three recent trips to Europe, two in the past year, I have found people in all walks of life eager to see the United States. In Russia I was questioned about the cost of making such a trip. In Ireland the people I met felt the trip was far too expensive to even hope for. In England visa regulations were deplored. Hollanders felt that our accommodations were fantastically high. However, in spite of all these objections there is real interest that can be stimulated into action by a good Office of International Travel.

A specific example of our lack of activity in this area was brought home to me in London this winter. Friends told me of being unable to obtain an ordinary paper map of the United States even at our Embassy. This prompted me to make some inquiry on my own. In the London offices of two of our large U.S. airlines whose windows bore streamers advertising winter air excursions to New York, I asked what information they had on the United States and was casually directed to a well-worn book containing some travel folders and a wallboard of lighted pictures. These showed a New York skyline at night, San Francisco by day, a wheatfield in Kansas, a grove of yellow aspen and several others. No captions, no descriptions, and no attempt to sell the idea of a visit. I am sure I could get more and better information in Denver about Timbuktu.

Bill S. 610 has a fine program to stimulate travel into our country, but we must make our visitors welcome and create the desire to return. In Ireland everyone feels and acts like a reception committee. Denmark has a special bureau set up that gets visitors in personal contact with Danes of similar status, be they banker, student, lawyer, etc. Every visitor firmly resolves to return, and many do.

It is my suggestion that we tap the great unused ability, energy, and experience of our recently retired executives as good will representatives who could be leaders of a vast network of volunteer greeters. Their job would be to make the experience of traveling in this country pleasant, and give as many visitors as possible an opportunity to see the best of America—its grassroots. In every section of the country a dollar-a-year man or woman can be found for such a patriotic endeavor. These men and women could work through local chambers of com-

merce, etc. This in no way infringes on commercial efforts.

This program would necessitate one national director on salary and expenses with offices in Washington, who would work under the director as created in bill S. 610, and be a permanent member of the board. The primary responsibility of this office would be to seek out, appoint, and direct chairmen for well-defined districts all over the country, to establish and keep in operation local groups who would welcome foreign visitors.

Such a program might be held together by being called, "Dial Welcome (9352663) for friends in the U.S.A." The answer on such a number could be a recorded short welcome giving the phone number of the local committee, all repeated in several languages.

The possibilities of such a program are limitless. Any effort that enlists the enthusiasm and energy of a diverse and widespread segment of our population, as found in this retired group, has great potential.

The White House Conference on Children and Youth—First-Year Inventory

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address by the Chief of the U.S. Children's Bureau, Mrs. Katherine Brownell Oettinger, delivered on March 13, 1961, before the Boston University Women's Guild.

The address follows:

THE WHITE HOUSE CONFERENCE ON CHILDREN AND YOUTH—FIRST-YEAR INVENTORY

(By Mrs. Katherine Brownell Oettinger, Chief, Children's Bureau)

Just 1 year ago this month the Golden Anniversary White House Conference on Children and Youth assembled in Washington. Hundreds of thousands of people in every State and territory and in many foreign countries had participated in preparations for the conference. The conference itself brought together over 7,600 participants, including 1,400 youth and 500 guests from 73 countries. Many of you took active roles in the conference and saw the great vitality with which it approached its task of reassessing conditions affecting children in a world where so much has changed in so brief a span of time.

I know you are all familiar with some of the clear themes which emerged again and again:

The need to help our children find lasting values to sustain them even in a world where little seems stable or predictable.

The need for more effective efforts to help families provide and maintain stimulating and wholesome environments for themselves and their children.

The need to respond to our rapidly changing, dynamic culture with programs organized with flexibility and adaptability.

The need to correct the weaknesses in our social and program structures which allow such problems as dependency, delinquency, and illegitimacy to perpetuate themselves.

Now, as the first year of followup activities draws to a close, it seems an appropriate time to see just where we stand. What have all the hopeful words added up to? What has been done to implement the nearly 700 recommendations which came out of the conference?

And, of course, even more important: Where do we go from here?

The measure of any conference is what gets done afterward. By this criterion the 1960 White House Conference is well on its way to being one of the most significant conferences in history. With the continued help and effort of citizen and professional groups all across the Nation, it will fulfill that promise.

I cannot begin to give you a full report of all the followup activities of this year. So I have tried to make my selection on the basis of what I felt would be of particular interest to you, especially in areas where such groups as your own might help to bring about further action.

First perhaps I should tell you a little about the structures which have been devised to coordinate the monumental followup effort. National leadership rests jointly with the Children's Bureau and the National Committee for Children and Youth. This committee is composed of representatives of the President's National Committee for the White House Conference, the Council of National Organizations, the National Council of State Committees for Children and Youth, and the Interdepartmental Committee on Children and Youth, whose members represent the 34 Federal agencies which have programs relating to children.

The principal purposes of the National Committee for Children and Youth are to stimulate implementation of the recommendations and other followup of the Conference; to encourage further research and more effective utilization of research findings on behalf of children and youth; to promote cooperation and joint activities among the sponsoring groups; and to provide for an exchange of information on concerns affecting children.

Already the national committee has a major research project under way, in the form of a National Conference on Unemployed, Out-of-School Youth in Urban Areas. Financed by a Ford Foundation grant, this conference is scheduled for May. The distinguished Dr. James B. Conant will serve as its chairman. This is to be a working and action conference which will bring together 300 representatives of State governments, labor, management, school boards and PTA's, vocational education and guidance people, juvenile courts and youth commissions, health and welfare agencies, and other interested groups. With unemployment of those in the labor market who are in the 16–21 age bracket nearly four times greater than in other age groups, the need for definitive action is abundantly clear, and this conference will undoubtedly be an initial step of great value.

A major followup function shared by the National Committee for Children and Youth and the Children's Bureau is to make national organizations and the States aware of the vast reservoir of how-to-do-it material which is available to them as they try to meet their local problems.

I wish you could go with me into the oversized room in the Bureau which serves as headquarters for this unit. All around the walls are large tables, and every one is piled high with materials awaiting distribution. As I thumbed through these publications I was struck with the excellence of what they had to offer; the concrete, helpful, down-to-earth facts that will make preliminary planning so much easier in areas where programs are just beginning to pick up momentum. Distribution of this material is part of the Children's Bureau's continuing effort to encourage the use of what is known about ways of meeting health and welfare problems.

There are publications about all kinds of problems: adoptions, delinquency, rural development, to name only a few. Many of the publications from the States are reports of successful programs, such as one from Kansas called So You Want To Start a Youth Council. Here, in one compact little volume, communities can find the answers to such questions as:

Who should be involved in a youth council?

What projects might a youth council undertake?

How can community participation be encouraged?

Publications from both Federal agencies and national organizations are also being made available to the State committees. Recently, for example, the special unit has sent out a complete mailing of all Labor Department publications relating to children and youth. Twenty-three mailing pieces from the Academy of Pediatrics—on such subjects as accident prevention, health supervision in early childhood, and hospital care of children—made up another mailing.

The publications being distributed by the National Committee for Children and Youth are primarily materials prepared for the White House Conference or which have grown out of its recommendations. The heavy demand for these materials clearly indicates the high level of interest which is being maintained. The committee plans to issue a report on White House Conference followup at the halfway mark of the decade, in 1965.

The committee has made the photographic exhibit, These Are Our Children, which was such a popular feature of the Conference itself, available for a nationwide tour to stimulate further interest and activity in the States. In showings sponsored by the State committees for children and youth, the exhibit has already visited two of your neighboring States, Maine and Rhode Island. In the latter, Governor Notte served as host at a reception marking the opening of the exhibit. Our regional representatives tell us that the exhibit is proving very helpful in stimulating interest in followup activities.

Again and again during the White House Conference community organization was stressed as one of the most strategic ways of coordinating public and voluntary efforts to meet human needs as well as the more mechanical aspects of providing health and welfare services. Our failures in community planning are clearly evident in the blighted urban areas where so many families lack a planned combination of health, welfare, recreational, and other essential facilities, and as a result are unable to realize their full potentialities for growth and healthy living.

Reaction against these failures is becoming ever more widespread, as is the conviction that community organization is one of our most promising social tools. The recent International Congress of Social Work in Rome, for example, echoed the community organization recommendations of the White House Conference and called particularly upon social workers to take leadership in getting community organization past the planning stage and into purposeful use.

In October the Children's Bureau held a 2-day workshop to determine how facilities and resources could best be offered to help the State committees in their follow-up efforts. It was attended by representatives of the State committees, national organizations, and Federal agencies. One specific desire of the State committees, expressed during this workshop, was for consultant services to help with the problems of community organization.

In its effort to give a real forward thrust to this new and creative emphasis on community organization, the Children's Bureau has made consultants available in several regions. Regional workshops at which the States can discuss their follow-up problems and receive help from the regional represent-

atives have been scheduled in several areas. In fact one is meeting right now—today—in San Francisco.

Mr. Augustine Riccio, formerly Director of the Rhode Island Department of Social Welfare, was appointed a little less than a month ago to be consultant for your area. He has plans well underway for a regional workshop. He has already met with the Children's Bureau's regional medical director, medical social work consultant, nursing consultant, and child welfare representatives to review the follow-up situation in each State and to help the representatives define ways they can assist the State committees in follow-up activities. He will be meeting soon with representatives of other Federal agencies.

Mr. Riccio has also met with representatives of the public housing administration and several national organizations. At the meeting of district I of the American Academy of Pediatrics, for example, a number of child health problems on which the White House Conference had made specific recommendations were discussed, such as accident prevention, protection of the unborn baby and the young child, services for handicapped children, and delinquency prevention. The meeting provided an opportunity for the State chapters of the academy to compare notes on their program planning in these areas.

Our consultants are fortunate that they can work closely with the leaders of State Committees on Children and Youth. Dr. Martha Eliot, chairman of the Massachusetts State Committee and a former Children's Bureau Chief, is of course known to all of you for her continuing work on behalf of children. Dr. Reginald Robinson is executive secretary.

In addition to these basic services which form a network of know-how for White House Conference followup which spread throughout the States, numerous specific activities and programs have been undertaken by an unbelievably large number of groups at national, State, and local levels. Many of the Federal agencies whose programs relate to children have selected from the White House Conference recommendations, threads of particular interest to them, from which they are weaving a new fabric of action.

In November, for example, the Children's Bureau and the Women's Bureau of the Department of Labor jointly sponsored a 2-day conference on day care for children of working mothers. The White House Conference had pointed out that one of the most significant social changes in this century is the great increase in the number of married women in the labor force. About 3 million mothers with children under six are now working, and about 5 million mothers of children over 6.

A study published by the Children's Bureau at the time of the White House Conference clearly indicated that the development of adequate day-care services has not kept pace with the new patterns of our society. It showed that whether for economic or for other reasons, nearly 400,000 children under 12 have no day care while their mothers work. Of the 1½ million children under 12 cared for in their own homes by relatives, well over a third are in the care of someone under 18.

Primarily the Day Care Conference was an effort to relate concerns which had been highlighted by the White House Conference to a realistic picture of present-day care needs on a national basis—to determine what services exist, what their strengths and shortcomings are, what untapped resources each community has. It examined how day-care programs can be most effectively organized and financed, and with what community agencies major responsibilities should lie. It looked at the adequacy of present licensing standards, and at unmet needs in facilities for children with special problems: children of migrant families, children with physical or mental handicaps.

A film prepared jointly by the Children's Bureau and the Pennsylvania Department of Public Welfare is now available to help community leaders dramatize day care, and the proceedings of the Conference, which are to be released soon, will provide a further tool through which followup efforts can be carried forward.

In a similar effort to respond to the recommendations of the White House Conference the Office of Education, in October, brought together 35 top educators in the field of elementary education. They attempted to define in specific terms what the schools could and should be doing to implement the 235 recommendations related to their programs.

The Interdepartmental Committee on Children and Youth itself has several followup projects underway, such as revision of its valuable publication, Programs of the Federal Government Affecting Children, and proposed studies of ways of implementing particular recommendations. One example is the recommendation "that a special committee be authorized to study the immediate and long-range emotional, social, and economic effects of the peacetime compulsory draft law on our youth and our Nation, and to make recommendations." The Interdepartmental Committee on Children and Youth, recognizing the urgency of analyzing this perplexing problem which so vitally affects the young men of our country, has prepared a staff report on proposed objectives and methodology for such a study. This report is now being evaluated as a basis for more extensive examination of ways to minimize any negative impact of the selective service experience and assure that it will be a positive influence in the lives of our young people.

The National Committee for Children and Youth tells me that the variety and creative imagination shown in the followup programs of the national voluntary organizations is truly amazing. Participation of youth at the White House Conference was active, and this is being reflected now in such programs as that of the Future Homemakers of America, which has selected "Measure Your Values" as the theme for their July conference. As working papers in preparation for the conference they will draw upon the many discussions and recommendations of the White House Conference which dealt with finding lasting values in a changing world.

Other organizations are giving strong leadership to their local affiliates by helping them define ways they can stimulate followup in the communities. The National Congress of Parents and Teachers, for example, has issued its "Assignment for the 60's" on the basis of White House Conference recommendations. The State groups have picked up from there by listing specific targets in point-by-point form: what the home can do, what the school can do, what the community can do, and what the Congress of Parents and Teachers itself has done and proposes to do in the future to implement the recommendations.

There is a similar close correlation of national and local activities in a new interest of the National Council of Jewish Women which has grown out of the White House Conference. Through a committee on the employment of youth this national organization is helping communities evaluate their youth employment resources and improve their employment situations through the cooperative efforts of schools, trade unions, industry, and other community organizations. Other organizations are developing similar followup programs in their specific areas of concern.

At the time of the White House Conference all 50 States were represented in the National Council of State Committees, although only 28 States actually had functioning committees. This vitality did not die with this focal event, but has carried on into many followup activities, as is shown by the fact that 17 additional States are now taking steps to establish permanent committees on children and youth. This year the agenda of the annual meeting of the National Council of State Committees, held 10 days ago in St. Louis, focused on helping the State committees define their duties and responsibilities in White House Conference followup in everyday terms. I think the spirit and tone which is pervading so much of the White House Conference followup activity is evident in a memo which went out to the State representatives a month before the meeting. The memo lists specific things about which it would be helpful to exchange information: how are the States handling distribution of White House Conference publications? How is followup being financed? What sort of consultation are representatives of the State committees offering communities?

The conferees were asked to bring with them a file of the materials which they had found useful in their States; for, as the memo added signficantly, "We are convinced we have much to learn from each other."

This spirit of exchange and sharing is the very essence of the vigor which characterizes the whole followup movement. The committees and councils are not new—many of them have existed for years—but they are being used in a new way, with a more intensive effort to make creative, coordinated use of what is known about problems and their solutions.

The same emphasis on specifics is evident in activity at the State level. In Oregon, for example, representatives of every county were asked to "do their homework" before attending a statewide conference on children and youth in November. Each was asked to come to the meeting prepared to submit two recommendations: One in an area where they felt legislative action in 1961 was desirable; the other relating to an identifiable problem on which more statewide factfinding is needed as a preliminary to action. From such a working basis as this it was possible to use every minute of the conference productively.

The results were 13 recommendations on such subjects as child guidance and family counseling services, the establishment of a graduate school of social work, coordination of mental health efforts, and establishment of family courts. But these were not simply recommendations to be made and forgotten. Each recommendation was accompanied by a specific plan of implementation, defining what the Oregon conference and its member groups should do to assure action.

At the local level also many efforts are being made to assure that the recommendations of the White House conference become more than what one reporter feared might be "a mere accumulation of lofty words." In Fort Worth, Tex., for example, the Family and Children's Division of the Community Council decided that one of its first followup efforts should be to respond to the White House conference recommendations relating to the development of homemaker services—that commonsense plan that meets the characteristic rootlessness of our times by providing a substitute for the unwearying Aunt Minnies of earlier generations who were always ready to respond in times of family crisis.

The Community Council sought the guidance of the Red Cross, the Bureau's regional medical director, and its regional consultant on White House conference followup, who helped the Council gain perspective on homemaker service needs in the community

as a basis for accelerated action. In this community as in many others, there is increasing recognition of the value of homemaker services not only for families in which illness is a problem, but also in other situations where such services can be used to strengthen family life and make it possible to keep children in their own homes.

Perhaps one of the most imaginative follow-up efforts being made anywhere is the one in a small but active community near Nashville, Tenn. There were numerous White House conference recommendations stressing the responsibility of the community to provide vocational education and employment opportunities for youth, and Wilson County, Tenn., took these recommendations very much to heart. With residual White House conference funds and additional financial backing from the State board of education, the Committee on Children and Youth hired a retired contractor to teach carpentry, bricklaying, electrical engineering, and other basic building skills. Civic groups and banks made it possible for the committee to buy a lot. Electrical supply houses and lumber companies donated materials.

And the students began to build a house. Not a model house or a dummy house, but a real house, which will be valued at $14,000 when it is completed. The house will then be sold, and the proceeds will be used to finance further projects.

This project seems particularly significant to me because it is such a basic, practical kind of follow-up activity. Wilson County is a community which does not have the vocational education resources available to it which are sometimes to be found in larger communities, yet a way was found to "live up to" what the White House Conference asked communities to do.

This project, incidentally, represents the work of only 1 out of 10 active follow-up subcommittees in that single community. A report on this project, now in preparation, is to be one of a series of Children's Bureau "how to do it" publications reporting on community action on White House Conference follow up. We feel certain that the story will inspire other communities as much as it has us in the Bureau as we have watched it develop.

Reports from the States and the national organizations, prepared as part of the background papers for the White House Conference, identified priority problems recognized in the communities. One of the most frequently expressed convictions was that much more must be done to meet the needs of children with all kinds of handicaps.

Already President Kennedy has said in his health message that he is recommending to the Congress an increase in appropriations for the existing maternal and child health, crippled children, and child welfare programs of the Children's Bureau. By this means, he said, "The fruits of our research can move at a faster pace to those who need them most."

Such an increase will mean that an ever higher quality of preventive work can be achieved under the maternal and child health program in such areas as immunization, prenatal care, and mental retardation. In addition, the availability of more adequate Federal funds should make it possible for the States to take care of more children with handicapping conditions under the crippled children program; and to expand or improve their services also to children with a variety of nonorthopedic conditions such as congenital heart disease, hearing defects, cerebral palsy, or epilepsy.

Equally pleasing to those who recognize the need to combat the growing trend toward severe handicapping, which was stressed by the White House Conference, is the fact that the President has expressed his eagerness to get at basic causes of handicapping, and, through stepped-up research—coordinated in the interests of children—prevent them from happening.

In the meantime he directed the Surgeon General of the Public Health Service to establish a Child Health Center, an action that could be taken administratively without legislative appropriation.

In commenting on these developments, Secretary of Health, Education, and Welfare Abraham Ribicoff said, "This new program in the field of child health shall have the fullest possible backing and encouragement. The new program will be further strengthened through close coordination with the programs of the Children's Bureau."

As the White House Conference opened many new doors in the health field, so, too, it drew on this interest and creative thinking of disciplines which had not been reached so extensively in any other way. Many professional groups—physicians, lawyers, and others—have met to define the specific ways in which they can participate in conference followup. Thus the number who can speak for children has been infinitely multiplied, and a new kind of national interrelationship and action has developed.

I know that as a great urban institution Boston University will be eagerly evaluating how it can relate the findings of the White House Conference to the broad scope of the interests and aspirations of university life. This is more than an opportunity: it is a solemn duty that comes only to free citizens who have the liberty to identify problems and work toward their solution. Let this first anniversary mark a renewed determination to join together to help each child achieve his full potential and contribute to the world in which he will be living.

National 4–H Club Week

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 24, 1961

Mr. WILEY. Mr. President, "Learn, Live, Serve Through 4–H"—this is the motto of one of our outstanding rural youth clubs, the 4–H Club.

Over the Nation, this fine organization has more than 2.3 million members. Through creative programs, it is providing a splendid opportunity for our rural youth to obtain knowledge, skills and, above all, to build strong character. Recently, the 4–H Clubs observed a special week.

The Rice Lake Chronotype, of Rice Lake, Wis., published a splendid article, as well as an editorial, on the fine work being undertaken on the 4–H programs.

Representing a constructive program that serves usefully to channel the energies and abilities of our youth into constructive activities—as well as serves as an antidote to delinquency—I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL CELEBRATION CITES WORK OF 4–H CLUB YOUTHS

National 4–H Club Week, celebrated this year from February 26 to March 4, marks the yearly observance of the importance of 4–H club work by all 4–H club members all over the Nation.

The Chronotype this week, as it has for several years, presents a special section of the paper dedicated to furthering the ideals of this rural youth organization and telling of the achievements of club members and their leaders during the past year.

Another rural young people's organization, the Future Farmers of America, also celebrates its annual week during the period of February 19 to 25, and material on its work will also be found on the following pages.

During National 4–H Club Week, the 1,100 members in Barron County will join 54,000 of their fellows in Wisconsin and 2,302,000 throughout the Nation in a variety of activities designed to call public attention to the achievements of the 4–H clubs and to the advantages of 4–H club membership for other boys and girls not yet enrolled in the organization. We are happy to be able to help out in this cause.

The 4–H clubs are an organization of young people interested in learning by actual practice how to be better farmers, better homemakers, and better citizens. They work in close contact with the agricultural extension service and the agricultural experiment stations.

They benefit from the guidance and cooperation of the public education system; civic groups; city, county, State, and Federal governmental organizations; and business and industry leaders. They have as volunteer leaders in their activities thousands of farmers, homemakers, and other adults interested in the future of the State's young people.

The 4–H clubs have pioneered many improvements in farming and homemaking in Barron County. But no less important is the character-building that results from membership and active participation in 4–H work. Many former 4–H members now hold prominent places in agriculture and many other walks of life.

There is a place in 4–H work for many thousands of other young people—and for many other adults who want to make a contribution to the welfare of youth and the progress of the State by lending a hand with 4–H work.

Four-H Club work is an educational program for boys and girls. At present there are 51 clubs with a membership of 1,100 in Barron County. Some 280 men and women serve as community and project leaders for the boys and girls enrolled in club work. These men and women give freely of their time and talent so that boys and girls may have the benefit and training provided through 4–H. Without these public-spirited men and women it would be impossible to conduct a successful 4–H program.

Club work not only teaches boys and girls better farm and home methods and skills. It gives them training and experience in citizenship, community life, character building, and spiritual development.

The work is conducted on a community basis with a planned program including project work, recreation, and activities such as health, safety, conservation, courtesy, and grooming. Members participated in such events as National 4–H Club Week, State 4–H Club Week, community, county, district, and State achievement programs, 4–H Sunday, county recognition program, 4–H camp, and International Farm Youth Exchange.

The 70 projects available deal with practically every phase of farming and homemaking. Many of the projects require little, if any, expense by the member.

Four-H boys and girls are kept quite busy learning by doing. According to the records last year members in home economics projects planned and prepared 4,720 dishes and served 1,460 meals; they froze 390 quarts of fruits and vegetables and canned 470 quarts;

they made 3,840 garments in clothing projects; then they made 260 articles in improving their rooms.

Members enrolled in agricultural projects owned and cared for 594 dairy animals, 42 beef animals, 67 sheep, 124 swine, and 57 horses. Thirty-four members grew 196 acres of corn. One hundred grew 27 acres of vegetables for home use. Members in tractor projects maintained and adjusted 91 tractors. In electricity, woodwork, and rope projects, they made 651 articles.

The 140th Anniversary of Greek Independence

EXTENSION OF REMARKS

OF

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. BURKE of Massachusetts. Mr. Speaker, today marks the 140th anniversary of Greek independence. Because of the many folks of Hellenic descent in the 13th Congressional District of Massachusetts, I feel that it is especially fitting to call attention to this day in the CONGRESSIONAL RECORD.

GREEK INDEPENDENCE DAY, MARCH 25

The Greek people have been the most persistent and proud advocates of freedom throughout their long and glorious history. They were the first to conceive and formulate the idea of freedom, and the first to practise it in their almost ideally organized state 2,500 years ago. There they enjoyed freedom in all its manifestation, freedom of speech, of conscience, of assembly, of movement, and also freedom from fear and freedom from want. All these freedoms were honored in ancient Greece, in classical times as never before in human history and nowhere else. Thus, Greek genius has a claim upon us, upon all men and women of the free world, and we all have always been conscious of our indebtedness to Greece for giving birth to this noblest of human ideals, freedom and independence.

It is one of the ironies of human history that these gifted and gallant people of Greece who gave birth to this superb idea were not allowed to enjoy it for almost 2,000 years. A few centuries after Athens had become the center of artistic, esthetic and philosophic learning of the then known world, with its citizens famous for their love of freedom and public spirit, Greece became a Roman province. The glory of Greece was gone and the Greeks were without their national freedom. Then during the late middle ages they were ruled by Frankish kings. And finally in the middle of the 15th century they were brought under their most despotic oppressors, the Ottoman Turks, under whom they suffered for almost 400 years and against whom they carried on their relentless struggle for their national independence. The independence which they proclaimed in 1821 was thus the culmination of an ideal fervently and dearly cherished by the people of Greece during their subjugation to foreign yoke for 2,000 years.

Neither under the austere and orderly Roman Government, nor under the greedy Frankish kings, nor under the ruthless Ottoman sultans were the Greeks at all happy. They were never willing to be reconciled to their unenviable lot under alien yoke. The longer they endured the foreigners' detestable regimes, the more oppressive became these regimes. Under the Romans they were captives, but as has often and with considerable truth been said, in this case the Greeks took their captor Romans captive. That is to say, the Romans were so much impressed and so completely overwhelmed by the Greek genius, that they became its disarmed devotees. The same cannot be said of the Frankish kings whose avowed crusading zeal was expressed in bitter religious ultrafanaticism, which was abhored by the Greek mind. But what the Greeks had to put up with under the ruthless and unscrupulous Turks was far worse. It is true the Mohammedan sultans did not interfere with the Christian religion of the Greeks, but as against this much misunderstood "religious tolerance" of the Turks, the Greeks were not allowed political, civil, or social equality. They were considered far less than second-class citizens in the Ottoman Empire in that all their worldly possessions as well as their lives were at the mercy of their overlords, the Turks.

Among the severe inequities under which they suffered was the immoral form of child taxation, which meant that the Turkish officials could go around and snatch away male children from Greek homes, who, when brought up in the sultan's palace schools turned into ferocious guardians of the Ottoman Empire. For decades and centuries helpless Greeks put up with these heartrending hardships and suffered immeasurably under the Turks. In their historic homeland, under the very eyes of Christian rules of Europe, Christian Greeks thus endured the inhuman rule of their unchristian oppressor. Then came the rebellion of 1821.

The Greek war of independence that started on March 25, 140 years ago today, not only spread instantaneously throughout the Greek mainland and all Greek islands, but it also roused many governments and all peoples of Europe. One might say it shook the conscience of Europe, and brought it to its sense of duty. All lovers of freedom and of Greece were elated and excited by the news of the revolt, led by an archbishop in a monastery in northwestern Greece. In the past, other Balkan peoples suffering under the same ruthless Ottoman sultans had revolted, and some had even attained autonomous status, but no previous revolt against the sultans, inside or outside of the Balkans, was to arouse so much public sympathy and enlist so much moral support as did the Greek war that began in 1821. In taking such a fair, upright, and sympathetic stand on this issue, the people of the civilized world were not only expressing their natural and genuine feeling toward a righteous cause, but they were also showing their unconcealed admiration and affection for gallant Greeks fighting for their lives as well as for the cause of freedom.

The war, fought continuously for almost 7 years, seemed a one-sided struggle most of the time, and at times it looked quite hopeless. The Greeks were overwhelmingly outnumbered from the beginning by the forces of their powerful enemy. Even the optimistic among Greece's friends were admitting that the Greek cause was lost unless some effective move was made, and a decisive step was taken by the governments in Europe. By mid-1827, Greece was almost bled to death; most of the country lay under the heels of sultan's soldiers. Peoples on both sides of the Atlantic were following the course of events with anxiety. Unofficial and semiofficial groups in many countries were sending much financial and medical aid, and England's great romantic poet, Lord Byron, had gone to Greece to have his magnetic influence felt there. And fortunately in the end the Greeks, through their tenacity and gallantry, and through their unswerving devotion to their freedom, wrenched victory out of defeat: with the aid of their friends their cause won out and they secured their independence.

Of course, this last act had its very sad twists and tragic turns, but even through tragedy the Greek people were to be freed and once more Greece was to be herself again. In 1827, as the sultan's ruthless agents were complete masters of nearly all Greece, they were committing a crime which could not be condoned even by the most inactive of European governments. At the time it was reported that the sultan's agents were deporting Greek people by the thousands to other parts of his empire, to be sold there as slaves. Peoples in Europe and America were horrified by this news. Now they wanted their governments to do something to stop this fiendish move on the part of the sultan, to prevent the enslavement of Greeks through the Middle East. At the time much as we wished to help the Greeks effectively, we could only do so privately, but fortunately for the Greeks, for the conscience of the civilized world, and also for the cause of freedom, certain European governments could and did act. In October the British, French, and Russian Governments informed the sultan to put a stop to such inhuman practices. The sultan did not take the warning seriously; nor did his naval commanders off the waters of Greece. Next the combined naval commanders there warned the Turkish admiral, and issued him what amounted to an ultimatum. The Turkish admiral at first vacillated and did not comply with the wishes of the European admirals.

But these admirals meant what they had said, when no satisfactory reply was received from the Turkish admiral, they ordered the decks of their ships cleared for action. On one memorable day, on the 20th of October 1827, as the combined British-French-Russian warships opened fire upon the Turkish flotilla, in a matter of hours that flotilla ceased to

exist, and out of this naval battle, fought in the bay of Navarrino, was born modern, free, independent, and sovereign Greece.

One hundred and forty years have gone by since the beginning of the Greek war of independence, and since then the Greek people have had many anxious years and endured many hardships. During the two World Wars they fought bravely, both times on the side of freedom and democracy, and fortunately for them, on both occasions their allies and their cause were victorious. For their steadfastness and unfailing loyalty to the cause of freedom, and for their readiness to sacrifice for the common cause they have earned the admiration and sympathy of the free world. We in this country have always held them in very high esteem. We have appreciated their contribution to the well-being of this great Republic as loyal, enterprising, and patriotic citizens, and we have admired them in their historic homeland in their political struggle. We have, of course, helped them not only financially, but I am proud to say that we were able to save postwar Greece from the throes of Stalin's totalitarian communism. Today we all join our friends in Greece, our faithful ally, on the 140th anniversary of their independence day.

Seattle Citizens Salute a Fine Officer of the U.S. Navy

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. PELLY. Mr. Speaker, in the years I have served in the U.S. House of Representatives I have had occasion to work closely with a great many members of our armed services, and because the Puget Sound Naval Shipyard and the headquarters of the 13th Naval District located in and around the Seattle area, by association with Navy personnel has been particularly close.

In this connection, it has been my privilege to have associated on a very personal basis with many high-ranking naval officers and without exception I have found them to be men dedicated to their chosen careers and to the service of their country.

Ordinarily it would be difficult, if not impossible, to single out any one of this distinguished company. But on occasion, by force of circumstances, events sometimes take over and spotlight one individual in the life and activities of a community. Such an example of public leadership and interest in civic affairs has attracted my notice and is worthy of mention.

This is the case of Capt. Kenneth J. Sanger, commandant of the Naval Air Station at Sand Point, Seattle, Wash. Captain Sanger assumed command of his present post on June 27, 1959. Since that time, he has given so unselfishly of himself, both as a Navy and community leader, as to have earned the official and quite unusual commendation of civic organizations such as the Seattle Chamber of Commerce, the Reserve Officers Association,the Disabled American Veterans and the Navy League.

Captain Sanger's inspirational leadership of the approximately 2,000 officers and men under his command resulted in raising their standing in the Naval Air Reserve program from 18th place in the Nation to No. 1 naval air station in a 1-year period of time. For this outstanding accomplishment the CNATRA trophy was awarded on October 1, 1960. At the same time the Edwin Francis Conway Trophy was presented to Captain Sanger by Under Secretary of the Navy Fred A. Bantz. This trophy is given annually to the highest rated naval air station in the Nation.

Also, he was instrumental in aiding the Mayor of Seattle in establishing the Seattle American Leadership Council and has taken an active part in assisting the Mayor with the implementation of this important community activtiy.

A 1-day seminar for over 100 Seattle business and industrial leaders was held on October 18, 1960, which resulted in a program for citizenship education and action in the field of reawakening the citizens to our American heritage and our responsibilities as citizens.

These achievements in the field of public relations and his individual dynamic, enthusiastic and patriotic personal activities have resulted in the closest cooperation between the military and civilian community leaders in Seattle. Many of these latter have expressed regret that under rotation or transfer he might be sent to some other duty.

As one of his many friends and admirers, I have joined in expressing the hope that the Navy will find it possible to extend Captain Sanger's tour of duty so that our community can continue enjoying the benefits of his inspirational leadership. As a fitting tribute to this fine officer and gentleman and to the Sand Point Naval Air Station which he so ably commands, I am including with these remarks a resolution adopted by the board of trustees of the Seattle Chamber of Commerce under date of March 21, 1961.

RESOLUTION ADOPTED BY THE BOARD OF TRUSTEES OF THE SEATTLE CHAMBER OF COMMERCE, MARCH 21, 1961

The Seattle Chamber of Commerce expresses again its great pride in the achievement of the Naval Air Station, Seattle, in winning last year the Conway and Chief of Naval Air Training trophies for the most improved and most efficient naval air station in the Naval Air Reserve Training Command.

Further, the Seattle chamber takes favorable recognition of the aggressive and effective program of the Naval Air Station, Seattle, in emphasizing the Navy's all-out effort to revitalize leadership. This program is reflected in the goal of educating all individuals in the command to understand and practice the basic principles upon which our country was based. The program emphasizes that Navy men achieve, in addition to combat leadership, leadership in the cold war.

Further, the Seattle chamber commends Capt. Kenneth J. Sanger, USN, commanding officer, U.S. Naval Air Station, Seattle, and the other dedicated members of his command, for the results which have been obtained.

JOHN C. CROSTHWAITS,
Chairman, Armed Services Division.

Overestimating Khrushchev

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DEROUNIAN. Mr. Speaker, in an article that appeared in the New York World-Telegram and Sun, on Tuesday, March 21, Mr. Ray Cromley has shown us an aspect of our defense program that requires close attention:

IS NIKITA TRICKING US INTO DEFENSE PANIC?

(By Ray Cromley)

WASHINGTON, March 21.—We are in danger of letting Nikita Khrushchev trick us into losing the defense race. He has so frightened us with reports of his great military and space might that we are frittering billions of our defense dollars in a wasteful scramble to catch up.

We are weakening our defense research programs by rushing into sterile alleys for quick solutions to get fast results we put missiles, planes and other defense systems into production without waiting for added research that would make them much superior. A little more research always means improvements and sometimes real breakthroughs.

We are adopting less than the best in defense weapons and equipment in a hurried fear to get something in place so Khrushchev "won't catch us naked." Then in big projects we add millions to the cost and add months to the program by contract changes during production and site construction.

We likewise are wasting millions and slowing the space program by rushing to use equipment in our space shots without waiting for it to be sufficiently researched and tested out cheaply on the ground.

The sad truth is, that if we would go at this defense-space race a little more slowly—spend more time on developing superior systems before putting them into production—we'd end up with a stronger defense system quicker. This is what Khrushchev's men seem to do—usually.

An extra year in research often can save more than a year in getting a missile produced, improved, a new model devised and the whole system mated to its site ready to fire. The resulting weapons system will certainly be much superior.

We rush down every road we hear that Khrushchev is going down so he won't be ahead of us on anything. Thus we divert our efforts from what may be more profitable lines for us. We play his game.

This hurry to get into production and turn out weapons and equipment has other evils. Frequently the hurriedly built missiles, planes, trucks or whatever, have so many weaknesses or bugs they have to be modified after they're built. There have to be continuous and time-consuming changes in the manufacture.

The missile is not quite so accurate or so reliable as it might have been had it been

developed along different lines. The equipment breaks down more frequently than it should. The missiles have to be used for shorter ranges than would have been possible.

The terrible part of these resultant not-as-good-as-possible weapons is that the failures are often in small component parts. A relatively small amount of extra research and testing on these components could add a great deal to reliability. There are indications that the Russians do this extra testing.

We hurry over details and they come back to trip us up.

But the scares that Khrushchev has thrown into us have convinced the Pentagon that we've got to rush even if it means slower progress in the long run.

This super caution is based on a general policy of overestimating the Russians because we had underestimated them for so long. It is this overestimating based on Khrushchev's missile-space showmanship that is causing us to run so fast that we are slowing ourselves down.

Gifts From the Maharajah

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 23, 1961

Mr. YOUNGER. Mr. Speaker, it is a well known axiom that you do not get something for nothing, and this is particularly true in the case of Federal aid to the States in its various guises. Under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of February 24, 1961, which draws a clever but rather tragic analogy between the present Federal aid programs and the methods used by the ancient maharajah to in effect "kill the taxpayer with seeming kindness":

GIFTS FROM THE MAHARAJAH

In ancient times, so we are told, shrewd potentates had a clever way of bringing local governors to heel, they smothered them with solicitous kindness.

Let a distant principality show too much independence and the gracious maharajah might pay it a visit, bankrupting the countryside which had to play host to his grand entourage. Or maybe the local ruler would receive the generous gift of a royal elephant who would eat him into ruin. Thus reduced to need, the local people would receive gratefully any largess from the maharajah. And, of course, receive resignedly the instructions that came with the relief.

This interesting gambit is still being played, as anyone might notice who listens to one of the current arguments as to why the Federal Government must give aid to the States for this or that costly program.

The argument runs like this: Education (or care of the indigent, or whatever) is one of the essential tasks of a community. The blueprint of the program needed, drawn up in Washington, runs into uncounted billions. These projected billions are obviously too much of the local communities whose tax resources are already exhausted. Hence there is no alternative but for the Federal Government to relieve the States of this burden.

To this argument it is not easy to turn a deaf ear; indeed, it seems a blessed relief to many a poor taxpayer already buried in local taxes to pay for the State's present program for schools, or hospitals, or roads, or any other community service.

And in his harassed condition, the poor taxpayer is hardly able to reflect how this state of affairs came about, or to think too much upon what else will come with this generosity from Washington.

Yet the process is, really, quite simple. Take that urban development project, down the street. It came as a gift from the Federal Government; but to get the gift the local community had to raise its own taxes a bit to pay incidental parts of the cost. The same is true of the new hospital or the new library. And, of course, the gift from Washington brought other hidden burdens; sometimes a drop in taxable property, sometimes the need for more roads, more police protection, more fire equipment. But all adding to the local burden. Enough such gifts from Washington and the town treasury is in dire straits.

Meanwhile, the Federal Government is doing other nice things for the people. The local veterans have been sent to school and the neighboring farmers have been paid for not growing things. Some of the community's money has been siphoned off and sent to Laos; there's that much less for the new school. And for more than a generation the Government has been quietly clipping the coins, so that the dollars which only a few years ago would have bought the school will not do so today. All calculated to shrink the local resources.

And consider those blueprints drawn in Washington. Citizens knowing their own community can judge whether the new school is needed and if so how big. But when Washington says the Nation needs to spend so many billions, what doctor in Duluth or plumber in Poughkeepsie can measure the sense of it all?

All he can know is that, sure enough, the taxpayers of Duluth and Poughkeepsie have already got enough trouble. Isn't it nice that the Maharajah on the Potomac is going to help out?

It is, when you think of it, a beautiful gambit. First of all the Federal taxgatherer milks the poor taxpayer as dry as possible. Next the Federal Government "gives" the people some nice things, being careful to see that the communities not only pay Washington for Washington's share but also have to dig up some more money to pay the local costs.

Then when the gifts from Washington have just about exhausted both the local treasuries and the local taxpayer, Washington discovers a new unmet need, the size of which, true enough, is bigger than the poor local communities can handle since the size is limited only by the imagination of Washington, in drawing the blueprints.

At that point in the argument comes that clincher. Nobody can argue against the desirability of schools. Nobody can argue that the blueprints as drawn can be met by "local action." So there's nothing left to do but run once more up Capitol Hill, hat in hand.

For of course hardly anybody ever suggests that this vicious circle could be readily broken by spending and taxing less in Washington, thus leaving more for the folks back home. Hardly anyone, indeed, stops to think that any way there's only one hide for all this to come out of, that same poor taxpayer's.

And by this time almost everybody seems beyond caring that with each gift come more and more controls from the faraway potentates. Or cares to notice that each new and gracious gift, for which relief we give such thanks, just makes the circle more vicious.

Clever fellows, those maharajahs.

Congressman Frank Chelf's Plan for a Living Memorial to Past Presidents Has Growing Support

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. McDOWELL. Mr. Speaker, our distinguished colleague, the gentleman from Kentucky [Mr. CHELF], has introduced an extremely interesting bill, H.R. 5617, to provide for a living memorial to past Presidents of the United States, including Woodrow Wilson, Franklin Delano Roosevelt, and Theodore Roosevelt.

Congressman CHELF has said that "unless plans for a living memorial or memorials are vigorously pushed, the Nation's Capital will be overrun with statuary and resemble a graveyard."

It has been pointed out by such publications as the New York Times that there are nearly 200 statues to statesmen, many of them nearly forgotten, in the confines of the Federal City.

The major newspapers in the Nation's Capital have grown increasingly critical of the memorials proposed for our past Presidents, and the suggestion is being heard more and more frequently that living memorials for our past Presidents make a lot more sense than many of the plans for memorials currently being considered.

I include as part of my remarks a letter which was published in the always informative and readable "Letters to the Editor" column of the Washington (D.C.) Evening Star:

LIVING MEMORIAL

Representative FRANK CHELF, Democrat, of Kentucky, deserves the thanks of a grateful and patriotic public for his significant new bill to make the National Cultural Center permanent. Such a step is long overdue. Haste makes waste, and if we have more time to examine the plans for the center, and to raise the money, everyone, including the donors, will be more satisfied and the results will be more enduring.

At the same time, CHELF has taken steps to provide that the National Cultural Center shall, with its various facilities, such as auditoriums, libraries, and art galleries, be a living memorial to all past Presidents.

His reasoning is sound. He points out that "unless plans for a living memorial or memorials are vigorously pushed, the Nation's Capital will be overrun with statuary and resemble a graveyard."

The danger is real enough, heaven knows. Many people and publications have noted that, at last count, there were about 200 statues to statesmen, many of them forgotten, in the confines of the Federal City.

It is hard to understand how anyone could object to making a great auditorium, library, or art gallery a memorial to one or more of our great Presidents. It may be predicted with certainty, however, that backers of the memorials to Woodrow Wilson, the two Roosevelts (FDR and Theodore) and to other Presidents will find persuasive reasons for not combining their memorials with others in truly great memorials to all past Presidents.

The backers of the National Culture Center can reasonably counter, however, that the center is a concept big enough and important enough to honor all our Presidents.

It is to be hoped that President Kennedy will support this new and significant plan by Mr. CHELF and that Congress will enact it into law. For the Chelf plan, if enacted, could really put some steam into the drive for the National Cultural Center.

THOMAS A. WAGGONER.

The 42d Anniversary of the National Amputation Foundation

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. HALPERN. Mr. Speaker, this year, 1961, marks the 42d anniversary of the National Amputation Foundation, founded in 1919 to aid the amputee veterans of World War I. In the intervening years since its inception, the foundation has aided the veterans of World War II and Korea; until today it has become the largest private organization dedicated solely to the amputee veteran.

Some may ask, What is the purpose of the foundation? Doesn't the Federal Government aid the disabled veteran? The answer, of course, is yes, but the foundation is able, through its 42 years of experience, to handle the special problems that face the amputee. The primary reason for this is because the foundation is staffed by fellow amputees who have encountered similar problems in their effort to readjust to a useful life.

The foundation offers legal counsel, training in the use of prosthetic devices, social activities, liaison with outside groups, psychological aid, and vocational guidance and placement. The amputee faces a definite need for these services, and the foundation, because of its acute knowledge of these needs, is able to adequately counsel the new member.

When the amputee faces the prospect of returning to work for the first time or resuming an active role in community life, complex and at times frightening problems confront him. The loss of a limb means, in many cases, an entirely new life.

Added to the economic problems are many serious psychological barriers. There may be manifested in the amputee's mind the idea that many will shun him because of his changed physical appearance, or even worse, that he will become an object of pity. He has possibly also built up a strong resentment to others who have not suffered the same misfortune as he. It is in situations such as these that only the counseling of people who have suffered the same physical problems and the same mental roadblocks that the foundation renders one of its greatest aids. It is easy for one to say do not worry, people will not shun you, or pity you, but the amputee in his special situation is not comforted by these words. But practical advice from one who has been in the same position may speed the patient to quicker physical and mental recovery.

The vocational guidance and placement programs sponsored by the foundation are vital to the amputee's process of rehabilitation. In many cases the individual may not be able to return to his former occupation, thus making him economically dependent upon others. This factor alone can destroy or at least greatly impede the process of readjustment. However, the foundation's program of vocational guidance can retrain the amputee in an occupation which can make him economically independent. The prospect of being independent in his mode of living helps to reaffirm the amputee's self-respect—vital to complete rehabilitation.

The placement program sponsored by the foundation is another step in returning the amputee to his rightful place in society. It matters very little if you retrain a person who has no opportunity to gain employment. The foundation works continually to educate the employer in the advantages of hiring not only amputees, but also handicapped individuals in general. They are able to point to both the high efficiency and safety record of the handicapped.

These various programs of the foundation may seem very broad, but they have one important element that no large organization can offer: Close personal service and counsel from people familiar with the problems of the amputees because they too have suffered the same handicap.

The National Amputation Foundation, as I have pointed out, was originally dedicated to the veteran amputees of World War I. However, in recent years the foundation, realiziny the urgent need of all amputees, whether they be veterans or nonveterans, for aid and counsel has opened its membership to all amputees.

The expanded activities of the foundation are based upon the premise that "no man is an island." This is especially true of people who have lost limbs, and face a psychological problem unknown to the majority of us.

I offer the foundation my heartiest congratulations on their 42d anniversary, and urge them to continue their fine work on behalf of both the veteran and nonveteran amputee.

The Communist Challenge

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. DEROUNIAN. Mr. Speaker, Mr. Roscoe Drummond's article on the Lao situation will be of interest to all Members of Congress:

A SOVIET TROJAN HORSE—UNITED STATES WARNED TO BEWARE OF RED COALITION IN LAOS

(By Roscoe Drummond)

WASHINGTON, March 21.—We face a new danger in Laos—while we may avert a Soviet military coup—that we will slip into the trap of encouraging the Lao Government to take the local Communists into the Government.

If you want a trojan horse in the living room, just invite in a Communist coalition.

We have had ample warning: The dead democracies of the Soviet satellites are strewn with Communist coalitions, who only wanted to help.

It is all to the good that Secretary of State Dean Rusk has warned Moscow that continued shipment of arms to the Communist Pathet Lao forces can lead to major hostilities. In delivering this warning, Mr. Rusk assured Soviet Foreign Minister Gromyko that America's objective is an independent and neutral Laos.

He hoped that the Kremlin would support the same objective.

SOVIET STRINGS

Premier Khrushchev may well announce his support of a "neutral" Laos. But when he does, look to see whether there is a give-away condition attached to it. If Mr. K. proposes to impose a Communist coalition upon the Lao Parliament, then the Kremlin will be pursuing its long-established tactic designed to turn yet another country into a Soviet satellite.

How the Communists pursue this tactic has been set forth as badly as Hitler did in "Mein Kampf." If we are to avoid a sad mistake in Laos, we had better heed the signs.

Fortunately the independent information center in London has just published an English translation of the pamphlet prepared by Jan Kozak, a Communist member of the Czechoslovak National Assembly, who tells how the Communists overthrew parliamentary democracy in his country as a guide to how they can do it elsewhere.

Kozak advises that the best way to subvert parliamentary democracy is for the Communists to get a foothold in any government coalition. From this foothold, he explains, it is possible to combine pressure from above with pressure from below to destroy the democratic political parties one by one.

HOW REDS WON CONTROL

In the case of the Czechoslovak coalition, the Communists were given control of the Ministry of Interior and had roving commissions in some of the other ministries.

"These executive organs controlled by Communists," Kozak candidly explains, "became effective levers for further advance of the revolution. They enabled direct suppression of bourgeois counterrevolutionary elements." (In Communist terminology "bourgeois counterrevolutionary elements" is a synonym for supporters of parliamentary democracy.)

The main purpose of pressure from below, according to the Czech Communist leader, is to support action by Communists in the government "enhancing their strength and compensating for their numerical weakness limiting the influence of waverers and enemies who stood in the way of further progress of the revolution."

These mass pressures include calling of protest meetings, sending delegations, organized demonstrations and eventually the use of strikes and the general strike.

RED VIEW OF COALITION

Kozak stresses that Communist partnership in a coalition government is always viewed as temporary and is never allowed to dilute the end objective, which is the dictatorship of the proletariat; that is, the de-

struction of democracy. But he omits, no doubt purposefully, one significant fact—that the non-Communist allies of the Communists, those leftist parliamentarians who wish to use the Communists for their purposes, always, end up discarded or purged, once the Communists no longer need them.

It will be well to keep this longstanding Communist tactic in mind when we come to negotiating with Moscow over Laos. An independent and neutral Laos is a good answer, but when the Kremlin suggests that the way to keep Laos neutral is to have a coalition government, let us beware. That is not the path to neutrality; that is the path to a Communist takeover.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BRADEMAS. Mr. Speaker, on March 25, 1821, the Greek way of independence began when the archbishop of Patras raised the flag of freedom in the monastery of Aghia Lavra and the people of Greece dedicated themselves to the attainment of their liberty from the Ottoman Empire.

Today—March 25, 1961—Greece celebrates the 140th anniversary of the beginning of that struggle.

Freedom-loving civilizations can profit greatly from the lessons of the classical age of Greece. These are the lessons of excellence, education, freedom, and public service.

The survival of our political freedom may depend on how well we learn these lessons. In a world threatened by the tyranny of communism, we must strive always for excellence, for the probable consequence of mediocrity is the enslavement of the human mind.

To mark the occasion of Greek Independence Day, I have today introduced in the House of Representatives, the following resolution:

JOINT RESOLUTION PROVIDING FOR THE ISSUANCE OF A PROCLAMATION DESIGNATING MARCH 25 AS GREEK INDEPENDENCE DAY

Whereas the democratic ideals that have made the United States of America the greatest free nation in the world were born many centuries ago in Greece; and

Whereas these ideals have kindled in the hearts of the people of Greece the determination that no sacrifice is too great for the cause of fredom and democracy; and

Whereas in every country people of Greek origin celebrate March 25 as Greek Independence Day, this day marking the beginning on March 25, 1821, of a seven-year struggle of the people of Greece to win their independence from the Ottoman Empire; and

Whereas free men in every nation rejoice that the principles of democracy are again firmly established in the land of their birth: Therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be authorized and requested to issue a proclamation designating March 25 of each year as Greek Independence Day and that he invite the people of the United States to observe such day with appropriate ceremonies.

Medical Student Loans

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. MACK. Mr. Speaker, I was very much interested in an article which appeared in this month's issue of the IAA Record concerning a loan program for medical students sponsored jointly by the Farm Bureau and Medical Society in Illinois. This type of program is essential if we are to educate young men for the medical profession who are not from wealthy families. My fellow townsman, Dr. William P. Lesko, was one of the first participants in this program and served as a general practitioner in a rural community in Illinois. Two other participants in this program were Dr. Leonard Todd, Jr., and Dr. Roger Quinn, who are now practicing physicians in my hometown of Carlinville, Ill.

Mr. Speaker, because of the urgent need for expanding programs of this nature, perhaps through Federal participation, I am including this article as part of my remarks. A great shortage of doctors exists today and the outlook for tomorrow is not at all encouraging. We are nto expanding our medical facilnumber of doctors we educated in 1900. We are not expending our medical facilities and we are not educating young men to care for the increased medical attention demanded today with the poplation over twice as great as we had in 1900. The article follows:

"Healing is a matter of time, but it is sometimes also a matter of opportunity," wrote Hippocrates.

Likewise, becoming a physician is sometimes a matter of opportunity.

Farm Bureau and the Illinois State Medical Society offer this opportunity, in the form of the joint medical student loan fund program, to talented and deserving young men each year.

Purpose of the program is to place general practitioners in rural areas in Illinois. Loans are granted at a low rate of interest to medical students. Recommendations that certain students be accepted by the University of Illinois College of Medicine are made also.

The Illinois General Assembly, by joint resolution, made it possible that 10 places on the admissions list be reserved annually for students recommended by the medical student loan fund committee.

Each student who takes part in the program agrees to practice medicine in a rural community for 5 years after finishing medical school. The town may be selected by the doctor or may be assigned.

The program was started at the 1947 IAA annual meeting. Farm Bureau members were interested in encouraging more doctors to locate in small towns. A survey had indicated that some communities had no doctors and other communities had too few doctors or doctors who were near retirement age.

IAA delegates approved the program on the basis that the Illinois State Medical Society would match IAA funds and that the society would agree to permit a joint committee to administer the fund. Each student to whom a loan is made must be recommended by his county medical society and his county farm bureau.

The fund administrative committee consists of three members of the IAA board and three doctors.

IAA representatives are Edwin J. Gumm, vice president, and directors Merle Jeffers and Harold Hartley. Representing the Illinois State Medical Society are Drs. Harlan English, Edwin S. Hamilton, and Jack L. Gibbs.

Gibbs—named to the committee in 1960—was one of the first medical students to take part in the loan fund program. Dr. Gibbs completed medical school and established practice in Havana in 1954.

First National Bank of Chicago is trustee of the joint medical student loan fund. The program was set up on a 5-year trial basis. IAA delegates later voted to increase IAA funds available for medical student loans and to extend the time limit for the program. The medical society followed suit.

The plan permits a student to borrow $1,250 each year during 4 years in medical school. Maximum loan is $5,000. A doctor can spend 2 years as a medical officer in the armed services and another year as an intern before his first note becomes due.

The first doctor o complete the program started practicing in 1952. Last year 13 young physicians started practices in rural communities, in addition to the 39 doctors who are practicing in Illinois as a result of the program. Twenty-three doctors are eligible to begin practice or are completing internships.

Forty medical students are now studying because of the FB–Illinois State Medical Society programs: 11 seniors, 11 juniors, 9 sophomores, and 9 freshmen.

Of the 102 students who have taken part in the program, 56 received loans.

Eleven students will be added to the program this year. The joint committee last month approved for loans or recommendations the following: Bill Fulk, Pinckneyville; Edward George Eschenbaum, Jr., LaSalle; Charles W. Cummins, Harrisburg; Morris Alan Kugler, Okawville; Theodore Charles Little, Shelbyville; Robert J. Parks, Stonefort; Robert H. Pierce, El Paso; Franklin Lyle Stroud, Somonauk; Robert E. Cox, Wenona; James Fred Greenwood, Metropolis; James G. Blythe, Vandalia.

Byelorussian Independence

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. MULTER. Mr. Speaker, Byelorussia's modern history is inextricably mixed with that of Russia, because during most of that period the country was part of Russia, Byelorussians had become subjects of Russian czars, and the Russian rulers had tried to eradicate all Byelorussian national traits.

The people of Byelorussia, who have had a longer history as a nation than the Russians themselves, were never willing to forego and forget their distinct identity, were never reconciled with their lot under the Russian czars, and have always yearned for their freedom and independence. For centuries they struggled for their goal and patiently waited for the opportune moment. That opportune moment came in 1918.

The Russian revolution of 1917 overthrew the decrepit and detested czarist

regime in Russia, thus freeing, for the time at least, all subject nationalities in the Russian empire. Freedom reigned from the Baltics to the Caucasus, where many national groups asserted their freedom and proclaimed their independence from Russia. The Byelorussians did this early in 1918, by proclaiming the establishment of the Byelorussian National Republic on March 25 of that year. In a joyful and optimistic mood, it was then hoped that some 10 million Byelorussians, having thus attained sovereign independence in their historic homeland, would be allowed to enjoy the fruits of their freedom in peace. Unfortunately that was not to be.

Early in 1921, before Byelorussians had the chance to put their house in order, before they could consolidate and strengthen their government, resurgent and aggressive Soviet forces attacked and overran the country, and independent Byelorussia ceased to exist as a sovereign state. For 40 years these stouthearted and liberty-loving Byelorussians have lived under the unrelenting rule of Communist Russia's totalitarianism. But even under this ruthless tyranny they have not given up their hope for freedom and independence. They still cherish that ideal as their national goal.

On the 43d anniversary of their independence day I wish them more power in their struggle against ruthless totalitarianism.

Edward R. Murrow Fails?

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. DEROUNIAN. Mr. Speaker, the following news item by Alvin Shuster, appeared in the New York Times, on March 23. Could it be that Mr. Murrow now realizes that his documentary was distorted?

MURROW FAILS IN EFFORT TO KEEP FILM ON MIGRANTS OFF BRITISH TV

(By Alvin Shuster)

WASHINGTON, March 22.—Edward R. Murrow, Director of the U.S. Information Agency, tried and failed to suppress the showing in Britain of a controversial television documentary on the plight of migrant labor in this country.

In an unusual intervention by a Government official, Mr. Murrow telephoned a high official of the British Broadcasting Corp. and asked that the film not be used. He was reported to have been told that the documentary, entitled "Harvest of Shame," had been too widely advertised in Britain to be withdrawn.

First word of the effort by Mr. Murrow to suppress the film he narrated as an employee of the Columbia Broadcasting System came today from Senator SPESSARD L. HOLLAND, Florida Democrat and long a critic of the program first televised in this country last November. He said he had been told of the intervention by Mr. Murrow.

Mr. Murrow said through a spokesman later that Mr. HOLLAND's report of their conversations was "roughly right."

It was learned that Mr. Murrow's call was placed yesterday morning to Hugh Carleton Greene, director general of the BBC, which purchased the film from CBS. The program went on as scheduled yesterday.

Mr. Murrow, who was confirmed by the Senate March 15 and sworn in yesterday, said he had produced the documentary "solely for domestic presentation." The sale, he said, was "entirely a decision of CBS, a network for which Mr. Murrow worked for 25 years before taking his Government post.

Ironically, it was also learned today that the information agency was seeking the use for worldwide distribution of another CBS documentary entitled "Africa Crossroads," also narrated by Mr. Murrow.

It was announced today, meanwhile, that "through the courtesy of CBS," the agency would make use of the televised film story of Dr. Gordon Seagrave, the renowned Burma surgeon.

In reply to accusations by Senator HOLLAND, CBS said that the migrant labor documentary, as a news report, was available for worldwide circulation just as was any American newspaper or magazine.

"To deny oversea subscribers the use of a news report would be inconsistent with basic principles of freedom of information and full circulation of the news," the network said.

It added that an announcement that Mr. Murrow had been associated with the documentary as an employee of CBS and before his appointment as director of the information agency was made before and after the telecast.

DISTORTION CHARGED

Senator HOLLAND and other Members of Congress from farm States has criticized the film as a "malicious distortion" of the migrant labor situation. He charged the show played "fast and loose" with the truth.

In a speech on the Senate floor today, Mr. HOLLAND renewed his attack. If the film presented an accurate portrait, he said, it would not be so objectionable. But, he continued, the "national image presented is not only an unfavorable one: it is also a very unfair and untrue image."

Since many of the migrants depicted are Negroes, he continued, the film fits "easily into the false picture of the position of Negroes in American society which our Nation's enemies are bending every effort to create throughout the world." He said it gave the impression that agricultural labor was exploited in this country.

According to the Senator, Mr. Murrow called him twice this week and said that he deplored and resented the sale of the film; that he was "deeply distressed" by it, and that he considered the CBS action as "wholly irresponsible." He emphasized to the Senator that the film had been made for domestic presentation.

Mr. Murrow could not be reached directly for comment on the statements attributed to him. But an aide relayed them to Mr. Murrow and reported that the accounts of the "conversations are roughly right as reported."

DEFENDED DOCUMENTARY

A week ago, Mr. Murrow defended the documentary from congressional attack when he appeared before the Senate Foreign Relations Committee on his nomination.

The American Farm Bureau Federation has been the leading critic of the film and its president, Charles B. Shuman, appeared on the CBS program "Face the Nation" after he demanded time to "set the record straight." The Farm Bureau reported today that it had been informed from London that a protest it had cabled BBC was used along with the showing yesterday.

The Farm Bureau also reported that it had heard that Australia had rejected use of the film as being "not in the best interests of either country."

The Independence Day of Byelorussia

EXTENSION OF REMARKS
OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. GALLAGHER. Mr. Speaker, every year we, Americans, celebrate the Fourth of July—the day of the Declaration of Independence of the United States of America. The 25th of March is the Byelorussian national holiday—the day on which 43 years ago the Byelorussian Democratic Rada—Council—solemnly proclaimed the independence of the Byelorussian Democratic Republic—BNR—in the country's capital Minsk.

The history of these two nations was different. The young American Nation, after having become independent, could freely develop all branches of national life and create the most democratic and powerful state in the world. The fate of Byelorussia was different, because of her different geopolitical location.

Byelorussia, a country on the crossroads of Europe where Western culture and freedom met with Eastern barbarian despotism, was always the battlefield of these two antagonistic worlds.

In the past Byelorussia was an independent nation and played an important part in the medieval history of Eastern Europe. In the early Middle Ages Byelorussia appeared under the name of Kryvia and later on—13th century—was known as the Grand Duchy of Lithuania; in 1795 the country was forcibly incorporated into Imperial Russia.

Continuous efforts have been made by the Byelorussians in an attempt to regain their freedom. With Napoleon's assistance in 1812, by armed uprising under the leadership of Kastus Kalinouski in 1863, and others. The revolution in Russia of 1917 offered another opportunity to shake off the chains of slavery—this time by the means of democratic self-determination. Through the coordinated effort of all Byelorussian organizations, a national representation, consisting of 1872 delegates from all corners of the country, convened in Minsk on December 18, 1917. This all Byelorussian Congress became in fact the constituent assembly of Byelorussia.

The Congress elected the Rada and its Presidium as its executive bodies, which have assumed the responsibility for the fate of the nation.

On March 25, 1918, the Rada and its executive council solemnly proclaimed the independence of Byelorussia and published their third constitutional act containing the official text of the proclamation.

Without any help from outside the new Republic could not resist for too long a time the pressure of Russian imperialism and soon fell victim of new occupation, this time by the Red Communist army.

Her place was taken by the Bolshevik-sponsored Byelorussian Soviet Socialist Republic, created on January 1, 1919, in Smolensk as a Communist counterweight

to the democratic republic. This "union republic" with its puppet government is still in existence within the structure of the Soviet Union.

The people by Byelorussia have never accepted the government forced upon them, and defended their rights by arms. The famous Slutsk uprising of 1920 was brutally crushed by overwhelming Communist forces, that is, suffered the same fate as the Hungarian revolution in 1956.

During the following 41 years the population has been subjected to a violent and ruthless persecution, deportation and extermination. As a result of Moscow's policy of genocide, Byelorussia lost 5 million people in 20 years, according to the Soviet census in 1959.

On the international forum the Communist puppet government of the B.S.S.R. continually abuses membership of Byelorussia in the United Nations.

The Byelorussian people know that thousands of their compatriots living in the free world are disseminating truth about their history, culture, and present colonial exploitation. They also know that the Byelorussian Democratic Rada leads the best forces of the nation in the fight for freedom and justice.

The Rueful Footnote

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the editorial by Mr. Joseph Alsop, appearing in the Washington Post, this day:

THE RUEFUL FOOTNOTE

(By Joseph Alsop)

The Lao crisis has given President Kennedy his first major experience of the harsh ordeal which can never be escaped by any man who wins the leadership of a great nation in troubled times.

This is the ordeal of making choices, in closed and secret rooms, often for closed and secret reasons, with the heavy knowledge that the choices finally made must intimately and perhaps terribly affect the fate of tens and even hundreds of millions of men and women. It came sooner for Kennedy than for almost any of his predecessors.

How has he withstood this test? One can only judge by the choice that seems to be in the making, and by the reactions of the experienced officials who have seen Kennedy while he was meeting the press. Not a few of these officials can also remember the demeanor of Dwight D. Eisenhower, or of Harry S. Truman, or even of Franklin D. Roosevelt, when they too had to submit to this special ordeal which is the occupational hazard of national leadership.

It is not surprising that Kennedy's cool competence has much impressed these men who have been watching him, so to say, taking the heat in the sweatbox of history. His rapid mastery of facts, his knack of asking the right penetrating question, his power to envision problems both widely and in minute detail, are the current commonplaces of the political community. His bitterest enemies no longer argue that Kennedy is incompetent or juvenile.

What is surprising is the deep impression the President has made by his peculiar, highly personal response to the domestic-political implications of the Lao crisis. Being a thoroughly realistic politician, Kennedy is well aware that the Democrats' heaviest handicap is their reputation as the "party of wars," just as the Republicans' biggest assets is their repeated claim to be the "peace party."

The choice in Laos, as is becoming more and more clear, may eventually become a choice between war and peace. In the endless White House meetings on the Lao problem, the President has quite often drily noted that a war for Laos, or for almost anywhere else for that matter, would quite probably permit the Republicans to win the White House in 1964, and to remain in power for long thereafter.

But having said this, the President has always gone on to discuss without prejudice the facts of the Laos problem, its local difficulties, its worldwide dangers, and its possible solutions. The domestic-political aspect has only been mentioned, in short, as a kind of rueful footnote in the much larger and more important discussion of what needed to be done about Laos.

Probably the President is right that he will weaken his chance of reelection if he meets the Communist challenge in southeast Asia. Yet it is doubly unjust that this should be so. It is unjust, first, because American military intervention to prevent the Communist capture of Laos was already under active consideration at the end of the Eisenhower administration.

About 20 days before the White House changed hands, former Secretary of State Christian A. Herter and Defense Department representatives even agreed on a plan for immediate aid intervention by American planes flying from a carrier held ready in the Gulf of Tonkin, in cooperation with planes of Thailand's air force.

The plan, though agreed upon, was not executed because of the feeling that decisions of this gravity had better be left to the new administration. But on January 19, when the incoming Kennedy received his final briefing at the White House, part of the briefing was a clear warning that the position in Laos might deteriorate quite soon to the point where military intervention might be the only saving course.

At this juncture, Kennedy looked squarely at Secretary Herter and asked him what he would do in such circumstances. Herter replied that he would not duck the obligations of the United States, even if this meant the use of force. And President Eisenhower, presiding over the meeting, did not reject the formula of his Secretary of State.

In sum, the phoniness of the claim of the cheaper sort of Republicans, that they have an exclusive patent on peace, was very nearly proven in action before Kennedy took office. But that is only half the injustice, whose other half resides in the claim itself. Would these praters about peace and war parties have had Roosevelt tamely submit when the Japanese attacked Pearl Harbor, or would they have liked Truman to yield all Asia to the Communists by ducking the challenge in Korea?

The answer given by Republicans like Herter is the same answer that one hopes Kennedy will also give, that the test of both parties in grave crises is whether their leaders do what needs to be done.

Leadership and Science: Keys to the Future

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, therewith, a splendid address by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, before the Corps of Cadets at The Citadel, Charleston, S.C., on March 18, 1961. General Trudeau, who has made a distinguished contribution to his country and to humanity, spoke with authority to an attentive and magnificent group of Americans on whose shoulders could well depend the future destiny of our civilization:

LEADERSHIP AND SCIENCE: KEYS TO THE FUTURE

General Clark, staff and faculty, cadets of The Citadel, ladies and gentlemen, fellow Americans, I feel very much honored that you have invited me to come here today to this picturesque campus—to the home of one of our Nation's oldest and most celebrated military colleges—to speak to you about leadership and science—two fields, which, from my vantage point, are keys to our future.

Of these two, it is my conviction that leadership is preeminent.

You—the cadets and faculty of The Citadel—are indeed fortunate in having as your superintendent, General Clark, a man who epitomizes the best in leadership; a soldier-diplomat, world-renowned as a master of his profession and matchless ability to inspire confidence, respect, and loyalty in all who associate with him. In the life and career of General Clark you may view one of the most absorbing and rewarding studies of modern, military leadership on record. The magnificent structures and beauty of this place are another monument to this remarkable American, but more important is the spiritual impact that one can sense here. I am sure that you leave here with the certain knowledge that your strength is in your God.

No need is more apparent throughout the free world today than the need for leadership and character. It is the postulate for victory in today's cold war and tomorrow's time of trial.

On this occasion of The Citadel's 118th anniversary, I want to pay tribute to the sound leadership training that you are receiving here. Each one of you should rightfully be proud of this magnificent school—of its traditions and heritage. I know the distinguished records of your graduates speak for themselves. But more meaningful to me is the fact that you are acquiring a good basic education in many areas of learning—in the arts, sciences, engineering, and business administration—at the same time you are receiving your military training. Broad backgrounds of this type are badly needed, not only in the military but throughout our society, to bolster our national strength and determination during these troublesome times.

In all walks of life—in government, in industry, in labor, and in the military—the

central question is not money—or technological growth—or unemployment—or world trade—as important as these matters are—but rather, where will we find the right kind, and the right number, of leaders to direct our path through peace and progress into the dramatic decades of the future.

In this regard, I hope all of you young men miss no word or action of our President as he struggles daily for solutions to the serious, complex problems which now beset us and which will continue to beset us in the immediate years ahead. There is no example in American history where the President of this country called for support to meet a foreign threat that our people failed in their trust. Always our people have responded fully to the right kind of national leadership; always they will.

The continued, alarming, and ever-growing challenges of this day and age demand the highest form of leadership from the policy level to the grassroots. These challenges are arising from three concurrent phenomena.

One. The threat of the insidious ideology of world communism; next, the rising tide of ethnic nationalism in the underdeveloped areas of the world; and last, the worldwide explosion of science and technology.

These phenomena are thrusting upon us at one time more pressing and difficult problems in all fields than have ever before cried for the solution.

In evolving a dynamic forward strategy to solve these problems, I aver that our thinking must emphasize the point that the searchlight of science, guided by leadership, is the instrument to shake our world of vested interests—our world of status quo—out of its complacency. In business and industry—in politics and the military—even in the most fundamental unit, the family—the daily round has become firmly geared to scientific advances, but in an ever changing routine.

Modern science today is not yet 500 years old and technology is perhaps half of that—but in the last century—2 percent of recorded time—mankind has torn from Nature more of her secrets than during all past history. And the future is even more promising. Of all the men who have ever been trained in science and technology, it is estimated that nine-tenths of them are alive today.

The implications of scientific advances and our exploding technology are truly fantastic. Every day brings new evidences of growth in knowledge and its application—challenging our imagination, our ability, and our judgment to utilize this knowledge wisely. We must use this progress, to the maximum extent, to meet and beat the Communist challenge—and equally important—to wipe out backwardness, ignorance and poverty in the underdeveloped areas of the world. Here, I refer to the social and economic conditions under which the majority of men live—the 75 percent of the world's population that enjoys only 10 percent of the world's wealth. These conditions can be materially improved by science and technology.

The essential catalyst here, gentlemen, is leadership—and wisdom.

The tremendous influence of all the many factors that make up our mighty national strength is impotent without the spark of leadership spread to all echelons of our citizenry.

This spark—the catalyst necessary for a resurgence of bolder and more imaginative thought and action in all ranks of our society—must be ignited in the ranks by you—our young people. Only with it can you make a worthy contribution that will go far beyond any particular military assignment or civilian vocation. I urge you to be inspired—to be seized—by a vision of a greater America—a better world—possible for us all.

This morning I would like to bring into focus certain aspects of military leadership which I believe will stand you in good stead in the days ahead whether you enter the military services, industry, business, or the professions.

Leadership is one of the oldest and most distinctive arts in the proud profession of arms; in its simplest definition, it is the art of directing the actions of others. By and large it amounts to the guidance, direction or control a leader exercises over his subordinates—and it is still a most challenging art to master in this day and age. For the most part, the normal burden of military leadership is multiplied by such current problems as—rapid turnover of personnel, shortage of experienced subordinates, and the training and command of men from many nations; but most importantly by the ever-increasing impact of science and technology on the development and employment of new weapons and equipment.

Complications are also added by the shrinking dimensions of time and space. Whether engaged in allout nuclear war or in countering local aggression with conventional weapons, the time and space factors previously associated with warfare have lost all validity in the face of modern advances.

Paramount among the qualities you must possess to be equal to tomorrow's challenge is leadership.

It is not possible and certainly not desirable, that all men be blessed with the same talents. It would be a highly unsatisfactory world if this were so. Each of us has been endowed with certain qualities and characteristics, integrated in a manner more or less peculiar to ourselves, and consequently our fields of endeavor and the success we reach within them will be considerably varied.

When you graduate, your leadership, ability, and training will be put to the real test in whatever you do.

Only by full use of your imagination and your initiative will you ever know your own capabilities as a leader. You will never know your capacity until you stretch yourself, or are stretched by others beyond what you think you can do or should do. You must seek additional responsibilities and develop broad interests and comprehensive knowledge if you would ever reach your full potential.

Acquiring the art of leadership is simply a matter of mastering certain techniques, understanding men and building up those sterling qualities that gave effective and full expression to your natural talents. The average man can be a good potential leader provided he is willing to work diligently at being one. Leadership is not a sometime thing, and the best leaders I have known worked at improving their leadership all the time.

To paraphrase Kipling, if you can keep your head while all about you others are losing theirs, you have met the test. Inside your head is the basic knowledge of organization, tactics, weapons, and logistics. The challenge facing you is to combine this knowledge with an understanding of men.

Do not err, however, in thinking that leadership derives from a deep voice, a parade ground carriage, or athletic prowess. These physical attributes are rightly associated with good leadership, but real leadership comes from the mind and the spirit and is more dependent upon knowledge and character than on outward appearances. An intelligent man of character—built on the right foundation—is the man of power.

Elements of good character are inherent to different degrees and in different balance in different people. All of us know what they are—I only intend to mention them briefly. Here, we think of courage, honesty, tenacity, integrity, and moral ascendancy in living up to the things we believe in and believing in something that is worth living up to. High character is so important that it can truthfully be said that any officer who does not possess it will never really lead, much less inspire. The exceptions only prove the rule. Leaders who truly combine great abilities with sterling character cast an inspiring aura about them.

Tolerance, loyalty, and respect for the leadership exerted by other individuals, whether they be in superior, coordinate or subordinate positions to yourself, are other traits of leadership I want to stress. There are some functions that you can perform better than I; but there will be others that noncommissioned officers, whom you will command, will be able to do better than you. Consequently, in this life of give and take, of adjustment and tolerance, an important factor is the respect we earn from, the support we give to, and the example we set for, others.

It is seldom that the subject of leadership is discussed without mention of the related subject of discipline. Sometimes the relationship between these two subjects is confused. For instance, a very renowned general once made the statement that "Without discipline there can be no leadership." This is a very fine sounding statement, except of the fact that it is invalid because it has the cart before the horse. If you will stop and consider the relationship of leadership and discipline, you will readily admit that the only correct statement is that "without leadership there can be no discipline." That's the true statement.

Nearly 40 years ago, at our Military Academy at West Point, I learned the definition of discipline which I have always tried to employ throughout my military career. It is still completely adequate today. It is that, "Discipline is the instant and willing obedience to orders; and, in the absence of orders, to what you believe those orders would have been."

Now all military men understand "the instant and willing obedience to orders." Violation here infers that punishment will be given. This is what I term the discipline of coercion, and a most necessary part of the military order; it is nevertheless, in itself, inadequate. The martinets of old knew well this type of discipline, and as a result their subordinates were stimulated mainly by fear and not by confidence in or respect and affection for the commander. It was the kind of leadership that caused men in front of barracks to duck back into the doorway when the colonel came down the street for fear of criticism or reprimand, rather than being proud and happy in greeting their commander.

That is why—particularly in this changing world—you must be sure, if you are to develop your full leadership potential, that you also exercise what I term the discipline of volition; in other words, that you seek to instill the confidence, the respect, and, insofar as practicable, the affection of your subordinates for you. This later characteristic will largely be the unconscious result of your actions. It will stem from the opinion of your men as to your adequacy as a leader, not from yours. It will never come from back slapping or affectation.

General Schofield once described the discipline of volition well, when he said to the cadets at West Point in 1887:

The discipline which makes the soldiers of a free country reliable in battle is not to be gained by harsh or tyrannical treatment. On the contrary, such treatment is far more likely to destroy than to make an army (the commander) who feels respect which is due others cannot fail to inspire in them regard for himself; while he who feels disrespect toward others, cannot fail to inspire hatred against himself."

The discipline of volition is also well explained by the second part of the definition that I learned, "and, in the absence of orders, to what you believe those orders would have been." This is the tense situation where you are not paralyzed by fear although you may well feel afraid. You may be the last officer remaining in your command but, because of the confidence and knowledge you acquired from your absent commander you know instinctively what he would want you to do; and in the crisis you have the initiative, the courage and the will to carry out proper plans and orders as though he were giving them to you directly.

Most of the conspicuously heroic deeds of war have been carried out by individuals or troops where the discipline of volition existed—where officers and noncoms have succeeded in making themselves the guardians of their men's interests and in return have gained unstinted devotion and sacrifice from their troops.

In research and development, I am increasingly beset with the requirement for officers who possess high qualities of leadership coupled with fine scientific background. The complex weapons systems and materiel in use today require officers to have a better understanding of science and technology than ever before.

Educational institutions across our land must review their curricula and incentives must be found to stimulate increased excellence in the field of scientific education—if we expect to have the brainpower our exploding technology requires to maintain its pace. The Soviets, with their emphasis on Communist materialism, graduate twice as many scientists and engineers as we do every year. While we must train young people in science and engineering, we must go the Soviets one better. Our scientists and engineers must come out complete individuals with sound grounding in social sciences. Equally, our social scientists must be completely trained; they must be given an understanding of the physical sciences. We do not approach our potential in this now.

Human knowledge has expanded and is expanding at such a fantastic rate that there is practically no field left in which you can become an expert after only 4 years of undergraduate work. Consequently, you should not expect to gain from this college a mastery of your particular subject, but rather the thorough grounding which will enable you to master it in the future, given time and access to the necessary material.

For example, did you know that currently half of the graduates of the Military Academy at West Point receive graduate schooling at a civilian university as a part of their military careers? In time, this percentage will grow, and it is expected that up to 75 percent of the class of 1963 will do graduate work.

Let me briefly cover with you the Army research and development program and discuss some of the more promising weapons and equipment we are developing for the future—for potential use both on the atomic or nonatomic battlefield. My remarks should underscore that the professional military leader of tomorrow must be mentally well equipped due to the complexity of our weapons systems and the dispersed nature of future combat.

The Army's current research and development program supports extensive investigations into the field of basic research as well as into the field of applied research and development. The scope of our program is as broad as man's imagination, for our primary interest is in man—the soldier—and what it takes to sustain him in an environment more hostile today than ever before in all history.

The Army's efforts in basic research—to penetrate the ever-shifting boundaries of science—are extensive. We devote about $50 million per year to this effort, expended through more than 550 laboratories, universities, and industries, and 80 Army and other Government installations.

Fifty million dollars is quite a sum when you stop and consider that 40 years ago President Hoover, while Secretary of Commerce, advocated at the national level the expenditure of $30 million for basic research over a 10-year period. Today, on the other hand, the Nation is spending approximately $1 billion a year to insure that the reservoirs of knowledge do not run dry—almost a 500-fold increase.

Remember the end product of basic research is new knowledge, or new science, and this remains invaluable but dormant until applied research and development—or technology—molds it into the prototype or model which eventually becomes a new weapon or a new piece of equipment in the hands of troops—or a new commercial product.

Basic research looks into the future for a 12- to 20-year period—as an example, toward the battlefield of 1975. The Army is particularly aware of the necessity for basic research and will continue to stress it to the limit for available funding. It is the key to future developments—to the realization of radically new concepts and designs just over the horizon.

There are many promising results of basic research which we can expect to see incorporated into future equipment and more are on the way.

One of our most important basic areas is materials research. We know that our engineering design prospects are intimately bound up with discovery of new materials with greatly enhanced properties—conducting, semi-conducting, insulating, magnetic, and structural—and also important—with improvement of existing materials. In materials research, we are working on a variety of approaches—in plastics, ceramics, cryogenics, pyrogenics, and metallurgy.

The most pressing research and development programs are not in the field of development—but in research—in finding the new materials which can make creation of advanced military devices possible. The unprecedented demands for new materials in this area are staggering—materials, for example, that can withstand conditions of extreme heat and pressure in the order of a million pounds per square inch and 5,000° C. All the Armed Forces share the need, and are working jointly in this area on a variety of approaches—in plastics, in ceramics, in polymers, and in metals—spending several hundred million dollars a year.

It is important to point out that metallurgy is a field that has seen tremendous advances in the last 10 years and can be expected to surge beyond the boundaries of our imagination in the next few. For example, it is estimated that within the next decade we shall have beryllium alloys with the strength of steel, but one-fourth the weight. Shortly thereafter will come plastics and ceramics with the same strength-weight characteristics. New steels, with vastly improved characteristics, are in sight now.

Research efforts are also underway to bridge the gap between materials and solid state physics. Rich dividends, here, will permit us to chainlink large molecules so that materials—with properties we can hardly now imagine—can be created at our order. Instead of having to work with materials we have—we can have the materials we want. We can determine the ideal characteristics we need, then tailor them out of atoms and molecules as needed.

These and other materials research-sparked developments will redound to the benefit of our civilian industry and commerce as well as to the military, giving us greater utilization of energy, increased measures of reliability and more efficient space accommodations.

How many of us in these days of wondrous advances remain impressed by the fact that electronic parts have been reduced in size in the last few years by modular concepts so that now instead of 7,000 parts per cubic foot, we can put 350,000 parts in the same space. Now, even this figure can be increased by a factor of 10 in certain fuze applications, and using solid circuit techniques—or "molecular electronics"—even this is only a beginning. Just around the corner of tomorrow I predict we shall see a good wrist watch radio of the size of an after-dinner mint.

We are also pushing forward basic research in the field of new energy sources. We are redoubling our efforts to achieve new engines at less cost, with more economy, of less size and weight—and most importantly, with higher performance ratings under all kinds of conditions. Only at our peril, will we fail to investigate every new avenue that shows promise in the power spectrum—from today's gas turbine to tomorrow's fuel cell—from the magnetohydrodynamic generator to the solar cell—and in a future as awesome as it is near—nuclear power sources.

Of these, the fuel cell now seems the most promising for the 1970's.

The fuel cell is an electrochemical device that produces electrical energy by direct chemical reaction. It has all the features of a battery except that the reactants—oxygen and some companion fuel like hydrogen—are supplied continuously and the products—carbon dioxide and water vapor—are removed continuously.

There are several commanding reasons for military interest in this cell. Significant is its potentially high efficiency compared with that of a gasoline motor—about 60 to 80 percent compared with 25 to 30 percent. This means more efficient utilization of fuel with substantial reduction in the logistical load. The fuel cell has no internal moving parts—no pistons, crankshaft, transmission, and the like—and this means reduced maintenance. Of additional importance is the fact that fuel cells operate with an absence of noise or smoke, and generally without excessive heat. They therefore are harder to detect by the enemy on or above the battlefield.

Other significant basic research in medicine, chemistry, or unusual power sources—such as the nuclear reactor, the solar cell, the thermionic converter, or the magnetohydrodynamic process—which our Army is conducting is too numerous for me to cover in the brief time for this talk. But what I have covered should indicate that basic research is an essential ingredient of potential military power as opposed to military power in being.

These advances illustrate, moreover, the kind of basic research effort which is necessary to feed the insatiable appetite of applied research and development, for without new knowledge, without new science, applied research and development is limited to product improvement. Product improvement, important as it is, will not put us out in front where we belong, or keep us there.

Let us look now at the general areas of interest in our applied research and development effort in the classic fields of military endeavor—firepower, communications, and mobility.

Our military power today, in terms of firepower, is truly formidable. In communications, the sinequa non of command and control, we have leaped ahead. But the Army has one crying need today, and that is for revolutionary strides in the third vital area—mobility.

We must break the ground-bound barrier.

Now, in mobility, engineering and military imagination has outstripped existing materials and surpassed the state of the art in power sources. I forecast that through new advances in the science of materials research, we can cut through conventional barriers and attain the truly revolutionary improvements we require in mobility. Our progress here is dependent on the solution of crucial materials and energy problems.

With all our resources, we are working to overcome the lack of new and unique materials and develop true air vehicles that will fly just above the "nap of the earth," permitting the combat soldier of tomorrow to overcome terrain obstacles, such as mud, swamps, ravines, rivers, and forests. This type of vehicle will have the takeoff and landing characteristics of the helicopter, coupled with the advantages of the fixed-wing aircraft in forward flight—and will be able to fly fast, or slow, and quietly, just above the battlefield.

On the ground, we are seeking to improve all our surface vehicles. We are working toward the utilization of large wheels and low profile, low pressure tires—to the "GOER" type of equipment that is used in commercial earthmoving and heavy construction work—where large wheels and tires we know give true off-road mobility. We also expect the "GOER" to provide better logistic support to mobile and dispersed combat operations of the future.

Still on the ground you will see new tanks and armored personnel carriers. These, while not yet in the hands of troops, are in production and soon to be operational to back up the striking power of our powerful new weapons systems. The new ground vehicles represent great improvement over today's tanks and armored personnel carriers—in size and weight—in engine performance and fuel economy—and still better ones are in the offing—on the drawing boards. Where possible, all new ground vehicles will have both swim and air-transportable capabilities.

Communications and electronics are a most important part of our applied research and development effort. We recognize that a land force cannot navigate on or over any terrain, particularly in the Arctic, without some special means of communication control. It also cannot fire missiles effectively without electronic devices to collect target information and guide the missiles to the target.

Here, communications satellites will ultimately provide a reliable and efficient means of spanning the oceans and polar regions, of providing worldwide communications.

Last October, the Advance Research Projects Agency (ARPA) in our Defense Department turned over to the U.S. Army, the $23 million Courier and the $174 million Advent communication satellite programs.

Courier is the first important satellite communication system to be put through the research and development paces. This delayed-repeater type of an active relay system is capable of receiving and transmitting in one pass—about a 5-minute period—almost 340,000 words, or the equivalent of the contents of the Sunday edition of the New York Times. This amounts to over 1,400 words per second—a tremendous increase over any of our present systems. Courier will contribute immeasurably to all future communications systems—civil as well as military.

During the next 3-year period, it is expected that several Courier satellites will be launched. Each communications "package" will be developed by the U.S. Army.

Indispensable to the success of Courier, I must add, has been the solar battery. The more than 19,000 solar cells employed in Courier, which give the satellite a cellular appearance, represent one of the real achievements of our time.

Now, the satellite communication system offering the most advantages is the so-called 24-hour satellite that completes one revolution around the earth in the same time period that the point below it on the earth completes one revolution. This system is known as Project Advent, designed to position a microwave communications relay package 19,300 nautical miles above the earth in a 24-hour orbit.

This is truly an ambitious program, which will probably take from 5 to as many as 10 years to complete successfully.

However, we are well on our way, and when the project has been brought to a successful conclusion, we will have practically a real-time global communications capability, something that seemed impossible a few short years ago.

Now, a few words about firepower.

As you know, nuclear weapons have revolutionized firepower—missiles have boosted our ranges of delivery and tremendously increased our impact power.

In the nuclear area, we are making particularly fine progress in developing a formidable array of weapons with a wide range of yields. Not only are we fashioning warheads for nuclear-tipped missiles and rockets, but we are developing low-yield, lightweight, nuclear weapons that can be used effectively in close support of our combat forces.

We are also improving our tube artillery—it still retains its vital importance for close support and for delivery of conventional fires continuously if needed.

We are developing many types of improved guided missiles and rockets to supplement or replace those that we have now. Among these are Sergeant and Pershing, both long-range, surface-to-surface missiles being developed to fire at ground targets. In the shorter ranges we have improved our reliability and accuracy of delivery by developing Lacrosse. This highly accurate guided missile provides all-weather, close tactical support for the frontline soldier.

To meet our important mission in the air defense of our troops and people, we have under development both a shoulder-fired missile, called Redeye, for the combat soldier to use against attacking aircraft and the amazingly effective Hawk missile for employment by field units against low-flying aerial targets.

Unquestionably, the most important contribution we can make to the active defense of the United States in the near future is Nike-Zeus, the only weapon system in development anywhere, to our knowledge, designed to attack incoming ballistic missiles. It is under development by that same Army-industry team which developed the Ajax and Hercules, and is an outstanding example of the Army-industry partnership so essential to national security.

I want to stress right here that the 450,000-pound thrust Zeus booster engine is the most powerful single-unit, solid-propellant motor successfully fired in the free world—and I feel there is an urgent requirement for such a weapon while we are faced with the growing ballistic missile threat of the Communists. I am confident the Nike-Zeus can do this job in the 1960's.

In the nonnuclear area, we have improved rifles and other small arms. These weapons, soon to be in the hands of troops, outperform anything we have now. They represent the latest advancement in the state of the art, but we are striving for still better ones tomorrow.

There is one other area with which I assure you we are most concerned, and that is with the most important factor on any battlefield at any future time—the soldier. In the Army of tomorrow, man—the soldier—will still play the predominant role, regardless of the nature of the conflict.

The soldier on the ground is the man for whom we try not only to develop the finest weapons systems but also the best rations, clothing, shelter, and protective devices; for whom we are constantly striving to secure every possible advantage in future combat so that he can perform his vital missions and carry on to victory. A most important objective in this respect is to lighten the load the soldier must carry.

Now, I have covered the Army research and development program broadly and described a few of our more promising results. My remarks, I hope, have given you a flash insight into the research and development cycle which goes from the concept of an idea until it is turned over for production of hard-hitting hardware.

And this brings us back full circle to my beginning thesis—the military leader of today must be mentally well-equipped—better than ever before—due to the complexity of our weapons systems, the dispersed nature of future conflict, and the diplomacy required in dealing with allies and indigenous peoples all over the world. Moreover, he must be mentally dynamic and study and master a broad span of subjects and acquire knowledge not only in the physical sciences, but in the life and social sciences as well.

You have often heard the casual remark that "the Navy and Air Force fight with machines; the Army and Marines with men," but today all the services are emphasizing such fields, for example, as personnel or "human factors" research and engineering-psychological research.

There is a real need for research on man's behavior because the physical sciences are outstripping the social sciences. More must be known about the great and most important element in war—man. We must know more about why he acts and reacts as he does and how he can do better. Like a car speeding along the highway at night, we must not outrun our headlights. I can assure you that the newest and most advanced weapon of war is no better than the man controlling it. Moreover, the most advanced combat vehicle in the world is no good without the crew to fight it and the leader to lead them. It is toward training men that your initial and future efforts largely will be directed.

The modern military leader must also be physically vigorous and tenacious to withstand the hardships of the battlefield and to inspire his men with his own vitality and enthusiasm. Never forget the advice of Napoleon—it is always the last quarter of an hour that decides the fate of a battle. How many football games have you seen won in the last quarter? Or the last minute? This is the kind of tenacity, of determination, of the will to win, that so frequently makes the difference between victory and defeat, and so it will be in your personal lives, whatever the task before you. You must not let the frustrations or difficulties of the day deter you from overcoming or shedding them tonight and plunging on to new goals tomorrow.

We are sometimes lured by fantastic notions about men of genius. The men of genius whom I have known are the most indefatigable toilers in this world. Blood and sweat went into the writing of every great book—the painting of every masterpiece—the building of every magnificent structure—the winning of any military campaign. The best things in life come high.

The future today, while it is challenging and difficult to foresee, nevertheless does hold the same promise as the future viewed in earlier decades or centuries. It will be a measure of our personal and collective courage in meeting this challenge of the future that will determine not only your individual

success but whether the free world will survive and progress or else go down in the dust of despair and defeat, if the torch of liberty is snuffed out by the poisonous fumes of world communism. The eminent British historian, Arnold Toynbee, has pointed out that 19 of 21 notable world civilizations have died from within, and not by conquest from without.

My message to you this morning is that this Nation cannot afford to let our great Western civilization be number 20 on this list. The codes of ethics and morals that we have so painfully built up over a period of some 2,000 years are still the best mankind has yet been able to devise.

I often think of the inspiring words of Theodore Roosevelt, great soldier and man of strong convictions and high character, who was endowed with outstanding qualities of dynamic leadership. Listen:

"We know there are dangers ahead, as we know there are evils to fight and overcome, but, stout of heart, we see, across the dangers, the great future that lies beyond, and we rejoice, as a giant refreshed, as a strong man girt for the race. The greatest victories are yet to be won, the greatest deeds yet to be done. There are in store for our people and for the causes we uphold grander triumphs than have ever yet been recorded."

To meet this worthy challenge, we need a resurgence of that faith and that courage to reach our destiny; we need to banish fear and complacency, the palliatives of weak and ignoble minds.

The individual contribution of each of you toward this worthy goal will be a measure of the future success or failure that we, collectively, attain as a Nation. This is the challenge of today. This is your commission for the future.

I thank you very much.

Address of Congressman Thomas N. Downing, of Virginia, on the Occasion of the Presentation of the Portrait of the Late State Senator Robert O. Norris, Jr., of Lancaster County, Va.

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the RECORD, I include a speech delivered by my distinguished colleague from Virginia, the Honorable THOMAS N. DOWNING, at the presentation of the portrait of the late State Senator Robert O. Norris, Jr., to the circuit court of Lancaster County at Lancaster, Va., on Monday, March 20, 1961.

Senator Norris was, during his lifetime, one of our most distinguished Virginians. He was a lawyer, a legislator of great ability, and a gentleman of outstanding qualities of character. He served in the General Assembly of Virginia possibly longer than any other individual in the history of the Commonwealth. He was elected to the house of delegates in 1911 and served in that body until 1928, when he was elected to the senate to succeed the late Senator Thomas J. Downing, where he continued until his retirement in 1958, a period covering nearly 50 years. He served as president pro tempore of the senate and was also chairman of the finance committee.

I had the distinction of serving with Senator Norris in the house of delegates and in the senate where we were for a period of 10 years desk mates. I have never known a finer man, nor have I ever had a better friend.

The address of Congressman DOWNING is as follows:

ADDRESS BY HON. THOMAS N. DOWNING

As I reflect back on my memory of cherished friendship with many people, no figure stands so prominently as does Robin Norris. It was my pleasure to have known and loved him since my earliest recollections of childhood. It was my distinguished honor to have been related to him. He was an intimate and devoted friend of my grandfather, Thomas N. Downing, whose portrait also hangs on the walls of this historic courthouse. Visits were frequently exchanged between these two men and for me it was always the greatest of delights to be allowed in their presence and listen to past masters in the now forgotten art of conversation. But, whether the conversation was privately conducted or a public speech before the multitudes, the resultant impression of one and all was that Senator Norris was a wonderful and interesting man.

When I first entered the practice of law, I had a strongly entrenched drive to begin my profession here in the Northern Neck, and it was Senator Norris who permitted me to work side by side with him. For one short, but precious, year I was with him night and day—through periods of adversity and disappointment—and when his joys were unbounded. It was during this period that I began to appreciate the magnitude of the man himself. As a practitioner of the law, he had no peer. The walls of this very courtroom have reverberated more than once with his oratorical elegance and understandable logic. Fortunate clients represented by him knew that they had an advocate of superior ability, character and integrity, and that if their cause had merit, it would be promoted by every fiber of his strength and every ounce of his energy. No client ever had a more able counselor, no lawyer better promoted his cause.

As a man, he always seemed to me to be a tower of confident strength. No responsible person ever questioned his word or his motive. He was a man other men loved and respected. He was a man who loved and respected his fellow man. Perhaps this was the cornerstone of his greatness. He could dine with kings and queens, and yet he had the gentle and kind common touch that endeared him to the hearts of all who knew him. As every other man, he had his frailties, to be sure, but in R. O. Norris, Jr., his were uncommonly few.

Above all else, however, he was a Christian gentleman in the finest and truest sense. He was courtly in manner, polite in speech, his very presence radiated a warm feeling.

As a representative of the people he loved, his prime purpose was to do only those things which would best serve the interests of his constituency, his beloved State and his Nation. There are laws on our statute books today which bear his name symbolizing his untiring efforts to promote, preserve and protect our form of society and which will serve to perpetuate his memory for years not within our reach.

The good Lord gave Robin Norris his great talents to be used—and they were used as He intended.

I hope that this sensitive portrait will serve as a constant reminder that the Northern Neck has again produced a true and loyal son of which she can be justly proud.

"The tall Cedar fell and left a lonely place against the sky."

Federal Aid to Education: A Forecast

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. QUIE. Mr. Speaker, while the great debate goes on concerning Federal aid to education, I know my fellow Members would be interested in reading the editorial views on this subject as expressed in the March 17, 1961, edition of the Albert Lea Tribune, Albert Lea, Minn.:

FEDERAL AID BILL CAN KILL SCHOOLS

Those who want the Federal Government to collect money for schools have ripped the lid from Pandora's box, hinges and all. For the last several years the public has been wooed with schemes all designed to pry money from Federal taxpayers in the name of "good works."

The Kennedy administration is proposing a multibillion dollar program ($3,327 million over 5 years for scholarships and construction of college buildings, $2,298 million more in 3-year grants to States for construction and/or teacher salaries) and makes signs of being serious.

Hardly has this measure been proposed than the National Catholic Welfare Conference composed of 200 cardinals, archbishops, and bishops served notice that when the money was being ladled out, the Nation's 12,000 Roman Catholic schools would expect a fair share.

President Kennedy has said he thought public money for religious schools was unconstitutional. That is, he said it one day, but a few days later said he thought "loans" might not be illegal. But, unconstitutional or not, the gold rush is on.

Protestant and Jewish bodies have gone on record as opposing the use of public money to support church schools, but if the Roman church succeeds in obtaining Federal money one could hardly blame other churches if they changed their minds.

In addition, many schools at all levels are private. Some are important such as Stanford, Harvard, Reed, Mills, Dartmouth, Carleton, Pennsylvania, et al. Spokesmen for these schools have not pressed the issue, but there are those who have said that if church schools get money, then private schools must receive equal treatment.

Already public money is used in many ways for parochial education: The school lunch is a case in point. GI school support went to private schools, church schools, and public schools, and this is being cited as a precedent for giving money to those who sponsor schools of special interest.

There are 99 Roman Catholic members of the Congress—12 in the Senate and 87 in the House of Representatives. They report their mail is running heavily in favor of including church schools and colleges in any program of Federal aids. Senator EUGENE MCCARTHY, of Minnesota, is one who is Catholic and who says his mail favors such aid.

And there you have it. Those who have nibbled away at Jefferson's "wall separating church and State" have loosened enough bricks that the structure is in a fair way of tumbling down.

There will be a great deal of eloquence expended on this issue, but it is the Tribune's considered opinion that if this measure—or one substantially like it—is passed by the Congress you can mark the date of its passage on your calendar as the day when public education began to fade from the picture.

It may take 20 years, or 50, or 100, but it is this newspaper's belief that if Federal aid to any schools is granted at this time, that the church and private schools cannot long be excluded. And the day that begins, there will be less real need for public schools and their decline immediately will begin.

Let the debate begin.

Dante's Dream

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. CONTE. Mr. Speaker, I call to the attention of my distinguished colleagues the following article which expresses some very fine thoughts on a celebration which took place this month:

[From the Christian Science Monitor, Mar. 21, 1961]

DANTE'S DREAM

Where a generous portion of the American population has just engaged in "the wearing of the green," it may come as a bit of a surprise to many—but not to Italian-Americans—to learn that March 17 isn't exclusively St. Patrick's Day. For 100 years ago on March 17, 1861, a dream of the poet Dante took shape in Turin—the cradle of Italian unity—when the first Italian Parliament gathered and proclaimed the Kingdom of Italy, thus uniting into one nation the separate states that make up the boot we know today as modern Italy.

Modern Italy—the Po Valley and 20th century Milan, yes—but Rome with its centuries of civilization; Florence and its great art collections; Naples and its sparkling blue bay—there the past stirs strongly. Even as America molded 13 raw colonies into what has become the United States, so contemporary Italy's task is to continue welding that country of contrasts—the old and new, the economically strong north and agrarian poor south, pockets of ignorance and of intellect—into a creative, vital nation.

On her visitors and friends Italy leaves an indelible stamp; as it did on Browning:

"Open my heart and you will see
Graved inside of it, Italy."

This year America commemorates its Civil War—that great struggle to preserve the union of North and South in this country. And Italy also celebrates its corresponding struggle to become a unified and a free nation. Just as Lincoln knew "this Government cannot endure permanently half slave and half free," so, too, did Italy's great statesman, Count Cavour, proclaim: "There can be no liberty without social justice."

Some nations whose independence is older than Italy's still have that lesson to learn. And others still seeking nationhood could study with profit the restraint exercised by Italian patriots who while building a new state preserved so much of the good and beautiful in their heritage.

Milk Marketing

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. HALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, the marketing of milk is a matter of vital concern to my district, which constitutes one of the largest milksheds in the Nation. The use of artificial and unjustified health barriers to prevent the marketing of our products is a matter of grave concern to thousands of dairy farmers in southwest Missouri. The following recently appeared in the Springfield, Mo., Leader Press, and is worthy of consideration by the Members of Congress who may soon be asked to consider legislation in this field:

MILK MARKETING

Tears, recriminations, misinformation—if not milk—have spilled prodigiously over the Texas legislative proposal to bar the import of Missouri milk from the Lone Star State.

Yesterday, the issue splashed onto the Texas Senate floor for what promises to be a showdown. And here are some of the misrepresentations—the tears were there, but can be ignored—offered Texas' upper house:

That the milk from Missouri—actually, it's from southwest Missouri—is of poor quality; that the show-me standards of production are inferior; that cattle here are penned all winter in barns to protect them from the Ozarks' severe cold; that such practices are unhealthful; that Missouri cattle are diseased; that the frigid Ozarks climate helps "kill flies and preserve milk," etc., etc.

All so much nonsense, of course. The description might be fitting to milk produced farther north where cattle go in barns in the fall and remain night and day until the next spring. But Ozarks milk is produced much the same as Texas milk.

Dairy cows never spend more than the few minutes needed for actual milking each day in the barns here, therefore do not incur the sanitary problems that northern housing invites. There are few days in any winter that Ozarks cattle don't graze at least part of the day in the open pastures; none when they don't have the freedom of open lots and comfortable loafing areas. Many of our cattle lots are paved.

Much of the milk passes via pipeline milkers from cow to the most modern bulk storage in airtight, quick-chilling retaining tanks without ever coming in contact with air and other potential sources of pollution.

As a matter of fact, Ozarks milk has been demonstrated as superior to that of most of the rest of the Midwest in its milk solids contents.

Now this is misrepresentation that's deliberate for it was suggested in large part by a man intimately acquainted with Ozarks dairying, Dr. George Fischer of the San Antonio health department.

Of course, the real intent of the Texans is not to keep out impure milk—actually, our herds are regularly and rigidly inspected for tuberculosis and brucellosis, the two most infectious diseases carried by milk—but to keep out our milk.

That's understandable, even excusable, if it competes with Texas milk. But one thing should be kept in mind: Texas importers pay a premium over prevailing Texas prices to get Ozarks milk. And they take it the year around. That should provoke some Texas thinking.

Ours is a $600,000 annual stake—not big for the State as a whole, but a sizable one when one remembers it's confined to a few southwest Missouri cows.

Quite understandable, then, that southwest Missouri legislators have rallied to their dairymen's support with a threat of boycott on Texas citrus and other products if our milk is barred.

Comic opera? Maybe so, if one has no stake in it. But it's not so funny when it's bread and butter money for our own industry.

A Nonpolitical Postal Service

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. DEROUNIAN. Mr. Speaker, following the announcement of the policy of Postmaster General Day to remove from the Postal Service any taint of politics, this editorial appeared in last night's Evening Star:

POSTAL BOOK BURNING

Postmaster General Day in the nick of time has saved his 550,000 postal workers from the possibly deleterious effects of reading the wrong literature—that is, literature prepared by and glorifying his predecessor, former Postmaster General Summerfield. If there has been more smoke than usual rising from the chimneys of post offices throughout the land, it was probably due to the burning of many thousands of copies of the February issue of the Postal Services News magazine. This was the final issue under sponsorship of the Republican administration.

The trouble with the February issue, according to a Post Office Department spokesman, was that it contained a feature "spread" praising Mr. Summerfield for his accomplishments. Among these, it was pointed out, were certain reforms which Mr. Day already has ordered halted—such experiments as postal automation and missile mail delivery. It was explained that the new Postmaster General felt the Summerfield article would be confusing to postal employees. So all copies of the February issue were ordered destroyed.

Somehow or other, this method of protecting employees from being confused, while possible effective, seems a bit drastic in a country and in an administration opposed to censorship in general and book burning in particulary. The better way, we think, would have been to set the employees straight with some right-thinking (Democrat brand) literature in the March issue.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Address by Senator John O. Pastore, of Rhode Island, Before the American Cotton Manufacturers Institute

EXTENSION OF REMARKS
OF

HON. B. EVERETT JORDAN

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1961

Mr. JORDAN. Mr. President, a few days ago the distinguished Senator from Rhode Island [Mr. PASTORE] and approximately 26 other Senators took part in debate in regard to the plight of the textile industry and the effect of imports on that industry. At that time the Senator from Rhode Island did a magnificent job, as did all the other Senators who participated in that debate.

On Saturday, March 25, the Senator from Rhode Island addressed the American Cotton Manufacturers Institute, at its meeting at Miami Beach, Fla. The Senator from Rhode Island was received there extremely well, and made a magnificent speech. I ask unanimous consent to have the full text of his speech printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE JOHN O. PASTORE, U.S. SENATOR FROM RHODE ISLAND, GIVEN BEFORE THE AMERICAN COTTON MANUFACTURERS INSTITUTE, INC., AT MIAMI BEACH, FLA., MARCH 25, 1961

My good friend Seabury Stanton and fellow Americans, first of all, I should like to thank you for your cordiality and your hospitality. I am very appreciative of how pleasant you have made my stay here in Miami for the last several hours. I think I speak the appreciation also of Prof. William Miernyk, whom our committee was so fortunate to obtain, even at a very, very busy time for him, to assist and to counsel our endeavors in the investigation that we made pertaining to the decline of the textile industry in America.

Yesterday I met many of you personally. Your compliments were rather universal. Many of you said "Thank you for what you have done for me and thank you for what you have done for the textile industry."

Frankly speaking, and I would be less than honest if I did not admonish you to this, that was not my interest. I am not interested in the plight of the textile industry because an individual may be looking to his profit or to his losses. I am only interested in the textile industry because I think it is absolutely necessary to the economic stability of America. [Applause.]

My interest and my knowledge of the textile industry is not academic. I do not read many books on the subject, but I, in full modesty, will say that my interest is somewhat profound.

I have lived in an atmosphere where the textile industry flourished for many, many years. I have been closely associated with men and women who have managed mills, and I have traveled my daily chores with men and women who have worked at the loom.

Ten years ago in my own beloved State of Rhode Island there were 62,900 people employed in the textile industry. Today there are 27,900. There has been a decline in the textile industry of more than 55 percent in the last dozen years.

When I was Governor of my State between 1945 and 1950, our revenue from textiles alone was 45 percent of our gross. Today I dare say it is less than 15 percent.

Now, it is true that many of the jobs that have been lost in the textile industry have resulted from an increase in productivity, and I dare say that in the textile industry you bear favorable comparison with the acceleration of productivity in any industry in the United States of America.

It is true that we lost much of our employment because of the exodus of some of our mills to a region of our country south of the Mason-Dixon line. We did not like that too much. We do not enjoy it to any extent today, but we accept it as the facts of life; but be that as it may, we today have 27,900 of our working population engaged in the textile industry in the State of Rhode Island, and it is the interest, the concern, and I hope the devotion of the senior Senator of the State of Rhode Island to see to it that these jobs are saved, protected and made to endure in my State of Rhode Island. [Applause.]

Now, that does not mean that I am a protectionist. I am certainly not a protectionist. Some mention was made here that the Reciprocal Trade Agreements Act will come up for renewal in 1962. I voted for the extension in 1958. We were told at that time by President Eisenhower that he needed an extension of the Reciprocal Trade Act if he was to maintain the peace of the world and the security of our people. I believed him, and I voted for it, and I say to you of the textile industry that if in 1962, Mr. John Kennedy rises before the American people and says "For the peace of the world and the security of our people I implore you to again continue the Reciprocal Trade Act" I shall do so again as an American.

But that does not mean that our problem does not cry out for solution. The one mistake that is being made all along the line, and I do not know whether this has been already mentioned to you, is the fact that on two occasions our subcommittee made this investigation, and on each occasion we were very explicit in our declaration, that we were not urging, we were not appealing for, we were not recommending a change in our traditional foreign policy.

When we instituted quotas on agricultural products in the United States of America we did not alienate the rest of the world. We did so for economic reasons. We have a surplus that was cluttering up our agricultural storage, and it would have been next to folly if we increased that surplus astronomically, and for that reason we invoked quotas. These quotas are accepted by the American people, they are accepted in good grace, I am happy to say, by the rest of the world, and this idea that the word "quota" has become so obnoxious is so surprising to me.

Now, the facts of life in the textile industry are very, very simple.

I applaud and appreciate very much what the Secretary of Commerce had to say in commendation of our subcommittee. I am so happy, and I had Bob Jackson get his speech for me. When he said, "A national administration cannot settle the textile problem in a vacuum or without regard to other matters." I say no one is pretending that we do, no one is asking that we do.

He went on, "But I think I can promise that you will get a decision * * * you will get action." That, to me, is the core of the presentation that he made yesterday.

Now, I am happy to see that upon the recommendation of our subcommittee the President of the United States has appointed a cabinet-level committee. They have conducted investigations, they are in the process, as Mr. Hodges said yesterday, of analyzing that report, and they, in turn, will report to the President of the United States, and he in turn will report to the people of the country.

I quite agree with Bob Jackson that there is enough power in existing law, there is enough power in the Presidency of the United States to ameliorate the situation in the textile industry in the United States of America and to do so quickly. No further legislation, in my humble opinion, is required.

Two years ago we were quite disturbed over the number of imports that were coming into this country from Japan. Our committee cautioned the country and the world that this was only the beginning.

Since 1959, when our report was made, and within the past 2 years, imports generally have risen two and a half times more. Japan in 1958 exported to the United States of America, as the greatest exporter, about 60 percent of the entire imports in cotton that were coming into this country. Her quantity has gone up 8 percent in the last 2 years, but her overall share is down to 28 percent, which means that other nations have come into the field.

Now, I heard a man say on the floor of the Senate last Tuesday morning that we must not price ourselves out of the foreign market, and I say "Amen" to that, but how in the world is America ever going to price itself into the Hong Kong market. It is a fallacy that blinks its eyes to the truth and to the realism of the moment.

We of our committee feel that our recommendation of flexible, expandable quotas is a fair and reasonable compromise of a very knotty problem. We feel that the law can be administered and be administered effectively. We feel that this law will not only have a salutary effect upon our own American textile economy, but, indeed, will have a salutary effect upon our friends, who are exporting to us from abroad. For the worst thing that can ever happen to America is to lull the rest of the world into the notion that they can produce and produce and produce their textiles and sell them to the American consumer, and then one day, when the goose that has laid the golden egg dies, to wake up and find out that they must begin to close down their own mills. We will end up with more enemies in the end than friends we made in the beginning.

This matter must be discussed on an international level. Our friends must be made to understand that the American market still welcomes them, but we must convince them, as diplomatically as we can, that the

American consumer is not inexhaustible. He is alive and kicking only in so long as he has a job, and what we are talking about today, my friends, involves the jobs of two million Americans, be it in the textile, broad-woven, man-made, Wilton and carpet, and made-up apparel—two million American job holders are concerned with this problem.

We can absorb, as we have been able to, what has already come in. What concerns us most is the trend. If imports have gone up two and a half times in 2 years, what will they be in 5 years? What will the cure be in 10 years, and where will the textile industry be in 15 years? The one industry that is second only to steel in our national security.

I have heard so much about sacrifice. There is not an individual in this room who, this morning, would not be willing to sacrifice his plant and his fortune if he or she thought for 1 minute that the doing of it would mean to remain free and not become slave. But where did we ever get this idea that the American textile domestic industry must vanish in order to preserve the peace of the world?

You have been most helpful to our committee, but I daresay, in sounding this clarion here this morning, we have achieved no results. We have been complimented to the extent that we are dizzy with flattery, but flattery is not flexible, expandable quotas.

The job must be done, the responsibility must be met judicially and wisely.

I know it is not simple. I know that we have problems, but look at wilton and carpet—3 percent of our entire production in 1948, 10 percent of our entire production in 1956, and 26 percent of our production in 1960—how long will it take? You can take category by category and the story is all the same.

Now, we do not mind, in giving foreign aid to our friends, we do not mind in helping them to build their factories. I have fought for it. In philosophy I am an internationalists and not a protectionist.

We do not even mind the two-price cotton system, provided that when our friends make it into cloth they put it on the backs of their own people. [Applause.]

But to send it back to us in competition with us is again turning your backs to the facts of life.

Now, I know that what we have suggested is not universally popular. I know that it must be studied and studied seriously. In our first report we advocated that in the offshore procurement program a certain amount of those American dollars be expended to buy American-made products. We were flatly told that we could not interfere with the machinations of a foreign government. We could not tell it where to spend our aid because that would not be right, yet we have lived to see, in recent months, that that policy has been reversed.

If, 2 years ago, someone rose on the floor of the Senate and said, "$500 duty-free is too much to bring into America from abroad by an American tourist" they would have called him an isolationist, and within weeks we have seen that drop from $500 to $100.

All I am saying to this administration, please make textiles part of the New Frontier. [Applause.]

I say this to you, that if our cause does not receive a welcome reception at the hands of a Luther Hodges, who knows the textile industry even better than I do—if our cause is not received favorably by Mr. John Kennedy, who lived in the environment and the atmosphere of the textile industry and saw it decline in his own beloved State of Massachusetts, then I dare say, and I say this frankly and as honestly as I can, we either have no cause or our cause is destined to die on the vine.

This is the time, this is the place. These are the facts. We are saying to the administration, look at them realistically. It is not enough that you recognize how badly off we are unless you bring to us some kind of a reasonable remedy. If, in our recommendations, we have gone too far and, for the national interest we must retreat a little bit, show us where our patriotic duty lies and we will accept it, but whatever you do, please look at the textile industry, understand its plight and save it, not only for America but for the rest of the entire world. Thank you. [Applause.]

Woodrow Wilson and President Kennedy

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. DODD. Mr. President, on March 19, my good friend and colleague, Senator ROBERT C. BYRD, of West Virginia, made a speech before the Knox County Democratic Women's Club, in Knoxville, Tenn. Like every speech my esteemed colleague makes, this one was filled with provocative thinking—especially with regard to our foreign aid programs and our import policies. Because I think Senator BYRD's remarks deserve the widest possible circulation, I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF U.S. SENATOR ROBERT C. BYRD, OF WEST VIRGINIA, AT KNOXVILLE, TENN., MARCH 18, 1961

One of the fringe benefits of serving in the Senate is the pleasure which comes from working with your two fine Senators from Tennessee—ESTES KEFAUVER and ALBERT GORE. No Members are more highly respected by their colleagues on both sides of the aisle, or by so many persons in all branches of the Government.

If there is one characteristic that sets Senator KEFAUVER apart, it is courage. It took courage to challenge the power of the big criminal syndicates, as he did during his first term. It took courage to question whether so-called administered prices in the steel, bread, automobile, and, now, the prescription drug industry, are good for the consumer or for our total national economy.

In all of these battles, and in others in which Senator KEFAUVER has been engaged, the people have been the victors. Turning the spotlight on hoodlums and racketeers has brought a public awareness about crime that has made our communities safer for ourselves and our children. And in going to bat against monopolistic practices and concentration in some of our major industries, Senator KEFAUVER has applied the brakes on price inflation in many areas.

Your senior Senator has been no less a man of courage in international affairs. As much as 10 years ago, he took the risk of being called a dreamy-eyed internationalist by battling for an organization of Atlantic Community nations, which would give attention to common economic and political, as well as military problems. Only now is the wisdom of this viewpoint being realized in Washington.

For all of his activities in national and international statesmanship, Senator KEFAUVER is constantly attuned to the problems and needs of his constituents in Tennessee. He gets—and answers—probably as much mail and as many telephone calls from individuals as any Senator. And his office is one of the busiest on Capitol Hill. I know you are proud of ESTES KEFAUVER, and you have every right to be.

Your junior Senator, ALBERT GORE, is now in his 22d year of service in the Congress. This period includes service both in the House and Senate.

ALBERT GORE's record has been marked by support of progressive legislation. As you know, among his major legislative accomplishments, since coming to the Senate, is the Highway Act of 1956, of which he was coauthor. It has been largely as a result of his leadership that the Nation is now engaged in a mammoth program to bring into being adequate highways to serve the needs of an expanding economy and a growing population.

As a member of the Joint Committee on Atomic Energy, and before that, as a member of the Appropriations Committee of the House, Senator GORE has played a leading role in making nearby Oak Ridge the atomic capital of the world. The wealth of scientific resources developed at Oak Ridge constitutes an asset not only to Tennessee, but also to the Nation.

But ALBERT GORE's activities have not been limited to his support of specific legislative proposals. His has been an influential voice in the shaping of policies of the Democratic Party. He has the perception to understand that the policies which guide the Democratic Party are grounded in the best interests of all the people, and he has the courage to speak out about the things in which he believes.

The courage of Estes Kefauver, and Albert Gore, are in the tradition of Woodrow Wilson, that great Democrat whom we remember tonight. I might add, parenthetically, that they are also in the tradition of Franklin D. Roosevelt, Harry S. Truman, and John F. Kennedy.

Courage, I might say, is synonymous with the name of Woodrow Wilson. And because he had courage, we have inherited, through his actions, a tremendous legacy of democratic tradition and national purpose.

The debt this country owes to Woodrow Wilson is immeasurable. His contributions to the strength and growth of America are too long to enumerate. But his determined fight for passage of the 19th amendment—the right to vote given to the women of the United States—will always be one of the things which assure Woodrow Wilson, throughout all time, a place among the greatest of our Presidents. Not only was his fight a recognition of the role of women through the generations—in war and peace, in prosperity and poverty, in crowded cities and in sparsely populated villages—it also was an affirmation that America needed the political participation of the homemaker for a more responsible development of the human aspects of our national life.

The strength of America today was founded in our homes yesterday, and the strength of America tomorrow is founded in our homes today. For it is in the home that each generation of Americans learns to live and work with other people—learns to understand and appreciate the precious quality of the American way of life. This is what Woodrow Wilson so keenly comprehended when he waged his fight for woman sufferage.

While Wilson was waging a fight for political emancipation of our women, he was also seeking to emancipate American political thinking from its narrow provincialism—from its concept that the broad oceans would keep us free and clear of the political fer-

ment in other countries. He was a visionary, and he foresaw the day when great distances would be erased by scientific achievement, when economic and social upheavals in some far off foreign country would directly affect the peace and equanimity of the United States. To protect America from the contagion of such foreign afflictions, he fathered a League of Nations—but a Republican Congress never allowed the United States to sustain his brainchild.

Today, the Wilsonian concept of American participation in a society of nations is an accepted role for our country. And we have even gone beyond the Wilsonian dream by a show of brotherhood with the free nations of the world—through a program of almost unstinting aid in the form of grants of moneys, loans for economic and industrial developments, and wholesale shipments of food.

Perhaps Woodrow Wilson would not have gone so far and so fast in the program of brotherhood with which we have indulged ourselves. Certainly, I think, he would have guided our course with more caution—the way President Kennedy is doing today with respect to aiding our sister republics to the south. Certainly, too, like President Kennedy today, Wilson would have sought to revitalize our own areas of economic sickness through a domestic aid program, while helping other nations to rehabilitate their economies.

In some instances, our reckless indulgence in international aid has cost our Nation a pathetic toll in unemployment and underemployment. Yes, in some instances, prosperous communities have suffered economic decline because of our rush to accomodate the needs of other nations. We sent the very latest and the very best kinds of machinery and equipment abroad, and kept for ourselves at home the old and worn-out and antiquated machinery and equipment of yesteryears.

With cheap labor, and with the very latest and very best of manufacturing machinery and equipment, foreign producers have been able to undersell similar American produced products in our own home markets. Today, in my own State of West Virginia, there are islands of unemployment and underemployment in many cities and towns because the growing level of imports has adversely affected our previously healthy glassware, clay, and pottery industries. In New England and in the South, our textile industries are suffering because of the flood of cheaper produced textiles from abroad. Our coal mining industries are also being severely harmed by imports of foreign residual fuel oil—a waste product of foreign refining processes.

My State of West Virginia ranks second in the Nation as a glass producer. The world's largest plate glass factory is located in our capital city of Charleston. But because of the upward creeping tide of flat glass imports, this vital West Virginia industry is economically sick. In the Morgantown area alone, one of the leading glass-producing regions in my State, three glass manufacturing plants have shut down in the past several years due to the unequal competition of foreign produced glass imports.

In effect, through the years since World War II, we have hoisted ourselves by our own petard through foreign aid programs without any thought to our domestic economic needs. Even today, as we contemplate a program of aid to our own depressed areas, we hand the whole loaf of bread to our foreign friends and grudgingly reserve some crumbs for ourselves.

As late as March 1, the House Foreign Affairs Subcommittee on Appropriations advised me that the total moneys available for expenditure by the foreign aid Development Loan Fund—including unexpended, unobligated, and new funds—amounted to $1,721,296,000—more than four times the total amount being requested in the Douglas Area Redevelopment bill for our own economically depressed areas.

Since our country is regarded by the entire world—including Russia and Red China—as the greatest and most powerful bulwark against Communist aggression, it is imperative that we not let a single fiber of our domestic strength erode through lack of proper economic nourishment.

Fortunately, President Kennedy sees the whole picture in its proper perspective. While he has proposed to the Congress a soundly based program of aid to our Latin American friends—and we can expect a revamping of our other foreign aid programs on the same terms—he has also proposed an encompassing program for domestic recovery. His program of aid to depressed areas is not solely and wholely in the Douglas bill. It also is in his programs for urban renewal and low-cost housing at lower interest rates; it can be found in his program for better education for our children through the construction of more classrooms and through the higher pay for teachers; and it can also be found in his determination to aid our elderly citizens through a realistic medical care program.

And there will be more Kennedy programs to strengthen the fiber of America—programs for the conservation and development of our natural resources, programs for the employment of our jobless youth, and programs for industrial growth.

It is through such programs, based on the plaform of the Democratic Party, that this country will overcome the effects of foreign competition with our own industries. The ingenuity of America has never been found wanting. If we can revitalize our economy through the Area Redevelopment Act and through President Kennedy's other progressive programs, there will be but few or no competitors who will be able to outdo us in the competition for markets at home and abroad.

Every today becomes a yesterday, and every yesterday becomes a prologue for tomorrow. The yesterday of Wilson is the President Kennedy of today—a leader carrying forward the progressive principles of the Democratic Party—a shirtsleeve leader who spends most of his time working behind a desk instead of on a golf course banging a small white ball. The lights burn late in the White House now—and not for the purpose of viewing western gun sagas on television.

We have a working President now—not a detached father image. We have a President who is in touch with the people—and not just in touch with the elite of big business. We have a President who sees the long lines of the unemployed, not one who ignores them and hopefully wishes they would somehow vanish. We have a President who wants social progress to go hand-in-hand with economic progress—a President who wants equality of opportunity for all, and for all a more abundant and meaningful life—a President in the true tradition of the truly great Democratic Presidents such as Jefferson, Jackson, Roosevelt, Truman, and Woodrow Wilson.

Vice Adm. William F. Raborn, Jr.: The Father of the Polaris

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 21, 1961

Mr. ZABLOCKI. Mr. Speaker, last weekeild, while in Milwaukee, I had the opportunity to attend a luncheon meeting and special program sponsored by the Marquette University Graduate School and Phi Delta Gamma, graduate honorary society, which featured the lecture by Vice Adm. William F. Raborn, Jr., on the subject of "Polaris and the Fleet Ballistic Missile Weapons System."

The lecture was informative and enthusiastically received by persons attending the program. I am very pleased that I was able to be there and to hear it.

In the thought that it may prove of interest to Members of the House, I wish to include in the Record under leave to extend my remarks a feature article by Jack Raymond which appeared in the February 19 issue of the New York Times magazine and was reprinted in the March 18 edition of the Milwaukee Journal. The article is entitled "The Father of the Polaris," and it pays special tribute to Admiral Raborn and his accomplishments in strengthening the defense of our Nation.

THE FATHER OF THE POLARIS

(By Jack Raymond)

The Polaris submarine represents a revolution not only in sea power but also in military management and production. It sprang from drawing board to sea duty in less that 5 years, compared with other strategic weapons which have taken 10 years or more to become operational.

While it was not the invention of a single man, one man's name has become synonomous with the Polaris. It is that of 55-year-old Vice Adm. William Francis "Red" Raborn, Jr., born in Texas, schooled in Oklahoma, graduated at Annapolis and trained in Pensacola as an aviator.

That a flier should have been placed in charge of developing a new kind of submarine may seem incongruous, but one look at the burly, barrel-chested Admiral Rayborn is reassuring.

The idea of marrying a ballistic missile and a nuclear submarine was not new. The Germans had experimented with submarine-based rockets in World War II. Navy men had argued for years that nuclear submarines could carry nuclear missiles. Then in 1955 a committee headed by Dr. James R. Killian, Jr., recommended to President Eisenhower the development of a ship-based 1,500 mile ballistic missile.

What was sought was a missile that could live in water, in air, in outer space and come through the reentry barrier unscathed. The missile needed fuel that could be stored safely in a rolling, pitching ship. Also needed was a navigation system that could accurately measure the location not only of the target but of the submarine itself.

HE WAS THE MAN FOR THE JOB

The Chief of Naval Operations, Adm. Arleigh A. Burke, explained recently why Admiral Raborn was chosen in the fall of 1955 to direct the Polaris development: "Our man had to be an aviator to assure cooperation from the Air Force. He had to be available from other duties, yet not a discard. But mostly, he had to be a nice person, who got along with people when the going was tough."

Admiral Raborn had been for nearly 2 years assistant to the navy's director for guided missiles. He won a commendation for organizing a gunnery school in Hawaii early in World War II and afterward was placed in charge of all navy aviation gunnery.

In 1949, as coordinator of the navy's air borne weapons, he directed the technical

branches in their quest for new guns, rockets, bombs and air-launched torpedoes—"in a small way, a job very much like the one he did on Polaris, drawing together hardware from various sources," a navy expert says.

So, a special projects office was established.

Admiral Raborn asked for his choice of 45 men as a start. The group soon numbered 400 men, both uniformed and civilian. This was a relatively small military task force for such a grand effort, but he said, "I can get more out of one overworked man than two underworked ones."

Carefully he built his staff, assigning one aide to do nothing but track down good men. A rocket fuel expert was brought in from the White Sands test range in New Mexico. An electronics expert was diverted from a new assignment at the naval research laboratory. A missile expert was detached from a destroyer at sea. A marine engineer was detached from a secret nuclear warhead center. In 6 months, as management problems mounted, he brought in an army financial wizard from the Pentagon.

The admiral felt from the start that there was little time. "None of this 5-day week stuff," he told his staff.

The original plan was to mount an Army Jupiter IRBM (1,500 mile range) on an oversized, 8,000-ton nuclear submarine—more than twice the size of the *Nautilus*. Tests during the summer of 1956 proved the inadvisability of this. The liquid fuel could not be handled aboard ship; the Jupiter missiles would be too big.

But to seek a radical change in the Polaris project could have meant being "cut off dead." By the end of 1956, Admiral Raborn had made up his mind. Luckily, a smaller nuclear warhead that could fit a smaller missile was developed around that time. James Baar and William E. Howard, authors of the book "Polaris" report that the then Secretary of Defense Charles E. Wilson looked "like a sulky Buddha" as he listened to Admiral Raborn requesting a major change in the program.

All of the admiral's vaunted powers of persuasion seemed to be failing until he flashed a chart at Wilson that indicated the new plan might save money.

"You've shown me a lot of sexy slides, young man," the secretary said. "But that's the sexiest, that half billion saving."

So the Jupiter was dropped and Raborn's team concentrated on an altogether new missile. It was the admiral who named it Polaris, for the north star, the mariner's friend and guide.

His team immediately ran into a new batch of problems. But Admiral Raborn within a few months was forecasting that he would have a Polaris submarine on station in 1963.

SUCCESSFUL SPUTNIK SPEEDED UP POLARIS

In October 1957, the Soviet Union launched the first sputnik. Admiral Raborn immediately brought his staff together and a plan was worked out to accelerate the Polaris program by 3 years—late 1960 instead of 1963. This could be done, they believed, by cutting the range of the missile from 1,500 to 1,200 miles, using less powerful propellants, and by further reducing the size of the warhead.

Again it meant program changes, new sacrifices, revised contracts. Again the determined Polaris salesman won everyone over to a new, exhausting try.

Meanwhile, missile tests began at Cape Canaveral, Fla. But in the critical months of 1958 and early 1959, despite official confidence, the Polaris test missiles kept blowing up on the pad or had to be destroyed by range safety officers. In the missile gap arguments of the time, the administration was reluctant to spend money on so unproven a weapon. A Polaris test missile was not launched successfully from a stationary pad until April 1959.

Still undaunted, smiling, ever the charmer, Admiral Raborn shrugged off appeals to slow down the pace. And on July 20, 1960, in contrast to the initial failures of Polaris tests on land, the pioneering crew of the *George Washington* successfully launched its first and second missiles out of the blue-green waters off Cape Canaveral, Fla.

"Polaris—from out of the deep to target—perfect," wired the jubilant commander, James B. Osborn. Raborn described the event as "the most significant happening in weaponry since the airplane first flew."

FIRST SAW THE SEA AT ANNAPOLIS

His father was a cotton gin owner in Marlow, Okla. William Francis, Jr., the second child of eight, never saw the sea until he got to Annapolis. There he was an "average" student, boxed and played tennis. He also got his nickname. His hair was auburn and he wrote that on a questionnaire. A superior crossed it out and substituted "red."

At Pearl Harbor, his patrol squadron was one of the few loaded with bombs and ready to fight back. He had anticipated trouble and swiped the ammunition. As executive officer on the aircraft carrier *Hancock*, he won a silver star for getting fires under control following a kamikase attack. After the war, he had been the skipper of the carrier *Bennington* for only 10 days when a catapault exploded during a maneuver and killed 103 men. He braved the flames and was awarded a bronze star for his efforts in controlling the damage.

Admiral Raborn met his second wife, the former Mildred T. Terrell of Baytown, Tex., a Navy nurse, while arranging some extracurricular activities for the men of his ship. They lived in Arlington, Va. Once a golfer, he now spends more time tending his 135 rosebushes, playing his electric organ and taking care of his beloved dachshund, Heinz.

"Heinzie," he often says to the dog, as they play on the patio at home, "stand up and salute the navy." The dog doesn't respond, but the admiral sits it upon its hindquarters and raise a paw to one ear.

And that's about the way he got the Polaris program completed.

Problems Facing the Fishing Industry in Massachusetts

EXTENSION OF REMARKS

OF

HON. BENJAMIN A. SMITH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1961

Mr. SMITH of Massachusetts. Mr. President, two articles appeared in the New York Herald Tribune yesterday and today on the problems facing the fishing industry in Massachusetts. They are problems being faced by this industry not only in Massachusetts but throughout the entire New England area. I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Herald-Tribune, Mar. 26, 1961]

FISHING BOAT'S DOOM SEEN IN PRICE SQUEEZE

(By William G. Wing)

GLOUCESTER, MASS., March 25.—Before dawn the fishing boat *Linda B.* dropped her net into the black ocean and began dragging for flounder and cod to be sold in New York.

She looked just right, bobbing along the track of the moon in Ipswich Bay. Boats have been fishing out of Gloucester since it was founded in 1623. Fifteen years ago as many as 411 boats were using Gloucester fish piers in the summer. Three-quarters of them are gone now. Of the hundred or so still fishing, 30 are big trawlers that go out to the North Atlantic Banks. The rest, like the *Linda B.* are inshore draggers.

The *Linda B.* belongs to a further subdivision, the Whiting Fleet, that spends its summers fishing for whiting. There are 42 boats in the Whiting Association on Fisherman's Wharf. Raymond Kershaw, who manages the association, says the average age of the boats is 24 years and he adds that not more than five of them are solvent. (It's customary to speak in terms of boats rather than persons because the boats are corporate enterprises. The crews work for a share in the profits instead of for wages.) The rest of the boats are in debt, Mr. Kershaw says, some by as much as $24,000.

This means the number of boats will continue to dwindle since there is no sign of hope. Many men on the piers think Gloucester will have no fish boats within a few years.

This situation is general, if not so desperate, throughout New England. Boston has 26 offshore and 35 inshore trawlers now, half the number it had 15 years ago. It seems that the fishermen, who did much in creating New England, are disappearing. They are taking their leave at the dawn of an era when the country may be forced to turn to the sea for more food.

The principal reason is foreign competition. Now that fish can be quick-frozen, fishermen from Iceland and Japan can send their catch to the American market. Foreign competition has been stiff enough to elbow the New England fisherman out of the biggest new development in the fisheries: fish sticks. These are finger-length pieces of fish meat, cooked, frozen, packaged on assembly lines and sold in chain stores from here to Bisbee, Ariz.

Fish sticks are changing eating habits from fresh to frozen fish. This also is hard on the New England fisherman, who works for the fresh fish market. He has been hurt, too, by the decrease in supplies of some fish. But the coup de grace comes from his continuing to sell at the prices of a decade ago while everything he buys—boats, nets, motors, insurance—goes up in cost.

So after the fisherman bring in a few brokers—trips with no fish—he sells out or goes broke. He has almost none of the cushions enjoyed by other American food producers. Fishermen are as far outside the comforts of the welfare state as was the *Linda B.*, rolling and pitching in the dark, from the sleeping mainland.

Capt. Rosario Testaverde stared through the *Linda B.'s* pilothouse windows at the cables that disappear astern, leading down to the net. "Every time that net comes up it has to have about $100 worth of fish in it for us to stay ahead," he said.

NO LIGHTS VISIBLE

He looked around the sea. No lights were visible. Winds of up to 40 miles an hour had been forecast and the other boats had stayed at the pier. Unlike offshore trawlers, which have heavy gear, the little draggers cannot work in bad weather because they keep bouncing their nets off the bottom. The day before, northeasterly winds had kept the fleet in—all but the little *Tipsy Parson* which had gone out and been arrested by a State warden for dragging within 3 miles of shore.

After 2 hours and 20 minutes, Captain Testaverde gave a toot to call his crew out of the forecastle. When the three appeared,

the captain joined them on the swinging deck to haul the net. Anthony Da Cruz, the captain's brother-in-law, ran the winch. Tony Fronteiro and Pasquale Lograsso guided the cables onto the drum. When the two big doors that hold open the mouth of the net broke surface, the captain helped hook them out of the way.

Then the net appeared, spangled with shells and starfish. The fish were dumped on deck and the men stared at the squirming mass. "No good," the captain muttered. It didn't look anything like $100.

NET AGAIN DROPPED

Again the net was dropped, the captain returned to the pilothouse and dragging resumed. The crew clambered over the pile of fish, hooking out yellowtail and blackback flounder and small cod and putting them into baskets. The biggest part of the pile remained and these fish—sculpin, skates, eels, and one big lumpfish—were thrown or pushed overboard.

At the wheel, the captain talked about fishing. He learned the trade from his father who came from a fishing family in Palermo, Sicily. (About two-thirds of the Gloucester fishermen are of Italian descent. The rest, like Tony Da Cruz, are Portuguese. Anglo-Saxon fishermen now are as rare as three-eyed flounder.)

Rosario's lessons began when he was 5, helping with the trawls in his father's small boat. When the weather was dangerous, he would be set ashore on an island to play for the day. And at night when they jigged for squid he wore a specially cut-down suit of oil skins to protect his clothes from the black ink that squid squirt.

After he grew up, the war gave him a chance to start on his own. Many Italian-born sailors were interned as enemy aliens and Rosario was able to get a berth on a big trawler, fishing on the Grand Banks. Fishermen made money during the war; Rosario saved his and bought a small dragger. This boat sank at sea some years ago, but Captain Testaverde was able to buy the *Linda B.*, a bigger boat.

Now the *Linda B.* represents an investment of $25,000. One nylon net with its gear costs up to $1,000 and if it snags on a wreck, it can be a clean loss. For that reason, Captain Testaverde keeps the locations of all known wrecks filed on cards in the pilothouse. No gear has been lost for some time and last year the captain and his crew cleared $3,000 apiece.

After 2 hours more, the net was hauled again with the same meager results. "We're going in," the captain said. "We're hardly paying for our fuel."

As the boat turned toward Annisquam Light, the crew weighed the fish and packed it with ice in boxes. There were about 400 pounds of flounder and 200 of cod.

BOAT TURNED BACK

The fish would be sold for 10 cents a pound, minus 2½ cents for the cost of trucking it to New York and for commission to the merchant who would sell it in the Fulton Fish Market. At 7½ cents a pound, the boat would collect $45. The captain estimated that after expenses, earnings for the 2 days would be about $3 a man.

Tony Fronteiro laughed wryly, Mr. Fronteiro is known throughout Gloucester as Tony Santa Claus because once when he was a boat captain during the black days of the depression, he gave away an entire trip of fish to the city's poor. Now he is the *Linda B.'s* cook and happy philosopher.

"What the fisherman gets," he said, beaming, as spray whistled back from the boat bow, "is lots of fresh air."

[From the New York Herald Tribune, Mar. 27, 1960]

OUT OF GLOUCESTER—DEEP FREEZE HITS FRESH FISH NEEDS—U.S. MARKET OPENED TO INFLUX OF CHEAPER FOREIGN CATCHES

(By William G. Wing)

GLOUCESTER, MASS., March 26.—The seafood business has grown more international than most fisheaters realize.

When one dines out it takes more than candlelight to tell whether the fish under the sauce came from the Jersey Shore or a Norwegian fjord. If the menu says gulf shrimp, it probably means Gulf of Mexico but it could refer to the Gulf of Aqaba or Finland or Tongking. Forty nations sell shrimp in New York City.

This is a remarkable change from a few generations ago, when seafood, because of its perishable nature, was eaten only by those who lived near the water.

The change was brought be the development of quick-freezing techniques, which not only standardized fish-eating tastes all over the country but put the Parisee and the Icelander into direct competition with the American fisherman.

There are other interesting phenomena connected with the coming of frozen fish. One is that although fish led to the development of the current deep-freeze age in the twenties, fish didn't get on the frozen-food bandwagon until 1953. And even with the fish abroad, the fishermen of New England haven't been able to find a seat.

INDUSTRY CHANGED

Another phenomenon is that, despite the changes in the business, the American appetite for seafood remains amazingly static. Year in and year out, the average American consumption has been about 11 pounds. One-fifth of this is supplied by New England fishermen. If something could be done to increase the average annual consumption, such as a national wave of asking for second helpings of halibut, there would be dancing in the streets of Gloucester and jubilation in Boston.

But before real prosperity can come, the New England fisherman will have to adapt himself to the new methods of marketing his catch. These methods have irrevocably changed mankind's oldest industry, the fisheries.

The eternal problem has been to find ways to keep a very delicate product from spoiling. Preserving fish by drying and salting is a centuries-old device. It was the basis of an international trade system in medieval Europe and the reason for Gloucester being started 338 years ago.

Canning was the next big development. It is believed to have been introduced from Britain at New York City in 1819. Later in the century icing of the catch became general in New England. Cold-storage warehouses appeared in the early 1900's.

In the twenties, New England fishermen were rescued from a depression when a Boston fish dealer developed a market for the fillets of haddock. Fillets are the boneless portions of side meat, something like steaks, which appealed to housewives because they needed little preparation before cooking.

At about the same time the fillet market was blooming, the first experiments were being made in quick freezing. Eskimos, of course, had been quick-freezing fish for eons. When they hooked a smelt, they would flip it onto the ice to freeze. The frozen smelt would keep indefinitely, or at least as long as the temperature stayed around zero.

In 1915, young Clarence Birdseye was in Laborador, trapping for furs. The story goes that he was struck with the possibility in freezing food when he found that a frozen haddock, which he had caught some time before, was still good to eat. This moment is comparable for the modern food industry with the moment the apple bounced off Isaac Newton's head.

ENTER THE FISH STICK

Mr. Birdseye returned to Gloucester, set up a plant on a fish pier and developed a commercially successful method of quick-freezing food. But when the frozen-food era began in America, it began with peas and beans and other foods. It was not until the 1950's that fish got into the convenience-food, or heat 'n' eat, market with small pieces of fillet—breaded, cooked, frozen, and packaged and generically called fish sticks.

This has created the market New England fishermen have been excluded from, so far, by foreign competition. Local fishermen will have to get into it, or develop something else, to survive.

Fishermen also face the basic problem of American taste. Surrounded by the most lavish supplies and varieties of fish any nation ever enjoyed, Americans are relatively indifferent.

Fish, considered as a food, is an easily digestible source of protein and other nutrients. Fish oils reduce the level of cholesterol in the blood serum; persons with high levels of cholesterol seem to be susceptible to heart disease. Furthermore, fish may have a mysterious effect on growth. Animals and poultry that feed on fish meal grow at a rate greater than the total of known food values. This unknown growth value is now being investigated.

As for taste, fish can have more variety than many people suppose. The Fulton Fish Market in New York offers 125 kinds of saltwater and 32 of freshwater fish and these run the gamut of tastes, according to John H. Von Glahn, executive secretary of the city's fisheries council and a spokesman for the market.

But most Americans live inland and are not used to eating fish. Besides, there is so much else to eat in this country. There is speculation that perhaps the average Japanese wouldn't eat 40 pounds of fish a year if he had the choice of turkey or pork chops or steak.

In addition, some Americans don't like fish and some think they wouldn't if they tried. On the other hand, it appears from surveys of taste that the greatest resistance to eating more fish occurs in areas where most of the people eat it regularly because they are Roman Catholic.

Mr. Van Glahn thinks the reason is that many Catholics equate all of it with the overfried, bland fish which is served in some homes on Fridays. The key to the Nation's indifferenece, he thinks, is that most Americans don't know how good a fish can taste. He writhes at the thought of the way fish is given a bad name by rough handling and overcooking.

Iowa State Commerce Commission Passes Resolution Urging Repeal of Federal Excise Taxes on Transportation of Passengers

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. SCHWENGEL. Mr. Speaker, the Iowa State Commerce Commission re-

cently went on record asking for the repeal of Federal excise taxes on the transportation of passengers. Under leave to extend my remarks, I include a copy of that resolution in the Appendix of the RECORD so that the Members can have the benefit of this representative opinion from the great State of Iowa. The resolution follows:

Whereas the Federal excise taxes on transportation were initially levied or greatly increased during World War II, as war measures, to help defray war costs and to discourage unnecessary travel; and

Whereas more than 15 years have elapsed since the end of the war, and the special and urgent needs for the levying or increasing of such taxes no longer exist; and

Whereas there has been a substantial reduction in railroad passenger traffic during the past several years, with resultant unprecedented deficits in passenger service operations; and

Whereas in view of the changed situation respecting passenger travel the excise tax on such travel has reached the point of diminishing returns, since the Government is probably losing about as much revenue through decreased Federal income tax payments, due to deficits in passenger operations, as it is gaining in excise tax payments on such service; and

Whereas all such taxes are discriminatory against the long distanced user of transportation services, and against sections of the country far removed from centers of population; and

Whereas all such transportation excise taxes are discriminatory in many other ways, including the discrimination against public transportation agencies which must collect the tax and in favor of private carriers which are not required to; and the discrimination against businesses which have to make frequent use of transportation services; and

Whereas the following bills have been introduced in the 87th Congress providing for the repeal of the Federal excise taxes on transportation of passengers: H.R. 398 (HUDDLESTON, of Alabama), H.R. 532 (POFF, of Virginia), H.R. 2577 (SLACK, of West Virginia), H.R. 3226 (ASHMORE, of South Carolina), H.R. 3692 (WHITNER, of North Carolina), H.R. 4465 (SIBAL, of Connecticut), and H.R. 4518 (KNOX, of Michican): Now, therefore, be it

Resolved, That the Iowa State Commerce Commission is of the opinion that the present excise tax on the transportation of passengers is inimical to the maintenance of a reasonably priced and nondiscriminatory public transportation service and that accordingly the excise tax on transportation of passengers should be repealed, and

Resolved further, That the secretary of this commission is directed to transmit a copy of this resolution to the congressional delegation from Iowa; to the chairman of the Committee on Ways and Means of the House of Representatives; to the chairman of the House Committee on Interstate and Foreign Commerce; to the Secretary of the National Association of Railroad and Utilities Commissioners; to the several State regulatory commissions and to the Secretary of the Iowa Railroad Committee.

IOWA STATE COMMERCE, COMMISSION,
BERNARD J. MARTIN,
Chairman.
RAY H. THOMPSON,
Commissioner.
HAROLD E. HUGHES,
Commissioner.

Attest:

CLAUDE E. DAVIS,
Secretary.

Dated at Des Moines, Iowa, this 14th day of March 1961.

Narcotic Addiction and the Teenager

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 22, 1961

Mr. JAVITS. Mr. President, the problem of narcotic addiction is one of the most serious facing the American people, not only because of the injuries which result from this scourge on the health of our people, its impact on crime and family welfare, and its effect on the countless innocent victims who suffer from its results, but also because of the weakening effect of narcotics addiction upon our national strength in human resources.

Probably the most shocking aspect of this problem is the extent to which it involves teenagers, taking away a part of the potential strength of our Nation's future during their formative years. The Youth Board of the city of New York recently held a conference on this aspect of the problem, and the resulting summary report deserves the attention of all Members of the Congress.

I ask unanimous consent that the report, which covers the extent of the problem, who is the addict, prevention and control of narcotics, and treatment, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CHAPTER I. WHO IS THE ADDICT?

Three phenomena enter into the process of addiction. The individual develops an emotional dependence on the drug. Tensions and conflicts become resolved and one has a feeling of great "normalcy," euphoria and pleasure. There then comes a time when tolerance for the drug is developed. To regain the original effect one must take the drug in ever-increasing doses and at more frequent intervals. The one who then develops a physical dependence will become addicted for some reason yet unknown. The body mechanism alters the stability of the body's balance so that an addiction prone individual will develop withdrawal or abstinence if he should no longer have access to the drug. The addict then experiences, in addition to his fears, anxieties and depressions, physical torture. The organism becomes dependent on the drug. He not only has an emotional dependence but a physical dependence, a tolerance and craving for the drug. Others may use drugs infrequently, occasionally or consistently over a period of years and yet they do not become physically dependent or addicted. Why? We don't know.

The average age of 2,000 patients admitted July 1952 to October 1959 at Riverside Hospital, New York, was 18 years. Ten percent commenced using drugs at 15½ years of age. Forty-five percent of prisoner-patients admitted to the U.S. Public Health Hospital, Lexington, Ky., in 1955–56 stated that they had been under 19 years of age when they first became addicted.

Personalitywise, the addict is unmotivated, passive, lethargic, sensitive, dependent, frustrated, impatient and self-defeating. His behavior is impulsive, unpredictable, infantile, stubborn and demanding. His constant companion is fear. He is afraid of his aggressions; afraid of his hostilities; afraid of responsibilities and afraid of success. His social world becomes narrower and eventually his only concern is himself.

There tends to be a common syndrome of causative and conditioning factors within the background of addicted individuals.

A. Failure of normal identification patterns during childhood and an ensuing inability to initiate or maintain relationships with other individuals.

B. Strong dependency needs often reflected in extreme symbiotic relationships with the mother.

C. A lack of moral sense. These individuals can judge a given act as right or wrong or as socially approved or disapproved but don't themselves really believe it.

D. No racial socio-economic group is exempt from the use of narcotics or from addiction but the majority of addicts are concentrated in the deprived socio-economic neighborhoods and in minority groups of low socio-economic status where there is a high incidence of narcotic availability. Poor housing, poor educational experiences, crime and poor law enforcement exist within their early environmental background. Of the 2,000 patients admitted July 1952 to October 1959 at Riverside Hospital, New York, 15 percent had relatives who had taken narcotics and 73 percent had been arrested from one to seven times prior to hospitalization.

E. Confusion with regard to sex roles. There is a high incidence of homosexual traits among addicts.

F. A bleak, hopeless, defiant outlook on life which pictures oneself and the world as no good. Life is only real and worthwhile when they are pursuing the thrills, chances, and pleasures of the moment. A drug like heroin is a specific remedy against this kind of an impossible outcome with regard to one's self and society.

G. Aspiration to goals which cannot be achieved. Eventually one gives up striving and he shuts himself off from the realities which have created the frustrations and conflicts. The addict is unable to handle these feelings and he turns to drugs as a solution.

H. Today there has been an increase in the experimental type of drug use among teenagers and youth. The need for rationalizing their own habits and conformity pressures operating within adolescent peer groups seems to induce addicted individuals to encourage others to try. Ordinarily, the drug user, whatever his previous position in the group, falls to lower echelons once he has become habituated. He tends in time to become completely disassociated from the group and his reliance upon drugs as a solution to status deprivations becomes all the greater.

I. Infants born of addicted parents show withdrawal syndromes at birth.

CHAPTER II.—PREVENTION AND CONTROL OF NARCOTICS

There is no panacea which will immediately dissipate the narcotics problem. A fundamental prerequisite to solution lies in close cooperation between law enforcement authorities and various professionals in the field of rehabilitation and prevention—the enforcement agencies to clear the streets of dope pushers and the rehabilitation personnel to administer adequate treatment.

Enforcement, national and international in scope, is the first line of defense. Extensive and rigid control of smuggling is essential if the problem is to be controlled. Approximately 85 percent of narcotics users are addicted to heroin. It is manufactured in European and Asian countries. It is then smuggled into the United States in wholesale quantities to distributors who dilute the pure heroin with quinine, milk sugar or manite. It is next passed on to retailers in ounce quantities. It is again cut and dis-

tributed to peddlers who in turn sell it to the addict. The heroin at this third dilution—and at the point at which it reaches the users—is now 95 percent adulterated and an initial investment of $3,000 has netted the staggering return of $300,000.

Some panel members maintain that a second step toward prevention and control would be legislation requiring the registration and fingerprinting of all addicts. They recommend as a third step, lifting the ban on heroin and that free medical prescriptions of the drug be allowed to certified registered addicts. They maintain the position that there is nothing in enforcement to stop a person with a compulsion for drugs from getting them. The compulsive aspect of narcotics implies that a prohibitory or penal approach to the problem is futile and ineffective.

The Harrison Act of 1914 is regulatory in nature as interpreted in 1925 by the Supreme Court of the United States. The act is not intended to impinge upon the medical profession in the course of its treatment of addiction. However, there were several preceding decisions by the Supreme Court which interpreted the act as sharply limiting the discretion of the medical profession. These intervening decisions are presently in force notwithstanding the fact that the Supreme Court unanimously stated in 1925 that the said decisions were to be applied strictly to the facts of the given cases heard at the time. A general hospital may not specifically prescribe drugs in the treatment of the addicted. Narcotics may be dispensed only if it is necessary in the treatment of a concomitant illness. Thus, the drug addict has been denied medical assistance and, in turn, he has been driven into the hands of the underworld.

The illegality of the drug and the necessity of obtaining it on the black market at exorbitant prices forces the habitual user into criminal activities, criminal associations and a way of life which it totally subjugated to the anxious pursuit of the next hour's or next day's supply. Once addicted, one must spend $50 a day to support the habit and it is estimated that one addict may be forced to steal as much as $75,000 a year in merchandise. This consequence is where addiction becomes a major problem to society. Citizens are robbed and burglarized. A tremendous network of underground supply is maintained with all of its pernicious effects on society. What has happened in effect is that we have given organized crime a market and a guaranteed minimum number of customers. The bulk of those arrested for narcotics violations are the addicts themselves. Once released they again resort to pushing among friends in order to support the habit. They are haunted criminals. They have no escape. They are caught between the black market and the law.

The addict's progressive deterioration is an undeniable fact but the causes of the deterioration are completely obscured by the inescapable fusion of addiction with criminality.

Legalization of prescription of drugs to certified addicts would not imply a free-for-all distribution of drugs. Opiates should be made subject to the general restrictions concerning the sale and distribution of medical drugs. Black-market operators and pushers should be severely punished. Laws and the rules of evidence should be constantly tightened so that it becomes increasingly difficult for the drug peddler to operate. Stringent regulation should be enforced to prohibit an addict who received drugs regularly as part of ambulatory treatment from patronizing the illicit market or introducing the habit to other individuals.

A divergent position expressed at the conference maintains that a great majority of addicts do engage in criminal, anti-social and deviate activity, and they do so before they ever experience narcotics. Failure to recognize this preaddiction activity is probably one of the prime reasons for the large incidence of addiction in the New York City area. The average citizen does not know where to secure drugs. A drug peddler just does not sell to anyone for fear of arrest. The average person, if he is to have access to drugs, must be accepted by those on the fringe of a criminal element.

The profit motive is not the primary cause of drug addiction. Addiction is caused rather by the existence of addiction-prone individuals, the availability of drugs and a catalyst. This catalyst is the addict himself. He is the contagious carrier who translates to the neophyte the use of narcotics as a great experience. This environmental circumstance means that we shall continue to have addiction whether drugs are sold at $2 per capsule illegally or at 2 cents per capsule legally.

There is nothing punitive about an approach to prevention which seeks to reduce the availability of the drug. Isolation of disease-producing effects from susceptible individuals is one of the oldest and most reputable public health procedures. Actually this procedure is the best and only safeguard to both the individual and society. Otherwise the more people who have the drug available to them the more addicts we shall have.

It is further contended by some that ambulatory treatment of addiction is not a valid therapeutic practice. The nature of the narcotic problem is such that there must be a general and uniform enforcement of the Harrison Act. A majority of addicts take drugs for the euphoric effect or the "bang" or the "kicks" as they call it. Tolerance is acquired quickly and more and more intake is required for the desired effect. If the addict were to receive narcotics legally, but not in as large doses as he required, he would continue to purchase most of his drugs on the illicit market. Legal distribution would inadvertently remove whatever deterrent value lies in the fear of withdrawal. More dangerous would be the effect on the potential addict who would perceive no hazards in addiction. They might well matriculate into the ranks of full-fledged addicts by the thousands. Rather than legalize addiction we must suppress it if we are to prevent widespread social disintegration. It is a fact that the rate of addiction has been reduced 800 percent since legal controls were instituted.

A majority of the panelists agreed that the best cure for addiction is for it never to occur. Our chief and most practical concern must be for the nonaddict contemporary of the addict. We need bear in mind that prior to the passage of the Harrison Act there were no illicit traffic and no illicit markets. Narcotics could be purchased over the counter most anywhere merchandise was sold and the number of addictions at the time was approximately 200,000 as compared to current approximate number of 60,000. A further warning against free access to drugs was made by Dr. C. J. Glass-Bell, president of the Federation of State Medical Boards of the United States. The U.S. Public Health Service Hospital, Lexington, Ky., according to the doctor, admits each year 50 addicted physicians. The incidence of addiction in the general population is 1 addict to every 3,000, and in the medical profession it is 1 to every 100 physicians.

There is disagreement as to whether legalization of the drug would free society and free the addict from the unnecessary consequences of the illegality of his addiction but there is full agreement that it would not solve the problem. A fourth step would have to focus on a rehabilitation program geared to treatment of the human being as a whole and not to addiction as such which is merely symptomatic of the real problem. Ordinarily, coercion does have undesirable implications. However, in the case of addiction it is essential to assure adequately controlled and prolonged treatment as prerequisites for cure. The addict cannot be relied upon to either initiate or complete treatment on his own volition.

A compulsory program of treatment is dictated but some panelists ask whether it is possible to implement it. Are we justified in committing an individual to one of our very few institutions specializing in addiction when no one is sure that at any of these facilities a true rehabilitation program exists? Programs must be developed but shall we offer priority to those who have been finding an effective prop in heroin before we can offer adequate treatment to the thousands and thousands suffering from emotional, mental and physical illenss or disabilities? Should not public policy be geared to the development of resources to help the largest possible number of people most in need of assistance and most likely to benefit?

CHAPTER III.—TREATMENT

The first step in treatment is withdrawal or detoxification. It is the easiest, the simplest and the quickest aspect of treatment. The hospital is the preferable place in which to effect withdrawal but it can be accomplished at home under supervision of a reliable family member and with the attendance of a physician.

The problem is not to get the addict off drugs but to keep him off. One would believe that once withdrawal was completed the addict would be cooperative and desirous of a permanent cure. This is not the case. Proper motivation is absent. They undergo detoxification, not with the intent to permanently stop drug use, but to achieve a temporary respite or reduction to a lower dosage because of inability to maintain their supply or because of pressures by the police, the court and family members.

The problem is not primarily a physical or medical one. Studies at Riverside Hospital, New York, conclude that the number of patients following hospital discharge who permanently remain abstinent from drug usage is extremely small. A study in 1943 of 2,400 patients discharged from the U.S. Public Health Service Hospital, Lexington, Ky., showed that 800 had relapsed within 6 months to 6 years.

The basic problem seems to lie in the sphere of the emotional and the environment. If these problems are not counteracted, modified or eliminated, the addict is repeatedly driven to drugs to solve his problems. There must be a total program to include many services administered by experts representing the fields of medicine, nursing, psychiatry, education, vocational guidance, counseling, occupational therapy, social work, religion, and law enforcement.

Experiments should be conducted relative to a residential school-hospital wherein a patient might reside 4 to 6 months. This facility should provide not only a continuity of personal contact but a continuity of planning for a wide variety and graduation of sheltering and supportive assistance. Its program should include vocational training, psychotherapy and an opportunity to join nonheroin using social groups.

Programs should be structured and patients required to participate. We know that addicts respond well to organized, strictly enforced programs. If freedom of decision and choice is permitted to rest with them, they will tend to persist in the behavior which they had followed in the community—sleeping all day, lounging around in the evening and staying up all night. A resident school-hospital facility might afford a prognosis more favorable for retraining, reorientation and rehabilitation.

Inpatient treatment can initiate the process but the eventual adjustment must be

made in the community and not in the hospital nor the prison nor reformatory. Picture the discharged addict. He is shunned by employers, by legitimate members of the community, by community agencies. There is no one to extend a helping hand. He comes back to the same tensions, pressures, family, associates and environment.

It is a mistake to view an individual as an unattached person. He must be seen as a member of a family and the fact must not be overlooked that the family itself might well have been the original source of his difficulties. Family members must be helped to understand the meaning of narcotic usage; its causes; and the social, emotional, economic, physical, occupational and spiritual factors involved. They should be involved in every step of treatment so that they know what goals might be achieved and under what conditions. Otherwise there is only one eventuality for the patient—his return to drugs for relief.

The addict will need what might be termed an anchor relationship. Addiction is chronic and it is characterized by relapses. The traditional picture is two, three or four periods of relapse before any substantial improvement is to be observed. The key to rehabilitation is a continuity of contact and relationship. The addict must be kept in relatedness to himself and to society. If he is permitted to drift to a point where he is no longer subjected to group norms which require him to participate as a social being, readdiction is assured. The anchor relationship must be very close—almost as a shadow.

In addition to the anchor relationship and accepting family members the patient needs a non-critical therapeutic relationship. The crucial factor which determines if he will stay in treatment relates to whether or not he will feel free to express his aggressiveness and his hostilities. If not, he becomes frightened and he withdraws to himself and the use of drugs.

Another important aid in the posthospital rehabilitation is gainful employment. If the addict is not helped to earn a living, he is forced to return to criminal ways in order to satisfy the necessities of life. His need for a job is immediate and he is not receptive to anything which will take time. This attitude presents a serious block to effective placement and it is further aggravated by the fact that most addicts have limited occupational training and poor work histories. Many don't know how to work. Others never worked. The end result is that the only type of job available is marginal at best. The prospects of employment are further darkened by the fact that most employment agencies will not service anyone identified as a drug addict or former addict. They are bad risks.

The vocational training and counseling attached to the inpatient program must be complemented by an aftercare program of interpretation and support of professional personnel to employers. Psychologically, employment has an important value. It may afford the addict, perhaps for the first time, the feeling that he is engaged in something constructive and legitimate. The experience of the narcotic project of the New York State Division of Parole indicates that an encratic person with a history of drug addiction does possess the potentially to become a reliable, competent employee. Its record shows that 43 percent of 272 parolees abstained from the use of drugs over a 3-year period.

The addict must receive the interest, guidance, and support of the hospital, the community, and his family. The best method to accomplish this end would be to establish a community social work agency staffed by representatives of all disciplines. This center would be the follow-up arm of the inpatient facility. Its services should meet the total needs of the total personality. No longer should agencies have a little piece of the addict, where the pieces are never synthesized into one effective therapeutic service. The most skilled should constitute the center's personnel. Extra knowledge or added experience may spell the difference between success and failure.

A most important segment of the center should be its law enforcement personnel. The patient who has some element of compulsion or legal involvement appears to have a better prognosis. Approximately 90 percent of addicted physicians recover. There is an element of compulsion to their treatment. Their license has been suspended and they are given 5 years to rehabilitate themselves. A second example is the success of the narcotic project of the New York State Division of Parole as against the failure of employment agencies. A final example is the fact that no voluntary treatment program has thus far proven successful. Controls must be imposed promptly and effectively whenever the addict fails to adhere to his posthospital program of rehabilitation.

Some panelists ask, Don't we have to be practical? Many people suffer from diabetes and high blood pressure. Their ailments can be alleviated and arrested but not cured. This degree of improvement is acceptable. Why can't we say there is improvement when a person takes a shot once on a weekend rather than three times a day? Should not our immediate emphasis be to help the addict stay off narcotics for increasing lengths of time. Our focus on cures can gain momentum as our knowledge, skills, and techniques develop.

Aid to Education: The Missing Alternative

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Sioux City Journal, Sioux City, Iowa, on Thursday, March 23, 1961.

AID TO EDUCATION: THE MISSING ALTERNATIVE

Up to this point in the debate about Federal aid to education and the place of parochial schools in the program of grants and loans, the best thing that has been said is that everybody should study the question some more. And in studying it, in our own opinion, everybody should consider the missing alternative, which is for no aid at all to education, in that form, from the national level.

It is understood that Federal aid to education is a campaign pledge and that the subject must be debated, but Federal aid to education has neither the indorsement of all the people, nor do various parts have common support. At the moment the feeling of the Catholic bishops is that they cannot go with the measure unless it contains loans for parochial schools, which illustrates the latter point.

The vigor of the debate about Federal aid to education has an unfortunate tendency to shut from view the major discrimination of the measure, which is that States trying to do a good job educationally are to be penalized, and States which have not tried particularly hard to do a good job educationally, or which have permitted themselves the luxury of a double public school system in the name of segregation, are to be rewarded. That is the net result of the bill presented and considered; it takes what Holmes Alexander calls the "Robin Hood" approach which, although making an interesting movie, is nevertheless unreasonable.

Those who do not like the Federal aid to education idea have offered some suggestions that should not be waved aside as they have been. The problem is a financial one for the local communities and the general umbrella of rationalization of Federal aid is that Washington can tap many sources of tax revenue in support of schools, thus removing part, or even much, of the local burden. But that does not change in the slightest the source of the money, which remains the people; it does not change in the slightest the house percentage to be taken out of the pot at the start of each hand and paid to the bureaucracy that will handle the program.

At least one of the suggestions already made achieves considerable local solution without loss of the house percentage. It would simply turn back to individual taxpayers a set amount of what they have paid, to be used in the support of education. This has the additionally desirable merit of keeping school control, including control of educational programs and salary structures, largely in local hands, which is precisely where it should be. No matter how any Federal measure might be administered, the odds for decreased local control are great.

If one-half the enthusiasm and vigor—and lobbying money—that have been spent in support of Federal aid to education had been spent in serious efforts to solve the problem at the local level, or at the State and local levels in combination, we cannot help but believe the problem right now would be largely solved. At the very least the thus far missing alternative, that of no Federal aid in the terms being presently talked, deserves exploration that it has not yet had.

Safety Awards to Wisconsin Canners

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1961

Mr. WILEY. Mr. President, the establishment of more effective safety programs to protect the lives and limbs of our citizens is a never-ending challenge. Across the country, for example, tragic accidents last year resulted in about 92,000 persons being killed—1 life lost every 5½ minutes—and about 2 million crippled. This is a tragic record.

To combat this dangerous trend, businesses and industries across the country are undertaking special safety programs. This is a well-warranted and much-needed endeavor. For the effort, these enterprises are to be highly commended.

Recently, 16 Wisconsin canning plants were given special awards for undertaking safety measures to protect their employees. Believing that such meritorious efforts deserve wider consideration, I ask unanimous consent to have an article from the Green Bay Press Gazette on the safety acheievements of these firms printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAFETY AWARDS GIVEN TO 16 STATE CANNERS

Sixteen Wisconsin canning plants were honored at the spring meeting of the Wisconsin Canners Association here recently for completing the 1960 season without a single disabling injury.

Plant representatives accepted safety awards on the basis of records made in a statewide contest in which 77 Wisconsin plants participated. The participating plants packed approximately 90 percent of the State's production of vegetables and fruits, so contest figures are representative of the employee injury experience of the Wisconsin canning industry.

LIST OF WINNERS

Awards were made to the following: The Larsen Co., Hortonville; Oconomowoc-Poynette Canning Co., Poynette; Markesan Canning Co., Markeson; Stokely-Van Camp, Inc., Horicon; Country Gardens, Inc., Gillett; Fruit Growers Cooperative, Sturgeon Bay; Lake Shore Canning Co., Cleveland.

Chilton Canning Co., Chilton; Country Gardens, Inc., Coleman; Pardeeville Canning Co., Pardeeville; Calumet-Dutch Canning Co., Waldo; Shawano Canning Co., Clintonville; Sauk City Canning Co., Sauk City; Libby, McNeil & Libby, Janesville Farms; Chippewa Canning Co., Inc., Bloomer; Knowlton Canning Co., Mosinee.

The 16 winning plants are listed according to man-hours of exposure.

SPECIAL TO LARSEN

Special honors went to the Pardeeville Canning Co., The Larsen Co. plant at Hortonville, and Oconomowoc-Poynette Canning Co., Poynette, for having the largest number of man-hours without a disabling injury for a continuous period of more than 1 year.

According to M. P. Verhulst, executive secretary of the WCA, who made the awards, State canning plants had an injury frequency rate of 18.40, 4.36 percent higher than in 1959, but considerably lower than the national rate of 21, set by the canning and preserving industry in 1960.

The canners safety institute is sponsored each year in cooperation with the industrial commission and the Wisconsin Council of Safety.

Is This What You Want?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis News of March 17, 1961:

IS THIS WHAT YOU WANT?

American foreign policy has had many low points over the past two decades: Yalta, the fall of China, mute complicity in the torture of Hungary, the subversion of Cuba.

But for sheer folly, and for flagrant disservice to American interests, this week's performance must rank somewhere near the bottom of the list.

To begin with, the United States has taken no action to back the faltering confederation of states achieved a week ago in the Congo—a step which alone offers hope of rescuing that area from communism. Instead, our Government announces it will not support the confederation if it means the Congo will cease to be a single state.

Why? What is the compulsion to force these diverse ethnic groups into a single government? What happened to the revered principle of self-determination? If a confederation as separate states is what these anti-Communist leaders want, why should we take it upon ourselves to oppose them?

Indeed, if our policy had any semblance of reason, we would bend every effort to make the confederation succeed, because it represents a victory for the anti-Communists, a defeat for the Communists.

The stark truth of the matter is this: Our policy is devoted to doing whatever the United Nations wants; the United Nations is devoted to doing whatever the neutralists want; the neutralists are devoted to doing whatever the Communists want.

By that process of graduated submission, our own policy is made an instrument of Communist strategy. We are in effect destroying ourselves, our anti-Communist allies, and the cause of freedom.

If this indictment seems too harsh, consider two other items in the week's news concerning Africa:

It has been acknowledged, even by such liberal journalists as Stewart Alsop, that U.N. forces in the Congo are working to promote the pro-Communist elements, and to subvert the pro-Western government of President Kasavubu. The principal agent of the pro-Communist cause has been Rajeshwar Dayal, the Indian military chief of the U.N. mission.

Which side is the United States assisting? "The U.S. Air Force," reported UPI 2 days ago, "proceeded with plans to fly the first tough Gurkha warriors from India into the Congo despite protests of Congolese President Joseph Kasavubu." In short, we are actively supporting the cause of our enemies against our friends.

A vote in the U.N. Security Council Wednesday presented a clear-cut confrontation of East and West. A motion was proposed against America's stanchly anti-Communist ally, Portugal, concerning the Portuguese territory of Angola. The motion was prepared by "neutralists" and supported by the Soviet Union. What did the United States do? It joined the Communists in voting against its own anti-Communist ally.

The outlines of American policy under the Kennedy regime are thus becoming frighteningly clear: We destroy those who would help us, and help those who would destroy us.

At this rate—unless the American people wake up soon, and flood their Government with protests—it should not be long before communism absorbs all of Africa, and our disheartened allies in Europe and Asia give up the struggle altogether. Is that what you want? If not, why not let your Senators, Congressman, and President Kennedy know your feelings?

Resolution on Greek Orthodoxy as a Major Faith

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. CASE of New Jersey. Mr. President, on February 16 I introduced, with Senators KEATING and PELL, Senate Resolution 88, which would grant Eastern Orthodoxy recognition as a major faith in the United States. I would like to insert in the Appendix of the RECORD the resolution passed at last year's annual convention of the Greek-American Progressive Association, in support of such recognition.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ON GREEK ORTHODOXY AS A MAJOR FAITH

Whereas Senator CLIFFORD P. CASE, Republican from New Jersey, introduced in the 2d session of the 86th Congress of the U.S. Senate, Senate Resolution 346 (S. Res. 346), a resolution resolving that the Eastern Orthodox Church is a major faith in this country; that all references by Federal agencies to major faiths now limited to Protestants, Catholics, and Jews include the Eastern Orthodox Church; and

Whereas the Eastern (Greek) Orthodox Church is a major faith in the United States and throughout the world; and

Whereas Senate bill 106, 84th Congress, introduced by Senator LEVERETT SALTONSTALL, Republican from Massachusetts, led to the designation of the Eastern Orthodox faith as a separate religious faith in the Armed Forces of the United States; and

Whereas several Federal agencies have omitted Eastern Orthodoxy in projects which Protestant, Catholic, and Jewish faiths have been invited to participate; and

Whereas more than half of the States in the United States through their legislators have passed resolutions recognizing Eastern Orthodoxy as a major religious faith; and

Whereas the Eastern Orthodoxy faith has 250 million communicants throughout the world, including 6 million in the United States; and

Whereas the President and the Vice President of the United States in 1957 invited the Eastern Orthodox faith to join with the Catholic, Protestant, and Jewish faiths in invoking the blessing of God on the President's inaugural in January 1957; and

Whereas certain mass media still do not afford the Eastern Orthodox faith the same privileges afforded the three other major faiths: Now, therefore, be it

Resolved by the delegates to the National Convention of the Greek American Progressive Association assembled on this 26th day of July, 1960, that the Senate and the House of Representatives of the United States approve by more than a majority vote Senate Resolution 346; and be it further

Resolved, That a copy of this resolution be sent to the President of the Senate and the Speaker of the House.

Since the above resolution was passed at the GAPA National Convention, U.S. Senator CLIFFORD P. CASE reintroduced Senate Resolution 346 as Senate Resolution 88 which was cosponsored by Senators KENNETH KEATING, Republican of New York, and CLAIBORNE PELL, Democrat of Rhode Island. The Supreme Lodge of GAPA heartily endorse Senate Resolution 88 and extend thanks to said Senators for the sponsorship of said resolution.

STAVROS KALARAS,
Supreme Secretary, GAPA.

Jerry Leland, 10th Grade Division Winner in American Legion and Legion Auxiliary Essay Contest for Ohio

EXTENSION OF REMARKS
OF
HON. WILLIAM H. HARSHA, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. HARSHA. Mr. Speaker, recently the Ohio American Legion Auxiliary in conjunction with the American Legion, conducted their essay contest among the

9th, 10th, 11th, and 12th grade students in the great State of Ohio.

I am happy to announce that one of my constituents, a very outstanding young man, Jerry Leland, of 525 Mayfair Drive, Washington Court House, Ohio, wrote an illustrious essay on the Constitution and what it means. As a result of his exceptional work, he was chosen one of the winners in the 10th grade division for the entire State of Ohio. Needless to say, I am extremely proud of this fine young American and consider it an honor and privilege to include the complete text of his work in the RECORD. Certainly, at a time when we apparently have been deviating from the true concepts of the Constitution, it is wise to stop and reflect upon what the Constitution means to us all; this exceptional essay is worthy of the attention of my colleagues:

THE CONSTITUTION AND WHAT IT MEANS

One hundred and eighty-five years ago a small group of men representing the struggling Government of the newly independent American Colonies met in convention. This meeting, first called to settle a dispute between Virginia and Maryland, was destined to change the course of history. This was our Constitutional Convention.

With each morning paper bringing fresh news of political unrest, revolution, and armed conflict in various parts of the world, I cannot help but be thankful that this Convention was held and that I was destined to become a citizen of the Nation it formed.

It is hard to realize that our United States of America owes its existence to the sound principles of democratic government laid down in our Constitution. It is hard to comprehend how a small group of men representing a small confederation of States could, in 100 working days draft a document which would give birth to a small nation destined to grow to world leadership. It is doubtful if any of them had the slightest idea that 175 years later this same Nation would be the hope and support of freedom-loving peoples throughout the world.

A great statesman, William Gladstone, has termed our Constitution "the most wonderful work ever struck off at a given time by the brain and purpose of man." My own feeling is that our Constitution has been the greatest document for mankind's benefit since the Holy Bible.

There is a great deal of the wording of the Constitution which I do not fully understand. I doubt if very many teenage boys and girls do fully understand very much of its legal meaning. I would like to think for a few minutes about what our Constitution does mean to me, a 15-year-old student in Washington High School.

For a few minutes I would like to think of our Constitution as the lifegiving blood to the structure which we know as our Government and the society I call my country.

Our Constitution guides our President, keeps our Congress ever mindful of its obligation to all our people and is the final law upon which our courts must render their decisions.

As an individual it assures me of a way of life which few boys and girls enjoy in other parts of the world.

Because of our system of government, I have grown up without knowing the meaning of fear or oppression. One of my earliest recollections was attending Sunday school with my parents in the church of their choice. At the age of 6 I was enrolled in what I feel to be the finest educational system for boys and girls in the world. This was made available to me not because of who my parents were or were not or because of what I could or could not afford to pay but was mine because of the system of government under which I live.

My friends and I have never given a thought to the serious plagues which take terrific tolls of life among boys and girls in many parts of the world.

The responsibilities of adult life and making a living have never concerned me greatly because in our country there is opportunity for all who work hard and are deserving. All of this means that I have the opportunity of growing up in the most advanced society the world has ever known. This society makes us one of the best housed, best fed, and most literate nations on earth. In addition to these basic necessities we also have a country where we can work, save, and accumulate property, investments, and smaller personal possessions with no fear of having them taken away from us by secret police, by government, or mob action.

All of these liberties which we so often take for granted could not just happen. They had their birth in our Constitution. Under its provisions our country has grown as our people have developed. While dictatorships may sometimes seem to make rapid strides, it is only in a free society that man can develop all of his talents to the end that we may establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

This is what our Constitution means to me and why I am glad and proud to be an American citizen.

Where Is Ireland in the Fight for Freedom?

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1961

Mr. DODD. Mr. President, on March 17 I had the privilege of addressing the annual dinner of the Friendly Sons of St. Patrick in New York. This is one of the oldest fraternal organizations in the United States, dating back to revolutionary days, and its annual dinner is one of the principal St. Patrick's Day events each year.

My remarks at the dinner dealt with the historic contribution of Irishmen to the struggle for freedom around the world and the contrast posed by the more recent record of neutralism by the Irish Republic Government in the struggle between freedom and tyranny.

I ask unanimous consent that these remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR THOMAS J. DODD, OF CONNECTICUT, AT THE 177TH ANNIVERSARY DINNER OF THE SOCIETY OF THE FRIENDLY SONS OF ST. PATRICK; HOTEL ASTOR, NEW YORK, FRIDAY, MARCH 17, 1961

Only an Irishman can fully appreciate what is in our hearts on a St. Patrick's Day occasion such as this. For this annual observance brings a pleasant interruption in our lives; reminds us of the many ties that bind Irishmen together wherever they may live; inspires a remembrance of the half-forgotten events and emotions of an earlier time that lie close to the core of our lives.

In my mind, as I am sure in yours, this day recalls a whole series of pictures stretching back to early youth: St. Patrick's concerts in the church hall; the wearing of the green; the countless stories and ancedotes drawn from the measureless well of Irish humor; simple music with its power and poignancy; a whole pattern of commonly shared attitudes and loyalties and animosities growing out of the long struggle of our people for freedom and progress.

Hidden in the heart of each of us is the image of something ever green, something clean, something right, some breath of home which is a part of our heritage, which marks us apart and ties us together.

The Irish have been a poor and humble people. They had little of material wealth to give to the world. So they bequeathed those rare jewels of character which lend an eternal significance to their history.

They have fought for freedom with courage and perseverance in their own country and all around the globe.

They have clung tenaciously to the faith of St. Patrick, resisting all attacks upon it, whether of brutal suppression, of ridicule and social sanction, or of false philosophy.

They have, through all the wrongs and shames which have been heaped upon them, kept alive a cheerful optimism, a certain amiability in adversity, a good humor in bad times, a durability and staying power which brought them through centuries of cruel oppression unbroken and unspoiled.

Thus, to an age poisoned by indifference, fearfulness doubt and softness, little Ireland has given hosts of sons and daughters who have qualities which the free world desperately needs: a love of freedom, a courage in defending it, a steadfastness in religious faith, a hardy endurance in defeat and adversity.

For as long as many of us can remember, the condition of Ireland has been a constant object of our hopes and prayers and efforts.

Ireland in chains was admired and loved around the world, not for its military strength or material wealth, but for its spiritual strength and the power and inspiration of its ideals.

Ireland, free, was confidently expected to lead the world by its honest and forthright example; to be a national embodiment of that constancy of faith and devotion to freedom which was the inheritance of this fabled land of heroes and martyrs, of saints and scholars.

But something has gone amiss in Ireland. Perhaps I trespass when I, an American, presume to comment upon the conduct of the Irish Republic. But our interest in Ireland is too ingrained, our concern is too personal to give way to diplomatic niceties.

This is a holy day as well as a holiday. If we would truly honor St. Patrick we should sometimes speak of our people with the candor and even the severity with which St. Patrick spoke to them.

Our generation has faced the most evil and dangerous of all threats to Christian civilization, nazism, and communism. Free nations throughout the world, large and small, banded together in resisting the common enemies of decency. But in world war and cold war, Ireland officially has been among the missing.

However notable may be its achievements at home, the Irish Republic, in the brief period in which it has played a role on the world stage, has become known for four principal courses of action:

Ireland refused to join the other nations of the free world in the desperate fight against Nazi aggression.

Ireland has declined to join NATO or to bear its small share of the common defense against Communist aggression in the post-war world.

Ireland has become an advocate of neutralism in the raging conflict between Christian civilization and communism.

Ireland has lent its support to those who are today paving the way for the admission of Red China into the United Nations.

Ireland, in short, is pursuing neutrality in a struggle in which no Irishman should be neutral, a struggle in which no one devoted to the religious and philosophical tenets of Christian civilization can be neutral.

This seems to me a renunciation of the Irish heritage, of all that it has stood for, of all that Ireland should properly represent to the world.

I am saddened by this and I know that kinsmen of ours in every corner of the world are puzzled and hurt by it.

We cannot believe that the national traits of Ireland have suddenly changed, or that the clear trumpet of old is to be forever mute.

We hope that we misread the signs.

We hope that in Red China and its Communist allies, Ireland will soon see its natural enemy and the mortal enemy of all things decent and honorable, the enemy of all religion, of all personal freedom, of all national independence, of all international law and order, of all true peace.

And those of us who foresee for Ireland a higher role than that of a mere neutral can draw comfort from the spontaneous action of the Irish people during World War II.

The official policy of Ireland in that war was one of neutrality that denied to the side of freedom badly needed training areas and naval bases. This is painful to recall. But we also remember the thrill it brought to our hearts to learn that the young men of Ireland, by the thousands and tens of thousands, were enlisting under an alien flag in order to join in the struggle against Nazi tyranny.

Despite the policy of its government, the Irish people contributed to that war a larger percentage of volunteers than any other nation in the world. The divine spark was still there, and it is there today ready to be ignited into a consuming flame by a new O'Connell, another Parnell, an Emmet, or a Wolfe Tone.

We want to see in the world an Ireland that is prosperous, an Ireland that is united, but above all, an Ireland that takes its place, not among the neutralists of history's greatest conflict between good and evil, but rather its rightful place, its natural place in the front rank of those who are fighting against the gravest threat to our faith and our freedom that the world has yet seen.

I am sure that Mr. Aiken, the Irish Minister for External Affairs, who is here seated beside me, understands that my comments and observations tonight are made with regret and only because at this fateful hour in history we must face facts and tell truths and do all we can to help others to join full strength in this desperate struggle for freedom.

I say these things not in a spirit of rancor or hostility but in one of hope and affection. We Americans of Irish descent are helping our country to carry the mighty burden of defending freedom for ourselves and for all men. And we instinctively want Ireland, the other house of our family, at our side, not as a subordinate, nor yet as an estranged and distant onlooker of our struggles; but as a friend and a companion, a partner in the greatest enterprise of our history.

It will perhaps be a significant factor in history that millions of displaced Irishmen and their descendants, who but for chance circumstance would have lived out their lives in a small land, far from the storm center of world events, today are a prominent and influential force in America at a time when the actions of our country may well determine the outcome of 30 centuries of recorded struggle between tyranny and freedom.

I think we may be pardoned for taking pride in the fact that a man of Irish descent today sits in the chair of the President of the United States, and in the chair of the majority leader of the U.S. Senate, and in that of the majority leader of the House of Representatives.

It is here in America that whatever is of worth i nour race has been given a chance to develop and flower. It is here that the ancient Irish yearning for liberty and religious freedom was first satisfied. It is here that the hope and the fate of man is centered. And it is here that Irishmen can best justify their heritage by strengthening America in its determination to do the painful things that must be done if we are to gain and preserve for all men what we have here.

To the United States, our great Republic, "the last best hope of earth," we give our toast this day as we give our prayers in all the days ahead.

Effects of Proposed Highway-User Taxes on Independents in Tire Sales and Servicing Field

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks I include a statement delivered by Mr. George J. Bruger, vice president of the National Federation of Independent Business, before the House Ways and Means Committee during the committee's recently concluded hearings on highway financing proposals:

HIGHWAY PROGRAM: PROPOSED INCREASED TAX

Statement of George J. Burger, vice president, National Federation of Independent Business, before Ways and Means Committee, House of Representatives, March 21, 1961

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740–742 Washington Building, Washington, D.C.

We are a national organization composed exclusively of small, independent business, and professional people. We have the largest directly supporting membership of any business organization in our country. We have membership representation in federation chapters in almost all of the Nation's congressional districts, including Alaska and Hawaii. I am more than pleased to advise the committee that our membership each month is showing a very healthy increase and now totals 165,236 members, all individual members—not groups, which naturally included many independents in the tire sales and servicing field.

My appearance before the committee in behalf of our members is that we are committed to take every action to protect the business life of independent business. That is our main and principal reason for appearing.

The witness does not come before the committee as a professional trade association representative in view of the fact that I have had better than half a century active experience as an independent in the rubber tire industry, and during that period have been honored many times as the spokesman for the Nation's independent tire sales and servicing institutions, as well as during the greater portion of that time owning and operating an independent tire company.

It appears, up to this moment, that the greatest expression of alarm coming from independents is the injury that their businesses would suffer in inflicting an excessive tax on tread rubber.

The committee must be aware of the fact that for practical purposes, from the witness' own knowledge, the recapping of tires in the first instance originated among the ranks of independents. These stalwarts pioneered this new development where suitable, safe used tires could be adapted to recapping.

During their existence, prior to World War II these stalwarts in the many sections throughout the Nation faced some severe opposition within the ranks of certain sections of the rubber industry which could tend to discredit the safety factor of recapped tires, and still these stalwarts carried on. It's fortunate for the Nation itself they did during the critical days of World War II, and now some of these stalwarts like Mr. A. L. Sanderson of Tire Service Co., Spokane, Wash., advise us in regard to the proposal: "Again we find ourselves in the situation where the small guy is the fall guy."

This gentleman knows the score because he has had extensive experience over the many years.

The Paul E. Hawkinson Co., of Minneapolis, Minn., one of the original producers of tire recapping machinery—whose product is utilized today nearly worldwide, and the armed services is aware of it too—recently wrote me: "Economy has made our country one to be proud of."

Is this development by small business to be destroyed by discrimination in tax levy? That's the question that the committee must decide.

It is to be noted that the President of the United States, prior to his election—September–October 1960—is reported to have stated in an exclusive interview: "We can expect a Department of Commerce report early next year" (1961). And he further said: "I would want to review the Department of Commerce report early next year before making a final decision on this matter." Now the question is: Were the findings in the report of the Department of Commerce on the subject matter of tax on tires, tubes and tread rubber in any way influenced by members of the Business Advisory Committee? We are making no charge but nevertheless it should be thoroughly checked into.

Mr. Chairman and members of the committee, as a matter of information it would be well to quote from a letter we received on March 8, from Mr. E. F. Dandy, vice president of the Oliver Tire & Rubber Co., Oakland, Calif.—one of the most responsible producers in tread rubber in the Nation, whose business we believe is confined exclusively to the independent, and who is one of the pioneer quality producers of tread rubber—where he said:

"Taking an average price of 30 cents per pound paid by retreaders for raw material tread rubber, the proposed increase is equivalent to 33⅓ percent of the commodity cost. I cannot think of a single other necessity which carries such a tax burden or of a single other business so handicapped by taxation. Remove by taxation the right of retreading to compete in a free and open market and the foundation of the business is destroyed.

"The application of this unfair burden of taxation could only discourage the further

development of retreading and reduce the number of independent businessmen engaged in it. It would appear to be unwise since the experience of World War II and the Korean conflict thoroughly proved the extreme value of this segment of the tire and rubber industry during national emergency. To restrict the future growth and development of retreading would serve only to eliminate an important reserve. It might be pointed out that these independent retreaders, while forming a national pool which can be tapped on an instant's notice by the Defense Department, do not today participate in any governmental defense spending, as such.

"I am certain that it is not the intent of Government to penalize the small independent businessman of the Nation nor to impose additional costs on the consumers least able to afford an added tax burden. To place a tax on economy and thrift is to my way of thinking an assault on the American way of life."

Then from Melim Tire & Rubber Co., in Honolulu, Hawaii, they write me on March 10, as follows: "We do, however, sight this proposed increase of excise tax on retread rubber as an example of tax laws which unknowingly jeopardize small business in their efforts to grow competitively."

We could add many more of these reported, unsolicited statements as to the seriousness of this situation as it applies to the future business life of competent, trustworthy tire sales and servicing institutions, all of which would confirm the statements we have already quoted.

It's well for us to stress on the importance of maintaining a healthy, efficient independent business in the rubber tire industry. I cite this because in the critical days when we entered World War II the cry from the housetops was the need for a conservation program on rubber stockpile, and whatever use was to be made of the rubber stockpile for essential use it must be handled with the utmost care.

Well do I recall my voluntary action at that time assisting the Small Business Committee's of the Congress as it looked at that moment shortly after Pearl Harbor like the independent tire trade was through for the duration of the war. In fact some top executives of the big rubber producers believed in that theory. It happened in Great Britain.

The Small Business Committees of both the House and Senate, realizing that tire use is essential and must be maintained during the war period, resolved by unanimous action in January 1942 that all tire sales and servicing for the duration of the war be channelled exclusively through the independents. The Senate Small Business Committee in February 1942 followed with similar action, even strengthening their resolution by adding that all tire recapping equipment should be channelled exclusively through the independent tire sales and servicing agent.

It is to be noted that the late William M. Jeffers, then president of the Union Pacific Railroad, on loan by the railroad to the Government as rubber administrator for the War Production Board, in his appearance before the Senate Banking Committee, November 19, 1942 when a proposition was before that committee which would provide that during the duration of the war all tire sales and servicing for essential purposes be channelled through the independent dealer, said: "Gentlemen of the committee, I am not attempting to qualify as an expert on war. I think our people are doing a great job. It is our job to support them. At the same time it is equally important that we keep this country on rubber. That must be done because failure to keep this country on rubber, to my mind, would be equal to a military disaster, and maybe more than that."

It is to be noted that Mr. Jeffers, as rubber administrator, appearing before the Senate Small Business Committee on April 8, 1943, when the same proposition was before that committee for consideration (tire sales and servicing through the independents for the duration of the war) said, in answer to a question by Senator ELLENDER: "Now, you ask me as to my view on the bill. My view is this: I hold no brief for the big rubber companies. I think it is important and imperative that the independent be permitted to operate."

Finally, Mr. Chairman, the independent tire trade these many years has faced tax discrimination levy on their product that has created a most unfair competitive condition and to penalize efficiency in independent ranks such as is proposed in the highway program, being raised from 3 cents to 10 cents a pound on tread rubber is the rankest kind of discrimination. The revenue the Government would secure would be meaningless compared to the danger that would destroy individual initiative of those who created in its entirety this service to all types of the automotive trade.

We are duty bound to use our best efforts to protect efficient independent business, and more important, to keep the free enterprise system functioning within our Nation's economy. And it is for this reason, in behalf of our nationwide membership, and in fact all small business, that we oppose this increase from 3 to 10 cents a pound on tread rubber.

Vincent F. Sullivan's Back-to-Work Plan

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. JAVITS. Mr. President, I would like to call the attention of the Senate to a four-point back-to-work plan which has been developed by Mr. Vincent F. Sullivan, New York City newspaper executive and author.

The back-to-work plan is included in Mr. Sullivan's new book "How To Sell Your Way into the Big Money," and one of the points in this plan calls for an examination of the whole area of education.

Mr. Sullivan's four-point back-to-work plan has been strongly endorsed by more than 100 board chairmen and presidents of our great American corporations. These include such business leaders as: William E. Robinson, chairman of the board of Coca Cola Co.; Melvin H. Baker, chairman of the board of National Gypsum Co.; Arthur H. Motley, president of the U.S. Chamber of Commerce; Clayton B. Hulsh, chairman of the board of Glamorene; Elmer H. Bobst, chairman of the board of Warner-Lambert Pharmaceutical Co.; and scores of others.

For the information of Members I ask unanimous consent to have printed in the Appendix of the RECORD, an excerpt from Mr. Sullivan's book which covers his four-point plan.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

VINCENT F. SULLIVAN'S BACK-TO-SCHOOL PLAN

(Start of quote from book)

While I found that American educational standards are by far the highest in the world, some elements of the school system appear to be bogged down by a number of their problems and by a confusion of objectives.

There appeared to be a frustration in educational circles caused by a lack of funds. Important educators, who had devoted their lives to education with a true disregard of adequate compensation, summed up the major problem in just one word "money." Casting aside controversial areas of debate, they pointed out estimates of the U.S. Office of Education indicates a classroom shortage amounting to 132,400. But more alarming is the increase in the number of children entering school, now up about one and a quarter million a year, and in the years ahead it is projected that the average will run as high as one and half million. These learned gentleman advised me that the answer to this problem can be found only through extensive research.

I found that no other vital enterprise in America suffers from lack of funds as much as educational research. When one considers the vast research expenditures of industry and the almost total absence of research in education, one realizes why so many pressing questions remain unanswered. It would appear then that what is needed is a clarification of the goals of our educational system, a clear notion of just where we want to go as a nation and the necessary funds to reach our objective.

Educators were puzzled as to why the Congress would appropriate massive funds for extensive superhighway construction on one hand and then on the other hand delay and delay any and all constructive plans to aid education, which is still considered our front line of defense.

Let us refer to a recent report of the Ford Foundation. Mr. Henry T. Heald, president of the Foundation, and a man of great vision, has this to say concerning American education: "total preoccupation with immediate solutions often results in patchwork no more enduring that the alarmed outbursts created by the issue." He contended that the public attitude toward education was too narrowly "limited to the preservation of the process and a modest repair of the institution."

Mr. Heald called, instead, for "serious efforts to challenge, explore and, where necessary, remake the kind of education that has served American society for decades."

My research into industry unearthed vast areas of softness. There I found a lack of understanding that work is the most satisfying of all human desires.

The coffee break for example, has now developed into an American institution. Industrialists do not realize that this intruder has added an extra 15-day vacation to the employee. That, in itself, is not too bad, but here is a vicious addiction, developed during World War II on ships at sea, that has moved into industry on such a broad scale that the National Labor Relations Board is now ruling in its favor, and before long it will be a part of most labor contracts.

The amazing part of the coffee break is that the large majority of workers who are keen to get ahead in industry through intense application, are being forced to accept this slowup action because of industrial management's inclination not to combat the "less work all around" theory.

Another costly area in industry is the failure on a corporate level, of American business to recognize that alcoholism is a disease of the body—and one which can be arrested, through adequate multiple therapy. The disease itself is not complex. The person afflicted simply has a low supply

of a natural antitension substance called adrenochrome. That's all there is to it.

This disease costs industry over $2 billion annually. However, out of 482 of our largest industrial corporations, and many of these are multiplant organizations, only a scattered 11 are making constructive progress with the problem. And only two, yes, only two, are aware of the "direct-mail technique" used in arresting the disease.

I might add that Du Pont of Delaware is one of the few corporations doing a really outstanding job in combating this illness, but not many have followed.

Space limitations prevent further discussion within these pages of my 4-year research job, seeking the answers to the many questions developed out of the earlier editions of this book.

But out of this wealth of research there developed a plan. A plan that grew itself out of the thinking minds of a cross section of our American way of life. A plan that my advisers hold out as being the real challenge to the Soviets insofar as their overtaking American productive capacity.

However, a plan may have considerable merit, but if it is not accepted you might just as well file it away and forget about it.

So I decided to give my plan the acid test.

I submitted a comprehensive outline of the proposal to a number of our greatest American leaders. The list included board chairmen of international corporations, presidents of line corporations that have been a part of America for many years, judges, one a Supreme Court justice, top echelon educators, and other leaders known for their brilliant minds.

All great men, all name persons, with enormous reputations for farseeing vision and rich imaginations.

All men with an indescribable love of country.

All interviewed are greatly concerned these days. They see (as we all do) an alarming drift away from the underlying principles that built our Nation not only to world leadership, but to a standard of living far higher than possible for any other nation.

They recognize, too, that the sudden surge of the Soviet Union to match us in technology, in education, in public works and construction is not because of a Communist philosophy or system. Nor is it a weakness in the wonderful free-enterprise system which brought so much to the Western World.

Simply it is that the Soviets are working, and working hard to capture the rewards of free enterprise. In fact, they are using the methods of the capitalists. You find incentive pay, more consumer goods, installment buying (recently legalized), education for all—but on a regimented basis that requires hard work by every individual or the penalty of economic starvation.

Our challenge is simply this: Can free enterprise come up with a system to encourage every man and woman to put into every workday the full measure of effort that is required?

Certainly the men interviewed would be the last to decry the advent of the 40-hour week, or the 35-hour week. But they (and many others) recognize the fact that the attitude of the upcoming generation is to give as little in that 35 hours as possible. To demand security instead of success. To expect a paternal Federal Government to feed them, their family, and pay the doctor bills—but to give nothing in return.

Certainly history repeats itself. Ancient Greece before its eclipse was rotted with decadence, with low moral standards, and graft. When Rome began to coddle its citizens with the rewards of world conquest—and free them from the need for work—so began its decline.

We can prevent this happening to us.

And I now submit my simple plan * * * one which my advisors tell me offers more hope for our country than any other that has been presented to the American people.

This is the Sullivan plan:

Let's Get Back to Work: Let us instill in our children a restless ambition to develop a powerful sense of duty and responsibility, to give their best, to win approval, and to really work hard.

Let us make success something to be proud of and let us make certain that the money, the material possessions, and the prestige of success are not mocked by the pseudo-socialists thinkers.

How can we accomplish this?

But turning loose the mighty power of free enterprise to sell itself. By putting merchandising dollars and know-how behind a mighty crusade to get back to work.

The first step must be a thorough investigation by a high-level committee of the educational processes in this country.

Then we must examine carefully a number of areas in industry where softness and laziness is the insidious illness. We must then explore our theory of passing out money to those who prefer not to work. And lastly, this committee must develop a plan of action to be backed with the full resources of the Federal Government, State and local bodies—plus business itself.

Let's start with the committee itself. American business leaders have suggested the type of men that could make up the membership.

To represent the educators:

Dr. James Bryant Conant, president emeritus of Harvard.

Dr. James E. Allen, Jr., New York State commissioner of education.

Dr. Harld S. Sloan, director, Institute of Research, Fairleigh Dickinson University.

To represent free enterprise:

Thomas J. Watson, Jr., chairman of the board, IBM Corp.

William E. Robinson, chairman of the board, Coca Cola Corp.

Mark W. Cresap, chairman of the board, Westinghouse Electric Co.

Such a committee should be assembled by the President of the United States to report first to the White House. From their recommendations, enacting legislation would be presented to the Congress.

The study would run into four points:

1. What can Government do to clarify the goals of our educational system and what would be the cost to reach the objective?

2. What can industry and business do to rekindle the spark of desire for success?

3. Where can the line be drawn between honest community welfare and the current trend toward a free handout for the lazy?

4. And how can we bring home to the American people the importance of this program?

Well, there you have the Sullivan "Four-point back-to-work study." Brief, but all encompassing.

Recently I was asked if I would care to elaborate a bit more on each point and spell out what in my opinion would be the specific chore of the six-man task force. I am reluctant to do so.

The type of men suggested for the committee would be among the tops in our American way of life. I believe that such men would know what the score is today and that they would have the necessary know-how to tackle a large-scale problem and come up with the right answers. A detailed blueprint would be premature at this point.

Hagerstown Rides Comeback Trail

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. MATHIAS. Mr. Speaker, the House of Representatives will shortly consider area redevelopment legislation. In the meantime, a great deal of attention and emphasis have been placed upon certain depressed areas throughout the country, and particularly upon the city of Hagerstown in the Sixth District of Maryland.

In an article appearing in the New York Times on Sunday, March 12, Hagerstown, Md., was called a scale model for 105 depressed labor areas. On Friday, March 17, the Wall Street Journal considered editorially the case of Hagerstown, citing how the Federal Government might assist such an area, but urging other cities similarly affected to heed the words of Hagerstown's mayor, who observed "In the long run, we've got to save our own skins, and I think we can do it."

Today I am glad to be able to introduce into the RECORD an optimistic note in the form of Josephine Ripley's article entitled "Hagerstown Rides Comeback Trail," appearing in the Christian Science Monitor on Thursday, March 23. Miss Ripley depicts Hagerstown in the light of city officials, business leaders, and local industrialists fighting hard for a comeback. As a result of individual effort, local incentive and a free enterprise system, Hagerstown is taking the matter in its own hands by bringing new industries to the area, expanding existing plants, and beginning new building projects which should in the months to come bring a substantial increase in employment. Admittedly, it is a start only, but it is a start in the right direction.

In consideration of the area redevelopment legislation, it will be well to keep in mind that the wellsprings of American progress and prosperity are still located in the cities, towns, and farms of our country and must ride through the national economy rather than trickle down from Washington.

I include Miss Ripley's article in its entirety:

HAGERSTOWN RIDES COMEBACK TRAIL

(By Josephine Ripley)

HAGERSTOWN, MD.—Along with the touch of spring in the air at Hagerstown, here in the picturesque foothills of the Blue Ridge Mountains, there is a touch of hope.

Hard hit by high and persistent unemployment, Hagerstown has been—and is—among the most seriously depressed labor areas in the country.

Out of a total labor force of some 30,000 for the Washington County area, 15 percent are unemployed now. This compares with a national unemployment rate of about 5.7 percent.

But Hagerstown has not been sitting on its hands these past few years. Nor has it been holding them out.

The people of Hagerstown have a lot of pride and even more determination. City officials, business leaders, industrialists—all have been fighting hard for a comeback.

EFFORTS PAY OFF

Their efforts are beginning to pay off. New industries are coming into the area. Existing plants are expanding. New building projects are underway.

It will be some months before all this will bring any substantial increase in employment.

Even then, these projects alone will not take up the slack.

But it is a beginning, and Hagerstown takes hope. The worst, topped by the toughest winter on record for many years, is over.

"I think the low-water mark has been passed," says Mayor Winslow F. Burhans. He saw symbolism in the fact that he had just broken ground for a new $250,000 factory "with a gold-colored shovel."

James W. Stone, manager of the Chamber of Commerce, foresees 3,000 or more additional persons at work by the end of the year as a result of incoming industries and local development.

The city is buzzing with talk about the new Mack Truck Co. factory. The building will cover 1 million square feet. "Big as 22 football fields," is the way Hagerstowners describe it.

Scheduled for completion in October, it will employ some 2,000 workers eventually.

The coming of this new industry was like a sudden ray of sun through the gloomy clouds that had lowered over Hagerstown after the Fairchild Aircraft Co. in 1958, started to cut its 10,000 work force down to 2,000, due to loss of Government and other contracts.

Not that the truck plant meant Hagerstown troubles were over. What it did mean was that the Washington County Economic Development Commission, formed in 1959 to bring in new business and industry for Hagerstown, was beginning to function.

NEW FIRMS MOVE IN

Since then, an electric company has come in with a small new plant. A small furniture factory is scheduled to go up later. Ground has just been broken for a new electronics plant.

None of these plants are large, but they are new—and they have come into the community as the direct result of local initiative.

One day last fall a Hagerstown attorney reported to the economic development commission that he understood the Electronic Teaching Laboratories, Inc., a Washington, D.C., firm was thinking of building a new factory.

The commission immediately called the firm, put in the Hagerstown bid for the business—and got it.

A Hagerstown industrialist was responsible for the location of the Contempo Furniture Corp. in the town, having strongly urged its head, a Cuban exile, to choose this community.

AMAZING RESULTS CITED

The Hagerstown Chamber of Commerce has taken a strong lead in promoting business opportunities in the area. Some $185,000 was raised last year for the purpose of providing plant and equipment for lease to industries which prefer that kind of arrangement.

Construction plans within the city for a new department store, a new bank building, post office expansion, and an addition to the courthouse promise "one of the biggest construction years in the history of the country," according to Daniel S. J. Rohrer, Jr., executive director of the economic development commission.

Considering the comparatively short time the commission has been in operation, he feels that "results have been rather amazing."

A rousing series of editorials, called "Road to Recovery," in a local newspaper has touched off another round of developments.

The theme of the editorial series was that instead of waiting for new capital to come in from without, Hagerstown make use of the capital it has for expansion from within.

SELF-PUSH DRIVE

Inspired by this philosophy, the Elpern Manufacturing Co. which makes dresses for children announced plans for stepping up production, adding new employees, and making Hagerstown a regional center for fashion showings of the dresses the company manufactures.

As a result of the series Mayor Burnans called a meeting of industrial leaders of the town March 20 to explore further possibilities. Some 30 or more industrialists turned out.

Discussion brought out the need for more housing in the $30,000 to $40,000 bracket to meet the demand of executives of the Mack Truck Co. The success of a training school for workers in the needle trade in the community suggested the possibility of more educational opportunities in this area.

A survey of local industry was proposed to find out if supplies which industry needs and now purchases outside the area could be produced locally.

These were among the ideas generated at this initial survey of Hagerstown potentials by the men who run the town, industrially speaking.

DIVERSIFIED INDUSTRY

Hagerstown has a remarkably diversified industry for a town of its size, with a population of only some 36,000.

It manufactures L'Aiglon dresses for women, in addition to children's clothes; refrigeration equipment, cold storage doors, pipe organs, shoes, sandblasting and dust-removal equipment, toys, leather and rubber products, and cement.

Proposed Freedom Academy

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 27, 1961

Mr. MUNDT. Mr. President, with the cold war continuing to expand and increasing in intensity it is becoming more and more evident every day that Congress should act promptly to authorize the establishment of the Freedom Academy proposed by Senate bill S. 822. Happily, more and more Members of Congress and commentators on public affairs, generally, are evidencing their support for this important program.

Clearly, we must no longer rely upon amateurs and untrained and unskilled representatives in the cold war areas of activity if we are to perpetuate the peace and promote the ideals of freedom around the world. Our American dollars cannot achieve the desired results alone. We must entirely revamp our thinking and update it to the point where those who represent the United States abroad are trained in their responsibilities and educated in the devices of the Communist conspiracy before they undertake to expend the resources and reflect the attitudes of this country overseas. The Communists rely upon professionals to carry out their nefarious undertakings—we must delay no longer in establishing a Freedom Academy wherein those who represent this country overseas are better trained for their tasks and equipped for their responsibilities.

At this point in my remarks I would like to call attention to an article in the March 20 issue of Life Lines, which, under the heading of "Are We Losing the Cold War?" discusses the need for a Freedom Academy. I ask that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE WE LOSING THE COLD WAR?

Our country spends vast sums on complex weapons systems and large sums on foreign aid. But neither type of expenditure is proving itself effective in checking the advance throughout the world of the deadly enemies of freedom. These mistaken forces are gaining ground month by month.

The totalitarian excesses of Fidel Castro's Cuba continue to grow in number. On the African Continent, Communists dominate the Government of Guinea and are infiltrating other newly created nations. In north Africa, Red Chinese "technicians" are taking up key positions in the Algerian rebel army that is fighting France.

We seem virtually helpless against the conspiracy's techniques of war by subversion. The truth is, of course, that covert methods are favored by the conspirators. They expect to win world war III not with giant bombs or fleets of submarines but with saboteurs, political agents, and propagandists. To them the propaganda war is the heart of the battle.

It is a tragedy that we in the United States have so little with which to fight on this front. Instead of understanding and becoming expert in the areas where the cold war is being fought, we have squandered billions on military aid to countries all over the globe. Roads have been built overseas in lands that communism came to control. Dams have been constructed, only for a pro-Communist regime to deny the United States credit for them, and instead tell their people Russia was the helper. Scholarships have been given foreign students, only for them to return home to become anti-freedom fanatics. It is ironical that Raul Roa, Cuba's Red-lining foreign minister, was at one time given a fellowship on a grant provided by an American foundation.

Patriots can serve the cause of freedom in a great way by working to wake Americans up to the need for anti-subversion training. We need our own Freedom Academy—a cold war training school in which American officials, agents, and military men would receive instruction on the methods used by Communists and how they can be checked. All that patriots have learned about the threat to freedom could be taught in this West Point of political warfare.

For example, graduates of this Freedom Academy would know how to expose the fraudulence of mistaken propaganda, and how to break up Communist fronts. They would be the spearhead of freedom's resistance to totalitarianism. They would understand the means of preventing student riots. They would be in a position to detect the efforts of the mistaken to infiltrate Latin America, and to offset those efforts.

The United States needs trained professionals to help break the power of the mis-

taken ones who hope to subvert America, the stronghold of freedom. We urge that you look into this need and inform yourself as to how it can best to met. Freedom fighters need to be taught how to fight most effectively.

A Protest on the Soybean Support Price

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. SCHWENGEL. Mr. Speaker, recently I received a letter from Mr. Dale W. McMillen, Jr., president of Central Soya, Fort Wayne, Ind., in which he enclosed a copy of a telegram which he had sent to Secretary of Agriculture Freeman protesting the unrealistic price support for soybeans.

In view of the fact that the Secretary has announced that the price support for soybeans will be $2.30 per bushel, I feel that Mr. McMillen's letter and his telegram to the Secretary should be called to the attention of the Members so that they will know about some of the reservations which the people at the grassroots have concerning the direction the farm program is taking.

Under leave to extend my remarks, I include Mr. McMillen's letter and the telegram to Secretary Freeman in the Appendix of the RECORD:

CENTRAL SOYA,
Fort Wayne, Ind., March 20, 1961.
The Honorable FRED SCHWENGEL,
House Office Boulding,
Washington, D.C.

DEAR CONGRESSMAN SCHWENGEL: The enclosed copy of a telegram and this correspondence constitute the letter of detail concerning the proposed soybean price support mentioned in my wire of last Friday.

In our considered opinion the $2.30 support price would expose this very important cash crop that provides the protein foundation for our animal agriculture's meat, milk, and egg production to the same fate that has befallen cotton, wheat, and corn.

In addition, the proposed program could price soybean oil out of the world market and force the price of the other urgently needed product of the soybean—soybean meal—to a level difficult for the production of reasonably priced meat, milk, and eggs for the U.S. food consumer.

With increased production costs for meat, milk, and eggs, these products would, in turn, become more costly for our food consumers at a time when they can ill afford an increase in their cost of living.

Historically, high support prices become ceilings rather than floors, and eventually depress the income of the groups they were originally designed to help. These facts are called to your attention in behalf of our company employees and the agricultural economy in your home State.

Respectfully,
DALE W. MCMILLEN, Jr.,
President.

MARCH 15, 1961.

HON. ORVILLE W. FREEMAN,
Secretary of Agriculture,
Washington, D.C.

DEAR MR. FREEMAN: I note that the Soybean Growers Association is protesting the suggestion of setting the 1961 soybean support at $2.30 a bushel. I note further they advocate a price of $2 per bushel, or 1.8 times the price of corn, whichever is higher. If the support price of corn was to be set at $1.20 a bushel, this would then mean that the support price of soybeans would be $2.16 a bushel. The association feels that a higher support than this would threaten the markets at home and abroad.

I say to you, sir, that it is my considered opinion that these men who are interested in the growing of soybeans know that they will be priced out of the market if as high a price is placed on soybeans. Throughout the years a ratio of 1.7 to corn has been considered high. On this basis $1.20 corn would produce a price slightly in excess of $2 for soybeans.

We are a surplus nation so far as fats and oils are concerned. We know that the starved nations of the world need this high-energy commodity. I believe that any land-grant college in the United States would say to you that insufficient protein is bad even at the present time with soybean meal at moderate prices as it has been the last year or two. In other words, I think that they tell you that livestock could be fed more economically with a greater intake of protein than they are getting at the present time.

Now, if you increase the support price of soybeans so radically, it seems to me that you would have an insurmountable burden on your hands to support the price of soybean oil to an extent that would permit a reasonable price for soybean meal. If soybean meal is not kept low you are doing a grave injustice to the livestock and poultry feeders of the United States.

Since this wire is coming to you from Florida and not from Fort Wayne, Ind., which is the home office of Central Soya Co., I would like to justify in your mind that I know something about the subject. I was processing soybeans when less than 10 million bushels were processed in the United States. Now we are processing 400 million bushels and our company processes over 50 million bushels of them. You may say that I am prejudiced because we are in the processing business, and to a certain extent that is true and it is true only to this extent, that we would like to keep our plants running and our people at work.

Now, Mr. Secretary, I could refer you to many men in the processing business and in the feeding of livestock who would understand very thoroughly my position in this matter. I will refer you to one, however, with whom I think you will be familiar. This man is Mr. J. McConnell, former head of the GLF and former Assistant Secretary of Agriculture.

The volume of soybeans raised in the United States, if my memory serves me right, is raised principally in the States of Illinois, Iowa, Indiana, Arkansas, Missouri, Minnesota, and Ohio—I think it is in this proportion. On the whole, soybean country is corn country. If you can get part of the corn land in soybeans without affecting too seriously the ratio between carbohydrates and proteins you will have been a service to agriculture. If you make as abrupt a change as has been suggested in the price of soybeans, I think it would be a disservice.

Now to state to you that I have been registered as a Democrat since 1901 would mean nothing, because I would be for any administration during these troubled times, regardless of politics, who are doing their utmost to better agricultural conditions in this country. Furthermore, from what I see in the press you are a man who is attempting very strenuously to get all of the facts and I have great admiration for a man with an inquiring mind and I have deep admiration also for a man who has the courage to change his mind when all the facts are in.

Assuring you of my desire and the desire of our company to cooperate at all times, I am,

Sincerely and respectfully,
D. W. MCMILLEN.

Needed: Blueprints for Freedom

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. WILEY. Mr. President, today the free world is confronted with an ever growing threat to its survival. All around the globe the Reds are thrusting forward to gain control of more lands and people. The ultimate objective—repeated again and again from Lenin to Khrushchev—is world domination.

In Laos, for example, we are witnessing one more effort of the Communists to penetrate and stir up trouble, arm and train a rebellious force, and then attempt to take over the country.

This must be stopped.

To more effectively combat the expansionist efforts of the Reds—not only in Laos, but elsewhere in the world—however, we need a more effective counter-offensive.

Yesterday, I was privileged to make an address over radio station WIND of Chicago. In the address I made some recommendations which I feel could well help to deal with such situation.

I request unanimous consent to have the text of this address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ALEXANDER WILEY, OF WISCONSIN

Friends, the Nation today faces greater, more complex problems to its progress, security and survival than ever before in history. However, this is no cause for defeatism. Why? Because the world of the 1960's also offers us better, more effective tools to find solutions to these challenges.

As a nation, we have the highest standards of living in history; the greatest defense military force in the world for our security; the most advanced scientific-technological program; the most productive agricultural-industrial systems; the greatest opportunity—within a climate of freedom—to attain our goals as individuals, and as a nation.

Now, admittedly, we face serious problems: At home, we have too much unemployment—still estimated over 5½ million—and regrettable lags in industry, business and other segments of the economy. Naturally, we must undertake strong, effective measures to cure these ills and further improve the outlook.

To keep the picture in perspective, however, we must remember that we also have a high rate of employment—estimated at about 65 million—and a gigantic gross national product of $503.5 billion.

In spite of our difficult problems, then, we must not allow—as some would encourage—"curtains of gloom" to descend over the Nation. In my judgment, falling prey to such an attitude of pessimism would cause the country far greater harm than the present economic problems.

Rather, we must go forward—confident in our ability to solve the problems; to provide for our defense; and ultimately to make—as I believe history will record we are now making—a constructive contribution to peace in the world, and a better life not only for our own people but for all mankind.

In a world shrunken by the ingenuity of man, controlling more of the forces of nature, our Nation cannot be isolated—an "island unto itself." Rather, the design of U.S. policies must consider universal as well as domestic factors in the overall picture. In this space age, events—economic, military, political and scientific—elsewhere in the world—affect, sometimes dramatically, our domestic as well as foreign programs.

PEACE—NO. 1 CHALLENGE

Now let's take a look at some of the major trouble spots on the globe: Headlines of newspapers across the country and around the world continue to spotlight the difficulties in Africa, particularly in the Congo. In that troubled nation, the UN—supported by the United States and other countries—is attempting to create stability and a climate in which the Congolese people can emerge as an independent, selfgoverning nation.

Unfortunately, the Communists are opposed to such a goal. Rather, they continue to attempt (a) to meddle in the internal affairs of the Congo; (b) and to defy, denounce and, as possible obstruct the efforts of the U.N.; overall, however, the U.N. continues to be the most promising hope for blocking a Red takeover and ultimately establishing stability in that troubled land.

The Congolese people themselves, however, need to demonstrate a greater sense of responsibility. The wanton killing, rape, and other atrocities, for example, reflect unfavorably upon the capability of the Africans to act humanely in relation to their fellow man or to govern themselves and their country.

COMMUNIST EFFORTS TO DESTROY THE UNITED NATIONS

For the future, however, we can expect that the Reds will continue to attempt—not only to stir up trouble in the Congo, Laos, South America, and elsewhere, but also to influence, control or destroy the United Nations. In attempting to cope with the growing threat to freedom in the world, there is a real need to review our policies. For too long, for example, the West has allowed Mr. Khrushchev to get away with the policy of considering the land and people behind the Iron and Bamboo Curtains as taboo to the West, or sacred property for the Reds. By contrast, the Communists consider all areas outside the Red orbit to be open hunting grounds.

With these ground rules for power-ideological-economic struggles, the West, then, finds that it can only be stalemated, or else lose ground. However, the Reds in each such contest have everything to gain and only a little to lose. The free world, I believe, needs to develop a more effective action program to counter the Red offensive. This could involve more creative and effective efforts to penetrate behind the Iron and Bamboo Curtains.

NEEDED: BLUEPRINT FOR FREEDOM

Globally, to attain their goals, the Communists design master plans that include (1) tactics for taking over a country; (2) techniques for transforming it into a Communist state; and (3) once controlled, establishing it as a subsidiary branch of the world conspiracy.

By contrast, the free world—although engaging vigorously in efforts to protect freedom—unfortunately has no master blueprint for the ultimate triumph of liberty. Why? Because liberty implies an inherent right of people to be self-determining. Consequently, we often feel a little conscience-stricken about efforts to influence them, even though we ourselves are dedicated to freedom.

In the face of a militant effort by the Communists to mobilize more people and resources to bury us, however, we need—indeed we must—design, and put into action, blueprints of freedom for the world. The efforts would include creation of plans for free self-government tailored for each country; educating a cadre of leaders within that country to carry the banner of liberty; insofar as possible, educate the people on the meaning of freedom, including the ways in which free institutions can serve them in attaining their personal and national goals; providing technical assistance, guidance and support—along the lines now being done—to help these countries establish a firmer foundation for attaining and perpetuating a free self-governing system.

The creating of such "blueprints" should, in my judgement, provide a greater sense of direction to our national and international efforts for winning more people for the ultimate triumph of freedom and for defeating communism.

CHAOS IN LAOS

Internationally, also, the spotlight is now on Laos. As this crisis is shaping up, it threatens to be a major contest between East-West forces. The Reds are supplying arms and ammunition to local Communists. Increasingly, these threaten the stability of the country and the survival of freedom for the Laotian people. The United States has taken a firm stand against aggressive policies of the Soviet Union. The Communists will not—I hope—turn the conflict into a Korea-type situation. The crisis, however, represents one more area in which the Reds are ready and willing to threaten world peace to further their aim of world conquest.

Currently, a meeting of the Southeast Asia Treaty Organization is underway. I am hopeful that from the conference will come some realistic action to help halt the Communist tide in that area of the world.

UNITED STATES-UNION OF SOVIET SOCIALIST REPUBLICS: DEFINITIONS OF COEXISTENCE

Despite Red-created warring in Laos, however, Mr. Khrushchev deceptively still endorses a policy of so-called peaceful coexistence. In Western understanding, coexistence is an inherent right of nations to live and progress together in the world. As possible, the United States has adhered to a philosophy of not only "live and let live," but also "live and help live."

By contrast, the Communists define coexistence as a period in which the Reds attempt by nonmilitary means—political, economic, ideological—to extend the influence and control of communism over more land and people. The result: a so-called "cold war."

For the future, the battle against communism will be fought on the production line, around the conference table, through trade channels, on the ideological plateau for the minds of men—all of these conflicts under the shadow of poised, ready-to-fire, pushbutton nuclear-warhead missiles. The free world can—and must—win the cold war. What is at stake? Our survival.

NEEDED: A STRONG U.S. DEFENSE

The "missile-muscle" of the United States—now and in the foreseeable future—will continue to serve as a major deterrent to military expansion by the Communists.

For fiscal year 1962, over $47 billion are earmarked for national defense programs. This includes production of advanced aircraft, missiles, guns, bombs, and other arsenal-for-defense materials for land, sea, air and space forces; maintenance of trained personnel; research and development for new weapons; and cooperating with other nations in common defense through the mutual security program.

As a leader of the free world, we need to maintain a strong, forward-moving economy, with full employment, for meeting the domestic needs of our citizens, as well as to retain a good, healthy lead over the Communists' challenge on the agricultural-industrial-consumer goods production line; further strengthen our jet-nuclear-missile-space defense—second to none—to guard the ramparts of freedom and to deter would-be aggressors elsewhere in the world; pace our scientific-technological programs to stay well ahead of competition; and carry forward a realistic foreign policy, designed to obstruct the expansionist efforts of Communists; accommodate, or negotiate, conflicts of interest among nations or blocs of nations; prevent a third world war; and, to promote the cause of peace.

Hon. William L. Dawson

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. O'HARA of Illinois. Mr. Speaker, for the beloved dean of the Illinois delegation, the Honorable THOMAS J. O'BRIEN, and his colleagues from Chicago, I am extending my remarks to include the text of a telegram from President John F. Kennedy to Edward B. Toles, president of the Cook County Bar Association, on the occasion of a dinner conferring awards of merit on Congressman William L. Dawson, Judge Ervin Charles Mollison, judge of the U.S. Customs Court, Judge Scovel Richardson, also judge of the U.S. Customs Court, and the Honorable Herman Emmons Moore, retired judge of the U.S. District Court in the Virgin Islands.

It is doubtful that ever a President of the United States has paid a higher tribute to a Member of the Congress than these words of President Kennedy referring to Congressman DAWSON:

Your giving well-deserved recognition to a man who, through selfless dedication to principle and devoted service to his profession, his community, and the Nation has achieved a position of unique distinction in the life and the political institutions of the United States.

The full text of the President's telegram follows:

THE WHITE HOUSE,
Washington, D.C., February 16, 1961.

EDWARD B. TOLES,
President, Cook County Bar Association, Chicago:

I extend greetings and felicitations to the incoming officers, members, and guests in attendance at the 47th annual installation banquet of the Cook County Bar Association. In honoring Congressman WILLIAM L. DAWSON, you are giving well-deserved recognition to a man who, through selfless dedication to principle and devoted service to his profession, his community, and the Nation, has achieved a position of unique distinction in the life and the political insttutions of the Unted States. On this auspicious occasion I extend my sincere congratulations and best wishes to him and to your other honorees—Judges Irvin C. Mollison and Scovel Richardson, of the U.S. Customs Court, and Judge Herman E. More, retired, of the U.S. District Court for the Virgin Islands.

JOHN F. KENNEDY.

The Philippines Since Independence

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid article written by my valued friend, Hon. Carlos P. Romulo, and appearing in Current History of March 1961 entitled, "The Philippines Since Independence."

The Honorable Carlos P. Romulo is one of the outstanding statesmen of the world. His views on any subject are deep and profound. The article, "The Philippines Since Independence" is not only stimulating, but informative, reading.

THE PHILIPPINES SINCE INDEPENDENCE

(By Carlos P. Romulo, Philippine Ambassador to the United States)

During this revolutionary period in world history the new nations in Asia and Africa, emerging from colonialism to freedom, are the focus of universal attention. It is of interest to take the case of the first country—the Philippines—to become independent after the Second World War, and find out how it has fared since it achieved nationhood 15 years ago.

Devastated by war when its independence was proclaimed, how did it carry out the work of reconstruction and rehabilitation? How did it organize its government? How did it rebuild its economy? How are its government's finances? What happened after the death of its great president, the late Ramon Magsaysay? How are its foreign relations, particularly with Asia and with the United States? What has been accomplished by the incumbent administration under the leadership of President Carlos P. Garcia?

The answer to these questions will show how the Filipino people have met the challenge of their new responsibilities, how successful they have been in maintaining a government of their own, free from alien rule, and what is more important, how judiciously and wisely they have exercised the powers that sovereignty has given them.

In his speech before a joint session of the U.S. Congress on June 18, 1958, President Garcia summarized what the Philippines had achieved after 12 years of independence. He said that when independence was proclaimed, on July 4, 1946, the Philippines was a country in ruins, wrecked by 4 years of cruel enemy occupation, the country's economy completely destroyed.

Freedom is a heady thing but it can also awaken latent potentialities. It places in the hands of a people instrumentalities that when properly used can be for their lasting good.

RECONSTRUCTION AND GOVERNMENT ORGANIZATION

The twofold task that confronted the Filipino people was reconstruction and establishment of a new government, democratic in pattern but molded after Philippine experience and tradition, a government by Filipinos and for Filipinos. Garcia declared—

"We like to believe that in our 12 years of independent existence we have proved to the world that we have not betrayed America's trust and confidence * * * and that in 12 years we have, with American assistance and cooperation, completed the task of reconstruction and restoration."

Anyone who has been to the Philippines, who saw our country in 1946 and can compare conditions then and now, will agree with the Philippine President. A beautiful job of reconstruction has been done. In his recent visit to the Philippines, President Eisenhower was amazed at the visible signs of progress that he saw everywhere. He said:

"Even in the short space I have been here, I have been struck by the vigor and progress that is evident everywhere. I see around me a city reconstructed out of the havoc and destruction of a world war. I know of the Binga Dam; the Maria Cristina Power and Industrial Complex; the Mindanao highway system; rural electrification; the disappearance of epidemic diseases; the amazing growth of Manila industry.

"Everywhere is inescapable physical evidence of energy and dedication, a surging faith in the future. But of even deeper significance is the creation here of a functioning democracy—a sovereign people concerned with the responsibilities in the community of nations. Those you have discharged magnificently even as you toiled to rebuild and to glorify your own land."

OUR FIGHT AGAINST COMMUNISM

During these 12 years, while rebuilding the country and organizing its newly independent government, the Philippines at the same time had to fight the danger of communism. Moscow-indoctrinated Communists, called Huks, tried to overthrow the fledgling Philippine Republic. It fought them in the hills and jungles as well as in the towns and cities and defeated them militarily. In the midst of the campaign against them, North Korea was attacked by Red China and the United Nations decided to intervene. The Philippines was among the first countries to send its troops to fight in Korea. When the Southeast Asia Treaty Organization (SEATO) was established, the first meeting was held in Manila; the Philippines not only joined the defensive organization but authorized the Pacific Charter which is an important part of the treaty. In it, the colonial powers agreed with us to uphold the principle of self-determination and the right of peoples of self-government and independence. The charter also stated that the dying colonial imperialism in Asia should not be replaced by the newer and even more dangerous species of Communist imperialism.

It was the late President Ramon Magsaysay who led the fight against communism and it was his interest in the welfare of the masses which helped mightily in defeating the Communist menace. Magsaysay justly won renown in the United States for his work, and when he died in an airplane crash in 1957, it was a real disaster for the Philippines. He was a leader who was loved by the people for his integrity and his sensitivity to their needs and aspirations.

However, in this connection, I wish to refer to the tendency I have noticed in the American press to write in terms of awed admiration bordering on hero worship about Magsaysay and, by an understandable but illogical inversion, to denigrate other Filipino leaders, including his successor, Carlos P. Garcia, who has been elected in his own right, in a clean and free election, as President of the Philippines.

Magsaysay was a leader sui generis. At the end of a long line of experienced politicians, and in a time of deep national distress, he burst upon the Philippine scene like an archangel of limitless energy, unsullied integrity and boundless love for the "forgotten man." Famed as a guerrilla leader, he was elected to our Congress and shortly afterwards acquired national prominence as secretary of defense, in which capacity he was mainly responsible for breaking the back of the Communist rebellion. The immense popularity he thus earned catapulted him to the presidency in 1953.

Magsaysay set a new style of national leadership. He established new standards of performance, morality, and dedication to the welfare of the people. He literally brought the Government closer to the people by going to them personally on every possible occasion, riding in bullcarts, eating with them in their thatched little huts, looking into their personal or community problems and solving them on the spot with a warm handshake, a gift of money or goods, or with an artesian well, a schoolhouse, a bridge, or a feeder road.

He represented an extraordinary cross between a barrio lieutenant (village leader) and President of a Republic of 27 million inhabitants. This style of governing had its inevitable drawbacks, and it does not detract from the unparalleled achievement of Magsaysay to point them out. They were the faults of his virtues.

MAGSAYSAY'S DIRECT ACTION

Himself an inspired amateur in the art of government and politics, he threw the careerists as well as the bureaucracy into disrepute. But in doing so, he also created a popular distaste for the established amenities and ordered procedures of public service. Paperwork and redtape which, unfortunately, are a necessary evil in any government were set aside in favor of direct action—a method which often made difficult the careful study of specific problems and the coordination of policies and programs.

Magsaysay disliked nothing so much as sitting down at his desk to read reports or listen to complicated technical advice or go to the roots of a problem. He preferred to be with the people and to go forth among them, knowing that the very sight of him would lift the hearts of the poor and the hopeless. He governed by ear and by instinct, and the former was as keen as the latter was sound.

The people loved him for this. True, in retrospect, this manner of running a government, while refreshingly new and popular, has its advantages. Yet it also can lead to regrettable errors and waste of time, energy, and resources. When Magsaysay died, he left a people whose faith in and dependence on the Government was as high as the latter's available resources were low. That is the legacy that has come to President Garcia. It is a legacy which is doubly difficult because the two men are poles apart in personality and experience.

GARCIA

Like Magsaysay, President Garcia rose by his bootstraps from the ranks of the poor. But there the similarity ends. He finished his law course as an outstanding student. He rose in politics by the proverbial step-ladder process: from Provincial Governor to Congressman to Senator to Vice President and Foreign Secretary and President of the Republic. He has never lost an election.

He is a quiet man of simple tastes. A devoted family man, he is a poet whose favorite form of relaxation is chess. After 35 years in the public service, he remains poor. He won the Presidency in an election held less than 9 months after he was elevated from relative obscurity, in the shadow of Magsaysay. That he is a loyal friend of the United States was shown unmistakably during the Second World War when he refused to collaborate with the enemy and preferred to risk his life in the hills as part of the resistance movement. It was he who signed the law outlawing the Communist Party from the Philippines. Recently, to show his faith and confidence in the United

States, he invited the American Government to establish bases for its missiles in the Philippines. This was at the time when America's NATO allies were refusing to do the same.

To write slightingly and abusively as some American correspondents have done of such a man is not only a gratuitous insult but a form of condescension which betrays in the writers a distrust of the democratic process. In the end, the real strength of democratic government lies in the slow maturing of experienced politicians rather than in the occasional spectacular emergence of an inspired popular idol.

CAUSE OF MISINFORMATION

I advisedly dwelt at length on the contrasting personalities of Presidents Magsaysay and Garcia because a lot of misinformation about the Philippines in the American press is due basically to a misunderstanding of the kind of leadership offered by each of them. Also because I believe it is high time that Americans rid themselves of the notion that Philippine progress came to an end when Magsaysay died. The great achievement of Magsaysay lay in setting up inspiring new goals for Philippine democracy and in turning the people's steps in their direction. It is left to the quiet, less spectacular, prudent and more experienced leaders like Garcia to bring the people measurably nearer these goals.

What then was the task that faced President Garcia when he took over after Magsaysay's death? In his own words, it was to be a new chapter, "The building of a national economy affording to the humblest citizen of a democratic Philippines, economic well-being, social security and stability." This he has done with concrete achievements as shown by the following facts and figures which speak for themselves; the larger share of the credit must be given to his administration.

AGRICULTURE

Despite the fact that it took several years to restore and rehabilitate agricultural production to the prewar level (in some cases, as in sugar, it took 8 years to bring it to its prewar output), there have been in recent years remarkable improvements in the acreage and output of the principal food and export crops.

In 1938, a total of 4,478,000 hectares was devoted to the production of food and export crops. In 1959, a total of 6,764,000 hectares was planted with these crops, or an increase of about 30 percent. Increase in production of these crops was more impressive, due to better methods and the use of fertilizers. In 1938, total production of these crops amounted to 5,366,000 metric tons which nearly doubled in 1959 when total production catapulted to 10,017,000 metric tons.

More specifically, the production of rice, the staple food of the people and the barometer of their economic life, surpassed the prewar output of 2,303,000 metric tons by 60 percent in 1959 when 3,685,000 metric tons of rice was produced. The year 1959 marked the turning point of the rice situation in the Philippines for we produced in that year, as a result of President Garcia's intensified 2-year food production campaign, sufficient rice to meet our domestic requirements and did not have to import this product, thereby saving considerable dollar exchange.

The production of corn, another staple food of our people, increased in 1959 by nearly 100 percent over that of 1938. Likewise, the output of the other food and export crops, such as fruits and nuts, root crops, sugar, and coconut products increased from 50 to 100 percent over that of the prewar year of 1938.

To accelerate the economic recovery of the country and to encourage and stimulate investment in new necessary industries, the Philippine Government approved Republic Act No. 35 in 1946, shortly after independence and later in 1953, Republic Act No. 901, exempting newly established industries from the payment of all taxes for a period of years. These incentives, together with certain import and exchange privileges and priorities, brought about the establishment of nearly 800 new industries in a decade.

Emphasis has been placed on the erection of factories to produce the finished products which have been imported and the utilization of raw materials locally produced. As a consequence, many of the products which the country previously imported in large quantities have been greatly reduced or entirely replaced by articles that are locally produced.

For instance, the Philippines in 1953 imported over $23 million worth of rubber tires and tubes. By 1958, rubber factories produced over ₱46 million worth of rubber tires and tubes, and the value of imports of these products decreased to ₱2 million. Importation of knitted cotton fabric which amounted to over a million pesos in 1953 was completely eliminated by 1958 and local production increased to ₱31 million, three times greater than that five years before. Importation of nearly ₱2 million of ready-mixed paints in 1953 was reduced to ₱228,000 in 1958 and during the same period our cigarette factories increased their production from ₱127 million to ₱237 million. The two flour mills recently erected now produce 75 percent of wheat floor for local consumption. The production of other manufactured goods likewise increased and imports of these items correspondingly diminished.

World War II destroyed completely the mining installations, equipment, machinery and materials in the Philippines. However, great efforts were exerted to rehabilitate the industry and production of minerals such as gold, copper, chromite, manganese, and iron ore increased steadily in the past decade. Today the output of Philippine mines has exceeded the ₱200 million mark or more than double that of the prewar years. Mining is one of the potential sources of wealth of the country as evidenced by the fact that for the 13 year period, 1946–58, the aggregate value of mineral production came to nearly ₱1.5 billion, as follows:

Gold and silver	₱435,000,000
Base metals	609,000,000
Non-metallic	423,000,000
Total	1,467,000,000

FOREIGN TRADE

The development of Philippine commerce during the 13-year period, 1946–58, reflected the many difficult problems that confronted the country in the reconstruction and rehabilitation of its industries and the stabilization of its economy and finances, at a time when the country was starting its existence as an independent nation. A notable aspect of Philippine postwar commerce was the recurring negative trade balances in contrast with the consistently favorable balances in prewar years. During the 8-year period before the war, 1934–41, the Philippines had a favorable balance of trade, with the excess of exports over imports, totaling ₱357.7 million; in the 8-year period, 1946–53, trade balances were from year to year in the negative, amounting to a total of ₱2,589.7 million. During the 5-year period, 1954–58, the Philippine trade deficit totaled ₱1,052.8 million.

Not until 1959, for the first time since liberation, did the Philippines attain a favorable balance of trade amounting to ₱40.7 million. This encouraging improvement in Philippine trade balance was brought about by a marked expansion in the volume and value of export shipments coupled with a substantial reduction in the importation of foreign goods. The 1959 export shipments amounting to ₱1,059 million reached an unprecedented level which surpassed the 1958 all-time high postwar exports totaling ₱985.5 million. Trade with the United States during the 10-year period, 1948–58, was also characterized by trade balances against the Philippines. It was only in 1959 that exports to the United States exceeded imports—₱583.3 million worth of exports as against ₱463.2 million imports, or a balance of ₱120.1 million in favor of the Philippines.

Another notable postwar trend in Philippine overseas commerce was the change in its direction from the United States to European and other countries. Philippine imports from the United States declined from 75 percent of the total imports during the prewar years, to 51 percent in 1959, and Philippine exports to the United States decreased from 83 percent to 57 percent of the total exports in the same period. Such a trend was, of course, envisaged in the Philippine-American Trade Agreement of 1946, as revised in 1955, as a consequence of the gradual elimination of tariff preferences. In accordance with the provisions of the Trade Agreement these tariff preferences will be totally eliminated in 1974. However, the United States continues to enjoy a dominant position in Philippine commerce, although its participation in both the import and export trade of the country has declined in the face of competition from other countries, principally Japan and European countries.

There was little change in the pattern of exports in the postwar years from that of the prewar period and five of the principal exports continued to constitute approximately 85 percent of the total exports. Sugar which was the No. 1 export product of the Philippines has been relegated to second place, copra taking its place as the premier export product of the country today.

The following statistics show the relative importance of principal Philippine exports:

	Value of Exports, 1958	*Percent*
Coconut products	₱340,719,662	37
Sugar	240,298,325	26
Logs and lumber	117,692,339	13
Abaca and other fibers	62,634,776	7
Tobacco products	16,411,346	2
Others	151,855,700	15
Total	919,612,148	100

The impact of the industrialization program of the Government changed the pattern of prewar imports, and reflected the increased demands for capital goods and raw materials required by the new industries established. This trend was more evident in recent years during the height of industrial development. While in 1949, capital goods and raw materials constituted 63 percent of the total value of imports, in 1959 these reached the proportion of 90 percent of the total imports. The principal Philippine imports are as follows according to their relative importance: Machinery, mineral fuels, textiles, cereal preparations, base metals, and dairy products.

POWER DEVELOPMENT

To exploit the hydroelectric resources of the country, the government established the National Power Corp. in 1937. Since its establishment several major hydroelectric projects have been completed, namely, the Maria Cristina on Mindanao, the Ambuklao and Binga on Luzon. In addition to these, the government has programed the erection of a multipurpose hydroelectric plant in Marikina near Manila and a thermal plant at Angat in Bulacan. Several other minor hydroelectric and thermal plants are being planned. By 1961, there will have been added a total of 270,000 kilowatts to the power capacity of the country. Under the 5-year economic and social program, it is envisaged that additional annual energy of 1½ billion kilowatt hours power will become available to the country.

An example of the phenomenal growth of electric production in the Philippines is the story of the expansion of electric facilities of the Manila Electric Co. which serves the city of Manila and its neighboring areas. Before the war the same firm produced approximately 175 million kilowatt hours. In 1959, it increased its production of electricity to over 1.5 billion kilowatt hours. The Philippines has abundant waterpower from its rivers, lakes and falls which can be harnessed to supply the electricity needed by homes and industries.

The overall Philippine economic progress made in the postwar years is evident from the growth in the national income of the country. According to the reports of the Central Bank of the Philippines, the national income more than doubled in the past 14 years from ₱4.36 billion in 1946 to ₱9.768 billion in 1959.

Government finances have likewise shown a steady improvement. Comparative monthly cash balances of the National Treasury during the period June to December show a considerable increase every month in 1960 over that of the corresponding month in 1959. Under the leadership of President Garcia the collection of taxes has been intensified, resulting in increased government revenues. Actual customs collections for the fiscal year 1960 amounted to ₱391 million against ₱289 million in 1959 or an increase of over 35 percent. Internal revenue collections amounted to ₱522 million for the fiscal year 1960 compared with ₱472 million in 1959 or an increase of over 10 percent. International reserves have reversed their downward trend of previous years and from their low level of $140 million in 1957, they reached the $200 million mark last year. Employment increased by over 16 percent and earnings of all workers went up 14 percent since 1955.

These notable accomplishments were attained by great hardships and sacrifices by the people. The government program of industrialization caused heavy demands on our international reserves to meet imports of capital goods and raw materials and, as a consequence, our reserves steadily decreased to dangerous levels. To arrest the continued depletion of our reserves it became necessary for the government to institute strict exchange control and later impose the 25-percent exchange fee. These controls placed heavy burdens on our producers and businessmen and encouraged smuggling and black marketing.

Fortunately, these controls, as repeatedly emphasized by our leaders, are only temporary measures and will be eliminated as soon as conditions warrant. Under the initiative of President Garcia the gradual decontrol required by law has been put into effect. The first step toward this end was inaugurated on April 29, 1960, when the Central Bank announced the free exchange market of the peso at the rate of 3.2 pesos per $1. Subsequently, on December 2, 1960, the Central Bank reduced the exchange margin fee from 25 to 20 percent and allowed the conversion of half of exporters' earnings at the rate of 3 pesos per $1.

There is a probability that decontrol may be completed before the end of 1962. When this takes place the Philippines will be the first nation in that part of the world to free itself from the shackles of controls and once more the country will be a free enterprise economy. It can thereafter look forward to greater interest abroad, particularly in the United States, in the exploitation of its hardly tapped resources.

Despite these improvements, the Philippines still faces many major and difficult problems before it can achieve a truly balanced economy. One of these is the continued domination of domestic and foreign trade by aliens. About 80 percent of the country's domestic trade and 50 percent of Philippine foreign trade is controlled by foreigners. The Philippines is probably the only nation in the world where aliens have a dominant position in the local and oversea commerce of the country. For this reason the Philippine Government has enacted the Retail Nationalization Act and more recently adopted the so-called "Filipino First" policy. These have evoked considerable criticism by foreign businessmen in the Philippines, particularly American companies doing business there. Explaining the origin of the "Filipino First" policy, President Garcia said:

"We have a background of centuries of foreign domination, during which period all policies favored the interest of the rulers. Since 1946 when we became independent and started charting our own policies, we discovered that the major part of our economy belonged to aliens.

I want to make it clear that "Filipino First" is not anti-American and cannot be anti-American even if I as President so desired. Under the so-called parity amendment of our constitution, Americans have exactly the same rights as Filipinos in developing natural resources and establishing public utilities. We are fortunate in the Philippines that the nationalist movement so forceful today is being pursued within the framework of a democratic system unlike those in other places where the fight of the common people for economic survival is being exploited by the enemies of democracy for their own selfish ends."

In fairness to the American businessmen in the Philippines I must state that some of their more enlightened leaders view the "Filipino First" policy with understanding. I have in mind the president of the long-established International Harvester Co. in the Philippines, Paul H. Wood, who publicly stated that—

"while some American companies have been affected by the growing nationalism here, this is a far better climate for American investment than some reports would lead you to believe."

He went on to say "we have a constant battle to keep some American companies, especially the newer ones here, from doing things that will get all of us tossed out."

DEMOCRATIC PROCESS

In the Philippines a government patterned after the American system and dedicated to democratic processes has been established. The Constitution specifically provides guarantees for the rights and properties of foreign nationals. Article III of the Philippine Constitution provides that property, whether owned by nationals or aliens, shall not be seized or confiscated without due process of law and shall not be taken for public use without just compensation. Moreover, the Philippine Constitution guarantees the inviolability of contractual obligations and provides that "no law impairing the obligations of contracts shall be passed." In the operation of their businesses, aliens are free to have associates or partners of their own choosing and are at liberty to employ their own men and fill positions in their firms with persons of their own selection.

The extraordinary rights and privileges enjoyed by American citizens engaged in business in the Philippines under the so-called party rights have been incorporated not only in the Philippine-American Trade Agreement, but also made a part of our Constitution. No other country has gone so far as to give such equal rights to its nationals and foreigners.

The pattern which the Filipinos would like to see adopted in their economic development is the joint venture system whereby both Filipino nationals and foreigners pool their resources to establish desirable enterprises. There has been in the last few years an increasing cooperative undertaking under this joint venture pattern of development.

A sector of the American press has published charges of graft and corruption against officials of the Philippine government. Like other countries, the United States and Soviet Russia included, we have had our share of corrupt and unworthy public officials, but their abuses have not been condoned or glossed over. Leading members of the party in power themselves are in the forefront in exposing those guilty of malfeasance in public office. There is a press in the Philippines which is among the freest and the most vigilant in the world, and publishes without fear or favor the abuses it believes should be known by the people. Public opinion is untrammeled. There is no censorship of any kind and consequently the government is under constant criticism and appears to casual observers in a worse light than it should.

It must be said that President Garcia has carried out a vigorous campaign against graft and corruption in the government. A Reuters dispatch published in the New York Times of November 30, 1960, says:

"The Philippine presidential office announced recently that since 1957, more than 19,000 government officials have been investigated for alleged corrupt practices. About 13,000 administrative cases have been decided, resulting in the conviction of about 9,000 officials and the exoneration of 3,000. About 6,000 administrative cases still are awaiting decision. There were 575 criminal cases. Of this number there have been 82 convictions and 76 exonerations."

This is a cleanup record that is unequalled by any previous administration in the Philippines. It shows that the healing process is going on, a sign of health and strength in the body politic, proof that the nation is constitutionally sound.

As shown in the enumeration of the Philippine economic achievements, since independence in 1946, the Philippines has continually grappled with the crisis of modernization trying to erect economic salients that will permit its people to have maximum necessities and more than a minimum of what more advanced countries call luxuries. This effort has been taken with the effort to preserve those political and social values which give the democratic ethos its vitality and at the same time give our people the dignity and self-respect that go with freedom.

FOREIGN POLICY

It is within this context that Philippine foreign policy and relations can be interpreted. Like some other nations which have newly emerged into the complexities of the 20th century, the Philippines has endeavored to examine itself with honesty and perception. This examination proceeds from a concern with the humane, with social justice and compassion for our people, and also from the forces that have shaped the world into its present state of anxiety, and will to live in peace.

Our relations with the United States since the end of World War II have been cordial and fruitful. There have been very few instances where the differences of our respective national interests could not be reconciled. But these differences have not visibly affected our friendly relations, as shown by the tremendous and unprecedented welcome accorded President Eisenhower which, in warmth and spontaneity, was a revelation of the Filipino popular sentiment of cordiality and good will for the American people.

A substantive part of the most delicate problems of Filipino-American relations has been settled. They include the payment of the gold devaluation claim for $23 million and the successful negotiations for the revision of the military bases agreement which resulted in definite accord on the transfer of the Olongapo community to the Philippines; reduction of the lease period of the American military bases from 99 to 25 years; the relinquishment of considerable area heretofore under American control and the determination of metes and bounds of remaining

areas to be retained; previous consultation with the Philippine Government before the United States could put up missile launching sites in the Philippines. This accord has been the result of American understanding of the defense concept of the Philippines.

It is confidently believed that the recognition of the mutuality of Philippine and American interests once brought to other sensitive areas of differences will again result in the settlement of other remaining problems, including the administration of the military bases and criminal jurisdiction over triable offenses committed outside and inside the bases; the additional Philippine claims such as those of our veterans who fought for America, filed with the U.S. Government; the adjustment of Philippine obligations under the Romulo-Snyder agreement and the claims for expenses of the Recovered Personnel Division; a more equitable Philippine-United States Air Agreement; a percentage share for the Philippines in the excess quota of the total American sugar import and the repeal of the 3-cent processing tax on Philippine coconut oil.

President Garcia recently made the statement after making state visits to south Vietnam and Japan last year that "the Philippines is in Asia geographically and is of Asia racially and must bend every effort to develop closer relations with its fellow Asians, never forgetting that in unity lies strength."

True to this assertion, since his inauguration, the Philippines has signed, first, a reparations treaty with Japan. A month ago, it concluded and signed in Tokyo a treaty of amity, commerce, and navigation. It has established diplomatic missions in India, Indonesia, Malaya, South Vietnam, Pakistan, Thailand, Japan, Republic of China, Burma, and Ceylon. We have exchanged cultural and trade missions with various Asian nations, thus developing closer relations with them. In February, this year, the Philippine President will make a state visit to Malaya to propose the creation of a Southeast Asia Association of States.

In 1961, we hope to complete agreements for trade expansion with Australia, Germany, Israel, New Zealand, Pakistan, South Korea, Spain, Taipei, and Vietnam; ratify and implement the Treaty of Immigration with Indonesia; implement the Treaty of Friendship with Vietnam; urge the implementation of the economic provisions of the Southeast Asia Treaty for the improvement of living conditions of underdeveloped member states; and further intensify educational and cultural interchange with other countries.

We have no diplomatic relations with Soviet Russia, Red China, and the satellite countries. We have made our choice and we do not believe in twilight zones. We cannot subscribe to a monolithic and ruthless ideology which reduces everything to materialistic dialectics. As we start as an independent country, history tells us that for 50 centuries men have had to choose either the hard sinews of freedom, integrity, dignity—or a gutless peace and the degradation of slavery. Freemen are free to choose and we have chosen.

Railroad Mergers Threaten 200,000 More Jobs

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. MOULDER. Mr. Speaker, according to figures of the Railroad Retirement Board, the average total covered employment in the railroad industry dropped by 400,000 workers from December 1955 to December 1960. The average number of railroad workers employed for each year has been lower than the average for the preceding year, and it therefore is clear that over recent months railroad workers have been experiencing what is, for them, one of the greatest depressions in history.

Several reasons have been cited for this situation. One has been the rapid technological advance within the industry and the elimination of the need for many jobs through the introduction of new kinds of equipment, automation and new methods of operation. Another has been the phenomenal increase in the productivity of the railroad workers, who have been increasing their output at a rate about double that of the rest of the economy as a whole. A third factor also has been a serious undermaintenance of the railroad plant, with bad order locomotives and freight cars running at near-record or even record highs on some railroad properties, and with maintenance of track, roadbed, and signaling systems in some instances having been allowed to deteriorate dangerously.

Spokesmen for the railroad labor organizations have, with clear justification, warned that the lack of proper maintenance on some railroads is becoming a real threat to public safety. To have allowed such a situation to develop in the face of the grave problems of unemployment and underemployment which faced their employees, does not reflect creditably upon the personnel and managerial policies of the railroad industry. Certainly, the earnings picture of the railroads in general over the last 5 years did not reflect a depression level when compared with prior years, and there appears to be no justification, in terms of either humanitarian concern for the welfare of workers in the industry or from the standpoint of sound management practice, to have allowed maintenance work which is necessary to go undone, particularly in the face of the serious economic hardships being suffered by employees of the industry. This is especially true since the great productivity increase of railroad workers entitled them to a fair share of the gains to the industry which resulted from increased labor output.

Today, a new threat to railroad employment has appeared in the widespread move to merge and consolidate railroad properties. Railroad labor has estimated that if all proposed mergers are allowed to proceed to a conclusion, it will mean a loss of 200,000 additional jobs in the industry. This is because the so-called economies of railroad merger result basically from the curtailment and elimination of railroad services and facilities. Each merger curtails the railroad potential to meet future transportation needs that will come with a renewed expansion of the economy.

Our national transportation policies have long recognized that the adverse effect of railroad mergers upon railroad workers certainly must be considered as part of the public interest and Congress has instructed the Interstate Commerce Commission to weigh such effects before granting its approval to such consolidations. Because the present merger movement threatens to impose upon railroad workers, who have already unduly suffered from unemployment, an unprecedented burden of hardship, I believe that the Congress should take a new look at our national transportation policies with respect to railroad mergers in order to determine whether adequate protections exist to insure that the public interest in all its aspects is safeguarded sufficiently under present law.

In conclusion, I ask unanimous consent to include the RECORD as part of my remarks a statement to the press on its policy toward railroad mergers recently issued by the Railway Labor Executives' Association.

There being no objection, the statement of the Railway Labor Executives' Association was ordered to be printed in the RECORD as follows:

RAILROAD LABOR SPOKESMAN SAYS UNION OPPOSITION TO RAILROAD MERGERS IS BASED ON THEIR HARM TO PUBLIC INTEREST RATHER THAN LOSS OF JOBS

Railroad labor's belief that no further railroad mergers should be permitted until adequate safeguards to protect the public interest have been written into law is not based solely upon labor's justifiable concern over job losses but rather stems primarily from alarm over the many other adverse effects proposed consolidations would have upon the national interest, a spokesman for railroad labor said today.

A. E. Lyon, executive secretary of the Railway Labor Executives' Association, released the text of a letter to the editor of the Toledo Blade in which he termed "very unfair" a statement in an editorial in that newspaper that "the unions are basing their antilabor battle on the claim that mergers mean a loss of jobs."

Lyon said that the threatened loss of some 200,000 jobs in the railroad industry if present merger proposals are carried to their conclusion "is only one of many reasons for our stand." He detailed six specific adverse effects upon the national welfare that would result from the shrinkage of the national railroad plant proposed in pending mergers and pointed out that some of these objections were being advanced by railroad managements as well as labor.

The complete text of Lyon's letter follows:

"The EDITOR,
"The Toledo Blade,
"Toledo, Ohio.

"DEAR SIR: Your editorial entitled "Closed Mind on Mergers" which appeared in your February 25 issue has painted a very unfair picture of the position of railroad labor in regard to railroad mergers by claiming that 'the unions are basing their anti-labor battle on the claim that mergers mean a loss of jobs.'

"Since the reason you have cited is only one among many reasons for our stand—and certainly not the one which has been stressed in our statements to date—we can't help but feel that it may be the Blade editorial writer's mind that is closed, rather than our own.

"As you will note from the enclosed official declaration of our policy in regard to railroad mergers, the 23 Standard Railroad Labor Organizations are opposed to all pending merger proposals in the railroad industry primarily because:

"1. We believe that railroad mergers would weaken the base for national economic expansion by curtailing rail transport facilities to a point where they would impair the railroads' ability to handle the greater traf-

fic that will result when the economy once again begins to expand.

"2. The proposed mergers also would seriously weaken our national defense. If, during the last major merger movement in the 30's, the railroads had been able to overcome the objections of railroad labor and effect the then proposed consolidations, our Nation simply would not have had the rail capacity needed to meet the demands for mass transportation during World War II.

"3. The presently proposed mergers would result in a decline of competition and a growth of monopoly in railroad transportation, which has already been allowed to proceed to an alarming degree. This view has been supported by a large and important segment of railroad management, such as for example the Southern Railroad, which has charged that a great concentration of economic power destructive of competition would result from the merger of the Atlantic Coast Line and the Seaboard lines.

"4. The scrapping of lines of railroad, the retirement of equipment and facilities—the basic objective of railroad mergers—can only mean a loss of service to shippers, interference with the economic development of regions such as the Northwest and Southeast and in increased public criticism of the poor service being given by the railroads.

"5. Since consolidation means the curtailment of the mass transportation services supplied by the railroads, it means that the Nation must rely on less efficient forms of carriage with a resultant lower standard of living because of higher transportation costs. Mergers of railroads thus mean a considerable loss of the greater economies of rail transport.

"6. Many communities and thousands of industries have been established on the basis of availability of railroad service. To reduce or eliminate this service over thousands of miles of railroad—as is proposed in the pending merger plans is to create depressed communities, disrupt established homes and place obstacles in the way of industrial development.

"Finally, after setting forth these reasons, the policy declaration mentions, as another reason for our opposition, the loss to railroad labor. I quote this section exactly:

" 'The most drastic loss to railroad labor from consolidation is, of course, the loss of employment by thousands of workers who have spent most of their lives in railroad service. In addition to the direct loss of jobs, many more thousands of railroad employees must leave their homes and become established in other railroad centers. This so-called change in location of employment usually means the loss of jobs because of the inability of workers to move from long-established residences.

" 'These losses to railroad labor are great, but not so great as the Nation's loss from discarding a skilled labor force from our most economic transportation agency.'

"Our policy statement also spells out the inadequacies of present law with respect to protection of the public interest in railroad consolidations in some detail—a view which also is shared by some segments of railroad management, such as that of the New York Central which asked the Interstate Commerce Commission to hold up approval of pending mergers until their effect upon the national rail transportation network had been determined. The management of this railroad pointed out, as does railroad labor, that the present mergers are not taking place according to a plan to promote a more efficient national railroad structure, but are being shaped solely by the competitive pressures upon the financial groups controlling the merging properties. Weaker roads, which should be absorbed into stronger roads in any efficient merger program, are being ignored and placed in a position where their very survival is threatened.

"Finally, our policy statement concluded with a declaration that 'lack of protection of the public interest in railroad mergers at the present time is so shocking and insidious that the Railway Labor Executives' Association, representing the 23 Standard Railroad Labor Organizations, believes that no further railroad consolidations should be permitted until the threat to our Nation's future which is inherent in the present proposals is fully investigated and adequate safeguards are enacted into law.'

"In view of the foregoing, I believe that you will agree that your editorial was an unfair statement of our position. The fact is that, while we are naturally concerned over proposals to cut back railroad employment by an additional 200,000 jobs on top of the loss of 400,000 jobs in the railroad industry which has already occurred over the last 5 years, we are not basing our campaign against railroad mergers primarily upon this reason. Rather, railroad labor, like a large segment of railroad management and the many shippers and businessmen of the communities which will be adversely affected, is primarily opposed to pending merger proposals because of the many other adverse effects they would have upon the national interest as outlined above.

"Sincerely,

"A. E. LYON,
"Executive Secretary."

Gulf Coast Naval Reserve Law Seminar

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. WILLIAMS. Mr. Speaker, recently there was held at the U.S. Naval Station at New Orleans, La., the Gulf Coast Naval Reserve Law Seminar for 1961 as a training program for the inactive Reserve officers of the Navy, Marine Corps, and Coast Guard in the 4th, 5th, 6th, 8th, and 9th Naval Districts.

We are rightly and justly proud of citizen-soldiers, citizen-airmen, and citizen-sailors in my district. My district is the home of Jefferson Davis. His proudest moment and biggest military success was attained when the citizen-soldiers of the First Mississippi Regiment of volunteers at Buena Vista in the War with Mexico carried out successfully his command: "Mississippians, stand fast." They stood fast, they saved that day at Buena Vista and helped win that war.

Under leave to extend my remarks, I include the welcoming address to the Gulf Coast Naval Reserve Law Seminar for 1961 by a friend and constituent of mine, Comdr. Robert W. Collins, U.S. Naval Reserve. The welcoming address follows:

GULF COAST NAVAL RESERVE LAW SEMINAR

Welcome, citizen-sailors and officer-lawyers, to New Orleans and the Gulf Coast Naval Reserve Law Seminar 1961.

To each of you citizen-sailors and officer-lawyers we extend a warm welcome to the Queen City of the South known also as America's most interesting city and express the hope your tour of duty at the Gulf Coast Naval Reserve Law Seminar will be truly worthwhile.

We welcome you as a body of lawyers who are taught that the prime source of Navy law is the Constitution of the United States. We know, too, that your task and mission always is to assist the Navy to maintain and employ her forces to: (1) Support and defend the Constitution of the United States against all enemies, foreign and domestic; (2) insure the security of the United States; (3) uphold and advance the national interests of the United States; and (4) safeguard the internal security of the United States.

In recognition of the fact that all true American lawyers appreciate history we invite you to note and reflect upon the great seal of the United States. It is portrayed on the back of the $1 bill.

One side describes the physical structure of our Government. The familiar eagle in whose claws are the arrows of war and the olive branch of peace. Over the eagle are the significant words "E pluribus unum"—"from many, one."

The other side portrays the spiritual character of our Republic. The pyramid of 13 layers of stone is an unfinished one. It symbolizes our work of building is not yet done. Above that pyramid is the all-seeing eye of Divine Providence surrounded by a glory. Above it is the constant reminder: "Annuit Coeptis"—"He has blessed our undertakings." At the bottom is this message for all of us: "Novus Ordo Seclorum"—"a new order of the ages."

That wise and patient, and oldest of the delegates to our Constitutional Convention in 1787 knew the meaning of our great seal. As Benjamin Franklin left that convention he made this simple statement: "We have given you a Republic, if you will only keep it."

While you are here we invite you to note and reflect upon the great seal of our host State, the Pelican State. Louisiana's great seal contains these all-important words: "State of Louisiana—Union—Justice, and Confidence."

Welcome to the Gulf Coast Naval Reserve Law Seminar for 1961 and do come back again for we have the hope the Navy will continue this seminar in New Orleans on a permanent basis.

The Alleghany Corp. Proxy Fight

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a most interesting and timely editorial by Leslie Gould, the well-known financial editor of the New York Journal-American.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON-AGAIN-OFF-AGAIN SONNABEND—HE CHOOSES TO FIGHT AGAIN

(By Leslie Gould)

The entrance of A. M. Sonnabend, the Boston hotel and real estate operator, into the Alleghany Corp. proxy fight presents a problem for the SEC and its full disclosure rules.

This is the second go-around for Mr. Sonnabend in Alleghany with its $7½ billion railroad, investment trust, and real estate empire a rich prize for any "takeover" operator.

Mr. Sonnabend first cast eyes on Alleghany late in 1959, with a great deal of publicity fanfare. He won for himself the nickname of "On-Again-Off-Again" Sonnabend, for announcing and then calling off plans for a proxy fight.

ONCE CLAIMED 700,000 SHARES

On Nov. 16, 1959, he announced he had "no choice" but to engage in a proxy fight against Allan P. Kirby, head of Alleghany. He revealed "a group of associates and myself" have acquired "over 700,000 shares of Alleghany Corp. common stock."

Around the same time, it was reported with no denial from Mr. Sonnabend that he personally had 200,000 shares of Alleghany.

There never was a disclosure to the SEC of his holdings then, nor the identity of his associates.

At the time of his announcement that he and his associates held 700,000 shares, this column reported that one individual—a New York garment center banker and head of an investment company—who bought stock along with the "group" at that time, had sold his entire holdings—90,000 shares—at a profit.

Now some 16 to 17 months later, Mr. Sonnabend has filed a report with the SEC and the New York Stock Exchange of his Alleghany stock purchases. These reports give his holdings presently at 135,000 shares.

NEVER HAD 200,000 SHARES

The reports indicate he never had any 200,000 shares, and probably the same holds for the 700,000 shares claimed for "a group of associates and myself."

The reports show that starting on September 29, 1959, Mr. Sonnabend bought 10,000 shares and by Oct. 9, 1959, had acquired 68,700 shares.

In November Mr. Kirby announced he had withdrawn his offer of a board seat to Mr. Sonnabend and his offer to buy the 200,000 shares the Boston hotelman and companies he controlled claimed to own. This was two weeks after Mr. Sonnabend made his first threat of a proxy fight.

SEC SLOW ON DISCLOSURE

There were no purchases by Mr. Sonnabend between October 9, 1959, and February 9, 1960, when he bought 3,200. By the end of December last year he reported all his purchases totaled 127,100 shares, and in January of this year he bought 22,800 shares. This brought his total purchases to 149,900 shares, but he also sold 11,500 shares and his 135,000-share figure as of now would indicate an additional small sale.

The SEC should have forced the present disclosure as to his holdings more than a year ago, when he was on again off again on a proxy fight. When he finally gave up the proxy fight idea on November 30, 1959, Mr. Sonnabend told a press conference:

"As of now I have no intention of soliciting proxies," but added "my intentions can change at any time."

MRS. YOUNG STILL TO BE PAID

When he was talking about a proxy fight in 1959, Mr. Sonnabend said he wanted on his directors slate David Wallace and Mrs. Young, widow of Robert R. Young. Wallace was dropped as an Alleghany officer by Mr. Kirby after it had been found he had been in communication with Mr. Sonnabend.

The two Murchison brothers—Clint, Jr., and John—who head up the new proxy fight with Mr. Sonnabend as an ally, have contracted to buy Mrs. Young's and the Young estate's holdings in Alleghany. These shares, however, haven't been paid for yet.

So, a question for the SEC to determine is whether the 1959 Sonnabend move and the present proxy fight are related or are really one and the same.

Jan Smith—Study and Research in Brazil

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Monday, March 27, 1961

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Local Student Returns From Year in Brazil," written by Clayton Willis, and published in the Albuquerque, N. Mex., Tribune of March 6, 1961, concerning the 1-year visit to Brazil by Jan Smith, of Albuquerque, in connection with an inter-American cultural convention grant for study and research.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL STUDENT RETURNS FROM YEAR IN BRAZIL

(By Clayton Willis)

A University of New Mexico graduate just back from a year in Brazil has great hopes that new Brazilian President Janio Quadros will do much to curb inflation there.

Jan Smith, 23-year-old daughter of Mr. and Mrs. Mike Smith, 3124 San Pedro NE, said she thinks President Quadros is going to help the economy of Brazil because of the austerity program he has outlined.

"As Governor of Sao Paulo State, Quadros was very successful with his austerity program," Miss Smith said.

She was in Brazil on an Inter-American Cultural Convention grant which is given for study and research.

"When I left Brazil in early February the cost of living and the inflation was going up so much that I didn't see how the lower class could live," she said.

The 1959 University of New Mexico graduate says education is the thing Brazil needs most. She said that only 52 percent of the population is literate.

"I don't think the lower classes are going to be able to better themselves without education. And education is too expensive for them," the former University of New Mexico major in Inter-American Affairs said.

"And the upper classes don't care whether the lower classes educate themselves or not," Miss Smith observed.

She said that there is little public school type education in Brazil. What education there is is mostly of the private school kind, she noted.

The attractive Albuquerquean attended classes on a noncredit basis 5 months at the National University of Brazil in Rio de Janeiro. She also lived in the Atlantic coastal port city of Salvador 5 months.

Miss Smith spent the remaining 2 months of her year in the Portuguese-speaking country traveling through the interior of Bahai State. There she recorded folk music and visited several cattle ranches in this northeastern part of Brazil.

Four other observations she made in an interview at her home:

1. Communism is practically nonexistent in the part of Brazil she saw;

2. Students at the National University of Brazil gave her a somewhat cool reception as an American. But the university's professors were very helpful;

3. The Brazillian sees the typical American as someone with a lot of money who drinks and smokes and goes to a lot of parties (the impression they get from third rate American movies they see, she said);

4. Brazilians were surprised that she spoke Portuguese. "But when the merchants found out I was an American, you could see the dollar signs lighting up in their eyes," Miss Smith said.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of March 25, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 25, 1961.

The New Frontier legislative program has everyone's attention. The leaders endeavor to meet an Easter deadline to get out legislation—whatever can be passed to show performance before the anticipated April upturn of business. The Ways and Means Committee has temporarily postponed the highway tax in favor of a study of social security changes and the reduction of the tourists imports of duty-free foreign purchases (from $500 to $100). Everything is urgent, whether the legislation would take effect soon or in the distant future.

The temporary unemployment compensation House-Senate conference report was passed handily. I joined debate to emphasize the inequity of the financing which most legislators, I am sure, did not intend. The employers of 40 States are forced to pay in more than they can get back, 3 States break even, and 9 States get back more than they pay in—all of this not intended but the result of the mandatory tax increase in violation of existing State law and procedures. In protesting this new forced taxation, I fail to see why Texas employers should pay for New York, New Jersey, Ohio, and other wealthy States costs of unemployment, not forgetting either that the States have vast reserves of $6.6 billion, particularly since the inequity results from local and States problems and program administration. The overriding danger is the Federal encroachment and breakdown of present State law, replaced by Federal standards. Time will show even more closely that the 31 of us opposing this bill are right.

Minimum wage legislation and debate, to increase minimum wages to $1.25 per hour and expand coverage under the Fair Labor Standards Act, dominated floor action this week. The 51-page bill, the 77-page report, the 637 pages of hearings, and the 2½ days of debate spell out one overpowering fact—minimum wage setting by the Federal law is unconstitutional. Infrequently is this mentioned. On the contrary, hours of technical and complicated amendments and differing solutions were the concern of the Members. The dilemma facing a constitutionalist is to listen, learn, and vote to bring out the least obnoxious bill—least endangering freedom of the individual and all the time realizing that every revision is unconstitutional, so that the final vote, no matter

how refined the bill is "No." As to the merits of the bill—whether $1 an hour, $1.15 an hour, or $1.25 per hour is the right amount, and how much coverage and exemption should be embraced—the evaluation of each side of the argument was almost impossible—first to reach an agreement of understanding when basic disagreements are so many and then decide the least undesirable solution, was an exercise in futility. Why? Because Government cannot equitably manage private enterprise without fully controlling all facets of enterprise, including price. In other words—business is either free or Government controlled—a solution embracing and endorsing both is inequitable and self defeating. Mainly, wage setting hurts people, the wage earners, because it results in unemployment, business failure, and higher prices.

Some of the inequities and unreal features are: (1) Minimum wages go to the unskilled, poorly educated, handicapped, young person, older person and these, all too frequently, will lose their jobs—no pay is hardly a better solution. (2) Interstate Commerce as the constitutional reason for Federal minimum wage setting has been discarded for an annual dollar volume of sales of not less the $1 million. (This figure can be reduced in the future until all business is covered.) (3) The escalator of $1.15 to $1.25, the latter to be imposed 2 years hence binds a later Congress which can take action on its own. (4) Some small merchants and services are exempt. Discrimination between businesses is arbitrary. The reasons for exempting some businesses apply to many of those not exempt. The bill finally passed raised minimum wages to $1.15 per hour and retained Interstate Commerce as the grounds for the increase rather than the arbitrary dollar volume proposed by the Democrat leadership.

Once again the emotional plea of substandard housing, clothing, food, and living conditions is used to demagogically show that higher pay is deserved. The plain fact is people must be paid what their services are worth, an agreement between employer-employee, not as a result of bureaucratic decision of Federal Government.

The four pillars of our national economic health (1) Federal budget, (2) fiscal policy, (3) debt management and (4) wage productivity need to be analyzed in the light of the New Frontier's radical spending and taxing plan. Then our people must realize where this course is taking us. In this connection a realization of the dedicated beliefs of men around the President advising him and administering the law should be known. Do the people and Members of Congress know the beliefs of these men: Goldberg, Schlesinger, Galbraith, Heller, Cohen, Bowles, Udall, Williams? The President's statement of foreign aid and fiscal policy received this week should be understood by everyone.

Lincoln National Memorial in Southern Indiana

EXTENSION OF REMARKS

OF

HON. WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the following resolution of the Lincoln Club of Southern Indiana, calling for the creation of the Lincoln National Park in southern Indiana, adopted on March 16, 1961:

LINCOLN NATIONAL MEMORIAL IN SOUTHERN INDIANA

Whereas Abraham Lincoln not only was the emancipator of the individual but also saved for the United States and the world a successful pattern of free government; and

Whereas Lincoln grew to manhood in southern Indiana and there began the study of the law, the Declaration of Independence and the Constitution of the United States; and

Whereas in southern Indiana Lincoln first gave expression to those ideals which became the crusading purpose of his life: Therefore, be it

Resolved, That the Lincoln Club of Southern Indiana commends Senator VANCE HARTKE and Congressman WINFIELD K. DENTON for introducing in the U.S. Senate and House of Representatives bills to establish a Lincoln National Memorial in southern Indiana and urges their speedy enactment into law; and further

Resolved, That the plan to establish the Lincoln National Memorial in southern Indiana be activated with the greatest possible speed in order to demonstrate to the world in a tangible way the determination of the United States to perpetuate the Lincoln ideals of individual freedom and the free way of life.

SS "Hope" Brings Asia Image of Good American

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, dedicated men and women who form the team on the SS *Hope* are doing much to eradicate the image of the "Ugly American" in southeast Asia. They are replacing it with the image of the good American.

Here is the story of Dr. William B. Walsh as told to and reported by Jerry Belcher of the Oakland (Calif.) Tribune. Dr. Walsh has recently return to America from Indonesia.

What the SS *Hope* has done, other dedicated Americans can do through the medium of the Peace Corps.

I hail Dr. Walsh and the good men and women associated with him. They are giving of themselves to help, not only the peoples of underdeveloped portions of the world, but those of us who sit complacently at home.

Here is Dr. Walsh's story at told to Jerry Belcher:

SS "HOPE" BRINGS ASIA IMAGE OF "GOOD AMERICAN"

(By Jerry Belcher)

Blinking back the tears welling in his dark eyes, the Indonesian village chieftain made a gracious farewell speech to the departing medical team from the SS *Hope*.

"I do not know even where the United States is," he said. "But you are always welcome in my village. You are the first foreigners ever to come here except to steal our rice."

And those who heard the chief's little speech knew he spoke sincerely and with deep gratitude, because only a few days befor one of the *Hope's* surgeons had removed the cataracts that had blinded his eyes for years.

INSPECTION TOUR

This dramatic vignette was related by Dr. William B. Walsh, president of the People to People Foundation, following a month-long inspection tour with the *Hope* in Indonesian waters. The *Hope* is sponsored by the foundation, which in turn is supported by private donations of the American people.

During a brief stopover in San Francisco, Dr. Walsh waxed enthusiastic about the big ship's first 6 months of operations as a seagoing medical school and treatment center.

He said the ship is received everywhere with almost unqualified enthusiasm by both government officials and plain citizens.

So great has been the impact of the mercy mission in creating an image of "the good American" that Dr. Walsh expects the Russians will be trying something similar in the near future. In fact, he said, 10 Soviet doctors arrived in Indonesia not long ago and spent a good deal of their time observing the *Hope's* operations.

From Jakarta, the *Hope's* information officer reported earlier this week that in its five stops in Indonesian ports, the ship's medical staff has played host to some 20,000 persons, performed at least 260 surgeries in the ship's operating rooms, presented more than 700 lectures and seminars for native doctors, nurses, and medical technicians.

SHORTAGE ACUTE

In addition to shipboard work, 12-member medical teams have roved through the jungle interior, setting up field clinics, treating as many as 800 patients a day, and training Indonesian physicians and technicians in more efficient methods.

Because of the country's acute shortage of doctors, increasing the number of patients a single physician can treat is one of the *Hope* staff's most important tasks, according to Dr. Walsh. In some instances, he said, Indonesian doctors are now able to treat 2½ times as may patients as before.

Dr. Walsh feels that some of the lessons learned from the *Hope's* mission may be of value to those setting up President Kennedy's Peace Corps. Above all, he said, patience and tolerance are required.

A well publicized tragedy marred the last days of Dr. Walsh's tour. He directed the mission in which a Navy plane flew staff technician Lois Boyce to an Air Force hospital in Japan, for emergency brain surgery.

Dr. Walsh explained that the flight was necessary because the medical ship's staff doesn't include a neurosurgeon. Miss Boyce, a 32-year-old former University of California Hospital medical technician, died Wednesday, after a 2-hour operation.

Dr. Walsh reported that the *Hope* will remain in Indonesian waters until June 1, then will call at Saigon and Vietnam ports before returning to the bay area sometime in the fall.

He expects the *Hope* to go back to Asian waters later. And, he said, he can guarantee enough doctors, nurses, and technicians to volunteer for similar mercy ships for Africa and South America if the American people will support the projects with their financial backing.

Byelorussian Independent Democratic Republic

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. DADDARIO. Mr. Speaker, there is no real peace in the world today.

Everywhere we look there is terror, anxiety, hate, and bitterness. The shores of Africa tremble with violence. The mountains of Laos reek with suffering. Indeed man's eternal hope for world peace seems far from realization.

Let as long as aggressive forces continue to spout their line of hate and destruction, of control and oppression, as long as these forces continue to deprive peoples of their universal desire for national independence, for human dignity, for freedom, this struggle must go on. By right, there should be no struggle—for independence, dignity, and freedom should belong to the heritage of man—yet by necessity it exists. It is not an easy struggle. It is not a short struggle.

I make these remarks, Mr. Speaker, in connection with the impending 43d anniversary of the establishment of the Byelorussian Independent Democratic Republic. It was on March 25, 1918, that this nation, for centuries the pawn of czarist Russia declared its independence. From the cities of Minsk and Homel, to the marshlands of the Dneiper, the Dvina, and the Nieman, 10 million people announced their intention to live in dignity and self-respect.

The little republic did not last long, and within 3 years another Muscovite power—that of the Soviets—overthrew the fledgling government, again imposing the dreaded yoke of tyranny. For 40 years now the Communists have continued to hold sway over Byelorussia. But those 3 short years of freedom whetted the appetites of the Byelorussians, and the memory of them continues strong. Those of us familiar with the wonderful White Russian people are well aware of their cultural tradition, their common language, the history of their struggle, and their respect for free democratic principles. Many, after fleeing their tortured homeland, have become some of America's finest citizens.

I know that my colleagues will join me in the hope that someday Byelorussia will again be independent, that Byelorussia and all other lands will be free from the ravishes of Soviet domination.

Let us join hands the world over to defeat this menace to society. Let us work together for the dignity and freedom of man. And let us remember the heroic struggle of the Byelorussians as we rededicate our efforts in this direction.

Resolution Opposing Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. BOW. Mr. Speaker, the Board of Education of the Canton City School District has adopted a resolution opposing Federal aid to education and I ask leave to include it in my remarks.

The resolution is remarkable for its clarity and persuasiveness, and its author should be complimented for the excellence of the statement:

Whereas in the traditions of the United States, education of our children has always been a local responsibility; and,

Whereas the fathers, mothers, and local authorities in general have recognized and assumed their responsibility to produce the best educational systems in the world; and,

Whereas funds raised by self-assessment are carefully watched to see that maximum value is received in their use. Such assessments are 100 percent available, there being no shrinkage due to absentee national administration; and,

Whereas Federal aid will inevitably bring Federal control, with the resulting loss of local control and local interest in education; and,

Whereas local interest creates an atmosphere of parental interest in child education that is most valuable for child-learning; and,

Whereas if national aid preempts or supplements local responsibility, the local community interest ultimately will be weakened and discouraged to the point that more and more national aid will be required; and,

Whereas national aid can ultimately lead to total control of the education of our children, similar to that in the totalitarian countries, a form of education that could become the tool of destruction of the American way of life: Therefore be it

Resolved, That the Canton City Board of Education is opposed to any form, or amount, of Federal aid to education, and respectfully requests our Senators and Congressmen to oppose with all their influence any attempt to impose aid and control over the traditional educational systems of our country.

Burden Must Be Shared

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, I should like to call to the attention of my colleagues the following editorial which appeared in the Lansing, Mich., State Journal on Friday, March 24. The article, I believe presents one of the most thoughtful discussions I have encountered of some important considerations to be borne in mind as the time approaches for legislation to implement our foreign aid program. The article follows:

BURDEN MUST BE SHARED

Many of the news stories about the programs President Kennedy has been submitting to Congress in rapid fire succession have one thing in common.

There frequently appears in such news dispatches from Washington the statement that the President put no overall price tag on his program.

This was the case with reports of Mr. Kennedy's foreign aid message to Congress Wednesday.

The President recommended a drastically revamped long-term foreign aid program which would include $7.3 billion in 5-year loan authority to meet "the crucial decade of development" abroad.

While no figure was given for the total cost to the taxpayers of a 5-year program, officials figured that total would be several times the $7.3 billion proposed for economic development loans overseas.

This would be true if annual foreign aid spending continues at the rate it has in the past.

Mr. Kennedy has proposed for the coming year a program equaling the $4 billion asked by former President Dwight D. Eisenhower.

There was no indication of any scaling down on annual foreign aid spending in the President's statement that the 1960's offer a golden chance to put more than half of the peoples in underdeveloped lands on their own feet economically and the rest closer to the day when they no longer need aid.

On the contrary, Mr. Kennedy seems to have in mind an ambitious extension of his New Frontier program far beyond American shores.

There are some attractive features in Mr. Kennedy's proposals.

Putting most existing economic aid programs under a single agency, as recommended by the President, could lead to more effective coordination in the interests of efficiency and economy.

Especially welcome is the emphasis which he places on helping nations which evidence a determination to help themselves.

The granting of special aid favors to nations which undertake social an economic reforms is likely to be criticized as an effort by the United States to interfere in the internal affairs of other countries.

No country is forced to accept American aid, however, and no one can fairly challenge the right of the United States to recognize self-help as a factor in the dispensing of foreign air.

If special favors are granted countries which do help themselves to the best of their ability, it follows that aid should be withheld from any nations which might be found to be using it as a source of graft and lush living by officials.

The United States should, as Mr. Kennedy proposes, encourage other industrial nations to share more of the aid burden.

There is likely to be strong opposition in Congress to the proposed 5-year loan program which would bypass congressional appropriations procedures.

Former President Eisenhower had been rebuffed on similar counts by key legislators in the past.

Congress could understandably prefer to retain year-by-year control, based upon changing conditions and needs, in spite of the arguments advanced in support of long-term loan commitments.

As Congress considers Mr. Kennedy's recommendations it should keep clearly in mind the fact that since the end of World War II this country has spent the astronomical sum of $85.8 billion to aid allies, nations which are supposedly friendly, and former enemies of the United States.

It also should be kept in mind that there is a limit to what this country can do in improving conditions in other lands.

It should be made plain to other countries that America cannot and does not intend to bear by itself the burden of aid to the free nations and that while it intends to discharge its responsibilities in the economic and military defenses of the free world it also must guard against a dangerous sapping of its own economic strength on which the preservation of freedom is so largely dependent.

Mississippi Oil Jobbers Association Testimony in Opposition to Extending Federal Gasoline Tax

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 24, 1961

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include the testimony given by Brown Williams of Philadelphia, Miss., representing Mississippi Oil Jobbers Association before the Committee on Ways and Means.

In his statement, made on March 17, Mr. Williams recommends that Congress let expire the 1 cent per gallon Federal tax on gasoline which is scheduled to expire on June 30, 1961.

The statement follows:

STATEMENT OF BROWN WILLIAMS, SECRETARY-TREASURER OF THE MISSISSIPPI OIL JOBBERS ASSOCIATION, 720 MILNER BUILDING, JACKSON, MISS.—BEFORE THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES

My name is Brown Williams, of Philadelphia, Miss. I am appearing here at the request of Mr. H. S. Williford, of Jackson, Miss., president of the Mississippi Oil Jobbers Association, to present the views of our association regarding financing the Federal highway program. Our association is comprised of 140 independent jobbers who market a majority of the petroleum products in our State.

Personally, I have a great interest in not only our Federal highway program, but also our State highway program, as my father was chairman of the first highway commission with authority to build and maintain roads on a statewide basis in Mississippi, and served in that capacity until his death. As a member of the Mississippi legislature, I served on the House Highways and Highway Financing Committee.

We appreciate this opportunity to make this statement, and realizing the importance of your time, gentlemen, it will be brief. Attached as part of our statement—Exhibit A—is a resolution adopted at our last State convention which implements this statement. Our principal purpose in making this statement is to urge you gentlemen and other Members of Congress to give this legislation serious study as to how it will affect the economy of each of the 50 States as well as the general economy of the Nation as a whole.

Naturally, we all realize, or should realize, that the gasoline tax puts a drain on our citizens' resources, and therefore, vitally affects the consumption of our industry's No. 1 product—gasoline.

We think our industry deserves credit from its customers for a remarkable record in keeping the price of gasoline moderate, but we aren't getting that credit because of the steadily climbing gasoline taxes.

Take the period from 1950 to the end of 1959. Over that interval the price of gasoline rose only 5½ percent—that's based on the actual retail price, excluding tax. Over the same span of time, the price index for all items, according to figures compiled by the U.S. Bureau of Labor Statistics, went up 21 percent: Gasoline up 5½ percent, all items up 21 percent. To give you a few examples—milk up 27 percent, shoes up 30 percent, bread up 40 percent. While the price of gasoline moved upward by a mere 5½ percent, the national average tax on a gallon soared by 39 percent.

The Federal highway program now depends on gasoline tax revenue for over four-fifths of its support. The States, too, rely very heavily on this tax for matching funds to participate in the Federal program, for revenue for their independent highway construction projects, for financing highway administration and maintenance, and for the grants they provide for local highway work. A breakdown in gasoline tax collections could mean a breakdown in all these gasoline tax supported undertakings.

We are accustomed to hearing—as part of the ballyhoo for a gasoline tax increase—that the whole highway program will collapse (grind to a halt is the favorite phrase) if this levy isn't boosted. Economic realities must be faced, it must be recognized that putting too much strain on this one pillar can shatter it and bring all highway programs—Federal, State and local—crashing in ruins.

What an ironic twist this would be in view of what the public was told when the concept of the national highway program was first being discussed—in the mid-1950's. Then the prevailing theme was the all-around usefulness of this program—not to the motorist alone but to national defense, to civil defense, and to the economy as a whole.

From magazine advertising and other information distributed by the promoters of increased highway user taxes, the Interstate System helps industrial and other developments in the area which it serves. Therefore, there are other beneficiaries than highway users. On the other hand, the many people who may never actually use or seldom use the interstate facilities, are already paying for the construction of these roads and it would be manifestly unfair to force them to continue to pay the 4th cent of the gasoline tax, or increased automotive taxes.

For example, the 678 miles of Interstate System in Mississippi traverses 27 counties out of the 82. This means 55 counties in my State receive no direct benefit from this system of highways, only secondary benefit.

The highway financing legislation passed in 1959 that becomes effective on July 1, 1961, provides that the gasoline tax will be reduced from 4 cents to 3 cents, and in lieu thereof the highway trust fund is to receive one-half of the present 10 percent tax on new automobiles and five-eights of the tax on automotive parts and accessories. Under the present law, there will, according to Government estimates, be available for the fiscal year beginning July 1, 1961, an increase of more than $225 million for the Nation's highway construction program, and this estimate takes into consideration the reduction of 1 cent per gallon Federal tax as of June 30, 1961. Under the terms of this legislation, $690 million from the excise tax on new cars and $112 million from taxes on automobile parts will be earmarked for roadbuilding when the Federal gasoline tax drops back to 3 cents. This means that some $802 million a year in automotive excises will go to the highway fund instead of the general fund as of July 1, 1961.

What is the answer? The answer has been suggested time and again, and was proposed in legislation introduced in both houses of Congress in 1959. The forthright and practical answer is to earmark for the national highway program all the revenue from special Federal taxes collected from motor vehicle owners. Then the Federal gasoline tax could be cut back to 3 cents per gallon, the program could sail along smoothly on schedule, and the Federal Government would not be jeopardizing both its own highway plan and the plans of the States by leaning too heavily on one tax.

But even if it is decided to give the motorists no more than halfway justice, and, while continuing to make him solely responsible for financing the national highway program, at least give him credit for all the special Federal automotive taxes he pays. It will be asked: If revenue from the excise tax on new automobiles, from the other half of the truck tax and from the tax on parts and accessories were taken away from the general fund, where would the Federal Government get the money to fill the gap?

If we get into questions like this, it should occur to someone to ask: Where is the motorist going to get the money to pay the kind of gasoline taxes all levels of Government are loading on him? And, to also ask: If the motorist takes the other way out by buying a smaller economy-size car, and both Federal and State gasoline tax receipts start going into a tailspin—then Government agencies are certainly going to have to look for some other financing solution. But then it will be too late. Then our present automotive industry will have suffered severe damage, and the magnficent highways projected by the 1956 act will be monuments to fiscal folly, mocked by the traffic of compact cars toddling along massive expressways.

SUMMARY

Our association is for:

1. Terminating the temporary 4th cent of the Federal gasoline tax, on June 30 of this year.

2. Maintenance of primary responsibility in State governments for construction, maintenance, administration and policing highways.

3. Continued investigation into highway construction programs to avoid unnecessary waste and costs.

Our association is against:

Any increase of the gasoline tax or other highway use taxes as long as the Federal excise taxes on automobiles, trucks and their use are used for purposes other than highways.

The oil jobbers of our State want good roads. They want serviceable roads that will get the motoring public where it wants to go with a minimum of delay and inconvenience, but, like everything else in life, the extent of investment in roads should be kept in balance with the investment in all other essential functions of Government. In short, we believe the combined State and Federal gasoline taxes have already reached the point where our people are being forced to drive less and to buy compact cars to minimize the burdensome taxes. The net effect now is decreasing revenues in many areas.

RESOLUTION ON FEDERAL GASOLINE TAX

Whereas when Congress increased the Federal gasoline tax in 1959 it was understood that this would be a temporary measure, and that the added 1 cent of tax would expire on June 30, 1961, to be replaced by portions of the Federal automotive taxes not now being applied to the national highway program; and

Whereas over the protests of motor vehicle owners, Congress increased the Federal gasoline tax by 33 percent in 1959, but with a pledge to the Nation's car and truck owners that this added 1-cent per gallon levy would last no longer than 21 months; and

Whereas the national highway program—said to be the costliest public works undertaking in human history—is being financed entirely, at the Federal level, by taxes on motor vehicle owners, and nearly 85 percent of the program's support now comes from the Federal tax on gasoline; and

Whereas the national highway program was presented to the public as being essential to the national defense and the Nation's economic well-being, but its entire cost has been loaded on one group of taxpayers—the motor vehicle owners; and

Whereas military requirements, particularly the transportation of missile-carrying vehicles, have caused the Bureau of Public Roads to increase the vertical bridge clearances for structures on the Interstate System to 16 feet—from the previous 14 feet—meaning an added cost of nearly $1 billion to raise already completed bridges and those to be built in the future, a purely defense expenditure to be borne by the motorists; and

Whereas Federal taxes imposed on gasoline and on motor vehicle ownership and use now cost approximately $4.3 billion a year, but only about $2.7 billion of this revenue is being applied to the support of the Federal share of the national highway program; and

Whereas in addition to the Federal gasoline tax the State of Mississippi collects a tax of 7 cents per gallon, and collects a State sales tax of 3 percent on the price of gasoline and the Federal and State tax (tax on tax), and the cities and towns that levy one-half of 1 percent or 1 percent sales tax collect the tax on the price of gasoline and the Federal and State tax (tax on tax), thus the overall tax on gasoline in Mississippi is over 12 cents per gallon: Now, therefore, be it

Resolved, That the Mississippi Oil Jobbers Association in convention assembled this the 3d of March, 1961, in Jackson, Miss., takes this means of calling upon the Congress of the United States to keep the pledge contained in the 1959 Highway Act by letting the 1-cent increase in the Federal gasoline tax expire on the scheduled date, June 30, 1961, and by rejecting any and all proposals for further increases in this excessive tax, and be it further

Resolved, That wide circulation be given to this resolution so that the issue may be publicized and the car and truck owners of the State be alerted to the necessity of taking a firm stand on this matter now.

Minimum Wage Increase

SPEECH
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H.R. 3935) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in commerce or in the production of goods for commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes.

Mr. GILBERT. Mr. Chairman, a cruel and vicious blow was struck against millions of underpaid and unprotected workers of our Nation when the minimum wage legislation which the President requested was defeated in the House of Representatives.

I would have preferred a direct increase in minimum wage to $1.25 now, and in January of this year reintroduced my bill which so provided. However, the committee bill; H.R. 3935, embodied the President's proposals, ar.d while it represented a compromise, it was felt that it was the best bill on which we could hope to get favorable action. The bill would have provided much needed relief not only to workers, but also would have given the economy of our Nation a boost. Increased wages make possible increased spending by consumers, thus benefiting all segments of our economic structure.

At the last moment, in order to avert defeat, a second compromise bill was offered by the House leadership, for which I voted, and when this was defeated by the Republican-Southern-Democratic coalition, all hopes for even a reasonable, moderately helpful bill fled. In order to provide at least some assistance to our underpaid workers, which they must have in order to exist in view of present alltime high living casts, I was forced to vote in favor of the Republican-backed bill, which is totally unrealistic and unsatisfactory to me. The bill, which raises the minimum wage to only $1.15 for the 24 million employees now covered and which would grant coverage to only 1,400,000 workers formerly uncovered, does not begin to correct the tragic predicament of the vast majority of our workers.

For years, there has been overwhelming evidence of the need for strong, equitable, humanitarian minimum wage legislation, and necessary amendments to the Fair Labor Standards Act have been long overdue.

The scaled-down coalition substitute which we were forced to accept, is in my opinion, a betrayal of the workers of our country, and is a grave disappointment to me. The House of Representatives has failed in its duty to the many millions who have looked to us for the assistance they sorely need. It is hoped that the Senate will come to the rescue and pass a much more satisfactory bill, so that when a new minimum wage bill is passed in its final form, by the Congress, it will more nearly approach the kind of legislation which our workers merit and to which they have long been entitled.

New Policies for Philately at the Post Office Department, an Address by James F. Kelleher, Special Assistant to the Postmaster General

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. BRADEMAS. Mr. Speaker, because it is clearly reflects the new policies and attitudes which will guide the Post Office Department under Postmaster General J. Edward Day, I wish to commend to the attention of Members a speech concerning policies in philately by James F. Kelleher, Special Assistant to the Postmaster General, given March 18 in New York at the Interpex exhibit. Mr. Kelleher, who comes to his new post from South Bend, Ind., brings valuable experience in newspaper and public relations work and represents the qualities of youth, vigor, and competence which have been called the hallmark of President Kennedy's administration.

The text of the address follows:

SPEECH BY SPECIAL ASSISTANT TO THE POSTMASTER GENERAL, JAMES F. KELLEHER, BEFORE THE INTERPEX EXHIBITION, NEW YORK, N.Y., MARCH 18, 1961

Ladies and gentlemen, misrepresentation of myself, this administration, and our stamp program will definitely not be the approach which Postmaster General J. Edward Day will take to philately during the administration of President Kennedy.

As for myself, I make abundantly clear that since my very amateurish childhood efforts, I have not been a collector.

My responsibilities in my new post are varied and interesting, but philately should not and cannot be the major preoccupation of my department.

Mr. Day believes, as I do, that we have a great potential in the reservoir of professional talents in all fields which are represented by the career service. Wherever and whenever the career service can supply specialized talent we intend to utilize it to the utmost and give to career personnel of the Post Office Department the authority commensurate with their responsibilities.

This approach the Postmaster General will take toward management, mechanization, personnel, and most explicitly toward philately.

We have announced our firm intention to limit commemorative stamps to 15 per year. This is not a hope but a promise of the Department.

COMMEMORATIVE STAMP AN HONOR

But more important than this fact is the thinking behind it. We believe a commemorative stamp is an unique honor bestowed by the Government of the United States. For this reason, we believe its subjects should be of broadest possible national interest in either the contemporary or historic vein.

For this reason, we believe that our stamps should represent the best in design and production.

For this reason, we believe our stamps should take advantage of the maximum capabilities of those most expert in the field.

With this in mind, we will soon name a Citizens Stamp Advisory Committee whose membership will give us the breadth of judgment and depth of experience in numerous areas of competence which influence the subject matter, character and beauty of the stamp we will issue.

We have not rushed into the selection of this committee in spite of our desire to have it functioning as quickly as possible until we can assure ourselves of the kind of membership that will be most advantageous to the Department and to philately.

I might add that the Postmaster General will rely heavily upon the judgment of this committee on the final selection of all stamps in our annual program.

DIRECTOR OF PHILATELY

I might also add that the Department will be represented on the committee by Mr. Franklin R. Bruns, Jr., who will function fully as our Director of Philately—will serve as our liaison between my office and the Chairman of the Citizens Stamp Committee elected by its membership.

To carry out the recommendations of the committee we will name, we feel very strongly that the full creative talents of the Bureau of Engraving and Printing should be utilized to a greater extent than has been possible in recent years.

We are equally convinced that the interest of the Post Office Department and Philately will best be served by a thorough exploration of the full capabilities of our Giori press equipment which, I am convinced, have never been completely realized.

Our stamps will be designed to take advantage of the multicolor, color blends and color paper combinations available to us.

The Bureau will not be asked to attempt the adaptation of design to equipment; rather our artists will be asked to create designs with a full prior knowledge of the potentials of the Giori.

It is our belief that this approach will result in fine stamp designs produced in the finest possible way.

Inevitably I have been exposed to the varying opinions of the potential of the Giori press production methods. Over a period of many weeks, I have investigated pros and cons of this issue with a basis of many years' experience in the graphic arts.

It is my firm conclusion, graphically demonstrated by test work now being printed for the guidance of our designers, that given adequate time our presses will produce work that will amaze and delight you with its beauty of craftsmanship.

We are also convinced that the best steel engravers and designers will be found at the Bureau of Engraving and Printing. We will give them the opportunity to do their job as they best know it.

CIVIL WAR COMMEMORATIVES

They are now at work, for example, on designs for Civil War Commemoratives that will not appear for 1, 2, 3, or even 4 years. They are designing them to take full advantage of the largely unrecognized potential of our press equipment, with leisure to refine and polish within the full scope of creative opportunity.

I am fully confident that their work in the future will justify the faith which the Postmaster General and myself have placed in them. With the same confidence, optimistic predictions can be made for the men specializing in production and our Giori presses.

When outside artists are called upon to supplement the design work of the Bureau, our first step will be to fully brief them on the requirements of design, engraving, and color necessitated by available facilities. This will permit them to prepare their design on an intelligent basis.

Against this factual background, let me express a few more general ideas regarding the program on which we have embarked and upon which we earnestly solicit your comment and suggestion.

We are aware of the tremendous cultural and artistic interests of the hobby which you so impressively represent at this show.

We are also aware that the commemorative stamp program is a profitmaking aspect of the Post Office Department and you are aware, I am certain, that philately must of necessity be a subordinate function in our Department—subordinate to our responsibilities of moving 65 billion pieces of mail annually.

In assessing the Department's planning, its programs, the Postmaster General and his staff are putting the emphasis on improved management, efficiency, economy, and a realistic appraisal of each phase of our operation. Philately has gotten its share of reevaluation.

PHILATELIC PROGRAM PROFITABLE

Delighted as any of us might be to discuss huge but vague profit figures in philately, I think we can all appreciate that realistically the philatelic program produces a profit to the Department of approximately $3 million per year.

I cite this figure not to disparage higher estimates sometimes called up, but to emphasize the need for a realistic appraisal of the relative functions of the Post Office considered from the standpoint of efficient management.

I think we should agree that both philately and the Post Office Department suffer when large numbers of commemorative issues force the adoption of production standards below the level which we naturally would like to attain.

There are other changes which will interest you in our program.

All future printings of the U.S. stamps will be in units of 50 to 100. This stamp utilization will be in the best interest of the Department, its personnel and philately, in our opinion.

Champions of liberty, if continued by our committee, will be issued only in 4-cent commemorative denominations.

Our basic printing order for commemorative stamps will be reduced from 120 million to 100 million.

Again, realistic management based on an accurate appraisal of average present demand suggest that this step, too, will be in the interest both of the Department and philately.

In the same vein, we will insist as rigidly as we can on our 5-day in advance provision for first day covers.

COOPERATION WITH USIA

We have initiated a program in cooperation with USIA, which will distribute our philatelic news and information throughout the world in some 23 native languages.

For the press, our philatelic news will be presented on distinctive and readily identifiable new philatelic release forms.

Let me add here a personal note. My necessarily limited contact with philatelists to date has been both enjoyable and stimulating.

I am here tonight because we of the new postal administration want to extend and deepen this relationship with all collectors and the organizations they represent. I will, however, ask one favor of you. I hope you will appreciate, as we must, that the primary function of our Department, the Postmaster General and those of us who have the privilege of serving on his staff is to expedite the delivery of the mail to everyone in this country. Secondarily, a hope that our services to philately will be constructive and useful.

I hope that as we embark on a New Frontier of commemorative issues that we may merit your support, attract your suggestions and therefore be enabled to consider your constructive criticisms.

Postmaster General Day and I will consider that we have made a contribution in this field if, at the end of our administraton, you can say we have made your hobby a more enjoyable one, and therefore a more popular one.

Mr. Speaker, I should also like to insert in the RECORD a column by Ernest A. Kehr from the February 26, 1961, New York Herald Tribune entitled, "Stamp News: Kelleher Has Some New Ideas":

STAMP NEWS: KELLEHER HAS SOME NEW IDEAS

(By Ernest A. Kehr)

He may not know too much about the philatelic aspects of postage stamps, but James F. Kelleher last Wednesday impressed this writer with his knowledge of the requirements necessary to produce such as will be a credit to the United States. Mr. Kelleher has been selected by Postmaster General J. Edward Day as his special assistant. Among his duties will be the chairmanship of a committee which will consider future stamp issues and decide upon the designs that will be engraved on them.

According to his own admission while visiting the Herald Tribune, he has been saturating himself "with the fundamentals of stamps and getting acquainted with philatelic personalities in an effort to come up with a program that will do credit to the department as it develops goodwill in stampdom's circles."

As part of this aim he visited the Bureau of Engraving and Printing, that division of the Treasury Department which produces U.S. stamps under contract to the Post Office Department. Unlike most of his predecessors since James A. Farley's day, he had a meeting with the Bureau's Director and staff to obtain their views and "was amazed to discover that they rarely ever had been consulted in such matters although these are the men who know most about the subject."

Mr. Kelleher stated that "as long as we have such know-how within the Government" he sees no reason why the Department should have to go to commercial fields "to obtain all designs that will appear of stamps made by processes whose techniques require skills few nonengravers have."

FIFTEEN STAMPS A YEAR

After the conference he concluded that "about 15" stamps could be issued each year without unduly taxing the output potential of the Bureau, its personnel and printing equipment. He also indicated that he is completely aware of the time necessary properly to engrave a stamp die. He plans to give "the Bureau enough advance notice so the engravers can create a die that will meet their own high standards of perfection."

Mr. Kelleher intends to continue the idea of a citizens advisory committee such as had been functioning for 5 years until January 20. But its "membership will be confined to an absolute minimum, and based on knowledge of the individual in his particular field."

There probably will be only three representatives from the stamp world and one qualified art critic. One innovation will be the addition of an "eminent historian" whose job it will be to pass upon "the historical importance of a stamp suggestion and the accuracy of its subject." This, he hopes, will obviate the possibility of having to issue stamps for events that have little national or international significance, regardless of "how much political pressure is put upon the Department for special commemoratives."

NUMBER OF IMPROVEMENTS

Mr. Kelleher has already set in motion a number of other improvements in Post Office Department procedures which affect stamp collectors. Among them is the modernization of press releases distributed in connection with new issues. Until now, these releases have been far inferior in contents and appearance to those turned out by many foreign administrations.

In addition to supplying the technical description of future stamps, these soon will emphasize their purpose and serve as instruments of propaganda. Except in unusual cases, no release dates will be placed on them so they may be published upon receipt by editors. As soon as possible they will be printed in the major foreign languages that they may be more widely understood and used by the editors of publications abroad whose knowledge of English may be limited. This is hoped to give U.S. stamps wider publicity abroad and increase demand for them.

Mr. Kelleher's aims are ambitious, but considering how much he has learned in less than 5 weeks, and what measures he already has taken in the direction he wants to go, he may have a program which might revolutionize the Department's relations with philately and philatelists.

Highways in New York

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. KEOGH. Mr. Speaker, in the hearings before the Committee on Ways and Means on the highway trust fund

reference was made by a witness to a letter addressed to the President by Governor Rockefeller. In order that the exchange of correspondence might be completely available, it is my privilege to include herein the reply to that letter sent by the President. It follows:

MARCH 14, 1961.

Hon. NELSON A. ROCKEFELLER,
Governor of the State of New York,
Executive Chamber, Albany, N.Y.

DEAR GOVERNOR: I want to thank you for your letter of March 5 in response to my telegram of February 15 urging action to stimulate employment and invigorate the economy.

In my special message of February 28, I recommend to Congress a fiscally sound method of completing the 41,000-mile Federal Interstate Highway System on time by 1972 without violating the pay-as-you-go principle, with which you have often stated your agreement. To meet this completion date set by the 1956 act requires additional authorizations of $11,560 million and additional revenues to the trust fund of $9,740 million. The legislation I have recommended accomplishes this goal.

In your letter you indicate that New York is able to proceed even faster and suggest Congress "authorize individual States to draw on their Federal highway fund allocations as rapidly as they can provide matching funds." This would involve repeal of the Byrd amendment and open-ended deficit financing, or, in the alternative, greatly increasing proposed highway user taxes.

The acceleration program I have proposed will increase the Federal highway expenditures by almost $1 billion per year and reaches the full extent fiscally sound at this time. If New York wishes to go even faster, the Highway Act (23 U.S.C. 115) allows you to do so. A State may finance total projects costs currently and be reimbursed from its Federal allocation for a subsequent fiscal year. I understand that Connecticut and several other States have already accelerated their Federal highway programs under this procedure.

You also can further increase your share of Federal highway funds by complying with the Federal standards for control of outdoor advertising along the Interstate System. I hope you will urge the current session of the New York Legislature to take such action—and also join me in urging Congress to extend the billboard control provision (as U.S.C. 131) for another 4 years and increase the incentive bonus from one-half to 1 percent of a State's allotment.

In closing, may I thank you again for having expressed such an interest in our vital Federal highway program and solicit your support for the sound method of financing I have recommended which I believe is the best for the country.

Sincerely,

JOHN F. KENNEDY.

A National Policy for the Establishment and Protection of National Parks and Monuments

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in the National Wildlands News of April 1961:

A NATIONAL POLICY FOR THE ESTABLISHMENT AND PROTECTION OF NATIONAL PARKS AND MONUMENTS

(This declaration of policy is a revision of the standards originally developed by the Camp Fire Club of America and endorsed by nearly a hundred organizations, including the National Parks Association. Offered by the association to help crystallize fundamental ideals, it is based on the thinking of the National Park Service and a number of organizations and individuals through the years since the establishment of the first national park in 1872. (For a history of these standards, see National Wildlands News for February, p. 4.))

DEFINITIONS

National parks

National parks are spacious land and water areas of nationwide interest established as inviolable sanctuaries for the permanent preservation of scenery, wilderness, and native fauna and flora in their natural condition. National parks are composed of wilderness essentially in a primeval condition, of areas of scenic magnificance, and of a wide variety of features. Their unexcelled quality and unique inspirational beauty distinguish them from all other areas, and make imperative their protection, through act of Congress, for human enjoyment, education, and inspiration for all time.

National nature monuments

National nature monuments are established to preserve specific natural phenomena of such significance that their protection is in the national interest; they are the finest examples of their kind, and are given the same inviolate Federal protection as the national parks. While there may be wilderness and scenery in some of the nature monuments, their primary purpose is to protect geological formations, biological features and other significant examples of nature's handiwork. The monuments differ from the parks in that they usually do not have such a wide variety of outstanding features. They may be set aside by act of Congress, but more often they are established by Presidential proclamation, under authority of the Antiquities Act of 1906.

APPLICATION OF PRINCIPLES

1. National parks and monuments are of national importance

An area is judged to merit national park or monument status and commitment to Federal care by the degree of its value and interest to the Nation as a whole. Every proposal for the establishment of a new national park or monument should be carefully examined lest it lead to the admission of an area of lesser importance, and thus form a precedent for the future admission of inferior areas which would dilute the splendor of the system. The sanctuaries should differ as widely as possible from one another, and represent a broad range of features of supreme quality.

2. Adequate area is required

National parks and national nature monuments are set aside for the enjoyment, scientific study, and permanent preservation, in a natural state, of the native plant and animal life and other features within them. Each should be a comprehensive unit embracing sufficient area for effective administration, and where the fauna and flora are of major significance, should include adequate year-round habitat.

3. Protection is based on scientific and esthetic values

Federal guardianship of national parks and national nature monuments involves sound scientific research looking to the protection of wilderness, and plant and animal life and other natural features, and it recognizes those great intangible values of inspirational beauty that make their protection imperative. The highest scientific and inspirational quality of the areas are the special, unique values of the national parks and national nature monuments. Visitor enjoyment is based on seeing and experiencing wilderness and the wonders and beauties of nature, without interference from man-made distractions. Future generations have the right to enjoy these sanctuaries unimpaired by present-day use as required by the act of 1916, establishing the National Park Service.

4. Congress intends enjoyment of unimpaired nature

When Congress adopted the act of 1916, establishing the National Park Service, it made that agency of the Government the guardian of national parks and monuments, and it charged the Service with the responsibility to "conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations." Public enjoyment of the natural features of the national parks and national nature monuments is their basic reason for being; the areas are, in fact, living museums. Necessary facilities for visitors should, therefore, be constructed with the least possible alteration of the natural scene.

5. Private inholdings are being acquired

The acquisition of privately owned lands within national parks and national nature monuments is imperative to facilitate administration and protection, and to prevent intrusion of undesirable developments and activities on them. Such acquisition is being carried out as rapidly as feasible.

6. Wilderness preservation is vital

Wilderness is one of the most significant attributes of the national parks and national nature monuments, and because it is fragile and irreplaceable, it is kept inviolate and is accessible only by trail.

7. Commercial uses are destructive

The national policy recognizes no use of national parks and national nature monuments for commercial purposes, because such use would alter natural conditions and scenery, which these areas have been established to preserve. Every alteration of the natural landscape, however slight, by such activities as logging, mining, grazing, airport and railroad construction, or damming of water courses, is a direct violation of a fundamental principle of national park management.

8. Amusement attractions are inconsistent

National parks and national nature monuments are not resorts or amusement centers. The introduction of incongruous recreational features diminishes visitors' enjoyment of the basic character of the sanctuaries. Resort amusement facilities, such as golf courses, swimming pools, ski lifts, tramways, skating rinks, tennis courts, and speedboats, abundantly available elsewhere, destroy wilderness atmosphere, and defeat the purpose of visitors who wish to derive inspiration from contact with pristine nature.

9. Interpretation is the key to appreciation

Interpretive programs, with museums, adequate literature, visual aids, guided trips, and lectures, are based on the natural features of each area, and are given special emphasis by the National Park Service. The Service informs visitors about the purposes of the areas under its care, stimulates respect for the irreplaceable objects of natural and scientific interest, and emphasizes the special significance of the particular area, as

well as of the system as a whole. The National Park Service needs adequate funds to employ a sufficient staff of naturalists to serve the rapidly growing number of visitors.

10. Protection of plants and animals is fundamental

Public shooting of wildlife in national parks and national nature monuments is contrary to the basic principle that these areas are inviolable sanctuaries, and it is prohibited throughout the park and monument system. Whenever scientific research shows that a native species has become so abundant as to endanger its habitat or the survival of another native species, the National Park Service has authority to reduce its numbers. The introduction of nonnative species is contrary to the principle that the national parks and monuments are sanctuaries for native wildlife.

Sport and commercial fishing are incompatible with the concept that the national parks and monuments are inviolable sanctuaries for native fauna. Commercial fishing is prohibited, or eliminated as soon as possible. So long as sport fishing is legal, streams and lakes are stocked only when natural reproduction fails to provide enough fish for angling, and then only with species native to the area. High country lakes, where fish do not occur naturally, are not stocked.

Indiscriminate cutting of trees and shrubs and mowing of meadows, and the picking and digging of wild flowers and other plants, are contrary to the principle of inviolate protection of nature. At important overlooks along roads and trails, and at locations where people may observe outstanding manifestations of nature, thinning of vegetation sometimes may be necessary, and it is performed under trained supervision. The removal of dead or dying trees that may endanger people in areas of heavy use, also may be required at times, as in campgrounds and picnic areas, or along trails and roads.

11. Mechanical noise is an adverse intrusion

Where airfields and railroad stations exist in national parks and monuments, long-range planning looks toward their removal at the earliest time to sites outside the boundaries. Because outboard motors, Speedboats, and airplanes are a disturbing influence to those seeking the quiet serenity of nature, as well as detrimental to wildlife, they should be prohibited in national parks and monuments. Low altitude flying over national parks and monuments should be restricted to patroling, forest fire suppression, rescue, and supply service to ranger outposts that are difficult of access.

12. Roads are held to a minimum

Only such roads are built in national parks and national nature monuments as are needed to provide access to some of the principal features of the sanctuaries, and to facilitate their protection. Roads are located so they will mar scenery and natural features as little as possible, and they are constructed for leisurely driving and not for speed or commercial traffic.

13. Buildings should be designed to blend with environment

Buildings within national parks and national nature monuments are designed to be as unobtrusive as possible, and to harmonize with their surroundings. They are erected only where necessary for efficient administration and for the convenience of visitors, at locations where they will least interfere with the natural scene or, where feasible and desirable, outside the boundaries of the parks and monuments. Wherever existing facilities detract from important scenic and scientific features, every effort is being made to move them to unobjectionable sites. Long-range planning envisions the eventual removal of many hotels and lodges to sites outside the boundaries.

14. Concessions are only for necessary accommodations

Concessions in national parks and national nature monuments[1] are granted only for the necessary care of visitors, and then in restricted locations; and they are operated so as not to lower the dignity of the sanctuaries. National parks and monuments are not established and maintained to provide local or personal profit, and the installation of crowd-attracting facilities and amusements to increase concessioner revenue, or to bolster local income, is a misuse of these reservations.

15. National archeological monuments are similarly guarded

National archeological monuments, which are established specifically to protect the structures and other remains of indigenous civilization, are administered under the same principles as set forth herein for the national nature monuments, wherever these are applicable.

16. The violation of one park is a threat to all

Any infraction of these principles in any national park or monument constitutes a threat to all national parks and monuments.

---

[1] The term "national nature monument," while not official, is used here for the sake of clarity to show that the monuments under consideration are those established to preserve the wonders of nature.

Bad to Worse

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. KING. Mr. Speaker, on March 16, 1961, the President sent to Congress a message embodying his farm program. Recently, there appeared in the Saratogian, a newspaper published in Saratoga Springs, N.Y., under the editorship of Fred Eaton, an editorial which I believe should be read by each Member of the House of Representatives.

The editorial is as follows:

BAD TO WORSE

The worst suspicions of those who feared what the Kennedy administration would do to the concept of free agriculture have been confirmed by the President's farm message to Congress. And then some.

It's as if Kennedy and Secretary of Agriculture Freeman, not knowing just how to get the Nation out of the farm mess, collected all the worn-out, far-out, left-out ideas on farm control and threw them into one big pot. Out of this conglomeration, they seem to hope, something may emerge that works.

The new farm program isn't all bad, of course. There are proposals to expand consumption, boost exports, aid depressed farm areas, bolster forestry and soil conservation programs and such. These have been proper parts of agricultural policy for years.

It's in the sweeping attempt to juggle food and fiber supply against demand all while raising farm income through Federal fiat, that the new program sinks deeper into a morass of more controls, greater government costs and higher food prices.

This does more than discard the efforts of former Agriculture Secretary Benson to effect a gradual return to a free farm economy. It positively gallops in the opposite diection.

One section of the program raises the specter that every commodity produced on the farm, from Maine's potatoes to California's grapes, will go under controls. That could involve more than 200 commodities, instead of the score now subject to some kind of price support or marketing control.

According to the proposals, growers of each commodity would work out their own price support program and clear it with the Secretary of Agriculture. Congress would have a veto power but no positive control.

This would give farmers almost a blank check on the U.S. Treasury. It could lead to Government control of almost every facet of farming. That would mean higher food prices for consumers and Federal costs eclipsing the $3.5 billion now spent every year on Federal farm price and income supports.

The President doesn't foresee such results, of course. This is his way, and the way of his farm advisers, of doing something about a Democratic-created farm program that, in Kennedy's words "is drifting into a chaotic state, piling up surpluses, penalizing efficiency, rewarding inertia and noncompliance, and constantly being torn and weakened by disputes and conflicting pressures."

But Kennedy's solution is based on the mistaken notion, in our view, that the Government can fix things for the farmer by wrapping him tighter in controls. It ignores the demonstrated fact that those parts of the farm economy which are now free are generally enjoying more prosperity than those parts under control. It's blind to the inevitable revolution in agriculture; it belittles free enterprise.

The President concedes that "we cannot expect to solve the farm problem in a day or in a year or perhaps even in this administration." If his program prevails in Congress, he can add: "In this generation."

Address by John F. Morse to the Association of Virginia Colleges

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 21, 1961

Mr. ULLMAN. Mr. Speaker, my proposal for assistance to community junior colleges—(H.R. 16)—continues to generate increasing interest and support from around the country. Mr. John F. Morse, vice president of Rensselaer Polytechnic Institute at Troy, N.Y., spoke recently to the Association of Virginia Colleges and made specific mention of the breakthrough that is being made in education through the growth of community junior colleges. I think the following excerpt from his address will be of interest to my colleagues:

Much is heard these days about talent-searching. We are told, and there is surely some truth in it, that there is a staggering waste of human resources in the failure of as many as half of our ablest young people to go on to higher education. Better guidance, bigger financial aid programs, and greater awareness are all having their effect on this. But I believe the real breakthrough is coming through the growth of community and junior colleges. I think it can be shown that the establishment of such an institution has an immediate and profound effect

on the entire area surrounding it. Youngsters who would previously have taken terminal courses in high school take college preparatory courses instead. Those who would otherwise have discarded college as economically impossible find it within reach. At the risk of seeming terribly provincial, for I know what great things are being done on the west coast, let me give you a small illustration. When in the early 1950's a community college was established in Orange County, N.Y., a rural and not very prosperous section of the State, we assisted them in planning and establishing a preengineering program that would prepare their students for the third year at R.P.I. and other comparable engineering schools. We further agreed to be liberal in accepting such students as transfers on the basis of grades the meaning of which would, in terms of our own students, be uncertain, and on the basis of the thoughtful endorsement of their dean. Since that time we have admitted 29 of their students. Five are still at Renselaer Polytechnic Institute, two of them on the dean's list, one flunked out. The other 23 have received their engineering degrees, 7 of them with honor averages, and several have gone on to graduate school. I wish we could bat this high with our freshman admissions. This may seem a tiny and insignificant example, but I think it important. For the point is that I know, because I took a particular interest in those lads, that not more than four or five of them would even have started college if it had not been for the community college. I maintain that this is genuine talent-searching and talent-development.

Let's look at it from another angle. How many institutions assign their top faculty to the work of the first 2 years? Is it not at least possible that as good teaching of elementary subject matter goes on in junior colleges as in some of our great 4-year institutions? And is it not possible that the important contribution the great institutions have to make is in the upperclass years, where the scholarly faculty meets the mature undergraduate mind? The junior college movement is going to grow and unless the private institutions encourage it and find ways of making room for the best of its product, they will, I think, be shirking their duty and making a little hollow their protestations of concern over the Nation's waste of human talent.

Proud Record

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. WALLHAUSER. Mr. Speaker, it is a real pleasure to compliment a wonderful organizations that has had 25 successful campaigns for the worthy purposes of improving the life and lot of those who need help and who are less fortunate than we are. I am particularly impressed by the fact that this effort is made by private enterprise, and the results are magnificent. It is my hope that all of the Members will join with me in wishing them well in the 26th annual campaign, and I call particular attention to the editorial that appeared in the Newark Evening News on March 26, 1961:

PROUD RECORD

The United Jewish Appeal of Essex County, which is about to launch its 26th annual campaign, has raised since 1936 more than $37 million for local, national, and oversea causes.

UJA funds have helped the people of Israel welcome a million immigrants, build homes and schools, hospitals and industries, drain swamps, irrigate the desert, reforest barren slopes, and divert rivers.

At home, the Jewish migration to the suburbs has brought new challenges to the local community organization, the Jewish Community Council, and its related health, welfare, education, and cultural services. To all these needs the Essex Jewish community has responded conscientiously. In 1936, it contributed $46,000; in 1960, $1,181,334.

UJA embarks on a new campaign, its goal $2,503,384, sustained by a proud record.

Land O'Lakes Favors Milk Sanitation Legislation

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the delegates to the 1961 annual meeting of the Land O'Lakes Creameries, Minneapolis, Minn., passed a series of resolutions pertaining to the dairy industry which have national significance. Among other things, they went on record in favor of my national milk sanitation legislation to permit the free flow of high quality milk from State to State. Under leave to extend my remarks, I would like to include six of the resolutions in the RECORD:

RESOLUTION OF LAND O'LAKES DELEGATES

TAXATION OF COOPERATIVES

Land O'Lakes reaffirms its position that net margins of a cooperative returned to patrons on a patronage basis in any form (cash, certificates of equity, or allocated book credits) are income in the hands of the patron in the year of the distribution and are not income of the cooperative making the distribution. Such margins should not be taxed to the cooperative but be included in the computation of tax of the recipient. This is in accord with the clear intent of Congress. It is consistent with the basic concept of a cooperative as a nonprofit institution in which any income above operating costs rightfully belongs to member patrons.

We request that Congress enact into law the substance of the Internal Revenue regulations first promulgated on patronage dividends after the passage of the 1951 Act of Congress so that the courts will have clear instruction regarding cooperative patronage refunds.

PRICE SUPPORT FOR MILK

A goal for dairy farmers in the United States is to produce sufficient milk to provide: first, high standards of milk and dairy product consumption for all Americans; second, the quantity of manufactured dairy products needed as a tool for improving international relations; and third, an adequate supply for foreign trade.

1. Exportation of dairy products provides a means for settlement of international debts using money earned by exports instead of gold.

2. The conversion of larger quantities of feed grain into animal and poultry products for human food improves living standards and also reduces feed grain surpluses. Milk price supports which stabilize farmers' incomes and encourage conversion of feed grains into dairy products are therefore desirable.

3. Efficient farmers should produce adequate supplies of milk at prices which are not inflationary, but such farmers should receive income and economic opportunity equal to other citizens on a comparable basis.

4. The means for distribution of the needed milk supply is inadequate; consequently, prices falter. It is necessary, therefore, that price supports be continued until adequate distribution systems have been developed both at home and internationally.

In consideration of these several desirable objectives, it is recommended that the prices at which manufactured dairy products are purchased by the price-supporting agency of the Government should yield a price for milk not less than $3.35 per hundred pounds.

STANDARDS FOR IMPORTED PRODUCTS

It is neither equitable, economical, nor right that milk or manufactured dairy products from foreign countries should be permitted to enter the United States for use by domestic consumers when such products are manufactured under conditions not acceptable within the United States. Standards of composition and purity for imported dairy products are often different than those imposed on domestic producers. Often standards of purity for imported products do not exist. Whenever laws or regulations prescribing labeling, packaging, sanitation, composition or other standards with respect to production or use are applicable to producers within the United States, the Secretaries of the Treasury and of Helath, Education, and Welfare should be required to apply similar standards to products imported. Each imported dairy product should conform to standards of sanitation, composition, and purity developed by the Secretary of Agriculture.

We recommend that the Secretary of Agriculture promulgate standards of sanitation, composition, and purity for all dairy products imported consistent with the quality of milk used for manufacturing dairy products in the United States.

IMPORT QUOTAS

The quantitative determination of import quotas under section 22 of the Agricultural Adjustment Act has become unrealistic and quotas for products are increased when such products compete with other farm products included under price support programs. We recommend that section 22 be amended in such a way as to make import quotas mandatory whenever products imported are in competition directly or indirectly with domestically produced products included under any legalized national price support program.

MARKETING AGREEMENT AND FEDERAL ORDERS

Procedures for marketing milk under marketing agreements have brought order out of confusion in many milk markets. More recently, however, the knowledge and practices in production, transportation, and distribution of fluid milk have made it feasible to transport milk greater distances and across State lines for the supply of urban populations. Milk pricing also should be related to prices at the source of the milk supply and the location of the market. Class prices should be related not only to the cost factors in producing an adequate supply of pure and wholesome milk, but also to costs of producing and distributing products.

We recommend that the Congress increase the authority of the Secretary of Agriculture in dealing with the marketing of milk, particularly in those areas where State milk control legislation produces rules and regulations which are inconsistent with the public interest and the interest of milk producers in adjacent areas. The principles set up by the Secretary in the handling of milk should not be made inconsistent through the exercise of local authority.

NATIONAL UNIFORM SANITARY STANDARDS FOR MILK

Municipalities, counties, States, and other governmental units rely more and more on the sanitary standards and code of the U.S. Public Health Service in the formulation of sanitary regulations for milk and dairy products. Such regulations have demonstrated their adequacy and usefulness over a wide area and for many years. Such regulations are consistent for the best interest of farmer producers of milk and the best interests of consumers.

Land O'Lakes favors mandatory legislation applicable to all milk shipped in interstate commerce prescribing the uniform sanitary standards for milk recommended by the U.S. Public Health Service. Such standards should be administered by qualified personnel, presently available through the local units to whom these personnel usually report, but under the supervision and control of the U.S. Public Health Service.

Resolution of the City of Swartz Creek, Mich.

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. CHAMBERLAIN. Mr. Speaker, the current debate between economists as to whether or not the slump has yet hit bottom seems to me to be a largely academic question. What matters is that large amounts of unemployment exist throughout the Nation. Instead of talking about a lot of statistics as to the number of people in need of work, I believe we should take some positive action toward curing the cause rather than the effect of unemployment.

I have introduced legislation to repeal the automobile excise tax which would doubtlessly result in increased sales and auto production and have the overall effect of bolstering the economy of our Nation. Under leave to extend my remarks in the RECORD, I am pleased to inform my colleagues of another expression of support for my bill, H.R. 3647, contained in a resolution passed by the City Council of the City of Swartz Creek, Mich.:

CITY OF SWARTZ CREEK, MICH.,
March 13, 1961.

Whereas the economy of the great State of Michigan is suffering from a general recession in business activity; and

Whereas the economy of Michigan depends heavily on the automobile industry; and

Whereas at the beginning of the Korean conflict, a Federal tax was levied on all automobiles; and

Whereas the Korean conflict has all but ended several years ago, but the Federal tax on new cars has not yet been repealed; and

Whereas the tax on new automobiles increases the cost of a new car enough to delay or discourage such purchases with a resultant slump in the economy of Michigan: Now, therefore, be it

Resolved, by the Council of the City of Swartz Creek, That the elected Representatives to the Congress of the United States be requested to make every effort to have the Federal tax on new cars repealed at an early date, so that the economy of the United States and Michigan particularly will be stimulated by the sale of new automobiles; and be it further

Resolved, That a copy of this resolution be sent to the elected Representatives of the State of Michigan with the request that they work toward repeal of the Federal tax on automobiles.

For Philadelphia Visitors

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. TOLL. Mr. Speaker, I would like to call the attention of the Members to a well-written article appearing in March 25, 1961, issue of United States Review, one of the leading insurance journals in Philadelphia, regarding the famous Science Museum of the Franklin Institute.

The Franklin Institute aids our Government through research. I believe that this report will enlighten readers on the value of the institute and will explain why it is one of the reasons why so many visitors come to the city of Philadelphia:

FOR PHILADALPHIA VISITORS

This summer millions of Americans will be on the move—enjoying their travel vacations. Several hundred thousand of these Americans, including insurance men who will attend the eastern agents' conference and midyear meeting of the National Board of State Directors of the National Association of Insurance Agents in mid-April, have already set their 1961 vacation sights on Philadelphia and especially on the world-famous Science Museum of the Franklin Institute.

There they will briefly stand in awe before the heroic marble statue of another well-traveled American—Benjamin Franklin, in the Institute's Memorial Hall. After a visit with Ben, they'll probably take a walk through the biggest heart in the world—15,000 times bigger than their own—listen to its beat, and marvel at the durable structure of all hearts. From large to small, the mechanical-minded will study the mechanical perfection of the Chambers steam engine, a working model of a horizontal engine which was made from a sterling silver spoon just a little smaller than their thumb.

Then, these inveterate, traveling Americans may look at some of the means of travel in the various transportation halls of the Science Museum. In the hall of aviation, they may marvel at the daring of flyers of 50 years ago when they see an original Wright brothers airplane. Then, too, they may try a little flying themselves in a Link trainer, "high above the city" yet only a few feet from the floor.

Far from home, these traveling vacationers may think of phoning home just to assure themselves that they did leave a note for the milkman. For them, there is the telephone room where they may laugh at the sound of their own voice talking back to them, or learn how their phone call rushes with the speed of light, via microwave transmission, back to their home.

In the railroad room, there is a bit of nostalgia in the No. 60,000. Here, inside the building is one of the biggest steam locomotives they'll ever see: 350 tons of steel, over a hundred feet long, huge and black and ready for the visitor to operate himself. Over several yards of high iron, the man from Portland or the lass from Grand Fork will, for a short time, become an engineer. For the nautical-minded midwesterner, there is the marine room where he may stand at the helm on a full-size ship's bridge and guide his own, personal liner over the seven seas. Here, too, the steamers, the pleasure boats and their uses are told in model form. And there is a model of a curious thing called an Amphibolus Oruktor, America's first combination automobile-steamship-truck-dredge, dated 1805.

In this amazing science museum there are complete and elaborate stories of the production of steel—from mine to its multiple uses. And for the southwesterners, there will be a bit of home in the big exhibit, "The Story of Oil." The story of how steel and stainless steel are formed and welded into all the fantastic shapes of automobiles, railroad cars, and refrigerator doors also is told. For the northwesterner there is a bit of remembrance, too, in "The Story of Paper." Here, the story of that prime necessity to American life—from the forests to the home—is told in a large exhibit hall. Other stories are told and questions answered.

How do you make a magazine? There's an exhibit on that too, along with stories of manmade lightning, atomic energy, printing, and a multitude of other parts of our technological civilization.

When his time grows short, the vacationer may want to check his watch. He may do so by consulting a Chinese water clock, King Alfred's candle, or the very latest in electric wrist watches in the time exhibit.

From there, it is but a step to the largest public observatory in the world, where the travelers from the 50 States (and from almost all of the countries of the world) may fix their eyes to one of several large telescopes and observe the timelessness of the heavenly bodies.

Recently the museum has added a "venture into space room" which features a display showing current positions of all known satellites. On display also is one of the complicated space suits.

The Franklin Institute aids the Government through research. In its laboratories located behind and nextdoor to exhibits it is studying how and astronaut might use star radiations as his compass and speedometer when he is midway on a long space journey. This and other technical problems are studied both at the laboratories on the Benjamin Franklin Parkway and at the Bartol Research Foundation in nearby Swarthmore, Pa.

The Government is not the only one to use these research and development facilities. The laboratories also work for foundations and a great variety of industries to solve problems that range from glaucoma-detection to development of adding machines and nuclear reactors.

There is also the hall of chemistry with a periodic table that answers questions when a button is pushed. In this hall many visitors are attracted to an "odor bar" where they test their sense of smell on various odors.

These Americans on vacation in Philadelphia's Franklin Institute Science Museum would miss one of the best parts of their

visit if they didn't sit in the Institute's Planetarium and marvel at the stately procession of the heavenly bodies across the cloudless, stainless steel sky. There, the stars in all of their glory, from millions of years in the past to billions of years in the future, move at the wave of the lecturer's hand.

Health Hazards From Agricultural Chemicals

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD the attached article entitled "Health Hazards from Agricultural Chemicals" by Dr. Francis M. Pattenger, Jr., which appeared in Let's Live magazine:

HEALTH HAZARDS FROM AGRICULTURAL CHEMICALS

(By Francis M. Pottenger, Jr., M.D.)

(EDITOR'S NOTE.—The following is from a talk, presented September 16, 1960, at Los Angeles, before the Governor of California's special committee on agricultural chemicals.)

Pesticide poisoning from agricultural products is not new. In the 1930's lead and arsenic were so heavily used as to constitute a real hazard and much of the summer diarrheas frequently resulted from its usage. In the mid-1930's we had an epidemic at Pottenger Sanatorium in which 80 patients were stricken with arsenic poisoning, one of whom almost lost her life. Stool samples from this epidemic as well as other occurrences were analyzed for arsenic and diagnoses established. From that time on, at the suggestion of Dr. Stone, Los Angeles County Health Department, I recommended to my patients the use of washing all fruits and vegetables first in sal soda, running water, then in vinegar, and again in running water. This method of control practically eliminated the recurrent gastrointestinal upsets which we had previously experienced. However, following World War II and the release of the chlorinated hydrocarbons pesticides (such as DDT, chlordane, lindane, etc.) to agriculture, we are confronted with a new situation. We found that the simple washing with sal soda and vinegar no longer was effective, and again we began to see gastrointestinal problems.

PARTICULARLY HAZARDOUS

Among the fruits and vegetables that we found particularly hazardous were apples, pears, and many of the leafy vegetables. We sent several samples to the State for analysis with the reports that pesticides were present within legal limits.

There were certain things that were noticeable in these early cases, namely, patients would frequently state that they ate something, usually salad, or a fruit, which caused a burning in the throat and was accompanied within the next few hours with a gastrointestinal upset and, on numerous occasions, in about 10 days to 2 weeks with a pulmonary episode.

FINDINGS IN FAT SAMPLES

Over the years I have taken numerous fat samples and I find that the general average of chlorinated hydrocarbon storage in the fat of my patients today is much higher than it was formerly. For that reason it is very difficult to establish that a given episode of burning in the throat, gastrointestinal upset, diarrhea, exhaustion, cough, disturbances in locomotion, etc., which I frequently see, is due to a recent chlorinated hydrocarbon exposure. They may have had considerable in their food beforehand. (There are very few people in my practice who have not had numerous gastrointestinal upsets since the first of the year.) But, on the basis of information obtained prior to the widespread use of these chemicals, it was possible to assume with a reasonable degree of certainty that the accumulation of organic chloride in the fat was from immediate origin. Now, one can only infer that the episode was acute and probably of pesticide origin.

It has been my general finding that the degree of storage of chlorinated hydrocarbons in the fats of individuals is increasing over the years, which would correspond to the finding of Hays, et al., who reported that it is impossible to get a meal without having some pesticide in it.

I have cared for patients who have been poisoned by chlorinated hydrocarbon pesticides both from agriculture usage and domestic. The most successful elimination of chlorinated hydrocarbon from a given individual occurred in a woman nursing her infant, and during this period lactation she dropped her titer of fat 30 parts per million to 0. She lived in an agricultural area and suffered as a result of agricultural sprays.

GREATER STORAGE

I do know that the public is showing greater storage of chlorinated hydrocarbons in their fat and that if we are similar to experimental animals, over a 10- to 20-year span of our life we may expect to see serious detrimental effects. As a clinician, it is my opinion that chlorinated hydrocarbon pesticide poisoning is a chronic poisoning that affects different individuals differently; that the storage rate depends upon the oxidative level of the individual, such as the low metabolic hysterectomized female who shows far greater storage than her highly active husband, who is carrying on vigorous activity in the open air; that individuals, who have as high a titer as 100–300 parts per million DDT or equivalent in their fat, can go on for weeks and months, possibly years, without difficulty. But if they miss meals or are under a physiological strain of illness or partial starvation which causes them to utilize their own fat, they can be thrown into acute, pesticide poisoning from the chlorinated hydrocarbons stored in their fat. In the same manner as the diabetic may shows signs of hyperinsulinism, if he rapidly drops from a blood sugar of 300 to 185, and can be thrown into shock.

SERIOUS INJURIES

Sensitive people have been seriously injured by community spraying of trees, such as the precipitation of asthmatic attacks and extreme exhaustion. The drift from the crop dusting by airplanes cannot be controlled, and it has been necessary for me to recommend to some of my patients to leave agricultural areas during the season of heavy dusting, or to equip their homes with extensive and expensive mechanical air conditioning and filtering, for both particulate matter and chemical contamination, in order to enable them to live (as hermits) within their necessary environment.

I have had innocent patients who were driving along major highways run into a cloud of agricultural spray, become completely incapacitated, followed by a pesticide pneumonia, which continued to disturb them for not only the duration of the spraying but for a prolonged time afterward.

OFFERS SUGGESTIONS

Inasmuch as Lehman, et al., showed that pigeons could not be housed in rooms that had been sprayed sometime previously with chlordane, one of the chlorinated hydrocarbons; and inasmuch as it has been shown in experimental animals that the increase in the storage of the chlorinated hydrocarbons in their tissues interferes with their general metabolism including their reproduction, and alters their longevity; inasmuch as it has been shown by many workers that there is a continual increase in storage in the fatty tissues and structures of the body, especially the brain, adrenals, liver, and the fat depots; and inasmuch as there is no positive information to date as to the longtime effect of such storage on the population in general, it would appear to me any such toxic material should be eliminated from the environment. I would like to make the following suggestions:

1. That any application of a pesticide, such as the chlorinated hydrocarbons that can in any way escape the locality where it is applied, such as the spraying of trees, markets, etc., in cities, and aerial spraying in agricultural areas, or by any other means in which the drift cannot be controlled, should be prohibited.

2. That all foods that contain residual hydrocarbon pesticides should be so labeled and the relative amount stated.

New Look at Surpluses

EXTENSION OF REMARKS
OF
HON. BEN REIFEL
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. REIFEL. Mr. Speaker, within a short time this body will act upon a bill to provide an additional authorization to carry out our food-for-peace program for the balance of 1961.

The American people would rather see their tax dollars being spent to advance this program than spent to finance continued storage of our abundance in Government warehouses at an average of 16 cents a bushel per year.

At the same time, Mr. Speaker, it ought to be made clear that the expenditures under our food-for-peace program are part of our total foreign aid effort to strengthen friendly nations abroad. These expenditures should not be reflected as part of the Department of Agriculture budget and thus be charged to the farmer.

Under leave to extend my remarks, I include an editorial on this subject appearing in the Yankton, S. Dak., Press and Dakotan, of March 20, 1961:

NEW LOOK AT SURPLUSES

All the evidence that can be mustered suggests that great farm surpluses will be with us for at least the next generation, no matter what farm programs Government devises.

That they represent a heavy drain on the U.S. Treasury is a long established fact. Increasingly, however, those concerned with the problem are trying to find a bright side.

The developing attitude seems to be: "The surpluses are going to be with us, so let's use them, and preferably abroad, where they can do the most good."

Said one agricultural specialist:

"We're a little like a guy with a million dollars. He's got problems. But there are worse ones. It's better to have too much than too little.

"What a potential weapon these reserves are for us in the world economic struggle.

Think what Khrushchev would do if he had them."

With our storage bins groaning with our excess production, no one pretends that more than a small dent has been made thus far. But there has been progress.

Our total farm exports in calendar 1960 came to a record $4.8 billion, up $800 million from the previous year. Exports of farm commodities have in fact been running consistently at high levels for several years.

Regular commercial sales and movement of farm products under the foreign aid program account for a heavy proportion of this. In addition, there has been a growing flow of crops and livestock under a law adopted in 1954 to help develop foreign markets.

This flow includes products involved in donations, barter deals, sales in foreign currencies, famine and other emergency transfers. Continuous effort is made to increase it.

All told, farm exports on the average represent about 15 percent of farmers' annual cash receipts in this country. But the net benefit to farmers may be only from a half to two-thirds of that figure since imports of comparable products partly cancel exports.

Nevertheless, their gain is a clear one. And U.S. leaders—and farm experts—seem heartened that whatever enlargement of exports has occurred has not only helped at home but has served our larger strategic and economic aims abroad.

J. T. Lykes Honored as Man of the South

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, Dr. J. T. Lykes, an outstanding businessman of Florida, Fla., has been selected as Man of the South for 1960 by Dixie Business magazine and its publisher, the Honorable Hubert F. Lee, of Decatur, Ga.

Dr. Lykes and his family have left a deep imprint on his home State and the South. The Lykes family built the largest single cattle operation in Florida, the largest meatpacking plant in Florida and developed the great shipping industry which made their name.

Presentation of the Man of the South award was made at a banquet in Tampa and the occasion was given excellent coverage by Florida newspapers, including the Tampa Tribune.

Mr. Speaker, I request unanimous consent to insert the article from the Tampa Tribune in the Appendix of the RECORD.

J. T. LYKES HONORED AS MAN OF THE SOUTH
(By Bob Fellows)

Joseph T. Lykes, in an occasion of dignity and solemnity received the "Man of the South" award last night before several hundred of the State's top business, political, and civic leaders at a dinner here.

Head of one of the world's largest steamship lines, among other interests, Lykes received the award from Dixie Business magazine, of Atlanta.

U.S. Senator SPESSARD HOLLAND told the group Lykes was "a distinguished citizen * * * who has done a great deal of good, and earned in a real way this award."

LOVE OF THE NATION

The award to Lykes represented a love of the Nation, and particularly the Southland, the privilege of private enterprise, a family which succeeded in their ventures, "and a flower of appreciation and gratitude to a gentleman while he may enjoy the fragrance of that gratitude," Holland said.

HOLLAND said Lykes was the last surviving member of seven brothers who accomplished "so much for themselves, their associates, the State, and the Nation."

The Senator outlined the Lykes family's pioneer activities, saying they were not a high-hat group, but rather a typical American family.

CITES ENTERPRISES

The Lykes family built the largest single cattle operation in the State, built the largest meatpacking plant in the State near Tampa, entered into the citrus industry in a large way, and "developed the great shipping industry which made their name," HOLLAND said.

"They were seven 'cracker' boys who grasped an opportunity," he added, saying that because of the Lykes family, the Nation will never again be caught without fast and adequate merchant service during wartime.

"Just as they became great from the cattle industry and the citrus industry, they saw fit to develop a great shipping industry," HOLLAND said.

EVERY FLORIDIAN PROUD

"And it should make every American, and every citizen, and every Floridian proud."

No other American family could point to the same record, "without making great outcry, but just going ahead," the Senator said. "I can't think about, nor praise too often, the Lykes family record," he added.

Carl D. Brorein, Sr., president of General Telephone Co., acted as master of ceremonies.

Hubert F. Lee, publisher of Dixie Business magazine, made the award to Lykes, saying the industrial leader represented "fine character and Christian principle."

Lee said Lykes was named for the honor by an overwhelming majority of votes from not only business leaders in the South, but also from foreign countries.

Accepting the award Lykes said:

"The South has been blessed with superior climate, abundant natural resources, and above all—citizens of outstanding character. The South has been good to Lykes, and it is my conviction that my associates in Lykes will continue their full measure of effort in the continued progress of our Southland."

"I accept this award with deep appreciation and humility on behalf of several generation of the Lykes family, and our associates."

A trustee of Washington and Lee University, from which he graduated, Lykes holds an honorary degree of Doctor of Humanities from the University of Tampa. He is a director of Tampa Electric Co., Seaboard Air Line Railroad Co., Gulf and South American Steamship Co., and the American Merchant Marine Institute, among other important posts.

He was born in Brooksville in 1886, and is married to the former Margaret Keenan, of Galveston, Tex. They have three children, Joseph T. Lykes, Jr., of New Orleans, and two daughters, Mrs. R. C. Colton, of New York, and Mrs. John F. Carrere, of New Orleans.

Commonsense in the Congo

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DEROUNIAN. Mr. Speaker, the following article by Marguerite Higgins in today's New York Herald Tribune, gives keen insight in how not to win in the Congo:

THE EXCITED NATIONS
(By Marguerite Higgins)

LEOPOLDVILLE.—Soviet blasts at United Nations Secretary General Dag Hammarskjold are, of course, built on lies and intended to destroy the world organization. But it is also obvious that the nefarious intentions of the Russians are no reason to rule out another and necessary kind of criticism—criticism aimed at the exposition of mistakes with a view to their correction if possible.

It should not come as a surprise to the American people that the United Nations here, being made up of countries with differing, often clashing, interests, and led by human beings whose fallibilities do not vanish with the donning of the U.N.'s blue hats, can and often does do wrong.

And the greatest mistake made by the U.N. has been to incur the hostility of the Congolese people, the Congolese Army, and the Congolese Government of President Joseph Kasavubu. The hostility is bound to continue so long as the U.N. is guilty of the attitude that brought the reaction on in the first place, its attempt to ram decisions down the throat of this Government without consultation and whether the Government likes it or not.

The comment most often heard around here from the U.N. officials is a revealing one: "The only way to handle the Congolese is to treat them as children."

Therein lies the clue to mistake No. 1. For the Congolese violently object to being treated as children, confronted with accomplished facts and actions taken in defiance of this allegedly sovereign regime's best estimate of its own national interest.

The dispatch here of Prime Minister Nehru's Indian troops is an example of an action taken by the U.N. in defiance of the publicly expressed opposition of President Kasavubu and every one of his ministers. The Congolese object for the simple reason that they believe that India, being allied to left-leaning Ghana, this country's bitter enemy, simply is not neutral.

The question of attitude begins with the reign here as director of the U.N. of Rajeshwar Dayal, an Indian national. According to dispatches printed in the local Congolese press, Mr. Dayal in a speech to U.N. corerspondents described the Congolese army as a rabble and called General Mobutu, army chief of staff, "a bandit." This press dispatch does not come as a surprise as Mr. Dayal has said the same thing often in private in Leopoldville.

And General Mobutu, who happens to be intense, hard working, intelligent and about as far from banditry as is Dayal himself, has had this to say about the news dispatch: "I had always thought it was the function of a diplomat to be diplomatic. But perhaps it is just as well that Mr. Dayal's thoughts are on the record. Perhaps it will make it

clearer why his return would be most unwelcome."

Before coming to this part of Africa, this correspondent had the occasion to interview statesmen of every single one of the new African states admitted to the U.N. The leadership of Leopoldville from President Kasavubu on down compares favorably with the best of them. Even George Washington, Alexander Hamilton, Thomas Jefferson, and Abraham Lincoln all put together would have had an incredibly difficult time trying to master the chaotic circumstances confronting this government and in many ways the wonder is that the Kasavubu regime has survived at all.

According to General Mobutu, "The mutual suspicion between ourselves and the U.N. does not need to exist. In the days when Ralph Bunche was here there was real cooperation and I am not saying that just because you are an American. But this neocolonialism—this imposition of the U.N. will irrespective of either our wish or our knowledge—can you think of any nation in the world that would welcome this? And if you Americans blindly and unconditionally go along with this policy, it cannot help in the long run but to undo the good relations we want so much to have. Has Washington really thought through the meaning of this precedent the U.N. is trying to set? Are you going to insist on carrying out a mandate from the Security Council if this mandate is against the will of the nation most concerned—the Congolese themselves? Are you Americans really anti-Communist? If you are, why do you ask us to surrender our guns to a U.N. force that so often has sided with the leftists? The whole world knows that it was the U.N. that let the rebel (Stanleyville) forces into our Kindu Province and then prohibited us from counterattacking. And you ask us not to be suspicious."

Of late the U.N. headquarters here has been dubbed the excited nations because of dire pronouncements about the perils of letting the Congolese run such things as the unloading of U.N. vessels at the port of Matadi. Yet even though the U.N. officials have not been permitted back into Matadi, the supplies including those of the U.N. are coming off the ships right on schedule under purely Congolese management.

Observed a Western diplomat: "One way of fostering a sense of sovereignty and responsibility is to treat a nation as both sovereign and responsible. It is not too late to begin."

Forty-third Anniversary of the Proclamation of Independence of the Byelorussian Democratic Republic

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. LIBONATI. Mr. Speaker, the Byelorussian-American Association, Inc., with national headquarters at 401 Atlantic Avenue, Brooklyn, N.Y., are celebrating the 43d anniversary of the proclamation of independence of the Byelorussian Democratic Republic on March 26, 1961, at the Biltmore Hotel, New York City.

It is an honor to note my sentiments on behalf of the recovery of the independence of the Byelorussian people now held in servitude under Soviet domination.

It is organizations, such as this one, whose patriotic support, together with a unified program of disseminating information as to the culture and historic significance of their contributions to the civilization of our times that instills a great admiration on the part of all Americans.

A request for a telegram, as follows, is indicative of our feelings in the sad plight of the Byelorussian Republic:

MARCH 26, 1961.

Mr. CONSTANT MIERLAK,
National President,
Byelorussian-American Association,
New York City, N.Y.:

Byelorussia's struggles to regain its freedom can be aided in purpose by establishing Byelorussian broadcasts by the Voice of America.

It is for our Government to do everything possible to further the dissemination of information among the Byelorussian people who are now under the Soviet yoke. The spirit of independence is still alive among the Byelorussians, even though the Republic with its puppet government is still smothered in the covering structure of the Soviet Union leadership. It is a sad commentary that following the 41 years of Byelorussian independence, she has suffered the loss of 6 million people in 20 years. The thousands of Byelorussian people living in the free world are carrying on the fight to acquaint the world with the plight of their compatriots, in their exploitation by Russia.

These brave people must be given courage and help in order to overcome and overthrow their Communist enemies. We must never forget Byelorussia's plight and we must show the greatest vigilance toward ultimately freeing her from the captors of her people.

Congressman ROLAND V. LIBONATI.

Ex-Ambassador Wires Protest to President on New Orleans Integration

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, the President has strongly endorsed efforts to force integration of the people of New Orleans, La., although the people, themselves, have resisted every attempt to usurp their laws and traditions.

The Honorable Hugh G. Grant, a former Minister to Albania and Thailand, pointed out in a telegram to President Kennedy that the right to operate segregated schools has never been prohibited to the States by the Constitution.

Mr. Grant also reminded the President that the separation of the races had its beginning in the North. He cited the famous case of Roberts against City of Boston in which the court in 1849 upheld that city's right to maintain segregated schools.

I commend to the Members of this Congress the text of Mr. Grant's telegram and the accompanying news article that appeared in the Augusta (Ga.) Chronicle on February 27, 1961:

EX-AMBASSADOR WIRES PROTEST TO PRESIDENT ON NEW ORLEANS INTEGRATION

A protest against President Kennedy's approval of efforts to integrate New Orleans public schools was wired to the President Sunday by Hugh Grant, of Augusta, former Ambassador to Albania and to Thailand.

The telegram read:

"My attention has been called to press reports today quoting you in a telegraphic message to the U.S. Civil Rights Commission meeting in Williamsburg, Va., as strongly endorsing efforts of those who are trying to carry out court-ordered integration of New Orleans public schools as follows:

" 'This is no time for schools to close for any reason, and certainly no time for schools to be closed in the name of racial discrimination. If we are to give the leadership that the world requires of us, we must be true to the great principles of our Constitution.'

"Mr. President, as a fellow alumnus of Harvard University who majored there in the study of government, I wish to suggest that you take a refresher course of study in American Government, giving particular attention to those great principles of the Constitution of the United States governing the proper relationship between the States and the Federal Government. I am sure you will discover in such a study that the right to operate racially separate schools has never been prohibited to the States by any provision of the Constitution. In this connection, may I call your attention to the significant fact that the separation of the races in the schools had its beginning in the North—not in the South. For instance, the right of your own native city of Boston, Mass., to maintain racially separate schools was upheld in the famous case of *Roberts* v. *City of Boston* in 1849.

"May I suggest further that if our so-called world leadership requires that we surrender a cornerstone of our American political structure, to the detriment of our own people, then we should take a long, hard look at the value of such leadership.

HUGH G. GRANT."

Testimonial to William F. Casey

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. CONTE. Mr. Speaker, I consider it an honor to place this speech, which was my privilege to deliver Saturday night, March 25, 1961, in Greenfield, Mass., in honor of a great American citizen, William "Bill" Casey, in the Appendix of the RECORD:

SPEECH BY THE HONORABLE SILVIO O. CONTE, GIVEN IN HONOR OF WILLIAM F. CASEY AT THE TESTIMONIAL BANQUET HELD IN GREENFIELD, MASS., SATURDAY NIGHT, MARCH 25, 1961

It gives me great pleasure to be here this evening. Above all, I consider my presence here a distinct honor. It is not often that praise can be aired in public, nor is it often that tribute is made until a man is gone. But this evening, we are going to honor a man who is very much alive and who is with us. We are going to say those things we have carried in our hearts—things we have

known so long but kept within ourselves or shared them in the confidence of others—our sincere feelings about Bill Casey.

I know that we have often heard it said, that this person or that one, has restored our faith in humanity. I believe that our consideration should be over the key word "humanity." By having lost faith in our fellow men we are opening the doors to an attitude toward life of cynicism, suspicion, pettiness, and even hate. There are those humans who have stalked through history to bring misery and suffering to their fellow men. Yet, despite these black moments in the chronicle of man's time on earth, we find those bright lights who restore our faith in the good * * * and that the eternal things of value must have their foundations in virtue alone. Along with the Judases, Hitlers, and Stalins, who have portrayed the baseness to which humans can descend, let us never forget that we have the greater balance on the scale of humanity represented by such men as a St. Francis, an Abraham Lincoln, and just recently in our time, a Dr. Dooley.

Of this group who spend their lives restoring man's faith in himself in his power to do good, to leave everlasting traces of the time spent on this earth displaying the values which have the eternal stamp of this group, Bill Casey certainly belongs.

If I may, I would like to review Bill's life to date. He is a native of our great Commonwealth, and came from Peabody, his birthplace, here to Greenfield in 1907. Before World War I he enlisted in the Navy and served aboard the U.S.S. *Nebraska*. Long before we ever heard of amphibious operations, Bill Casey participated in the landings at Vera Cruz, Mexico, in that famous expedition. During the Great War, he served aboard the armored cruiser U.S.S. *Seattle*, and he was in convoy with the first contingent of American troops to France.

Interesting enough, Bill transferred to the infant submarine service and saw duty in the Atlantic on submarine hunting. After the war, he worked for the Lake Torpedo Boat Co., testing submarines for delivery to the Navy. I understand that these tests consisted of dives to test the hull strength of the craft. It was men like Bill, early pioneers in submarines, who led the way to the great fleet we have today.

After being hospitalized for war injuries, Bill returned here to Greenfield. This was the best move he ever made. I am sure that everyone in Greenfield feels the importance of that decision.

He opened an automobile electrical shop which, from 1931 to 1952, was located on Main Street. In 1952 he assumed the post of veterans agent for Greenfield. But during the years I have spanned so briefly in my biographical sketch, Bill Casey was not by any means inactive in many civic activities. He was commander of the John F. Harrington Post of the Veterans of Foreign Wars in 1926 and 1927, and he was also first county commander for that organization. Since 1933, he is president of the Greenfield Patriotic Societies, and has served Greenfield on many committees like the Fourth of July, Armistice Day, and the February anniversaries. He was a Cubmaster of the Newton School Cub Scouts from 1940 to 1944. As if these activities were not enough to wear down any man, Bill has given of himself to even more. Board of the Registrar of Voters, secretary of the Greenfield Finance Committee, Military Manpower Committee during World War II, and since 1951, director of civil defenses for Greenfield. There are so many more things he has done, and is currently undertaking, that he seems like a "one man" city of Greenfield. It would take many people to do all the things he has, and in the manner he has, over the years. I know that Bill has done all of these things, and will continue to do them, because he has faith in his fellow men and he derives that lasting merit which comes from dedication to his service.

What emerges so clearly from his biography, is not the quantity of activities, organizations, or endeavors—for they in themselves, could be unimportant and valueless—no, what has made a great impact on us, is the quality of the motivation which Bill Casey has constantly kept as his ideal.

For I know, as do all of us here, that he seeks no reward, needs no praise, nor does he want a public display of his works. For indeed, Bill Casey is one of the great examples of what men should be, of what men want to be, and of what men can do. His humility would prevent hollow praise, and his sacrifices do not demand vocal approval.

To reassure you, Bill, that we are grateful, let me say that what you have done rests deep in our hearts, spirits, and minds—there, like a seed, your deeds prompt our sincere thanks and set before us the great examples of those values which have virtue as their basis and eternity as their objective. Because of you, we have once again come to understand the immortal fact that man can be a power for good. That good in itself, is sufficient. In us, Bill, you have cast living monuments, and you have set up again within us all, the faith and hope in humanity, in man himself, which we all need.

I know that in the years ahead, we shall have the unique benefits of your virtues to continually guide us, to lead us, and to refresh our dampened spirits.

For these reasons, we speak without shame or embarrassment—and I am positive that everyone here, in their hearts and minds, join me in saying that we are profoundly grateful for not only what you have done and will do, but because you came to live among us and with us you shall remain forever.

United States Can't Afford Strikes Today

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. MONAGAN. Mr. Speaker, the problem of the nationwide strike, and the strike which disrupts public services is one which increasingly draws the attention of thinking Americans.

As a contribution to sober thought on this difficult problem, I should like to call attention of the House to the following article by Rev. William J. Smith, S.J., which apeared in the Catholic Transcript of Hartford, Conn., in its issue of March 16, 1961.

Since Father Smith is customarily an apologist for the organized labor movement, his concern and his suggestions have particular significance.

I sincerely hope that the proposals of reasonable friends of labor like Father Smith will bear fruit, so that legal compulsion will not become necessary to secure the public welfare.

The article follows:

PROBLEM MUST BE SOLVED—UNITED STATES CAN'T AFFORD STRIKES TODAY

(By Rev. William J. Smith, S.J.)

The recent strike of the flight engineers on the airlines cost the companies an estimated $25 million in about a week's time. The frustrated, potential passengers suffered a proportionate loss in time and money. Coming as it did on the heels of the railroad-tugboat crisis, this stoppage shook up a lot of people—mentally, physically, and emotionally.

The inevitable showdown on this type of organized chaos cannot be far off. The question must be asked and a definitive answer given: "Who is to make the decision when a crisis arises that is loaded with potential harm to the Nation as a whole and to the common good?"

No one of knowledge, experience, and ability with whom I am acquainted wants compulsory arbitration. Management doesn't want it. The reasonable labor leader doesn't want it. The capable public official, who understands the problem, doesn't want it.

Regardless of what anybody wants or doesn't want, strikes of this kind must go. As a matter of fact, it is becoming more and more difficult to justify any kind of strike in America today.

Not so many years ago we were just evolving from a condition of monopoly capitalism in which management held most of the cards. Trade unions were weak. The public was ignorant of labor relations. The Government had little or no machinery to deal with union-management disputes. The spirit of individualism was rampant. Mediation, conciliation, and arbitration were undeveloped. Resort to the strike was about the one effective means the labor unions could take to protect their rights.

In a sense, we could afford work stoppages in earlier years. Over and above their economic benefit to the workers, they had an educational value for the general public as well as for trade unionists and management.

Today, things are very different. Too often our backs are to the wall in the serious threats we must face in the international arena. The American economy must get moving and keep moving. In a word, our national life and security is at a turning point; at the crossroads of the future. We just can't afford strikes.

The present administration in Washington is determined to play its part in attaining rational solutions to union-management disputes. We have experienced arbitrators in abundance. In practically every locality there are enough men with sufficient grasp of union-management affairs to play the part of arbitrator. Most of the States have labor boards, mediation boards, and other services which can be used to obviate the drastic action of the strike.

On the national level, in Secretary of Labor Goldberg we have one of the most distinguished and talented men in the field. His office is equipped to render every needed service no matter how serious a situation may arise. The U.S. Conciliation Service has talent galore.

We have need, great need, of a thorough study of the long-neglected problem of automation and the harmful consequences that it is bringing in terms of unemployment.

We have need, and great need, of bringing our top industrialists, our labor men and public experts together to diagnose the problem of the wage-price spiral and tangent issues.

We have need of digging deeply in the causes of strikes and to find remedies for the ills that spring from these causes.

We have a hundred and one problems in industrial relations that must be studied and solutions for them found, as far as it is humanly possible to find such solutions.

We have, above all, the need of developing the determination on the part of all concerned that a substitute for the strike can be and will be found with justice to all. To date the thinking has centered around concrete, specific cases and crises. We should start thinking in terms of isolating and destroying the virus itself.

It is as necessary for us to formulate and develop that determination and that attitude of mind as it is for the medical profession to be determined to eliminate cancer and its causes; for educators to find ways and means to train American youth; for legislators and private industries to eliminate slum conditions.

If human society is to be really human, the citizens must learn to act habitually on the law of reason. No nation can reach its full potential while a large segment of it accepts the principle of force as an ordinary means of settling disputes.

We have all the means today that are necessary for solving industrial conflict, if not in an amicable way, at least in a reasoned way. What is lacking is the firm resolve to reject the principle of force as a substitute for peaceful negotiation.

Where there is a will there is a way. We can find that way if enough people in influential positions really want to find it. We will find it, if the public insists strenuously enough that it must be found.

If we can find ways and means to reach the moon, given the same attention why shouldn't we be able to reach the minds of men?

Broadcasters' Responsibility for Improved Programing

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. HARRIS. Mr. Speaker, Gov. LeRoy Collins, the new president of the National Association of Broadcasters, has made important proposals looking to the elimination of excessive violence on television programs and the increase of outstanding drama, fine music, public information and educational programs during prime evening hours. In an effort to support Governor Collins' drive for improved programing, I have written a letter to him and I would like to use this way of informing other members of Congress and the public of the support which the Committee on Interstate and Foreign Commerce hopes to give in this connection to the National Association of Broadcasters. The exchange of correspondence with Governor Collins is as follows:

MARCH 20, 1961.

Hon. LEROY COLLINS,
President, National Association of Broadcasters, Washington, D.C.

DEAR GOVERNOR COLLINS: In the past, whenever this committee has received complaints with regard to television or radio programs from viewers or listeners, or had referred to it by individual Members of Congress, complaints received by them from viewers or listeners, it has been the policy of this committee to transmit such complaints to the Federal Communications Commission with a request that such complaints be placed in the file of the particular station to be given attention at license renewal time.

The committee has always advised complainants and Members of Congress that the primary responsibility for programing rests with the licensees, that the Communications Act of 1934 specifically prohibits censorship by the Federal Communications Commission, and that the Commission's responsibility with regard to programing is limited (except in cases where a program violates specific criminal statutory provisions) to an overall review of programing at license renewal time in the light of promises made by licensees in their license applications.

In view of the strong stand which you as the new president of the National Association of Broadcasters have taken with regard to the responsibility of broadcasters in connection with programing, especially with regard to the need for eliminating excessive violence and for increasing "blue ribbon" programing, the committee will be glad to assist you in your efforts by furnishing you with copies of communications received by it or referred to it which deal with radio and television programing.

It has always been my conviction which I have expressed in speeches before broadcasters that the licensees and not the Government must assume the primary responsibility for improved programing, and I share your feeling that the National Association of Broadcasters can greatly assist in bringing this about—be it through the formulation of improved codes of good conduct or through other methods such as the plan which you suggested aiming at increased high level television network programs during prime evening hours.

I trust that our close cooperation with your organization in these matters will produce the results which we are seeking.

With kindest regards,
Sincerely yours,

OREN HARRIS,
Member of Congress.

NATIONAL ASSOCIATION OF BROADCASTERS,
Washington, D.C., March 23, 1961.

Hon. OREN HARRIS,
Chairman, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I want to thank you for your letter of March 20, in which you extended the offer to furnish to me copies of complaints received by your committee which deal with radio and television programing.

Your sharing the conviction that the licensees and not the Government have the primary responsibility for programing is another indication of your dedicated and informed interest in broadcasting and its service to the American people.

I gratefully accept your offer. I feel confident this information will prove helpful in administering the self-regulatory efforts of the radio and television codes. You are aware, of course, that favorable comments as well as complaints will assist in making the necessary assessments for carrying out our program. Will you also forward copies of these?

With appreciation and high regards, I am,
Sincerely,

LEROY COLLINS,
President.

MARCH 24, 1961.

Hon. LEROY COLLINS,
President, National Association of Broadcasters, Washington, D.C.

DEAR GOVERNOR COLLINS: I have your letter of March 23, 1961, replying to my letter of March 20, 1961. I am glad you feel that the transmission of comments received by the committee with regard to radio and television programs will be helpful to the broadcasting industry's self-regulatory efforts.

Of course, the committee will include any favorable comments which it might receive along with any complaints which reach the committee. As a former Governor of the great State of Florida you will appreciate, however, that constituents usually are more ready to reach for the pen to express dissatisfaction with some occurrence than they are to convey their pleasure over a job well done.

With kindest regards,
Sincerely yours,

OREN HARRIS,
Member of Congress.

Federal Aid to Education: One View

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. QUIE. Mr. Speaker, it is my conviction that the surest route to a sound decision on the entire Federal-aid-to-education proposal is an atmosphere of free and unfettered expression of differing views. In that spirit, the March 24 edition of Life magazine presented some of its views on this subject, and I believe my fellow Members would be interested in reading those views:

SCHOOL AID AND RELIGION

The hottest opposition to President Kennedy's school bill comes not from those who sincerely doubt the need or wisdom of such massive Federal aid. It comes instead from the President's fellow Catholics who resent the bill's discrimination against the 6.5 million students (most of them Catholics) in church and private grade schools. The National Catholic Welfare Conference insists that such schools be eligible at least for Government loans. And House Leader McCORMACK, like many other Catholics, will oppose the bill unless it is so amended.

Kennedy justifies this discrimination in his bill on constitutional grounds; that direct aid to any church school would breach the first amendment's so-called wall of sepation between church and state. In taking this stand Kennedy is fulfilling a campaign promise but he is also cloaking a political decision in constitutional clothing that doesn't fit it.

He cites the Everson case of 1947, in which the Supreme Court allowed public buses to serve parochial schools but indicated it would go no further. A year later, in the McCollum case, it even forbade religious instruction on public school premises. But in 1952, in the Zorach case, the Court upheld the "released time" accommodation for religious teaching and remarked, "When the State encourages religious instruction or cooperates with religious authorities it follows the best of our traditions." The narrow-mindedness of the McCollum rule was excoriated by so great a (non-Catholic) constitutional authority as Edward S. Corwin. Another, Arthur Sutherland of Harvard, remarked last week, "If I were President, I could think of no clear constitutional reason to veto a bill aiding church and private schools." Still another, Philip Kurland of Chicago, says "Kennedy is wrong." The least that must be said is that the constitutional issue is uncertain.

Is Congress considering a "law respecting the establishment of a religion," which the first amendment forbids, or merely aiding education? Congress clearly has the power to do the latter. Moreover, it has the duty not to "prohibit the free exercise" of any religion and while discrimination is not prohibition, it is not equal justice either.

Catholics have long felt a grave injustice in the fiscal segregation to which their schools are subjected by the States. They pay taxes for the public schools but maintain their own as well because they believe that religion is an essential part of education.

The authors of the Constitution would have been surprised to hear that it penalizes that belief. The Northwest Ordinance of 1787, our first national venture in school aid, reads: "Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." As the Supreme Court itself has said, the first amendment did not make our Governemnt hostile or even indifferent to religion.

Among other arguments for discrimipation against private schools, one is the assumption that only the public school system is a fit vehicle for the Government's interest in education. Catholics reply that the pluralistic nature of our society has no room for an "official" school system. Some Protestants would agree with this much but argue that the Catholic school system encourages too strong a Catholic "separateness" and an intolerance toward other aspects of American pluralism. Since five-sixths of all private school students are in fact in parochial schools the practical effect of nondiscriminatory Federal aid would be to strengthen the Catholic schools. But Protestants and Jews might be asked whether the comparative paucity of Protestant and Jewish church schools indicates a lack of seriousness about religious education. Certainly education needs all the going concerns it can get: the greater variety the better and the more religious schools the better, too.

Whatever the fate of Kennedy's bill, it is healthy that the discrimination issue has been aired. There is a grave issue of public policy and social justice here which will not be settled until the argument, in the courts or out, has gone much further. Democracy depends on education; but does that mean it can depend primarily on nonreligious education, which is often in effect antireligious? Protestants, Catholics, and Jews have a lot more thinking to do on this vital subject.

A Pioneer Project in Medical Care

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. RIEHLMAN. Mr. Speaker, the city of Syracuse, N.Y., which I have the privilege of representing, has long been recognized as one of the most progressive communities in the country. The city has pioneered in the fields of housing for the elderly, housing for lower-income groups, and urban renewal. The Syracuse story has been second to none in demonstrating what the foresight, initiative, and drive of a community can accomplish.

Syracuse has now embarked on another pilot program, one which I feel will give ample evidence of the benefits accruing to all concerned when citizens set out to deal with a community problem through community action.

Pursuant to unanimous consent authority, I include at this point in the RECORD, an editorial which appeared in the Syracuse Herald-Journal of March 20, 1961:

A PIONEER PROJECT IN MEDICAL CARE

Medical care for the aging is receiving a major share of public attention, mostly in the abstract. The talk often is in general terms, about all the aging, and all the proposed programs to help a constantly enlarging segment of the population.

A project opened in Syracuse last week, the James Geddes Health Center, deals in specifics—the aging themselves, and their health problems. Besides the 500 residents of the Geddes Homes, the center will serve the entire area bounded by South Geddes, West Fayette, South West, and West Onandaga Streets.

It will be active service in the sense that it involves attempts to contact others besides those who actually ask for help. Public health nurses have visited each elderly resident of the housing development to learn their problems and explain what aid is available.

The center itself, in the basement of the development, has 17 diagnosis and treatment rooms, including facilities for physical therapy.

This is a pilot program of the Syracuse Health Department, and the Syracuse Housing Authority. Health Commissioner David Bigwood terms it "an aggressive attempt to get in touch with the elderly, to define their problems, and to make available to them the resources of the community."

The ultimate benefits, obviously, will also extend to the entire community.

Olivetti Aids Underwood Corp.

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DADDARIO. Mr. Speaker, about a year and a half ago, an unusual development in the control of American business corporations took place in my home city of Hartford. An Italian firm, Olivetti Co., bought into and obtained control of a respected old line American corporation, the Underwood Corp.

There were, at that time, some misgivings about what might happen. Olivetti was in competition with other American firms, both in this country and in foreign markets. It was recognized that Olivetti was an aggressive, intelligent firm, with a great record of accomplishment abroad, but what plans did it have for its new American affiliate? Would it affect employment?

It did affect employment, and for the better. Under Olivetti management, Underwood has made some notable gains. I offer for the RECORD an article which appeared in the New York Herald Tribune last Sunday outlining this remarkable case of reverse lend-lease of managerial talent. I also offer a letter written by a distinguished and respected labor official and former mayor of the city of Hartford to the agent of another typewriter company in which he expresses the view of the Underwood union regarding the accomplishments of the new management.

I believe these reports show what is often forgotten but what is in the textbooks of economics—that alert, aggressive salesmanship and management are important factors in the progress of any firm, and that this managerial know-how is not just exclusively a domestic possession.

The achievements of Olivetti with Underwood deserve to be noted and recorded. I recognize that a fresh approach and the psychological determination of the new management may have played a large part in the success, but I believe that it is a fundamental acknowledgment that confidence and ability may not only be found abroad, but may be exported as well.

The article and letter follow:

OLIVETTE AIDS UNDERWOOD BY U.S. RX FOR EUROPE—BOOSTS JOBS AND RETURN OF DOLLARS

(By Joseph R. Slevin)

WASHINGTON.—An Italian company is giving the United States a dose of the medicine this country has been prescribing for other nations since the end of World War II and the remedy is going down very well indeed.

The story is summed up in a two-page memorandum that is being read with deep interest—and considerable amusement—by top advisers to President Kennedy.

It's the case history of Olivetti Co., the up and coming Italian office-machine manufacturer, and of the things that happened after it obtained control of Underwood Corp., the Hartford, Conn., typewriter maker.

What the United States told the devastated Western European countries after World War II—and since has been preaching to underdeveloped countries—is that they must attract foreign capital, must learn from the technical know-how of industrialized countries, must improve their productivity and must specialize in products they need at home and can export.

PEPS UP UNDERWOOD

Olivetti gained control of Underwood in the fall of 1959 and completed the takeover in mid-1960.

Underwood had been slipping, but it's been making notable strides since the merger and the turnaround has been due to the production and marketing know-how that have been contributed by the Italian company's efficient management.

One of the big U.S. contentions over the years has been that managerial skill goes hand in hand with private capital investments and Olivetti has been giving a brilliant demonstration of the American theory.

The Italian company streamlined Underwood's production and modernized its organizational structural. It eliminated unprofitable products and concentrated on selected and tested merchandise.

Olivetti saw to it that Underwood developed new models. Total production last year was three times as big as it was in 1959.

Productivity has been climbing, too. Overall production costs were slashed 30 percent last year.

SENDS FUNDS HERE

And Olivetti has sent funds into the United States. Its total contribution to Underwood in cash and in credit totals a sizable $51 million.

One of the most impressive Olivetti contributions has been the chalking up of a sharp rise in employment at a time when the United States has been in a recession.

The Underwood work force at Hartford fell to a low of 2,500 in early 1960, but it has been gradually rising under the Olivetti management and at last reports had climbed to 3,300. Wages were boosted 5 percent in 1960 and another 5-percent hike will take effect automatically this year.

GREATER HARTFORD DISTRICT LODGE
No. 26, INTERNATIONAL ASSOCIATION OF MACHINISTS,
Hartford, Conn., December 27, 1960.

Mr. P. A. FILLER,
Salesman, Butler Typewriter Co.,
Warren, Ohio.

DEAR MR. FILLER: In answer to your letter of December 21, concerning the products of the Underwood-Olivetti Corp., may I say that if it hadn't been for the purchase of the old Underwood firm by the new management, many of our union members now gainfully employed here at the Hartford plant might have been among the unemployed of this community.

We have only praise of the new management. Since the Olivettis assumed direction, control, and management, we have had an increase in employment of approximately 30 percent.

The Olivetti management group have proved to be understanding, liberal, and eminently fair in our relations with them.

They have invested large sums of money in the corporation in order to improve physical facilities, modernize the plant, and make the entire organization more efficient.

Our contract and wage structure, negotiated with representives of the new management is one of the best in the industry.

Other managements should be encouraged to emulate the Underwood-Olivetti management, and to invest in American industry, and American workers as has been done in this case.

We use Olivetti products in our own union offices here, and would urge other unions to do the same. As you may know, this company has a reputation in Europe as one of the most liberal and enlightened industrial organizations in the world.

If there is any other information you desire, please feel free to write.

With best wishes.

Sincerely yours,

JOSEPH V. CRONIN,
Business Manager, District 26, I.A.M.

P.S.—Incidentally, at a time when the Remington Rand Corp. has announced the removal of its standard typewriter operations to Europe, for manufacture there, it is refreshing to note that Underwood-Olivetti manufactures its standard typewriters here in Hartford, and sells them in competition with other firms, in various parts of the world, including Europe.

Urgent Need for Adequate Civil Defense

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks, I should like to include the following column by Inez Robb appearing in the Topeka Capital on March 16:

URGENT NEED FOR ADEQUATE CIVIL DEFENSE
(By Inez Robb)

One way or another it has always been difficult to sell people on salvation. But if civil defense is to be anything but a continuing fiasco, then salvation in case of nuclear war is going to have to be sold to the American people. Furthermore, it'll require a hard sell.

That, in one woman's opinion, is the major problem of Frank B. Ellis, Director of the Office of Civil and Defense Mobilization who is preparing a new program of civilian defense for presentation to the President.

Surely, few persons will want to argue with Ellis' estimate of the present civil defense program as completely inadequate. Worse, the program has been completely unrealistic from the beginning.

More than 10 years ago I was horrified at New York City's first civilian defense exercise. As one who had had some small experience with non-nuclear bombing in England and Africa in World War II, I was appalled that officials could pretend to themselves or the public that persons were safe as long as traffic was stopped and everyone was off the streets and sidewalks.

The fact that hundreds of thousands of persons were herded off sidewalks and crowded behind plateglass windows on the city's major avenues was, and is, a wanton mockery. Even a small World War II bomb would turn that glass into lethal shards that would cut hapless persons to ribbons.

That has set the pattern for every civil defense exercise since, an exercise in futility that is dangerous, useless and deceitful. How many persons have been cheated into a false sense of security by such tactics?

Part of the congressional and civilian indifference to national salvation in case of nuclear attack is probably traceable to the fact that all of us, confronted with the terrible statistics of nuclear destruction, stick our respective heads in the sand.

It is almost impossible for us to grasp the fact that a minimum of 20 to 40 million of use could die in the first atack and that as many as 85 million, or half the Nation's population, can be casualties of the initial strike.

But the Government and its proper agencies, if they want the civilian population to survive and the Nation to continue, are going to have to force us to understand and digest those appalling figures before it can hope to make us interested in our own salvation.

No one is going to be interested in a shelter program unless the Government leads the way and sells that program.

In the past various Federal agencies have estimated that an adequate shelter program would cost a minimum of $40 billion; maybe more. No one will deny that that is a tremendous sum—to spend on civilians. The Armed Forces get that much annually.

But we should either make up our minds that the continuity of the United States is dependent, per se, upon the continuity of civilian life and act on that conviction, or we should decide that salvation is too expensive and we aren't worth the cost of saving, and then scrap such fumbling civil defense as we have had up to now.

The one essential reform is that we stop kidding ourselves that the present civil defense program guarantees the Nation's survival. I don't want to be buried by indifference any more than I crave to be buried by Khrushchev. First, we need a tough educational program and, second, the courage to face up to the fact that salvation can't be had on the cheap.

The Politics of Pollution

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD, an article entitled "The Politics of Pollution," by Mr. William L. Rivers appearing in the March 30 edition of the Reporter magazine.

That article tells how 50 million pounds of solid sewage are dumped daily into waterways that provide our drinking water, water for industry, water for recreation and other uses.

This is a well-thought-out commentary on why Americans must begin to react vigorously to clean up the soiled and foul waters of our land. The frightening instances mentioned in this article are repeated daily in almost every corner of our land. Unless some serious action is taken to rectify the frightening situation it sets forth Americans face not only a growing and calamitous water shortage in this country, but a desperate problem of danger to the health of our people from our dangerously polluted waters.

The article follows:

THE POLITICS OF POLLUTION
(By William L. Rivers)

Last September, the U.S. Government filed a suit against St. Joseph, Mo., the first time the Federal Government has ever brought suit against a city. The suit was filed in desperation, after 3 years of unsuccessful attempts to persuade the city to stop polluting the Missouri River.

St. Joseph, which publicizes itself as the "home of the pony express," also has some old-fashioned notions about sanitation. The city and its industries have been pouring raw sewage into the Missouri River for more than a century.

On occasion the waters south of it have become so thick that some of the hardier entrepreneurs in the area have taken to their boats and worked up a good business peddling the grease they skimmed from the surface. A Public Health Service engineer who inspected the sewage flow into the river testified that it is not safe to come in contact with the water.

The Missouri River is a boundary between Kansas and Missouri. Twenty-four miles south of St. Joseph, the city of Atchison, Kans., takes its water supply from the polluted river, Atchison goes to extraordinary lengths to purify the water, but with limited success. An Atchison resident testified during a Public Health Service hearing: "We have grown accustomed to it, but at times * * * the chlorine content was such as to cause a serious odor and also some sickness among people in Atchison." His wife's parents had moved to town to enjoy the amenities of urban life, he said, but they were hauling their drinking water in from the farm.

CRACKING DOWN

The U.S. Public Health Service brought health officials of Kansas and Missouri together for a conference with spokesmen for St. Joseph and 18 of its industries in June

1957, but little was accomplished until the Federal Government pushed the water pollution board of Missouri into cracking down. In 1958, St. Joseph held a bond issue referendum for a sewage-treatment plant. The voters rejected it. A year later, the Public Health Service held a 5-day public hearing that resulted in a notice to the city and the 18 industries to stop polluting the river; they were given a schedule that was designed to get sewage-treatment facilities into operation by June 1963.

The industries that had been polluting the water gave in at that point. When city officials rejected as inadequate their offer to contribute $1,350,000 toward construction of a plant that would serve the entire area, industry leaders got together and decided to build their own facilities. St. Joseph conducted a $9,500,000 bond issue referendum last May. The voters rejected it again, this time more decisively, prompting a newspaper to applaud them for "pioneer independence and be damned if they aim to stand still while some bureaucrats in Washington tell them what to do." The "bureaucrats" then brought the suit against St. Joseph for failing to keep to the schedule of sewage plant planning and construction.

The case of *United States* v. *City of St. Joseph*, which is still pending, is a small symbol of the breakdown in efforts to control wastes that endanger the health and welfare of millions. Although this is the only suit that has ever been filed under the Federal Water Pollution Control Act, the problem is so general and persuasion has accomplished so little that others are sure to follow.

St. Joseph is not the only city that has been accused of turning a river into a sewer. In fact, St. Joseph itself is the victim of the dirty habits of cities and industries farther north. The Missouri River begins in Montana and winds through the Dakotas into Iowa, reaching its first urban complex at Sioux City. There, according to Public Health Service engineers, "Floating excrement and other sewage solids were obvious, and gas bubbles from sludge deposits rose to the surface." The point where the Floyd River meets the Missouri "appeared almost clogged with untreated packing plant wastes. Where the water was not red with bloody wastes, it was gray with decomposing organic wastes. Offensive odor filled the atmosphere." At Omaha, 135 miles down the river, some of the grease passes through the plant intake, coating the walls of the concrete basins used in treating the water. Omaha's complaints, however, must be balanced against its own sewage-disposal practices: fish taken from the river below Omaha sometimes taste like kerosene, and crows ride on the patches of solid grease that flow from its packinghouses.

The Missouri has been described as a thousand-mile sewer, but it is no more polluted than many another U.S. waterway. Thirty thousand municipal and industrial sewers empty directly into waters that are used to supply municipal water-treatment plants. In earlier days, even sanitary engineers repeated the rhyme that justified dumping filth into water: "Dilution is the solution to pollution." There is reason to doubt that this ever was true, but it is certainly not true today. The purifying properties of water are being used up so rapidly by increasing quantities of new oxygen-demanding wastes that many streams and rivers barely flow. Fifty million pounds of solid sewage go into water every day.

In a Public Health Service hearing, a Louisiana farmer testified that 95 of his 140 cattle died from drinking the water in the creek that ran beside his 90-acre farm. When the creek overflowed, the trees along the banks began to die, and more than 60 acres could no longer be used for pasture or for growing crops. A trapper added: "Everything has been killed in that creek, and the fur-bearing animals have done quit traveling it. There's nothing for them; not even a frog."

POISONS IN OUR WATER

Alarmed by such incidents, Representative JOHN D. DINGELL, Democrat, Michigan, started collecting newspaper articles and editorials about pollution. He labeled them "Poison in Your Water," numbered them, and had them printed in the Appendix of the CONGRESSIONAL RECORD. He now has nearly 200, many of them relating pollution to illness. No. 161 is an editorial from the Salt Lake City Deseret News & Telegram listing three Utah rivers as health hazards and linking them to "an alarming increase in the incidence of infectious hepatitis." No. 165 is an article in an Arkansas newspaper, in which a physician reported that all but 1 of 34 Arkansans stricken with paralytic polio resided in areas of the State that have no sewers.

No one can be certain about the full effects of water pollution on public health. Too little money and attention has gone into research, especially to studies of new industrial chemicals. Public battles are fought over fluoridation of water supplies to prevent dental cavities, but almost unnoticed is the fact that water-treatment plants nearly everywhere have to add massive doses of chemicals to drinking water so as to counteract the industrial chemicals that are polluting it. Farmers now spend nearly $300 million a year for chemicals other than fertilizers which are washed into drinking water. Experiments show that the use of insecticides can produce infertile eggs and weak chicks. When water is introduced, the insecticides are even more destructive to small game, fish, snakes, and frogs.

Former U.S. Surg. Gen. Leroy Burney commented somewhat helplessly on detergents, which cause the clouds of foam that blow from treatment plants on windy days and, in some areas, form a froth on top of a glass of water that compares favorably with the head on a stein of beer. "They're not killing us," Dr. Burney said, "or making us clinically ill. But how does the human body react to steady doses of diluted chemicals? What happens if the concentration increases, either suddenly or gradually? We cannot say we know the answers."

Those who are most disturbed about water pollution emphasize a scarcity of water. The Senate Select Committee on National Water Resources reported in January that the latest estimates of water supply and demand indicate that conversion of salt water may be essential by 1970. Five Federal demonstration plants are being constructed, but the costs of desalinization are still too great by current rate standards, and transportation of desalted water to inland cities will increase these costs. Representative JOHN A. BLATNIK, Democrat, of Minnesota, states, "The control of pollution is a key aspect of the entire water resource problem."

Cleaning the Nation's water is a political chalenge that arouses implacable resistance. St. Joseph was taken to court only after many conferences, warnings, and a hearing. Throughout the hearing, a transcript of which ran to 426 pages, the city's attorney spoke of the alleged pollution despite clear evidence that untreated sewage from 80,000 people was being dumped into the river every day.

Much of the foot dragging by municipalities can be explained by an axiom of local politics: building a water treatment plant to clean up the water used by voting citizens is almost always easy to accomplish; however, a sewage plant that will treat a community's wastes benefits only the neighboring communities downstream. A Public Health Service official says that he detects a slow change in this selfish attitude, in part because of the growing popularity of water sports, which need clean water, in part because "almost all cities are downstream from at least one other city."

In contrast, the resistance of industry to enforcement actions is growing, even though many manufacturing plants cannot use polluted waters. By 1980, industry will need nearly twice as much water as agriculture and all municipalities combined. And the Nation's industries are by far the worst polluters, dumping twice as much waste as the municipalities.

Spokesmen for industry do not deny that industrial pollution is a critical problem, but they claim that their research program will lead to improvement. Leonard Pasek, an executive of Kimberly-Clark Corp., told a Senate committee that the National Council for Stream Improvement, which is financed primarily by pulp and paper companies, has a research budget of several million dollars a year. In many cases, competitive pricing makes the cost of building sewage-treatment plants prohibitive. An executive of a plant that produces soda ash said during a Public Health Service conference that forcing his company to install treatment facilities would drive production costs so high that his plant would close down because it would be unable to compete with the other nine soda ash producers.

CLEANUP VERSUS INDUSTRY

Since the Federal Water Pollution Control Act restricts the authority of the Public Health Service to pollution that flows past State lines, most of the work of pollution abatement is left to the States. Many States are so solicitous of their industries and so eager to obtain new plants that pollution controls are weak. In arid west Texas, oil drillers dump brine into shallow earthen pits, where it seeps into the ground water or is washed into streams with the first rain. Often, drillers go on to seek their fortunes elsewhere when they fail to strike oil, leaving unsealed holes that permit subterranean salt water to seep into ground-water strata or into surface waters. One of the 112 oil companies in west Texas dumped 4,000 barrels of salt water into a single stream every day for months.

Early in January, E. V. Spence, general manager of the Colorado River Municipal Water District, pleaded for legislative action at a meeting in Texas of the Governor's water coordinating committee. Gov. Price Daniel pointed out that laws prohibiting oil drillers from polluting the State's water and requiring that wells be plugged have been on the books for 25 years. It is a fact, however, that the Texas Railroad Commission, which is charged with controlling oil-industry pollution, spent nothing on control last year and very little during the past 10 years.

Keeping pollution control at the State level has long been a goal of those fighting effective cleanup. The lobbyists were able to defeat meaningful national legislation until 1948, when the late Senator Robert A. Taft, of Ohio, who had long held that a Federal act to control pollution was unconstitutional, changed his mind and helped push the bill for the Federal Water Pollution Control Act through the Senate (and the Public Health Service's Robert A. Taft Sanitary Engineering Center was established in Cincinnati). Even with Taft's help, the 80th Congress had a harder time passing the pollution act than any other health bill. As it turned out, industry's fear of a federally enforced cleanup was unfounded. According to the 1948 act, there had to be an agreement between the State where the pollution originated and the State that brought the complaint. There has been only one agreement.

The 1948 act did, however, permit strong interstate compacts. The Ohio River Valley Water Sanitation Commission was formed

under this provision, with the expressed determination that communities and industries would undertake to clean up—"by persuasion where possible and by compulsion where necessary." Last year, the eight States in the compact—Indiana, Illinois, Kentucky, New York, Ohio, Pennsylvania, Virginia, and West Virginia—announced that most of the communities and many of the industries in the drainage area have adequate installations. But 225 industries still have not met the basic control requirements that were established 6 years ago, and a sanitary-engineering specialist says that after nearly 13 years the compact has not accomplished its purpose: cleaning up the Ohio River.

In 1956, 3 days before the act was to expire, Congress passed an amended version providing $50 million a year in Federal matching grants for building community sewage facilities. The National Association of Manufacturers opposed that provision and another calling for stronger enforcement of pollution abatement. According to expert estimates, industry was then dumping into the water every day untreated wastes equal to the sewage created by 110 million people, but the NAM held that "State and local governing bodies are competent to handle pollution abatement and stream improvement * * * much more will be accomplished by cooperation than by compulsion." Despite this, both Houses approved the conference bill. President Eisenhower said it went beyond his recommendations, but he signed it.

In 1959, in the face of Congressman BLATNIK's estimates that the Federal grant program had stimulated municipalities to spend more than half a billion dollars for sewage-treatment facilities, President Eisenhower asked that the grants be reduced and that the States take over the program altogether after 1960. Both the House and the Senate, however, passed even stronger bills, then postponed the conference-committee meeting so as to prevent the President from killing the bill with a pocket veto after Congress had adjourned. When the conference committee met after the beginning of the 1960 session, it reached a quick compromise. Mr. Eisenhower vetoed it.

In his message, the President called polluted water "a uniquely local blight," then announced, paradoxically, that he had asked the Secretary of Health, Education, and Welfare to call a national conference on water pollution. In the steering committee sessions where the broad outlines of the national conference were planned, NAM representatives tried to convince the other committee members that the conference should be devoted to success stories of municipalities and industries that had solved their problems. That was squelched, and a subcommittee was appointed to formulate conference objectives. According to one of the members, NAM spokesmen "flew into rages." Daniel Cannon, an NAM executive, later wrote to every member of the steering committee to protest the creation of a subcommittee that would formulate a manifesto.

On the last day of the National Conference on Water Pollution, the same Mr. Cannon pressed for a recommendation that the Nation's waterways should be only "as clean as is economically feasible." There were no votes on recommendations, but an informal vote was taken on whether the Federal Government should be allowed to enforce pollution abatement not just on interstate waters but on all navigable waters of the United States. Many of the delegates had already left the conference, but some had been prepared for the informal vote and rose in full strength to oppose the extension of Federal authority.

The fight in Congress this year will be primarily on this issue. By extension of Federal authority to enforce pollution abatement to all navigable waters, almost every waterway in the United States would be brought under Federal protection. Mr. BLATNIK, the House leader on water-pollution legislation, has introduced a bill to accomplish it. President Kennedy was not explicit about his own views on this question in his message to Congress on natural resources, but he called for legislation to "strengthen enforcement procedures to abate serious pollution situations of national significance," pointing out that "pollution of our country's rivers and streams has * * * reached alarming proportions." Noting that a national total of $350 million will be spent this year on municipal waste-treatment works, Mr. Kennedy said that an expenditure of $600 million a year is necessary, and he asked Congress to increase the amount of Federal assistance to municipalities.

A key man in the congressional decision will be Senator ROBERT KERR of Oklahoma, who was chairman of the Senate Select Committee on National Water Resources and who is now chairman of the Senate River and Harbors Subcommittee, which will handle Senate legislation. His book, "Land, Wood and Water," makes this plea for preserving the Nation's waters: "Unless we do combat the menace of pollution, it will be like storing our precious waters in a garbage can." But there are some who doubt that Senator KERR means business. They point out that his own Kerr-McGee Oil Co. has been fined by Louisiana for polluting the waters of Bay Garden and Chandeleur Island.

In January, Senator KERR introduced his bill for amending the Pollution Control Act. It called for $75 million a year in Federal grants—$15 million less than the bill Mr. Eisenhower vetoed—and said nothing whatever about Federal enforcement.

Hospital Facilities Needed for Veterans on Long Island

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. HALPERN. Mr. Speaker, one of the most vital needs for hospital facilities for war veterans exists on Long Island—the Queens-Nassau-Suffolk area.

To resolve this highly desirous need, I have introduced in this House legislation calling on the Veterans' Administration to construct and maintain such a hospital. This bill has the full support of all veterans' organizations on Long Island and its enactment will fulfill their long sought objective.

The fact that there are now 3½ million people in the Queens-Nassau-Suffolk area, but no general hospital for veterans stresses this appalling need for such facilities. If a veteran in this three-county area needs medical or surgical attention, he must apply for admission to either the veterans' hospital at Fort Hamilton in Brooklyn or to the one on East 23d Street in Manhattan. These facilities are vastly inadequate and have long waiting lists for admission. There is a neuropsychiatric hospital for veterans in Northport, but here again there is a list of over 2,500 waiting for admission.

Realizing that the approval of such a hospital is within the province of the Veterans' Administration, I, as a member of the House Committee on Veterans' Affairs and its Subcommittee on Hospitals, and so many others interested in the project have been in constant touch with the administration and have repeatedly pointed out the necessity for the hospital and solicited its support for inclusion in the projected hospital construction program.

In response to my appeal to the Veterans' Administration for this Queens-Nassau-Suffolk VA Hospital, Mr. John S. Gleason, Jr., VA Administrator, wrote to me as follows:

DEAR MR. HALPERN: This is in reply to your letter dated February 22, 1961, concerning your bill to provide for the construction of a general medical and surgical hospital on Long Island, N.Y.

You will be glad to know that consideration is being given to the feasibility of constructing a 1,000 bed hospital on Long Island. This new hospital is needed to offset the reduction of approximately 800 psychiatric beds which will result from the modernization of our hospital at Northport. Since there is an unmet demand for medical, surgical and neurological beds in the general area, the new hospital would include 200 beds of this type.

Your kind interest in the welfare of veterans is appreciated.

Sincerely,

J. S. GLEASON, Jr.,
Administrator.

Mr. Speaker, a recent development offers an ideal site for the construction of the hospital. I have strongly urged the Administrator to seriously consider this site for the location of the hospital. I refer to Mitchel Field which is owned by the Government and which has been announced as obsolete for continued use as an Air Force base.

This property would provide a perfect location and ideal setting for the hospital. It would save a considerable sum to locate the hospital there since the Government already owns the property. It is easily accessible by highway and public transportation for all Long Islanders.

Mr. Speaker, the advantages of this sight are pointed out in my most recent appeal to the Veterans' Administration and I cannot prevail enough that immediate steps be taken to acquire the site for the Queens-Nassau-Suffolk Veterans' Administration Hospital.

Clinton Methodist Church Withdraws Financial Support From National Council of Churches

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks, I include a resolution unanimously adopted by the official board of the Clinton Methodist Church, Clinton, Miss., on March 12, 1961. The resolution is as follows:

RESOLUTION BY THE OFFICIAL BOARD

Whereas the Clinton Methodist Church reaffirms its belief in the doctrine of individual responsibility, the Christian obligation and privilege of love and charity toward one's fellow man, total separation of church and state, and loyalty and devotion to the United States of America, and

Whereas the National Council of Churches, through various actions, has opposed continuation of the House Committee on Un-American Activities, has supported proposals for a system of socialized medicine being sought in H.R. 4222, a bill before the 87th Congress and has opposed publication by the Department of Defense of information on the threat of communism in Protestant church organization; and

Whereas these actions are totally unrepresentative of the views of the Clinton Methodist Church, now, therefore, be it

Resolved, that the official board does deplore the stated actions by the National Council of Churches and does reaffirm its belief in lawful prerogatives and, indeed, duties of the Congress to investigate and expose subversion wherever and whenever such exists; does reaffirm its belief in a system of private enterprise, local self-help for the needy sick, and opposes any and all forms of socialized medicine, especially present proposals before the Congress, and, finally, the official board withdraws all financial support of the National Council of Churches while rededicating the energies and resources of the Clinton Methodist Church to the service of God, love and charity toward the needy sick, and loyalty to our Nation as a free, self-determined state under divine providence.

Adopted unanimously this, the 12th day of March, A.D. 1961.

Wm. R. Chambers; Ralph Stutt; James L. Denman; B. E. Martin; H. T. Busby, Mrs. H. T. Busby; Bernard Blackwell; Jack L. Williamson; Albert L. Craven; Jack W. Lilley; H. F. Crisler, Jr.; Loyn H. Williams; Marian B. Lyons; Graham B. Kennedy; David J. Callahan; W. M. Bryson, Chairman of the Official Board; Earl Chesley, Pastor.

Multiple Illegitimacy

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, the growing problem of illegitimate births in the United States is one that is costing Federal and State treasuries almost $1 billion a year in aid to dependent children.

Statistics prepared by the National Office of Vital Statistics show that the rate of illegitimate births more than doubled in the period from 1940 to 1958, the last year for which official figures are available.

Records show that in 1940 a total of 89,500 illegitimate births was registered; the total in 1958 was 208,700. White illegitimate births in 1958 averaged 20.9 for every 1,000 live births; Negro illegitimate births for the same year averaged 212.3 for every 1,000 live births. This ratio between white and Negro illegitimate births has remained constant down through the years.

It is obvious that in far too many cases mothers of illegitimate children are taking deliberate advantage of laws that permit them to draw aid to dependent children funds for each child they bear out of wedlock. In one Southern State, for example, 6,000 unmarried mothers are being paid assistance for their 23,000 illegitimate children.

The General Assembly of the State of Georgia in 1951 enacted a law prohibiting payments to any mother for more than one illegitimate child. The effectiveness of this reasonable law was destroyed when the Federal Government threatened to withhold all welfare funds from the State of Georgia unless the law was repealed.

The General Assembly of Georgia, on March 6, 1961, adopted a resolution protesting and deploring this Federal intervention, which, in effect, condones and rewards multiple illegitimacy. This resolution follows:

H.R. 106

Resolution relative to certain welfare benefits; and for other purposes

Whereas in many areas of this State the number of births of illegitimate children has sharply increased during the last few years; and

Whereas, although laws have been enacted in an attempt to stop illegitimate births, under Federal rules and regulations welfare payments are still authorized for illegitimate children; and

Whereas at the time the General Assembly of Georgia enacted a law prohibiting payments to any mother for more than one illegitimate child, the Federal agency administering the welfare program threatened to withhold all funds from the State of Georgia unless such laws were repealed; and

Whereas there is no action which might be taken on the State level to cope with this situation, but action needs to be taken on the Federal level: Now, therefore, be it

Resolved by the General Assembly of Georgia, That the members of this body deplore the situation existing at the present time which, in effect, condones illegitimacy and rewards persons for illegitimate births, and request that the Members of the U.S. Senate and the Members of the U.S. House of Representatives from Georgia do all in their power to take whatever action necessary to prevent welfare payments for illegitimate children; be it further

Resolved, That the clerk of the house is hereby instructed to transmit a copy of this resolution to each member of the Georgia congressional delegation.

Read and adopted in the senate, March 6, 1961.

GEORGE D. STEWART,
Secretary.

Read and adopted in the house, March 1, 1961.

GLENN W. ELLARD,
Clerk.

Misinforming the Public

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DEROUNIAN. Mr. Speaker, David Lawrence, in his article in today's New York Herald Tribune, shows how easily misinformation can get to the American people, especially when a President spreads it:

DANGER OF LIVE PRESS TALKS SEEN IN KENNEDY TV ERROR

(By David Lawrence)

WASHINGTON, March 26.—President Kennedy made a serious mistake at his press conference last Thursday which ought to spell the end of so-called live performances on radio and television. For the net effect of the error—which, of course, was unintentional—was to mislead the American people and give them an erroneous statement about the minimum-wage legislation now pending before Congress. The President's exact words are recorded in the official transcript as follows:

"I find it difficult to know why any one would oppose seeing somebody by 1963 paid $1.25 in interstate commerce, and in the new coverage we're talking about businesses which make over $1 million a year, and I find it difficult to understand how anybody could object to paying somebody who works in a business which makes over $1 million a year by 1963, $50 a week."

It will be noted that the President twice used the phrase "make over $1 million a year." Probably most listeners agreed immediately with the President that any company making such a profit could well afford the increase from $1 an hour to $1.25 and that those opposing such an increase would just seem to be cruel-hearted, selfish business men. This is the kind of innuendo which adds to class antagonisms and is the sort of argument on which the labor demagogs thrive.

NOT PROFITS BUT RECEIPTS

But what are the facts? The legislation now pending in Congress doesn't make any such classification of businesses with profits of $1 million or over per year. Instead, the bill sponsored by the President—and which was defeated last week by the House of Representatives—called for measurement by gross receipts or sales of $1 million and not by profits. The language in the bill read "$1 million gross annual volume." There's a vast difference, of course, between what a business takes in and what it has left after paying wages and other expenses as well as all taxes.

Indeed, out of the total number of businesses in the United States, at least 90 percent do not make as much as $1 million a year after taxes.

The bill as finally approved by the House last week would exclude a lot of service trades altogether and would continue existing exemptions for employees of hotels, restaurants, lunch counters, cafeterias, hospitals, laundries, drycleaners, motion picture theaters, amusement parks, parking lots, beauty shops, barber shops, gasoline stations, and automobile sales dealers. The reason for this is that many of these employees get tips and other gratuities which increase their income, or else they are largely part-time workers anyway.

The new House bill would require an employer who operates five or more retail chainstores in two States to come under the law, but if any such chainstore has gross receipts of less than $250,000 a year, it would remain exempt.

Now why is there opposition to these measures? Some employers say it will force many present employees out of work altogether. Unions want the legislation because it will enable them to press for a rise in wage scales generally. For, obviously, giving a worker the new $1.25 minimum will cause another worker alongside of him who already gets $1.25 an hour to feel that his pay ought to be stepped up because he has previously been rated higher in skill or experience than the $1-an-hour employee. It really could

bring demands, even during the recession, for a new cycle of wage increases and could affect wage differentials all along the line and not just the employees at the minimum-wage base.

Unfortunately, the whole presentation made on this issue is an example of how one-sided and unfair is the system of forming public opinion by Presidential press conferences, since the President of the United States can unwittingly make erroneous statements, and the many millions of persons throughout the country who hear him have no chance of being given immediately the true facts when errors are made.

One solution of the dilemma is to abandon the live presentations and let them be recorded on tape for showing later in the day or evening, as are so many other television programs. This would afford an opportunity in the meantime for careful revision of any factual errors or misstatements instead of allowing errors to mislead the American people. There is altogether too much preoccupation hereabouts with publicity stunts and live shows for political purposes instead of interest in the orderly and impartial processes of transmitting the Government's information to the people.

Correlation of Federal Activities in Combating Juvenile Delinquency and Cooperation With State and Local Groups—A Constructive Suggestion From the Metropolitan Youth Commission of St. Louis and the Encouraging Response of the Department of Justice

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mrs. SULLIVAN. Mr. Speaker, the Congress periodically—and enthusiastically—votes for additional Federal funds to help in combating the alarming extent of juvenile delinquency in this country, although, of course, this is and must be primarily a problem for localities. But Federal assistance and cooperation and leadership, particularly in the fields of research and vocational education, encouraging the training of teachers with special skills in teaching disturbed children—such as called for in my bill H.R. 15, dealing generally with all types of exceptional children—and in other ways can be most useful.

There is a strong feeling, however, that various Federal agencies engaged in activities intended to help combat juvenile delinquency have been operating in something of a vacuum, isolated and insulated from each other, and without much regard to or knowledge of the work being done on the local level in communities which are trying to face up to this great problem and challenge.

Because of that widespread feeling, I am delighted to include in the CONGRESSIONAL RECORD some correspondence indicating that the Department of Justice under Attorney General Robert Kennedy is aware of the situation and is disposed to try to work closely with other Federal agencies and with groups such as the outstanding Metropolitan Youth Commission of St. Louis and St. Louis County. The executive director of that organization, Mr. Eugene P. Schwartz, recently made some very constructive suggestions and some provocative comments to the Attorney General bearing on this issue, and was thoughtful enough to send me a copy of his letter. It stimulated me to write also to Attorney General Kennedy.

This correspondence will, I believe, be of great interest to other Members of Congress and to all Americans who are intensely concerned over juvenile delinquency and over the extent of cooperation among Federal agencies with each other and with State and local agencies in combating it.

This correspondence, including Mr. Schwartz' letter of March 10 to Attorney General Kennedy, my followup inquiry to the Attorney General of March 14, my reply to Mr. Schwartz of the same date, the Attorney General's reply to me and his response to Mr. Schwartz, and also a letter to Mr. Schwartz from David L. Hackett, Assistant to the Attorney General, all dated March 23, 1961, follows:

METROPOLITAN YOUTH COMMISSION, OF ST. LOUIS AND ST. LOUIS COUNTY,
St. Louis, Mo., March 10, 1961.

The Honorable ROBERT F. KENNEDY,
Attorney General of the United States, Washington, D.C.

MY DEAR MR. ATTORNEY GENERAL: It was with much interest that I read of the request by President Kennedy for an additional $1,158,000 to "battle two phases of crime: organized syndicates of hoodlums and juvenile delinquency."

There are some serious questions I would like to raise in inquiry for information about any plans, particularly as they might relate to the problems of juvenile delinquency.

The statement, as it appeared in our local newspaper, indicated that $618,000 would pay for a program aimed at wiping out juvenile delinquency. There is so much confusion already as to who is doing what in this field of delinquency that I wish there might be a top level conference on this matter before any plan goes ahead.

For example, we already have a little-supported Juvenile Delinquency Section of the U.S. Children's Bureau, a program of delinquency research through the National Institute of Mental Health and, of course, the repeated "expert" announcements from the FBI about what should be done about delinquency. The public, as well as agencies, are so confused as to who should take the lead that I hope the Juvenile Delinquency Section of the U.S. Children's Bureau will at least be consulted.

One of the great problems in our field has been the lack of coordination and interagency planning. The FBI as a law enforcement agency, certainly ought to work cooperatively with social agencies at the national level. Here in St. Louis we have an excellent example of how the law enforcement agencies, social workers and juvenile courts and Metropolitan Youth Commission work together and not against each other. There has been too much professional jealousy and criticisms of other professional disciplines from each other at the national level to keep the public informed as to what should be done.

It is my personal belief that whatever should be done at the national level, as well as at the local level, must be on a coordinated basis. On May 11 and 12 there will be a meeting of local municipal and State youth commissions, youth boards and other public agencies with the responsibility for delinquency control in their respective communities. This will also be a meeting for the formation of a National Association of Public Agencies for Delinquency Control. It is my fervent hope that you will consult with representatives of this group before any plan, either by the FBI or individual agencies, is presented and supported.

Needless to say, I am very grateful for your personal interest in this matter, and we at the local level, who have the responsibility for controlling delinquency in our communities, look for some Federal help. However, this should be on a well planned and coordinated basis. There is much to be questioned as to the role of the FBI with relation to juvenile delinquency. Their responsibilities and activities should be clearly defined in relation to the roles of other agencies working in the same field.

Could we not discuss this matter before we again get the public aroused with misinformation and unsound plans for delinquency control which has already confused our citizens who are anxious to help. There must be a great deal more teamwork by all professional disciplines, and I believe you can give us the leadership to facilitate this.

With sincere best wishes,
Respectfully yours,
EUGENE P. SCHWARTZ,
Executive Director.

MARCH 14, 1961.

Hon. ROBERT F. KENNEDY,
Attorney General United States, Washington, D.C.

DEAR MR. KENNEDY: I have read a great deal of interest a copy I have received of a thoughtful and provocative letter written to you on March 10 by Mr. Eugene P. Schwartz, executive director of the Metropolitan Youth Commission of St. Louis and St. Louis County on the various Federal programs, funds, efforts, studies, and demonstration projects relating to juvenile delinquency and the seeming lack of coordination or meshing of efforts and findings. I would be extremely interested in having your comments on Mr. Schwartz's discussion of this issue, and would appreciate receiving a copy of your reply to him and any other comments you might care to make—or legislative suggestions.

With kindest regards, I am,
Sincerely yours,
LEONOR K. (Mrs. JOHN B.) SULLIVAN.

MARCH 14, 1961.

Mr. EUGENE P. SCHWARTZ,
Executive Director, Metropolitan Youth Commission of St. Louis and St. Louis County, St. Louis, Mo.

DEAR MR. SCHWARTZ: Thank you for keying me in on your letter to the Attorney General. I am enclosing a copy of my followup letter to him, one which is intended not only to reflect my interest in what you have written but also to expedite the course of your letter "through channels" at Justice. I will certainly be interested in his comments.

Sincerely yours,
LEONOR K. (Mrs. JOHN B.) SULLIVAN.

MARCH 23, 1961.

Mr. EUGENE P. SCHWARTZ,
Executive Director, Metropolitan Youth Commission of St. Louis and St. Louis County, St. Louis, Mo.

DEAR MR. SCHWARTZ: Your letter to the Attorney General regarding juvenile delinquency has been referred to me, and I am looking forward to discussing this matter with you in person.

I find that I will be in the St. Louis area in the not too distant future, and hope that I may call your office for an appointment.

Very truly yours,
DAVID L. HACKETT,
Assistant to the Attorney General.

MARCH 23, 1961.

Mr. EUGENE P. SCHWARTZ,
Executive Director, Metropolitan Youth Commission of St. Louis and St. Louis County, St. Louis, Mo.

DEAR MR. SCHWARTZ: Many thanks for your good letter of March 10 regarding juvenile delinquency.

As you know, this administration is very interested in this problem, and for the past 2 months the Labor, Health, Education, and Welfare and Justice Departments have been working together on a program which we hope to be able to announce very shortly. In the meantime, the $618,000 requested for the Bureau of Prisons would be used in the following manner: $300,000 would be spent for demonstration release guidance centers (half-way houses); the remaining $318,000 would be spent on demonstration vocational, counseling and correctional education programs as well as training manuals and institutes for correctional personnel and a statistical program.

I have referred your letter to Mr. David Hackett of my staff who is particularly concerned with this project and have asked him to contract you when he is next in the St. Louis area.

We welcome any further views you may have on this very serious problem.

Sincerely,

———— ————,
Attorney General.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D.C., March 23, 1961.

Hon. LEONOR K. SULLIVAN,
Congress of the United States,
Washington, D.C.

DEAR MRS. SULLIVAN: Thank you very much for your letter of March 14 regarding correspondence received from Mr. Eugene P. Schwartz, executive director of the Metropolitan Youth Commission of St. Louis and St. Louis County on the subject of juvenile delinquency.

As you know, this administration is trying very hard to coordinate the activities in this field and for the past 2 months the Labor, Health, Education, and Welfare and Justice Departments, have been working together on a program that we hope we will be able to announce very shortly.

The attached copies of letters to Mr. Schwartz will indicate that Mr. David L. Hackett, of my staff, is already making plans to call on Mr. Schwartz in the near future. We are most interested in his views on this problem and look forward to discussing this matter with him further.

Your interest in this serious problem is greatly appreciated.

Sincerely,

ROBERT F. KENNEDY,
Attorney General.

Textile Imports—Resolution of General Assembly of Georgia

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JAMES C. DAVIS. Mr. Speaker, our inequitable and unfair system of tariffs which favor imports at the expense of our own economy is having a serious ill effect on the industries of the United States.

Inequitable tariffs undoubtedly have contributed to the recession which we are now being asked to vote billions of dollars to combat.

Imports from cheap labor countries have caused temporary unemployment in some fields and the elimination of jobs in other fields. Imports have caused some businesses to retrench and others to lock their doors and go out of business.

The textile industry, for example, has suffered severe losses in recent years because of excessive importation of textile products.

More than 800 textile plants in the United States have been forced out of business in the last 13 years. This resulted in the unemployment of almost half a million people.

The General Assembly of Georgia, at its 1961 session, adopted a resolution urgently requesting the Congress of the United States to make a full study of the present tariff rates on goods imported into the United States, and to determine whether tariff rates should be charged on the basis of wage standards of the country exporting such goods.

This resolution—which I hope will be given attentive consideration by the Congress—follows:

H.R. 202

Resolution requesting the Members of the Senate and House of Representatives of the U.S. Congress from Georgia to make a study regarding tariff rates of certain imported goods; and for other purposes

Whereas the textile industries and certain other industries located in the State of Georgia are suffering because of the importation of goods from foreign countries; and

Whereas the wage standards and the standards of living in certain of these foreign countries are much less in comparison than the wage standards and the standards of living in the United States of America; and

Whereas because of such wage standards and standards of living, it is possible for such countries to export goods to the United States of America at a much lower price than the same goods can be purchased from American industries; and

Whereas it is only fit and proper that the citizens of our great country be encouraged to purchase American made goods: Now, therefore, be it

Resolved by the General Assembly of Georgia, That the Members of the Senate and House of Representatives of the U.S. Congress from the State of Georgia are hereby respectfully and urgently requested to encourage the proper committee or committees of the U.S. Congress to make a full study of the present tariff rates on goods imported into the United States of America, and such committee or committees making such study are hereby respectfully and urgently requested to determine whether or not tariff rates should be charged on the basis of the wage standards of the country exporting such goods.

Be it further resolved, That the clerk of the house of representatives is hereby authorized and directed to send a copy of this resolution to each member of the Senate and the House of Representatives of the United States from the State of Georgia.

Read and adopted in the senate, March 6, 1961.

GEORGE D. STEWART,
Secretary.

Read and adopted in the house, March 4, 1961.

GLENN W. ELLARD, *Clerk.*

Minimum Wage

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. DEROUNIAN. Mr. Speaker, the following editorial from today's New York Herald Tribune, comments fairly on the minimum wage legislation passed by the House last Friday:

THE HOUSE PASSES A BETTER WAGE BILL

The House of Representatives passed a better minimum wage bill than the one asked by President Kennedy, and showed again that Congress has a will of its own.

The most significant difference between the administration proposal and the Kitchin-Ayres bill, which finally passed, was in the criteria for coverage of retail workers. The administration bill would have based this on a store's annual sales volume, a new departure which would have opened the way for eventual wage regulation of ever smaller and smaller enterprises. The Kitchin-Ayres bill, by contrast, bases Federal regulation of retail wages clearly on the historic concept of interstate commerce, limiting it to chains with five or more outlets in two or more States.

The Kitchin-Ayres bill adds far fewer new workers to the bill's coverage (1.4 million, against 4.3 million in the original administration bill). The important point, however, is not one of numbers, but rather of the virtually inevitable future consequences of adopting the sales-volume standard. Once the principle is accepted, no arbitrarily set limit (in this case, a dollar annually) can long be maintained.

The President's defeat was by the irreducible minimum of a single vote. And the Senate, which last summer passed a Kennedy-sponsored bill similar to this year's administration measure, has yet to act. But a defeat it was, nevertheless, and it follows razor-thin victories in past legislative tests. It by no means indicates that the so-called coalition of Republicans and Southern Democrats is in control of Congress, or even of the House. But it does make clear that the President's wish is not automatically going to be Congress' command.

President Kennedy is not likely to take defeat lying down. He has shown a readiness to use the powers of his office to the full in bending Congress to his will when he thinks the issue warrants it. And minimum wage has been high on his "must" list. But if he uses pressure injudiciously he runs the risk of offending a Congress which, he well knows, is jealous of its independence.

An independent Congress is essential to a government of checks and balances, and the House chose a good issue on which to assert itself.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Report on Africa by Assistant Secretary of State G. Mennen Williams

EXTENSION OF REMARKS
OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. McNAMARA. Mr. President, G. Mennen Williams, Assistant Secretary of State for African Affairs, has recently returned from a journey which covered 16 African nations.

Upon his return, he was invited to speak before the National Press Club in Washington.

I feel his remarks make a great contribution to the knowledge we must have to understand the explosive African situation, and I ask unanimous consent that the text of his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE G. MENNEN WILLIAMS, ASSISTANT SECRETARY OF STATE FOR AFRICAN AFFAIRS, TO THE NATIONAL PRESS CLUB, WASHINGTON, D.C., FRIDAY, MARCH 24, 1961

It is a pleasure to come before you today to make a brief report on a trip through 16 of the nations of Africa. My mission on this trip was twofold. First it was my pleasure and privilege to bring personal greetings to African leaders from President Kennedy and Secretary Rusk, and to convey to them and to their peoples new assurances of the strong and positive friendship of the United States. Second, and quite simply, I went to learn.

We flew down over the great desert and stopped first beside the Nile at Khartoum in the Sudan. Next day we were at 8,000 feet in Addis Ababa, capital of the oldest independent country in Africa. Two days later we were sweltering beside the Indian Ocean in the Somali Republic, one of the newest nations in the continent. And so it went. British East Africa, including storied Zanzibar, the two Congos, Cameroon, Nigeria, Togo, the Ivory Coast, Liberia, Ghana and my favorite new frontier, the capital city of Ouagadougou in Upper Volta. Our new Embassy there is safely in the hands of a pair of ex-Marines, an experienced foreign service couple, and the lady in question is a wandering constituent from Marinesco, in the Upper Peninsula of Michigan.

During this long trip I met one of the last Emperors in the world. I talked with presidents and prime ministers, colonial administrators, tribal chieftains, labor leaders, businessmen, students and farmers and fishermen. I have visited mission stations, factories, schools, hospitals, in jungle villages and in sprawling cities where skyscrapers push up beside thatched huts.

To three of my traveling companions I owe a real debt of gratitude. I refer to Warren Unna of the Washington Post, Judd Arnett of the Detroit Free Press and Alan Morrison of Johnson Publications. They have set a high standard in getting a trip like this, and the image of Africa, on the record.

In fact, I did not lack for expert assistance in this journey. Traveling with me were several foreign service and USIA officers who know Africa well and who, in West Africa, stood ready to rescue me when my command of the French language was being put to the test. Perhaps the best qualified, most vigorous and eminently successful expert of them all was one who bore the simple but all-important title, "Mrs."—my wife, Nancy. Like many American women she is much experienced in the world of schools, hospitals, nursing and the basis of all civilization, children and mothers. Her keen perception gave us all insights we might have missed, and her intense and friendly interest delighted the Africans even when she was lecturing them for having so few girls in the schools.

Then, too, I had the help of the men and women of our Embassies, consulates, ICA and USIS, and permit me here to throw another spadeful of earth on the dead image of our foreign service people as striped-pants, high-style bureaucrats ping-ponging from one cocktail party to another. These are wash-and-wear people, working with their sleeves rolled up and working hard. And we learned much from the dedicated American missionaries, businessmen, and educators who also represent America in Africa.

We were met everywhere with the greatest friendliness and warm hospitality, from governments and from people on the street and in the countryside. The peoples of Africa unquestionably have a great reservoir of good will toward America. Once in the Congo an overly-eager U.N. sergeant broke up what he apparently thought was a riot but was only an impromptu crowd gathering to say hello and shake hands with us. The Africans place much trust in America, even to the extent of being quite candid about our shortcomings here at home and in our responses to their needs and hopes.

We found great contrasts in Africa, and observed many stages of political, economic, and social development. Yet there are certain aspirations held in common in the countries we visited. Let me place them under nine headings:

1. The Africans want freedom from colonialism, from any form of outside domination.

2. The Africans want and will insist on racial equality in the world.

3. The Africans do not want to align themselves in a great-power struggle. They are for the most part neutral in international politics, or perhaps more accurately they are not ready to commit their new independence elsewhere.

4. The Africans naturally want government institutions which fit the values of their own societies. This may sometimes mean a greater reliance on some aspects of centralized authority than in the advanced democracies of the Western World, although democratic forces will make themselves felt.

5. A good many African leaders feel they must plan their economies for rapid development, and seem to favor a mixture of private and government-owned enterprise. In part this is because of a lack of local capital. Some call this a socialist approach, but almost without exception it is far from rigid or doctrinaire. Actually I thought I was back in American State Government when I visited western and eastern Nigeria and saw the regional governments encouraging private industry and investment. We saw this elsewhere, too.

6. African leaders want economic development, but many of them have yet to assess not only the opportunities but the limitations which confront them in the economic field. They are bound to make some mistakes before they hit the stride which their nations can maintain in a competitive world.

7. There is a growing awareness of the need to raise standards of health and vitality in Africa. This means not only more medicines and doctors and hospitals; it means a more adequate diet and a lot more protein intake.

8. Agriculture is the main African occupation and a drive is beginning to raise yields and income from farming. The importance of doing so is indicated by the extremely low per capita income figures.

9. Finally, the most commanding, is the need, the burning desire for education. The literacy rate in Africa is something less than 10 percent. I repeat, 10 percent. The educational need is thus felt not just at the top, in terms of college graduates, but in the primary and secondary school levels. We learned that in many local communities the people were raising school buildings with voluntary labor, as frontier communities did in this country.

If we accept these nine points, we can begin to look realistically at the problems of Africa. In my own reckoning they lead to this first conclusion:

Africans are generally agreed on their goals and aspirations and feel they must be achieved in the relatively near future. As a result in tropical African countries there is a race between the rising expectations of the people and what their governments can deliver. This race is the basic issue in Africa today, an issue which in fact is critical for the world and for us here today.

The dangerous side of this race is not hard to see. Africa's new leaders are faced with a situation which invites demagogery and reckless opportunism. These forces, wholly apart from communism, will seek to stimualte and exploit any failure or discontent. This greatly increases the challenge to responsible leadership, the challenge to build for genuine progress. It was a privilege to get to know many of these leaders and I have a great respect for their general level of competence and devotion. I wish each of you could have been with me to feel the intensity with which one outstanding leader said to me: "Mr. Williams, we have won our freedom; we have a democratic society—now we need help." This leader knows he must produce.

This can be better understood if we look briefly at the historical setting. Tropical Africa was long isolated from the rest of the world. Its own special history is essentially one of minor kingdoms and many tribes, of local wars and scattered migrations. Unlike the peoples of other continents the Africans have not been mouled through force of arms and cultural dominion into one or a few broad cultures. The tribe is still the underlying base of society, and the degree of fragmentation is suggested by the fact that 800 to 1,000 languages are spoken

in the continent. The colonial imprint on Africa has been important but incomplete.

Africa's journey in the great world is thus of very recent origin. But it has been gathering momentum at a terrific pace. There were four independent nations in all Africa in 1945. In 1959 there were 10. Today there are 27. This is an absolutely unprecedented transfer of power and it has created an atmosphere of great expectations, of great new beginnings. The aspirations of the African peoples have been brough to the fore by leaders determined to realize rapid advances in human dignity, physical well-being, and national progress.

Really we should try to put ourselves for a moment in the position of one of the leaders of the new Africa—let us say, of Dr. Azikiwe in Nigeria, of Felix Houphuet-Boigny in the Ivory Coast, of Julius Nyerere in Tanganyika. They have led their peoples to independence or in the case of Nyerere to the threshold of independence. But the African peoples are only now beginning to think in national terms. We hear much about "African nationalism" but more correctly what is meant is the immemorial urge, this time in Africa, for freedom. African leaders and their supporters have won freedom from something, from colonial rule. Now they must give content to the momentum that has carried them to independence and get their peoples to use freedom for something, for the building of modern nations and the realization of economic and social progress.

For this task they have, in modern terms, all too little to work with.

That is why I say that the new governments are in a race with time and the expectations of the African peoples—expectations which are fed by today's easier communication and wider contact with the world outside. Newly won independence means newly assumed obligations for Africa's leaders, and they need outside support and assistance. Without exception they have turned to the West first and for most of the assistance they must have. Only where that help has not been forthcoming, or where it has been too little or too late, have they placed their primary reliance elsewhere. It is not an easy thing, I can tell you, to hear out young and progressive African leaders as they earnestly discuss minor amounts of American aid in terms of the political life and death of their countries.

In the field of economic aid and investment, the main facts today are these: British and French assistance, which except in Guinea has not dried up when a country has become independent, is at an annual level of over $700 million, according to a leading university report. These contributions are a vital base for most African economies, and let me say here that I believe both France and Britain have done commendable jobs in tropical Africa. U.S. aid programs are supplemental and in this fiscal year will total about $250 million. This covers grants, loans, and technical assistance but not surplus agricultural commodities. Almost half of this total is going to three North African countries.

What can be said of these figures? Are they large in relation to the need, or in relation to development aid given elsewhere—or are they small? The fact is they are small, on both counts. To take an example from aid given elsewhere, we gave more to Austria alone in the first year of the Marshall plan than the figure I have just given you for all of Africa this year. To measure Africa's needs is not a simple matter, but it may help to cite two figures. The first is per capita national income, which for Africa as a whole is $89 a year. This compares to $171 for the Near East, $253 for Latin America, $790 for Western Europe and over $2,500 for the United States. The second figure represents the total value of all the goods and services produced by Africa, in comparison with the United States. The figure is 3 percent—Africa produces 3 percent of what we do—and yet that continent is three times the size of the United States and supports over 200 million people.

If we cannot equate such figures with needs in any absolute sense, we can certainly use them to gage where Africa stands in the world's lineup. Africa can not be neatly lumped in with our usual generalizations for the world. Africa's problems are new and different, and we must mark the differences and understand how they affect the total world balance.

It would be rash of me to venture very deeply into what the U.S. role toward Africa should be. Yet it is impossible to miss the point that Africa's leaders expect from the United States a greater response to their needs at this time of the birth of nations throughout a continent. And for me it is impossible to imagine that we will miss seeing the consequences of failing them. I am encouraged in this by the first reactions to President Kennedy's appeal of 2 days ago for a new approach, designed to fulfill our moral, political and economic obligations in support of freedom.

Such talk may in your minds conjure up thoughts of vast new sums of money for aid programs. It is true, of course, that it will cost money to enable African leaders to meet the dangerous challenges of ignorance, poverty and disease. But the need is not for a sudden and unlimited increase in funds. We are not alone in extending aid. And the capacity to absorb and put economic assistance to work productively is limited in Africa at this time. What we can and should do is well within reasonable expectations when judged by the criteria of our wealth and leadership in the world, by the record of our performance in the past, and be the stake we have in human dignity everywhere.

There is, however, an urgency, a timeliness that we must not miss in anything we do or hope for in Africa. We must act more quickly; we must throw in our support now, today. We must help Africa's leaders to build schools and get teachers into them—some from our own shores, many more from Africa itself. We must export our know-how to the farmers of Africa and we must be ready to help get more food from our surpluses into African stomachs. We must support community development. We must help small industries, like that of a trader I saw in Kenya who started his small store with an ICA loan. In some cases we should take on larger schemes for the development of power and new manufactures. In doing so, we shall be enhancing the probability that American private investment can play a growing part in Africa's future development.

The sum of these contributions will not transform Africa overnight. And in any case, that transformation is ultimately in the hands of the peoples of Africa and of their new leaders.

Essentially and in conclusion, these are the impressions I have come back with. You may remark that I have not talked about the Communists or the Congo or the cold war. I will try to answer questions, if you wish to ask them, about these and other points I have not touched on. Just let me say, however, what we had better be coldly realistic about Communist bloc influence in Africa. The new nations there do not emerge into a one-sided world. They see it whole and they are not going to slam the door on another great power which commands large political and economic resources. The Sino-Soviet presence will inevitably increase in Africa, and its emmissaries will be well armed with promissory notes—some open, some offered covertly to ambitious and unscrupulous powerseekers. The push of a new imperialism is thus certain to seek headway in Africa. This is one more reason, and a weighty one, for us to get busy learning all we can about Africa, understanding the aspirations of its peoples, and supporting its new leaders in the great enterprise of construction that lies before them.

Finally, let me say Africa is not only a challenge but an opportunity—we saw it in the bright eager faces of hundreds of young school children. And I remember especially visiting a mission station 50 miles from Leopoldville in the Congo. The missionaries were back only 3 days since evacuation. They said they had left long after the other whites because the indigenous Africans had protected them and finally warned them they had better go—they left by helicopter. All the while the missionaries were gone, the Africans ran the mission church, the school and the hospital—as we could see. Africans when given the opportunity can and do hold high the finest values of human dignity. This, then, is the real challenge of Africa, the real opportunity—to fulfill our American philosophy by helping our fellow human beings realize for themselves the full significance and rich blessings of individual dignity as well as national freedom.

Hon. B. Carroll Reece

EXTENSION OF REMARKS
OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. BAKER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD the very appropriate editorial comments on the life of our beloved coleague, the late Congressman B. Carroll Reece, First District of Tennessee.

I should like to include the editorials from the following Tennessee newspapers: the Knoxville Journal, the Nashville Tennessean, the Nashville Banner, and the Bristol Herald Courier.

The editorials follow:

[From the Knoxville Journal, Mar. 21, 1961]

TENNESSEANS RECOGNIZED REECE'S STATURE IN NATION, BUT THEY WERE DEVOTED TO HIM AS HUMAN BEING

In the death Sunday of Carroll Reece the Nation lost one of its great conservative leaders, and the Republican Party nationally and in Tennessee lost one of its most valued chieftains.

At an age just a little past his 3 score and 10, the First Congressional District Congressman had rounded out a career which carried him to the heights of public service as a statesman and politician, he had achieved leadership in the world of business, and above all, he had won the confidence and affection of literally thousands of persons in both political parties who reacted to his death as a personal loss.

It was this last facet in his career that he would want emphasized, even beyond the honors conferred upon him as a soldier, an educator, and as a State and national political leader.

Carroll Reece both loved and respected his fellow man. Those who came in contact with him sensed it instantly. He was not kind, considerate, and helpful as a matter of political expediency. Rather the fact

that he was all of these things drew his fellows to him and created the devotion which it has rarely been the good fortune of any man to possess in such full measure as was the case with him. It was this aura of friendliness and helpfulness which established a bond between him and thousands of Tennesseans, and no less made him one of the most effective men in the Capital, both within the Halls of Congress and in the departments of the Government. In the truest sense of the term, he became the Representative of his constituency in its contacts with their Government, nor was his representation confined to the geographical limits of his own district or his own State.

Some of us in Tennessee have observed his career, and have to a degree participated in it, in the process of its building up to a point of national prominence. Some of us have watched the development of his stature, beginning with that first campaign in 1920 to the present, with pride and devotion. For us, the memory of this man, his intelligence, his steadfastness, his affection, and above all his faith in his fellow man, will be treasured for as long as we shall live. This is a measure of immortality in itself.

To be a statesman with courage and tenacity; to be a politician with conscience and consideration; to be a friend with affection and devotion; to be a husband and father with love and tenderness; Carroll Reece was all of these through a long and busy life. If he had been allotted more years there was nothing in his living that he would have wanted to change.

That this is so must prove the greatest source of comfort to Mrs. Reece, to his family and to his friends.

[From the Nashville Tennessean, Mar. 21, 1961]

TENNESSEE'S MR. REPUBLICAN

Tennessee conservatism has lost one of its most eloquent spokesmen with the passing of U.S. Representative B. Carroll Reece, of Johnson City.

This newspaper did not often agree with the philosophy of Mr. Reece, but seldom was there any reason to question the sincerity of his convictions or the honorable basis of his motives.

Mr. Reece possessed extraordinary political insights which he wedded to an unusual business acumen to become truly Tennessee's Mr. Republican. For several decades he had been the party's most influential leader in this State, and his influence in national GOP circles was considered.

It is unlikely that the minority party will soon develop another leader in this State capable of consolidating so much of its political power in a single personality.

Younger men who aspire to Republican leadership in Tennessee would do well to understand those qualities which made Mr. Reece so successful. For his influence was not based solely upon political or fiscal skills.

Rather, the broadest base of his support could be found in a warm personality, in an inherently kind spirit, in a deep desire to serve what he believed to be the best interests of his constituents, and in a personal political credo by which both friend and foe knew him: A promise made was a promise to be kept.

Mr. Reece was partisan in his views and partisan in his deeds and words. But he was never bitterly so; therefore those who differed with him held him in highest esteem, and considered him a devoted patriot in the best tradition of freedom's way.

[From the Nashville Banner, Mar. 20, 1961]

REPRESENTATIVE B. CARROLL REECE

State and national tributes unite in evaluation of a lifelong service, the notable career of B. Carroll Reece—and in recognition of the public loss sustained with his passing. He was a stalwart American; as former President Eisenhower said of him, "an able and courageous leader in war and peace."

The First Tennessee District honored him by election 18 times to Congress, a tenure second only to that of Speaker SAM RAYBURN in the House. From 1946 through 1949 he served his party as Republican National Chairman, and other party honors included chairmanship of the State Republican Executive Committee, and long membership on the national committee.

East Tennessee knew him, boy and man, as one of its own, whose success stemmed from innate qualities of character, zeal and toil up the ladder to fulfill worthy aspiration. Early poverty was for him a challenge to self-improvement. He measured to it, with determination, and for education, creating its own opportunities.

On that solid foundation, he built a career distinguished for its service. As a soldier in World War I he was cited for extraordinary courage and heroism under fire. He received the Distinguished Service Cross, the Distinguished Service Medal, the Purple Heart, and the French Croix de Guerre.

Politically a conservative, he commanded the respect of colleagues on both sides of the party aisle. A power in Congress, a stabilizing factor in that realm of legislative give and take, he exercised an influence on the direction of Government, and he faithfully represented the interests of his district—no less concerned for the interests of his State and his Nation.

These unite in appraisal of an extraordinary career, self-made, and in the sense of loss occasioned by his death. To his memory respect belongs.

[From the Bristol Herald Courier, Mar. 22, 1961]

B. CARROLL REECE: A MAN OF STATURE

On this day we pay our last respects to B. Carroll Reece. We are not alone in sorrow. His colleagues in the Congress of our Nation, his countless friends across the State of Tennessee, a host of men and women at every station of life, all share the sadness which is ours.

How can you appraise, with any hope of adequacy, the life of men like Carroll Reece?

He came down from the mountains of east Tennessee and walked along a path which is open to few men, and which fewer still possess the courage and ability to tread.

Along that pathway, which ended Sunday, Carroll Reece tasted often the sweet wines of victory. He also, one some occasions, knew the disappointment of defeat. But Carroll Reece was never one to chart his course by battles won and lost. He turned his efforts always toward today and toward tomorrow—and grew in stature and in service until the very end.

Wherever his responsibilities and his duties led, Carroll Reece never relinquished his love or his loyalty for the First District of Tennessee. He served it with devotion; he gave himself full measure to each of those who came and sought his help. These mountains were his home, and the ties that bound him to his district were much stronger than such bonds are usually thought to be.

His name fell from the lips of those who knew him with the ease and affection of a loved one. He was more than a Congressman to all of them; he was a friend. At crossroads stores and country homes, they spoke of Carroll Reece as a personal benefactor. He helped an aged mother get a phone in a remote rural area; he worked to get electric power service so that poor farms might become more prosperous. During times of stress, he was the one answer for bereaved families who knew not what step to take to bring a serviceman home from some farflung outpost. Whatever monuments we may erect to Carroll Reece, none will speak more eloquently than those he built himself in the memories of men.

He was unquestionably the greatest Republican leader ever produced in the State of Tennessee and, also unquestionably, he was one of the greatest national figures of our generation. He was a patriot, in war and in peace. He was a legislator, astute in the ways of legislators and ever mindful that his actions could, and often did, alter the course of life for millions of Americans. He was an educator, a businessman, an economist, an historian. He read the lessons of life; he understood what he read; and, with understanding, he gave his own life to public service.

The mountains which bred him will stand silently for years unnumbered before they give us once again a man to equal Carroll Reece.

Mandatory Quotas on Textiles and Textile Products—Resolution of American Cotton Manufacturers Institute

---

EXTENSION OF REMARKS

OF

HON. B. EVERETT JORDAN

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. JORDAN. Mr. President, on last Saturday, at Miami Beach, Fla., at the time when the Senator from Rhode Island [Mr. PASTORE] addressed the meeting of the delegates to the American Cotton Manufacturers Institute, that convention adopted a resolution.

I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

IMPORT POLICY

Whereas the major American economic aim is growth and the creation of job opportunities; and

Whereas world trade on an orderly basis which is not disruptive of existing markets or creative of tensions is a desirable objective; and

Whereas the American fiber, textile, and apparel industries are vital to the national interest and employ 2 million persons in fiber production and another 2 million in textiles and textile products; and

Whereas the major deterrent to stability of employment and growth in the textile industry is the excessive and rising importation of textiles and textile products;

Whereas the competitive position of the American textile industry will be severely damaged by the rising differential between the cost of cotton to the American and foreign manufacturers; and

Whereas such excessive and rising imports: (a) increase unemployment and reduce work time; (b) worsen our balance of payments position and increase our potential gold loss; (c) deter sound forward planning essential to growth: Now, therefore, be it

Resolved, That the ACMI strongly endorses all the recommendations of the Pastore Committee and especially the recommendation that mandatory quotas on textiles and textile products be established by country and by category of product on a fair and equitable base period; and be it further

Resolved, That the ACMI commends the unusual action of President Kennedy in appointing a Cabinet-level committee to

consider the textile problem and urges that the recommendations of the Pastore Committee be implemented by the President at the earliest possible moment.

Virginia: All America City

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. POFF. Mr. Speaker, the city of Radford, Va., where I was born and make my home, has recently been awarded the title "All America City." In every sense of the word and by every yardstick, Radford is all America.

Under leave to extend my remarks, I quote herewith the contents of an editorial which appeared in the March 16 issue of the Radford News Journal, an editorial which appeared in the March 17 issue of the Roanoke Times and an editorial which appeared in the March 17, 1961, issue of the Roanoke World-News:

[From the News Journal, Radford, Va., Mar. 16, 1961]

ALL AMERICA CITY

This newspaper, like every citizen of Radford, is bursting with pride today in connection with Radford being chosen an All America City.

The fabulous honor is doubly punctuated by the fact that no other southern city received this award. We stand alone in this whole section of the Nation.

We would like to commend the delegation which journeyed to Phoenix and "brought home the bacon." The city's trust and confidence in the delegation was completely justified. So to Messrs. Whitehead, Price, Coleman, and Silverman goes a hearty, "well done."

Radford is 1 of 11 cities selected from over a hundred which pursued this honor. It is an appropriate award since citizen participation is the dominating factor in the competition and this has been the primary factor in the mass of outstanding accomplishments in the community.

The people of Radford responded magnificently when called upon to pass a bond issue for a much-needed expansion of our school system. Later when the need for a sewage treatment system became necessary, again our citizens answered the call with a resounding 7 to 1 majority. When the idea of an area airport was first advanced, Radford was beating the drums early on its behalf. This set the stage for other area developments whereby the several communities in the New River Valley have joined hands to further develop the area. The outcome of the area concept of development bred the Fantus study, closely followed by the New River Valley Industrial Commission. A need for vocational training was realized and joint community action created the New River Vocational Technical School. Probably the most unique contribution by Radford's citizens in recent years was last year's Project Color Styling. The overwhelming support given this attempt to present a more attractive face for visitors to our city (as well as ourselves) is noteworthy and has attracted much publicity throughout the Nation. The need for a substantial amount of local funds for the creation of our newest industry, Grafio Rubber Co., received outstanding support from our citizens. Once again, our people had responded in true all-America fashion.

Radford can look forward to expanded industrial development if we utilize the guide of the Fantus study. As yet, not a single new industry has been secured from the blueprint submitted by Fantus. It is mandatory that this be pursued with increased vigor. There are still many structures whose appearance can be greatly enhanced through the suggestions of Project Color Styling. Expanded library facilities are sorely needed for our people. The advancement of our excellent recreational facilities would be another desirable endeavor. Improvements in our zoning and planning for improvement of our shopping facilities should come under close scrutiny at an early date. An educational program to acquaint our citizens with the desirability of spending most, if not all, of their dollars locally would reap huge dividends to every citizen of our city. Of course, these are just a few of the many tasks ahead to which we must address ourselves. There are obviously many others.

[From the Roanoke (Va.) Times, Mar. 17, 1961]

CONGRATULATIONS

Few cities of Radford's size have ever won the coveted All America City Award. Since it was instituted the honor has come to scarcely half a dozen Virginia communities, of which Roanoke is one.

So Radford has good right to be proud of the fact that it is one of 11 cities of the United States to win the "All America" designation this year. Roanokers share in their neighbor's rejoicing.

Radford's good fortune is not the result of any single individual's effort though, to be sure, there was excellent leadership. It is a recognition, more than anything else, of a vigorously progressive civic spirit and a cooperative attitude in civic improvement. The award is a deserved tribute to the forward look and enterprise of the people.

We have an idea that this recognition and sense of achievement will stimulate Radford to accomplish greater things, that its citizens won't be content to rest upon their laurels. They have our congratulations and best wishes.

[From the Roanoke (Va.) World-News, Mar. 17, 1961]

ALL AMERICA RADFORD

Congratulations, Radford.

Recognition as an All America City by the National Municipal League and Look magazine is a deserved achievement and one in which every citizen has a right to take pride.

Being the only Southern winner among the 11, chosen from a field of 22 in the final competition, makes the award even more pleasing.

Radford shortly will receive its 1960 prize for citizen leadership in getting neighboring communities to join hands in common area projects such as the New River Valley Airport, an industrial commission, and a vocational school. In addition it enlarged the local hospital facilities, improved the water and sewage systems, launched a school building program, and staged a general refurbishing of its downtown area.

Thus, Radford joins Roanoke, Richmond, Norfolk, and Petersburg in the selected circle of communities which have earned national recognition for their progressive spirit.

Roanoke, All America of 1952 salutes Radford, All America of 1960.

Proposed Trout Hatchery on the Jordan River, Mich.

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. PROXMIRE. Mr. President, the scourge of the sea lamprey has fallen heavily on all States bordering on the Great Lakes in recent years.

The Great Lakes Fishery Commission is at last winning the battle against the lamprey, but the result of its earlier spread remains. The trout population of the Great Lakes has been virtually eliminated.

A vast quantity of lake trout fingerlings will be needed to restock Lake Michigan and Lake Huron, two of the hardest hit. To rehabilitate the trout population, a large lake trout hatchery must be constructed.

The Conservation Department of the State of Wisconsin reports to me that the most suitable location for this hatchery is located on the Jordan River in the State of Michigan. The need is urgent.

Mr. President, I ask unanimous consent that the letter to me from the Wisconsin Conservation Commission explaining this need be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF WISCONSIN
CONSERVATION DEPARTMENT,
Madison, Wis., February 17, 1961.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: I am writing to you at this time as a Commissioner of the Great Lakes Fishery Commission and as Director of the Wisconsin Conservation Department in regard to an appropriation which has been included in the Department of Interior budget for fiscal year 1962 for the construction of a lake trout hatchery on the Jordan River in the State of Michigan. It is my understanding that hearings will be held shortly by an appropriate subcommittee on this allocation of funds.

The Great Lakes Fishery Commission, as well as the Great Lakes States, the Province of Ontario, and the Canadian and U.S. Federal Governments have been actively engaged in the sea lamprey control program and lake trout rehabilitation. Considerable progress has been made in the control of the sea lamprey, and as of this date all of the streams tributary to Lake Superior inhabited by larval sea lamprey have been treated with specific toxicants to bring about eradication and control. The next step, of course, is the rearing and stocking of large quantities of lake trout to bring about the reestablishment of the population. Chemical treatment of streams tributary to Lake Michigan and Lake Huron will begin this spring, and subsequently lake trout fingerlings will be needed for the rehabilitation of the lake trout populations in these two lakes.

In order that a vast quantity of lake trout fingerlings can be made available for this

restocking, a large lake trout hatchery must be constructed. The most suitable location for this hatchery is located on the Jordan River in the State of Michigan. This site was selected only after extensive and exhaustive investigations were made by State and Federal experts. The Jordan River is the only site which has a water supply of sufficient quality and quantity to operate the size of establishment which is necessary. We in Wisconsin located several sites which had water of suitable quality but lacking in volume.

It will be greatly appreciated if you will lend your support to the allocation of funds necessary for the establishment of the Jordan River lake trout hatchery. I am certain the Bureau of Commercial Fisheries and the Bureau of Sport Fisheries and Wildlife of the Department of Interior will be most happy to provide you with further details. Should you have any further questions, I anticipate that I will attend the North American Wildlife Conference which will be held in Washington on March 6, 7, and 8. I would be most happy to answer any questions or provide whatever additional information which might be necessary.

Thanking you for your consideration, I am,

Very truly yours,

L. P. VOIGT,
Conservation Director.

Death of the Dollar

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DEROUNIAN. Mr. Speaker, how much can our American taxpayer stand? Lyle Wilson's article in the March 27 issue of the Washington Daily News is very timely:

NICKED AGAIN
(By Lyle C. Wilson)

Your bank account, your insurance policy and the dollar in your pocket were nicked by the budget message sent to Congress last week by President Kennedy.

All three will be nicked again by this week's defense budget message. These are the thousandth or ten thousandth such nicks suffered by the U.S. dollar in the past 20 years. These nicks are painless, less than a pin prick.

It is a fact, however, that mere nicks can cause the U.S. dollar to bleed to death. The dollar has been bleeding a little ever since it was established as the basic unit of our money in the infancy of the Republic. This bleeding process is called currency inflation. Currency inflation, in turn, is a process of shrinking the purchasing power of the dollar.

There was some currency inflation in Mr. Kennedy's Friday budget message. It was not identified as such, but it was there. It was disguised but identifiable in the language and the figures estimating Treasury revenue and proposed spending for current (1961) and next (1962) fiscal years.

The Treasury experts are estimating deficits in both of those years. Deficits tend to rot the dollar. How large those deficits will be depends on the sum proposed by the President for national defense spending. Last Friday's budget covered only nondefense items.

Both of these budget messages are revisions of budgets previously proposed for those years by former President Eisenhower. Messrs. Eisenhower and Kennedy jointly are responsible for the end product, including the inevitable further inflation of the currency and rotting of the dollar.

This process proceeded at a gallop in the Roosevelt and Truman administrations. It slowed to a crawl or a creep during the 8 Eisenhower years. Even so, the impact on your bank account, your insurance policy and on the buck in your pants has been devastating. The Senate Finance Committee calculates that the dollar since 1939 has lost about 53 cents in purchasing power.

The committee took 1939 as a reasonable jumping-off place for such calculations. It arbitrarily assigned to the 1939 dollar a purchasing power of 100 cents. Month by month the Government issued cost-of-living figures on the basis of which, month by month, the committee recalculated the dollar in terms of what it actually would buy.

As prices rose, the dollar bought less and less. That beautiful buck in your pants pocket is worth right now 47 cents in terms of 1939 bacon and beans.

This dollar devaluation is sometimes called the rotting of the dollar, a better phrase. It also is the grandest larceny. It robs everyone but it robs some more than it robs others. The hardest hit are those who can least afford it—the common men and their women.

Civil Rights Progress

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article, by the distinguished Senator from Hawaii [Mr. LONG], on the subject of civil rights legislation, which appeared in the Honolulu Advertiser on March 12, be printed in the Appendix of the RECORD.

I should like to know how he obtained that much space in a daily newspaper. It was a remarkable achievement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS PLAN PERKING
(By Senator OREN E. LONG)

The outlook is good for progress in the civil rights field under the Kennedy administration. The President and the majority leadership in Congress have skillfully avoided the boobytrap which has destroyed civil rights efforts so often in the past—a bitter, drag-out fight over legislative procedure.

To have pressed Congress immediately for a sweeping civil rights program, with the dramatic threat of a filibuster, would have been a spectacular gesture by the new administration.

But the President and the majority leadership in Congress were well aware that any such grandstand play would have jeopardized the administration's entire legislative program.

Instead, the administration has wisely chosen first to use the tools at hand—tools which the previous administration also had, but failed to use fully. These tools are the Executive actions which can be taken under existing law and authority.

Some of these steps are being taken quietly, with little or no publicity. Others are public actions such as the President's Executive order setting up the new Committee on Equal Employment Opportunity. This is indicative of the new administration, showing what can be done if the effort is made.

As the New York Times commented on March 8:

"For some years it has been the official policy of the Government not to discriminate against its own employees because of race, creed, color, or national origin. And the same policy has been required of companies in Government contract operations. But enforcement by the two previous committees in this field was much too sketchy—especially in the case of private contractors—largely through the lack of clearly defined powers and also personnel.

"President Kennedy's order meets both these shortcomings with an imaginative and hard-hitting program—hard hitting in its possibilities, but tempered by education and persuasion."

Although progress will be made by executive action under the Kennedy administration, this is not to say that legislative action is not also needed. That is why I have joined with Senator HUBERT HUMPHREY of Minnesota in introducing a seven-point civil rights legislative program.

The bills are:

S. 1253—Bar racial discrimination in the use of facilities or equipment used for interstate travel. This bill would apply to terminal facilities and local transportation to and from terminals in the same degree as to the transportation equipment itself.

S. 1254—Extend to all members of Armed Forces the protection now afforded to Coast Guard personnel against bodily attack. The bill would make an attack upon any serviceman in uniform a Federal offense.

S. 1255—Strengthen criminal statutes and provide additional civil remedies to persons deprived of their civil rights. This would be accomplished by outlawing certain actions that may be prejudicial to the rights of citizens under the Constitution and by providing civil remedies against persons contravening such rights.

S. 1256—Define lynching as an assemblage which: (1) commits violence on any citizen because of race, ancestry, or religion; or (2) exercises by physical violence any corrective measure over a prisoner, suspect, or convict to prevent apprehension, trial, or punishment. So defined, lynching would be a Federal criminal offense with severe penalties.

S. 1257—Extend indefinitely the Civil Rights Commission as now established. Under the present law which expires November 8, 1961, the Commission would be eliminated as of that date.

S. 1258—Create an Equality of Opportunity in Employment Commission to administer a program of nondiscrimination in employment. The Commission would be given, subject to judicial review, broad powers of preventing discrimination and investigating employment conditions.

S. 1259—Outlaw the poll tax as a voting requirement in all elections where Federal officers are chosen.

This bill would affect only the five States which still retain a poll tax.

I am hopeful that in due course, after the other major parts of the administration's legislative program are acted upon and the threat of a filibuster is therefore weaker, Congress will give proper consideration to the bills which Senator HUMPHREY and I have proposed.

To me, the program envisioned by the bills is more than the sum of its parts. Each bill is designed to correct or ameliorate some

specific evil or injustice which is now prevalent or is possible under present law. But I believe the program would represent much more.

Its enactment would be a milestone in the slow progress of humanity toward humanitarianism—a way station on the long road toward the realization of the American dream.

Anti-Communist Group Necessary

EXTENSION OF REMARKS
OF
HON. WILLIAM W. SCRANTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. SCRANTON. Mr. Speaker, I find that young America is more interested than ever in the many major issues of our day. It is particularly encouraging that the college students seem to be so alert to the threat of communism to the world and to the Nation.

As a clear and forthright indication of this, under unanimous consent, I include the following editorial from the Aquinas, a newspaper published weekly by the students of the University of Scranton, Pa., and thus bring it to the attention of the Members of the House:

ANTI-COMMUNIST GROUP NECESSARY

The House Un-American Activities Committee and in particular its film, "Operation Abolition," have come under fire recently from college newspapers and student associations throughout the Nation demanding that the committee be disorganized.

In addition, some Members of Congress, led by JAMES ROOSEVELT, of California, have attacked the committee and tried to halt appropriations this year for the committee.

The main contention against the House Un-American Activities Committee is that it is un-American. Opponents of the committee constantly revert to mentioning that the Supreme Court of the United States is split by a close vote of 5–4 on the committee's constitutional basis.

This type of faulty argument was most recently used by Representative ROOSEVELT on March 1. When speaking before the House of Representatives, he noted that only a few days previous had the Supreme Court in the Wilkinson and Braden contempt cases, split 5–4 on its decision. In all cases, the majority voted in favor of the committee.

The HUAC is one of the many ways by which the people of the United States, through their duly elected representatives, can take a forward step against communism.

J. Edgar Hoover, Director of the Federal Bureau of Investigation, recently stated that "communism was never more dangerous to American freedom than right now."

With this in mind, civic-minded people of the United States can do one of two things; either stand around twiddling their thumbs and allow communism to gain a stronger hold in this hemisphere, or they can take constructive forward action against this menace to mankind. Americans should not only be prodemocracy but anti-Communist.

Support the House Un-American Activities Committee is one of the best means of combating the communistic threat in the United States.

We were specially gratified by the recent vote of the House of Representatives favoring the appropriation of funds for the HUAC. The vote was 412 yeas, 6 nays, and 14 not voting.

Of special note regionally was the fact that both Congressman DANIEL J. FLOOD, Democrat and Congressman WILLIAM W. SCRANTON, Republican, voted in favor of the resolution.

This overwhelming vote of confidence should promote the HUAC to continue its relentless work which is so important to the well-being of the United States.

The Aquinas, at this time, wishes to go on record supporting the House Un-American Activities Committee, and asking other college publication and student groups to take a realistic look at the total picture of communism and its influence on the United States. If they do this then they will see the necessary duty of the House Un-American Activities Committee.

Economic Bootstrap Operations in Mellen, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. WILEY. Mr. President, across the Nation serious economic problems still confront us in many communities.

Fortunately, a number of these areas, through constructive, forward leadership, are attempting to undertake "bootstrap" operations to improve their economic outlook.

As a splendid example of this, the citizens of Mellen, Wis., are undertaking a vigorous effort to promote tourism. The objective is to take advantage of the splendid natural resources of the area to,

First. Provide a wonderful place of recreation for the people of Wisconsin, the Nation, and other countries, and

Second. Boost the local economy.

Recently I received from President Howard Peters of the Mellen Area Development Corp., a statement revealing their efforts at improving the economy. Reflecting the realistic, forward-looking way in which this community is endeavoring to grapple with these economic difficulties, I ask unanimous consent to have this statement published in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

ECONOMIC BOOTSTRAP OPERATIONS IN MELLEN, WIS.

The sight of skis atop of automobiles, going from ski hill to ski hill in northern Wisconsin and upper Michigan is a recent phenomenon to the Midwest. To most this is just one more sign of the American, with increased leisure, seeking outdoor recreation in what is the Nation's fastest growing outdoor sport. However, to the long depressed areas of the north where ski developments have been made it is a new and dynamic economic factor, a factor that has brought about a healthy resurgence in the recreation industry. Skiing has made these areas four season vacationlands, converting this once highly seasonal industry to a year-round basis. In these communities new moneys and energies are now available to develop fully all the vast recreational resources that abound in the north. Existing motels, resorts, restaurants and other tourist facilities have been able to greatly improve and new facilities have been built or are a-building. Recreation on a year-round basis is just beginning to be recognized in these areas as the great economic force that it is.

To most experts the best potential ski hill in northern Wisconsin is Mount Whittlesey, located just outside the city limits of Mellen, Wis. Here in the heart of the snow belt Mount Whittlesey rises to a height of 1,872 feet, the highest point in the Penokee Range. The northern slopes afford a usable vertical drop of substantially more than 400 feet, down hill runs in excess of 5,000 feet and an average snowfall of over 100 inches. The mountain is accessible and visible from three State highways, Nos. 13, 77, and 169. The general geographic location places it within easy reach of three giant metropolitan areas, Chicago, Milwaukee and Minneapolis-St. Paul. These factors have made winter sports enthusiasts look longingly at Mount Whittlesey for the past 30 years.

The mountain was named for Col. Charles Whittlesey, who in 1849 was sent by the U.S. Government to make a geological study. In the colonel's letters to his younger brother, Asaph, he told of the promise of iron ore mining in this area. Asaph came north and built the first home in what is now the city of Ashland. He later was instrumental in forming Ashland County. Today, 112 years later, people are still waiting for the iron ore mining.

The land needed for the surface development of Mount Whittlesey as a ski hill represents but a small fraction of the land in the Penokee Range now controlled by the Oliver Mining Co. A subsidiary of the giant United States Steel Corp. The year 1929 marked the first date in which efforts were made to obtain this excellent hill for recreation. This proposal was submitted to the steel interests by the Chicago Toboggan Club and it was turned down on the grounds that the development of Mount Whittlesey would interfere with planned mining operations. Over the next 32 years numerous requests were received by the mining company for the use of this land for recreation and each was turned down. The most recent request was contained in a comprehensive proposal, including firm financial backing, drawn up by private individuals of the Mellen area. On June 14, 1960, the secretary of the Pewabic Corp., a subsidiary of the subsidiary, rejected the proposal "somewhat regretfully" and stated once again that the reason was that the surface development of Mount Whittlesey would "represent an additional encumbrance and consequent interference with exploration or the mining possibilities."

Today venture capital is waiting to develop Wisconsin's finest ski hill and the Mellen area is making an effort to create conditions whereby they can exploit their rich recreational resources as well as the possibility of mining. This depressed area has the summer assets of one of Wisconsin's most beautiful State parks, Copper Falls, many lovely small lakes nestled in the rocky highlands of the Penokee Range, fine trout streams and the vast Chequamegon National Forest with its wildlife. To date, the short northern summer vacation season has precluded any full development of these resources. But with skiing on Mount Whittlesey, the area would become a compact four-season recreation area where present limited facilities could be greatly improved and new ventures established. Conservative estimates show that the need for recreational facilities in our Nation will grow 10 times in the next two generations and the Mellen area cannot afford to overlook their underdeveloped recreational resources as means of economic betterment.

The proposed ski development looks for an initial investment on Mount Whittlesey

that would in a few years bring 40,000 skiers to the Mellen area during the 13-week ski season starting at Christmas. Over the years the hill could be expanded to accomodate up to 60,000 or more. Figures show that the average skier spends 10 percent of his dollar in transportation, 10 percent at the hill and 80 percent for lodging, food, beverages, and entertainment. On the basis of 40,000 skiers, it can be estimated that each skier would spend $7 at the hill for a total of $280,000 and eight times that amount in the area, or $2,240,000. A total of over $2½ million would be brought into the area during the worst 3 months of the yearly economic cycle. This money and the summer potential would make the building of facilities economically sound and would do much to hold in this area a great percentage of the over 140,000 visitors who yearly visit the State park. Other developments will follow. The YMCA of Metropolitan Chicago has already expressed definite interest in developing a year-round camp for high school and young adult groups. This one organization alone has spoken of an initial development costing over a quarter of a million.

In order to bring about an economic resurgence to their community, interested citizens of the Mellen area have formed the Mellen Development Corp. to explore and exploit all of their resources. The development corporation has taken up the ski hill project and are bending every effort to get a sympathetic hearing from the Oliver Mining Co. for the multiple land use of the small area in the Penokee Range that is needed for the Mount Whittlesey ski hill. Through their legislative representatives in the State senate and assembly a nonpartisan resolution has been submitted calling on the mining interests to "seriously consider the leasing of this property to the Mellen Development Corp." The executive branch of the State government has been enlisted to help this small northern community help itself.

The need for prime outdoor recreational areas for those caught in the web of metropolitan living is recognized by all business, intellectual and government leaders. Four-season vacationlands are a vital need in our complex industrial society and their economic worth to northern Wisconsin is just truly starting to be felt. Mellen is a prime area for just such development and the people of this community are striving today to bring an enlightened view of multiple use of both the recreational and undisclosed mineral resources of the Penokee range. It is their hope that the full exploitation of these two resources can be made in such a way that one will not compete with the other.

Statistics Show the Need for Oil Depletion Allowance

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. CASEY. Mr. Speaker, the need for continuation of the present oil depletion allowance has long been understood by Members of Congress familiar with the many problems of the petroleum industry.

But if there is any doubt in the minds of some of my colleagues, I respectfully call to their attention the short editorial from the Houston Chronicle of March 20, 1961. I think the statistics cited in this editorial clearly point the need for continuation of this allowance.

WILDCATTING REPORT UNDERLINES NEED FOR DEPLETION ALLOWANCE

Those who think the oil industry is getting undue tax benefits as a result of the 27½ percent oil depletion allowance ought to peruse the 16th annual report on exploratory drilling by the American Association of Petroleum Geologists.

The risks the industry takes in its search for new oil reserves are dramatized by the report's disclosure that during 1960 the industry enjoyed a success ratio of only 10.18 percent. Of the 7,320 new field wildcats drilled, only 745 produced some oil or gas.

However, the full story of the risks encountered is not seen in last year's operations.

Of the 7,033 new field wildcats drilled in 1954, there were 875 discoveries, but only 117 of these are producing today.

The report draws the conclusion that only 2 percent, or 1 in 60, rank wildcats drilled in the United States discover profitable fields.

On the basis of last year's operations, it costs an average of $53,000 to drill a new oil or gas well, according to a joint survey by the American Petroleum Institute, the Independent Petroleum Association of America, and the Mid-Continent Oil & Gas Association.

But an individual well can cost as much as $2,207,000 as each of nine dusters drilled in Alaska last year showed.

Nanticoke High School Wins Pennsylvania State Basketball Crown

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. FLOOD. Mr. Speaker, I am extremely proud and happy to announce that a high school in my congressional district, Nanticoke High School, last Saturday evening won the coveted honor as Pennsylvania's State Class A basketball championship in a stirring clash with Hickory Township High School of western Pennsylvania by a score of 56–46, before a huge crowd of nearly 9,000 at the Farm Show Arena in the State capital, Harrisburg. All in Luzerne County are thrilled with this truly outstanding and memorable accomplishment and to the coach, Mr. Syl Bozinski, his talented squad, and to the people of Nanticoke who supported the team most loyally throughout a long and often-difficult season, my warmest congratulations on this great honor. So that others may have the opportunity of reading of the accounts of this great game, I submit the story from the Wilkes-Barre Sunday Independent of March 26, 1961, written by the paper's sports editor, Mr. Lou Rauscher:

NANTICOKE WINS STATE CAGE CROWN—NANS LEAD FROM START TO FINISH—JAMES AND LEGINS LEAD FINE TEAM IN GREAT VICTORY

(By Lou Rauscher)

HARRISBURG.—Nanticoke High School, a team with determination to match its skill, last night made modern-day cage history here at the Farm Show Arena by winning the PIAA class A basketball championship in soundly outclassing Hickory Township, the western representative, 56 to 46, before 8,841 paid onlookers.

The State's team of destiny led throughout, controlling both boards and utilizing superior speed in bringing Wyoming Valley its first State crown in 25 years and the school's first in 35 years.

Coach Syl Bozinski's boys made their seasonal record 26 and 1 and hung the second defeat of the year on the Hickory boys who had practiced all week with the Sharon team which earlier in the year put the only blemish on Nanticoke's record.

	G	FM	FT	Points
Nanticoke (56):				
James	8	3	4	19
Yanchik	4	0	0	8

Nanticoke	19	15	7	15	56
Hickory	13	14	8	11	46

REAL TEAM EFFORT

It would be a rank injustice to single out any individual for a sparkling effort as all the Nans pitched in to bring home the bacon. But, at one point in the third period, when All-Stater Ken Legins was taken out of the game with his fourth personal, the Nans looked to Billy James to carry them over and he came through in fine style.

James, in addition to being a whiz off the board, wound up as high scorer for the winners with 19 points, many of them on smashing drives into the basket. Legins followed with 16 points 6 of them on fouls, and played an outstanding game on defense. The Nans as a team converted 14 of 19 free throws, while their opponents were making 12 of 17.

The Nans got off to a 2 to 0 advantage on Legins' goal and were never headed, forging to a 19 to 13 first-period bulge and making it 34 to 27 at the half. However, at one point toward the end of the second period, Hickory put on its only sustained offensive of the night, causing Nanticoke to come up with a case of butterfingers in narrowing the gap to three points, 30 to 27.

The game developed into a racehorse affair at this point and marked the only time during the contest that the western Pennsylvanians matched the winners in sheer hustle.

Then, when it seemed disaster would overtake the Nans, George Yanchik, who with James and Legins controlled the rebounding on both boards, sank a goal and James added two fouls to stake the Wyoming Valley League champs to their seven-point halftime advantage.

Legins, who had 10 of the Nans 19 points in the first period, was blanked the entire second quarter as Hickory's big boys, Fred Green at 6 feet, 4 inches and John Crumbacher at 6 feet 5 inches, ganged up on him from the Hornets' optional man-for-man defense.

As has been the case all season for the Nans, when their big man is tied up, one or the other rises to the occasion. This time

it was James who dumped through three goals and two fouls to lead his team's scoring in the second period.

Hickory took the court after intermission to insert a modified full-court press, but soon thought better of the idea when they couldn't match the Nans' speed. It was about at this point that Nanticoke's superior conditioning began to tell.

LEGINS TAKEN OUT

The Champs built up a nine-point lead at 38 to 29 in the third period when Legins was charged with his fourth personal. The big guy was lifted in favor of John Dudrick and the team missed him, being outscored in this stanza, 8 to 7, and winding up the third period with a six-point lead at 41 to 35.

The Nans could muster only one field goal during the period, a neat drive-in by Yanchik.

The fourth quarter saw Legins back in action and collaborated with James for four quick buckets to up the Nans' lead to 51 to 39. This 12-point spread came about when James drive in for a shot and hit the deck hard on the way down. The six-two ace wound up with 11 of his team's 15 points in this period to apply the clincher.

SENSED BIG VICTORY

As the Nanticoke partisans sensed the impending victory, they let out a roar during the time-out session that must have been heard all the way back to Tilbury Knob.

Hickory's Green, playing mainly in the corner, came up with 12 of his team's points. He was joined in the scoring department by Guard Bill Lenzi, the Hornet's equivalent of Nanticoke's Richard Kiewlak.

Crumbacher, the other big man for the losers, came up alent of Nanticoke's Richard many easy shots.

Rounding out the scoring for the Nans were Kiewlak, seven points, eight by Yanchik and six by Joe Shepela, who began leading an informal one-man cheering session as the championship hovered in sight.

Two of Kiewlak's goals came early in the first period as he thrilled the lively throng with set shots from near-center court.

FAN FARE

Nanticoke owned a substantial bulge in the rebound department clearing the boards 45 times to only 29 by the losers.

Of the champs' total, James picked off 16, Yanchik 13, Legins 10, Shepela 4 and Kiewlak 2. Crumbacher and Green led the rebounding for Hickory. Nanticoke outscored Hickory 15 to 11 in the final period as the Hornets seemed to be dragging. The scene on the floor after the game was one of unbridled joy as the Nans presented their coach Bozinski with game ball and carried him off the court. State Police cordon ringed the floor shortly before the end of the contest to keep spectators off. Legins did a marvelous job of playing the entire final period without committing another personal. It was a long ride back for Hickory's partisans—their town is located near the Ohio border. Incidentally, Hickory has an enrollment of 600 in Grades 10 to 12 while Nanticoke has about 550 in Grades 9 through 12. Green left the game for the losers on personals in the fourth quarter, the Champs really played Hickory off their feet with their dashing fourth quarter. Nans enjoyed a 48 percent accuracy average. Hickory seemed nervous in the first half, while Nanticoke was poised after playing in the arena for the third time within eight days. Hickory had a hard time penetrating the Nan's sliding zone defense. Lenzi was the loser's spark and was a threat throughout. Nanticoke's band did a fine job with their rendition of the national anthem and this time a color guard was on hand to present the colors. Referee Steve Honzo of Palmerton and Zig Mahalik of Ford City did a good job of calling 'em. Legins now has over 600 points this year and Bozinski's 7-year record is 141–30. Bozinski readily admits that he has about had it as far as basketball for this season is concerned. He said, "The boys and I are getting just a bit tired and we're starting to feel like the Harlem Globe Trotters with all the bus rides we've taken in the last two weeks." Nanticoke supporters staged a huge bonfire at the Lincoln Stadium in Nanticoke on Friday night. An old home razed in the redevelopment project was used as kindling. Bozinski was high in his praise for the work turned in by his assistant, Norm Groblewski. Norm played football at Nanticoke and one year under Biggie Munn at Alabama before finishing at Albright. He didn't have much in the way of basketball experience until Stretch corralled him.

Termination Date of Menominee Indian Reservation

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. PROXMIRE. Mr. President, the Clintonville, Wis. Association of Commerce recently wrote me to request a postponement of the termination date set for the Menominee Indian Reservation until such time as the Tribe is ready for self-government. Clintonville is located 23 miles south of the reservation, so the members of the Association of Commerce have personal knowledge of the serious financial and other problems which the tribe must solve before termination can work successfully. The decision of their board of directors to ask for a postponement of the termination date, now set for April 3, should therefore carry considerable weight.

I ask unanimous consent that the letter from Mr. James C. Huffman, president of the Clintonville Association of Commerce, be printed in the Appendix in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ASSOCIATION OF COMMERCE,
Clintonville, Wis., March 24, 1961.

Senator WILLIAM PROXMIRE,
U.S. Senate, Washington, D.C.

DEAR SIR: It was the decision of the Clintonville Board of Directors of the Association of Commerce to request that you delay the termination date of the Menominee Indian Reservation until they are ready for self-government.

In the interest of good government and human relations, we suggest that date of the termination coincides with time that they are sufficiently organized to be self-governing.

In only this way, do we feel that the Menominees would have a fair opportunity for good self-government that would be a credit to their country, State, neighbors, and themselves.

We think they deserve this opportunity in interest of good government; and we ask the Department of Interior to give serious consideration along these lines.

Very truly yours,

JAMES C. HUFFMAN, *President.*

A U.N. Seat for Communist China

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. FORD. Mr. Speaker, it is disturbing to hear and read from time to time that serious and favorable consideration is being given by responsible governments of the West to the admission of Red China to the United Nations. Under leave to extend my remarks, I include an editorial entitled "A U.N. Seat for Communist China?" by William Henry Chamberlain which appeared in the New Leader of March 27, 1961. Mr. Chamberlain points up some obvious but basic considerations in this crucial issue:

A U.N. SEAT FOR COMMUNIST CHINA?

(By William Henry Chamberlin)

It is becoming increasingly probable that the first big test of nerve, skill and firmness in foreign policy for the Kennedy administration will come in the Far East. In Europe there has been no sign of weakening or wavering. Apart from geographically isolated West Berlin, there is no point in Europe that seems vulnerable, politically, economically or militarily.

But in the Far East the ideological line of the new administration looks less firm. Whatever may fairly be said in criticism of some aspects of the foreign policy of the Eisenhower administration, it held the line in the Orient. There was no war and there was no appeasement. When the Chinese Communists put on their big bluff of launching an intensive bombardment of Quemoy and Matsu in the autumn of 1958, and a vociferous chorus of faint hearts on both sides of the Atlantic was predicting the direst calamities if the United States did not pull the rug from under Chiang Kai-shek and force the evacuation of the islands, Eisenhower and Dulles refused to panic. The bombardment in due course ceased; the Kuomintang flag is still flying over Quemoy and Matsu.

But some men who are high in the councils of the new administration are on record as favoring substantial revisions of this policy of defending Formosa and other countries in the pathway of Red Chinese aggression. Both Adlai Stevenson, Ambassador to the United Nations, in an article in Foreign Affairs for January 1960, and Thomas K. Finletter, Ambassador to the North Atlantic Treaty Organization, in a book on American foreign policy, are on record as favoring a plebiscite in Formosa to determine its form of government.

This seems to ignore the fact that there is a recognized government on Formosa, that of the Republic of China, with which we are in formal treaty alliance. To repudiate the legitimacy of this government by trying to stage a plebiscite would be the surest way to inaugurate chaos on Formosa and pave the way for possible seizure of the island by the Communists.

Stevenson, in the same article, suggested an abandonment of U.S. resistance to admission of Red China to the U.N., and more recently he remarked that it might be difficult to continue keeping Red China out. It is not surprising, therefore, that a propaganda campaign has been launched in London in favor of the admission of Red China. This has taken the form of statements by high British officials, including Foreign Secretary Lord Home, and of inspired leaks to foreign correspondents in the British capital. The recent Commonwealth Conference

served as another forum for advancing this program of appeasement. The issue also may figure prominently in the coming talks between Prime Minister Harold Macmillan and President John F. Kennedy.

In view of this pressure from London and the prospect that some votes in the U.N. may shift on the issue (for example, Brazil's new government seems to favor admission), is there a serious case for changing our position against admitting Communist China to the U.N.? In my opinion, all the arguments for admission do not hold up under examination.

One argument that is often put forward is that Communist China would be amenable to the influence of the world organization and moderate its policies of violence and aggression. Of this there is not the slightest probability. One need only look at the Soviet record in the U.N., with special reference to the lesson of Hungary.

Another argument is that China should be recognized in the interest of international disarmament. But this is getting far ahead of present realities. It remains to be seen whether a nuclear test ban treaty, with satisfactory safeguards, can be arranged with the Soviet Union. Even if this should come off, it is extremely doubtful that the Soviet Union, even if it so desired, could prevent Red China from seeking and ultimately achieving the status of a nuclear power.

Nothing in Communist Chinese public statements and actions would seem to qualify this regime for membership in an organization supposedly composed of "peace-loving" states. Nor could the admission of Red China to the U.N., or its diplomatic recognition by the United States, be justified on the ground that this is simply acceptance of realities.

It is pernicious nonsense to say that nonrecognition can be equated with an ostrich-like refusal to recognize the existence of Communist China. Americans, especially relatives of Korean war casualties, know very well and to their sorrow that Red China exists. Our purpose in withholding admission and recognition is to give heart and confidence to our allies on Formosa, and to anti-Communists in other Asian countries.

Resolution on Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution of Freeholder Thomas G. Dunn on Federal aid to education, as adopted by the Board of Chosen Freeholders of Union County, N.J.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION BY FREEHOLDER DUNN

Whereas the parochial schools of Union County, representing all major religious faiths, and private schools, contribute vastly to the educational welfare, cultural, and financial betterment of the county; and

Whereas the parochial and private educational systems of the county are finding it increasingly difficult to finance its operations without assistance from sources other than those already contributing; and

Whereas there is before the U.S. Senate and House of Representatives, proposals that would, if enacted into law, allow for governmental loans to parochial and private school systems, that would permit new construction, expansion, and improvement to said school systems: Now, therefore, be it

Resolved, That this board of freeholders go on record favoring such loans, and be it further resolved that forthwith Senators CASE and WILLIAMS, and Representative DWYER, be informed of the sentiments of this board.

The Sergeant Alvin C. York Committee

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, the need of a great American hero Sgt. Alvin C. York, now disabled and bedfast, has come to the attention of the patriotic citizens of this Nation as Speaker SAM RAYBURN last week accepted the chairmanship of the Help Sergeant York Committee and donated his personal check for $1,000 to begin the campaign to raise funds to pay off Sergeant York's income tax indebtedness to the Government. Other members of this committee are Hon. Robert F. Kennedy, the Attorney General, Hon. Silliman Evans, publisher of the Nashville Tennessean. Actor Gary Cooper, who played the part of Sergeant York in the film of his deeds of heroism and the Representative of the Fourth District of Tennessee, Sergeant York's Congressman, who is serving as treasurer of the committee.

The press, radio, and TV of the Nation has rallied to the cause and has helped focus attention on Sergeant York's difficulties. Among the newspapers which have given the York matter excellent coverage are the Nashville Tennessean, the New York Journal American, the Baltimore Sun and the National Tribune—the Stars and Stripes. Both Ed Sullivan and Dave Garroway of TV fame have contributed much to the fund raising campaign. We have passed the halfway mark as contributions of generous Americans continue to be received at our office for this purpose.

Mr. Speaker, under unanimous consent, I include a representative sampling of these articles from the press across the country on the Sergeant York campaign in the Appendix of the RECORD.

The articles follows:

IRS TO SETTLE YORK'S TAX DEBT FOR $25,000—SPEAKER SAM RAYBURN KICKS OFF CAMPAIGN TO GET NEEDED FUNDS

(By Lois Laycook)

WASHINGTON.—The Internal Revenue Service agreed yesterday to settle Sgt. Alvin C. York's tax debt for $25,000 and House Speaker SAM RAYBURN immediately kicked off a national drive to raise the money.

The speaker announced the formation of a "Help Sergeant York Committee" to conduct the fund-raising campaign.

Appointed to the committee to serve with Rayburn as chairman were Attorney General Robert F. Kennedy, Representative Joe L. Evins, Democrat of Tennessee, Silliman Evans Jr., publisher of the Nashville Tennessean, and Gary Cooper, Hollywood film star.

Rayburn called a rare Saturday afternoon press conference to announce the action.

He told reporters that the Government had agreed to lop off almost $150,000 of its claim against Sergeant York which it said the World War I hero owed in taxes, penalties and interest on royalties from a book and the 1941 film version of his life. "Sergeant York," starring Cooper.

In New York, Cooper said:

"I worked with Sergeant York when we filmed the movie and he is a great patriotic American. I am delighted and pleased to take part in a drive to raise money to pay off Sergeant York's tax debt."

IRS contended York owed $172,000, a figure which the Tennessee Medal of Honor winner vigorously disputed. In announcing the settlement and plans to conduct a campaign in York's behalf, Rayburn said:

"This is a matter that appeals very much to my heart. Alvin York was the greatest hero of World War I. He's had a great deal of financial trouble in recent years. He's very ill now and will not be a well man during the rest of his life. He has had two severe strokes."

"I am interested for another reason. I was born about 50 miles from where Sergeant York lives."

RAYBURN was born in Roane County, Tenn.

In Nashville, Tennessean Publisher Evans said after RAYBURN'S announcement:

"I feel very honored to be associated with this project to ease the financial burdens of Sergeant York, one of the greatest heroes of the Volunteer State, home of so many illustrious warriors."

To start the fundraising drive, RAYBURN presented Representative EVINS with a personal check for $1,000. EVINS, who represents York's district in Congress, will serve as secretary-treasurer of the campaign.

"I hope this check made out to the 'Alvin C. York Fund' will challenge others to give at least $24,000 more so we can take this debt off the mind of this great hero," RAYBURN declared. "In fact I hope the campaign will raise more than $25,000. Sergeant York has only a small pension and a little social security. That makes it pretty thin as far as making a living is concerned."

York received the Congressional Medal of Honor for killing 25 Germans and capturing 132 singlehandedly Oct. 8, 1918, during World War I. He is still Tennessee's most famous war hero.

RAYBURN told newsmen EVINS first approached him several weeks ago after talking with the Attorney General and officials of the Internal Revenue Service on the possibility of settling York's tax troubles.

"We decided on a course if we could get a reasonable compromise," the speaker said. "We now have a letter from Internal Revenue stating that the Government will compromise for $25,000."

EVINS had previously introduced a bill to wipe out the tax debt. However, RAYBURN said the Congressman later agreed that settling income tax difficulties was "not a proper subject for legislation."

In announcing Evans' appointment to the committee, RAYBURN said the Nashville publisher "has been interested in this matter and he has wanted to find some way to get this man out of debt."

The Speaker expressed the hope the campaign will receive wide publicity.

He said checks should be made to the "Alvin C. York Fund" and mailed to Representative JOE L. EVINS, House Office Building, Washington, D.C.

Representative EVINS said the checks will be deposited with the House sergeant of arms office in the Capitol.

He praised RAYBURN for his most generous gesture in presenting a $1,000 check to the fund.

He said various American Legion posts in Tennessee have previously raised approximately $2,000 to help pay off the debt "so we are starting off with $3,000."

York received $150,287.76 in 1942 and 1943 for the book and movie rights to his life story. The Internal Revenue Service held this income to be taxable as ordinary income rather than as capital gains.

York disagreed with this ruling and petitioned the U.S. Tax Court for a redetermination of his liability as capital gains. Complicating the case was York's earlier action in giving almost all the money he had received from the royalties to York Institute and other schools. IRS held he could not deduct these gifts as charity.

The case, although set for trial several years ago, has been continued from time to time because of York's long illness. Meanwhile, IRS estimated interest and penalties ran the tax debt up to $172,000.

York has a monthly income of $135.45 as a veteran's pension, $32 monthly from social security, and $10 monthly from the Government paid to all Congressional Medal of Honor winners.

J.F.K. JOINS DRIVE TO HELP SERGEANT YORK

(By Marianne Means)

WASHINGTON, March 22.—President Kennedy, a war hero with a deep sense of history and an admiration for courage in battle, is taking a personal interest in the troubles of a man whose name has become part of America's heroic tradition.

The President learned of the plight of Sgt. Alvin C. York, the greatest hero of World War I, through the Attorney General, Robert Kennedy.

Robert was told last week by Internal Revenue Commissioner Mortimer Caplin that Sergeant York, who wiped out 25 Germans by himself and captured 132 in one battle in 1918, was in deep income tax trouble. The IRS claims that Sergeant York owes $172,000 in unpaid back taxes.

Mr. York, now an invalid of 73, ekes out a bare existence in a rugged mountain farm in Tennessee, and simply doesn't have the money.

The near-illiterate soldier never did have any money, really. The funds from his book and movie in 1941 which the Government wants to tax all went to build a small Bible school and high school.

Robert Kennedy remembered Sergeant York's heroism, and recalled he had hoped to stop to see Mr. York while campaigning in Tennessee this fall, although he had not had time. He asked Mr. Caplin: "What can we legally do?"

Robert Kennedy told his big brother J.F.K. about Sergeant York's problem, and the President too was sympathetic. The Attorney General's legal department ruled, however, that an Executive order from the President relieving Sergeant York of his tax liabilities would be illegal.

So the President instructed the executive departments, specifically the Treasury which harbors IRS, to do whatever possible to assist Sergeant York. Representative EVINS, Democrat, of Tennessee, Mr. York's Congressman, had tried repeatedly to get tax relief through congressional action, but with no success.

REDUCE DEBT

The Attorney General, Mr. Caplin, and Mr. EVINS huddled in three long meetings. Finally it was Speaker RAYBURN, who was born less than 50 miles from Sergeant York's home in Tennessee, who suggested the solution.

He proposed a fundraising drive, and promised to donate the first $1,000. Robert Kennedy went along with the idea, and promised another $1,000. The Internal Revenue Service compromised and reduced Sergeant York's indebtedness to $25,000, the amount the fund drive set as its goal.

Robert Kennedy told the President about the way out for Mr. York which had been found. The President said he was pleased something could be done.

Speaker RAYBURN, as chairman of the Help Sergeant York Committee, launched the fund drive.

Another besides Messrs. Rayburn, Kennedy, and Evins serving on the fund drive committee is Actor Gary Cooper. Mr. Cooper played the role of Sergeant York in the movie based on his life.

The fund drive, although only 4 days old, has already pulled in $5,000, Representative EVINS, who is acting as treasurer, reports.

RAYBURN OPENS DRIVE TO AID SERGEANT YORK—GIVES $1,000 TOWARD $25,000 SETTLEMENT OF WORLD WAR I HERO'S TAX DEBT

WASHINGTON, March 18.—Speaker RAYBURN, Democrat, of Texas, personally launched a nationwide subscription campaign today to raise $25,000 to pay off the tax debt of Sgt. Alvin C. York, of Tennessee, the World War I hero.

The 73-year-old soldier is now ill and bedridden in his hillside home, probably never to be active again. For many years he had owed the Government a debt of $172,000 that had its origin in a gesture of generosity by York and a misunderstanding of the Federal tax system.

The Government, after years of discussion, will compromise with York, the holder of the Nation's most coveted medal—the Congressional Medal of Honor. It has agreed to accept $25,000 in full settlement of the claim.

YORK MIGHTY GRATEFUL

In Tennessee, York said he was "mighty grateful." The big mountaineer added:

"Those tax folks have been a-houndin' me so long and I been a-fightin' them so long I just thought it'd never end."

He chuckled over the reduction of the debt. "Seems funny," he said, "talking about reducin' something I don't owe."

RAYBURN DONATES FIRST

Speaker RAYBURN made the first donation to the fund—a check for $1,000—and as he handed it to the secretary-treasurer of the fund, Representative EVINS, Democrat, of Tennessee, York's Congressman, the Speaker said:

"I hope this initial gift will move other like-minded citizens to come forward and donate the other $24,000 so that we may ease the last days of one of the Nation's greatest war heroes."

"This is a matter very close to my heart," RAYBURN said at a special news conference today.

He said that he had accepted the chairmanship of the "Sgt. Alvin C. York Fund" and that other members of the committee will be the Attorney General, Robert F. Kennedy, the publisher of the Nashville Tennessean, Silliman Evans, Jr., and the actor who played the role of Sergeant York in the film about the war hero, Gary Cooper.

1918 ACT OF HEROISM

It was on a dull, chilly October day of 1918 that Sergeant York came upon a German machine gun nest deep in the Argonne Forest and performed the act of heroism that won him world acclaim.

After York had killed 25 of the German machine gunners, he captured the remaining 132 men—4 officers and 128 enlisted men—and marched them back to American field headquarters.

For this exploit he was awarded the Congressional Medal of Honor, and heaped with other honors when he returned to the United States.

Cordell Hull, a fellow Tennessean, and RAYBURN, who was born in Tennessee only 50 miles from York's home—both then Members of Congress—greeted the hero when he came home from the war and took him to the Halls of Congress, where he received great welcome.

MOVIE RIGHTS SOLD

Later York wrote a book, which he sold, along with the movie rights for $150,287 in 1942 and 1943.

But, believing he would have only a modest, if any, amount of taxes to pay on the proceeds, York donated the entire sum to establish a Bible school and York Institute in Tennessee.

York regarded the contribution as a charity but the then Internal Revenue Bureau ruled it was not a tax-free gift. The Bureau ruled that his tax liability was $85,442.03.

York disputed this, and appealed to the Tax Court in the 1940's. The case has never come to trial and meantime, RAYBURN said, York has had many financial troubles.

FARMING PROHIBITED

Once a powerful, 6-foot-2-inch mountaineer, York lived on a 395-acre farm in Fentress County near Pall Mall, Tenn. But now he can no longer farm, as a result of a cerebral hemorrhage 7 years ago. He is partially paralyzed and bedridden.

He has also had lobar pneumonia, heart trouble, high blood pressure, and a hemorrhage of his right eye.

RAYBURN noted that York is not able personally to pay off his obligation to the Government and that this inability "weighs heavily on his mind as he does not want to be in debt to his Government."

The old veteran has an income of $177.45 a month—$135.45 as a veteran's pension, $32 from social security and $10 as a Medal of Honor winner.

INTEREST MOUNTS

The Internal Revenue Service stated that with accumulated interest amounting to about 102 percent York's total debt on the basis of the original claim would now amount to $172,000.

But a letter was forwarded to RAYBURN today saying that the debt would be settled on payment of $25,000.

"I hope enough people of the country will remember this great soldier and relieve him of the worry that he owes his country something," the Speaker said.

RAYBURN said that Representative EVINS will serve as secretary-treasurer and that checks should be made payable to the "Sgt. Alvin C. York Fund" and sent to EVINS at the Capitol.

PRECEDENT FEARED

RAYBURN pointed out that a number of bills have been introduced in Congress to relieve York but said, "I do not think this is a proper matter for legislation." It might set a bad precedent, he said.

EVINS disclosed that the American Legion of Tennessee had raised $2,000 toward relief for York.

RAYBURN said as he handed EVINS his $1,000 check, "I hope this challenges 24 other people to give $1,000."

He recalled that York once could have cashed in his experiences for a vast fortune but rejected offers aggregating more than $1 million with the simple statement "This uniform is not for sale."

FORM COMMITTEE TO AID SERGEANT YORK—RAYBURN HEADS GROUP TO ASSIST AILING HERO; VETERANS OF WORLD WAR I PRESENT CHECK FOR $500

On Saturday, House Speaker SAM RAYBURN called for public subscription to help Sgt.

Alvin C. York, of Pall Mall, Tenn., with his tax indebtness. York was the outstanding hero of World War I and won the Congressional Medal of Honor together with dozens of other military decorations from a number of allied governments.

Serving with Rayburn, who wrote a personal check for $1,000 to inaugurate the drive, were Attorney General Robert F. Kennedy, Congressman Joe L. Evins, who represents York's home district in Tennessee, Silliman Evans, Jr., publisher of the Nashville Tennesseean and Movie Actor Gary Cooper, who played the part of York in the story of York's life.

CALLS FOR CONTRIBUTIONS

RAYBURN has called upon patriotic and generous Americans throughout the country to come to the assistance of the ailing hero of World War I. York, who suffered a cerebral hemorrhage 7 years ago, is paralyzed from his waist down and confined to his mountain home at Pall Mall. In addition to this, he is under constant harassment from the Internal Revenue Service, who have charged him with owing some $172,000 in taxes upon his movie and his book depicting the story of his life.

York insists that the Revenue Service is in error in its claims for tax payment. He declared that virtually all of the proceeds from the movie went for the establishment of two schools in his Tennessee mountains. Government tax officials admit that the legal question is a most complex and involved one.

Representative EVINS has introduced legislation to alleviate York of this tax burden but his efforts have met with no success. After a conference with Speaker RAYBURN and the Commissioner of Internal Revenue the Government offered to compromise the claim if a payment of $25,000 was made. Accordingly, RAYBURN and EVINS formed the Help Sergeant York Committee and are appealing to all patriotic Americans for voluntary subscriptions.

The once powerful York, who killed 25 Germans and captured 132 more, an act which won for him the Nation's highest military award, the Congressional Medal of Honor, is now bedridden and has no assets. He relies for his existence on a non-service-connected World War I pension of $135.45 per month plus $32 monthly social security benefits and he is also awarded $10 monthly as a Congressional Medal of Honor winner. This adds up to $177.45, much too little to care for the ailing World War I hero in his present physical condition.

SERVED WITH YORK

National Commander John E. Erickson, of the Veterans of World War I, who served in the same company with York and witnessed his parade of German prisoners in 1918, visited the Tennessee mountain man in November of last year. He found York cheerful in spite of his physical disabilities but worried considerably over the tax burden which hung over him. One of the major legislative objectives of the Veterans of World War I was to sponsor legislation which would provide relief for York from his tax liabilities.

On Tuesday of this week, National Senior Vice Commander John Bashara of the Veterans of World War I, on behalf of the VWWI, presented a check to House Speaker SAM RAYBURN in the amount of $500 for the Help Sergeant York fund. This action was taken after every member of the national board of administration had been polled over the telephone as to his position on the award to the committee. Every board of administration member voted for the donation.

It is understood that other veterans organizations have promised substantial amounts to the committee and Congressman EVINS reports that on Tuesday morning some 200 letters had been received by the committee. These returns have not as yet been tabulated so that there is no account of the moneys that have been received. EVINS said scores of small contributions had poured into his congressional office on Monday.

President Kennedy has been personally interested in seeing that York is alleviated of his tax indebtedness and is being advised on the progress of the matter through the Attorney General. The President has instructed the executive departments, specifically the Treausry, to do all that is legally possible and appropriate to assist Sergeant York in his difficulties. Contributions for York are being received at the following address: Help Sergeant York Committee, Washington, D.C.

HELP SERGEANT YORK COMMITTEE

The organization of the "Help Sergeant York Committee" by House Speaker SAM RAYBURN, of Texas, and Congressman JOE L. EVINS, from Sergeant York's congressional district in Tennessee, should meet with the hearty approval of every patriotic American. The Tennessee mountaineer who had to struggle with his conscience to enter military service in World War I, has suffered cruel vicissitudes in recent years.

York received approximately $150,000 in 1942 and 1943 for book and movie rights to his life story. The Internal Revenue Service held this income to be taxable as ordinary income and the approximate tax amounted to about $85,000. York questioned the Internal Revenue statistics and asked the tax court for a redetermination of his liability on the basis that this income was taxable at capital gains rates. York gave almost all of the receipts from the movie to establish a bible school and the York Institute in his beloved Tennessee mountains.

Some 7 or 8 years ago Sergeant York suffered a disabling stroke and has been an invalid since that date. His only income is a non-service-connected pension for service in World War I of $135.45, $32 monthly from social security and $10 monthly as a Congressional Medal of Honor winner, a total of $177.45 monthly. This is a meager sum to sustain York in his present physical condition and his aged wife. Added to his straightened circumstances was the harassment of a threat of a suit by the Internal Revenue Service to collect the sum allegedly due the Government.

Representative EVINS had introduced legislation asking forgiveness of the Government debt and he had been promised the support of the major veterans organizations in seeking this remedial legislation. EVINS found that there were a number of obstacles in the path of securing favorable action upon his legislative proposal so he met with House Speaker RAYBURN and together they formulated the idea of setting up a committee to raise the necessary funds to pay off York's tax debt. The Internal Revenue Bureau had indicated that it would accept a compromise offer of $25,000 to settle the indebtedness.

On last Saturday, Speaker RAYBURN announced the formation of the Help Sergeant York Committee and at the same time wrote his personal check to the committee in the amount of $1,000. Serving with the House Speaker and Congressman EVINS on the committee are Attorney General Robert Kennedy, Silliman Evans, Jr., publisher of the Nashville Tennesseean, and Gary Cooper, who played the part of York in the movie. Representative EVINS is serving as treasurer of the committee.

York, who is now 73 years old, lives on his mountain farm near Pall Mall, Tenn. He was once a powerful 6-foot-2, 210-pound mountain strong man. He is now partially paralyzed and bedridden as a result of the cerebral hemorrhage which struck him down 7 years ago. Since 1942 he has suffered lobar pneumonia, heart trouble, high blood pressure, a hemorrhage in his right eye, and the cerebral hemorrhage.

Upon his return to the United States at the close of World War I, York was besieged with flattering contracts and offers which would have made him a rich man. He was offered a million dollars by various promoters but he told them, "This uniform is not for sale."

York was one of the founders of the American Legion and represented the 82d Division at the organizational meeting in Paris before he returned home.

The National Tribune-The Stars and Stripes deems this effort a most commendable one and we hope that not only veterans and veterans' organizations will respond to this appeal, but every patriotic American should feel it his duty to help alleviate the distressful condition in which this ailing World War I hero now finds himself.

CAPITOL COMMENTS

(By Hon. JOE L. EVINS, Member of Congress, Fourth District of Tennessee)

SGT. ALVIN C. YORK

On January 3, 1961—the opening day of the 87th Congress—your Representative introduced a bill for the relief of Sgt. Alvin C. York of Fentress County—to relieve Tennessee's distinguished World War I hero of his tax indebtedness to the Government.

This effort has resulted in the formation of a committee to raise funds to pay off Sergeant York's tax indebtedness. Both the bill and the fund raising campaign has had the same end in mind—tax relief and peace of mind for the greatest hero of World War I, who is now disabled and bedfast.

The change from one course to the other came after many conferences and attempts to work out the most satisfactory method of relieving Sergeant York of additional tax claims arising from the filming of his life story and heroic deeds.

In an effort to get a favorable report on our bill—H.R. 1305—your Representative conferred with the new Commissioner of Internal Revenue and later with the Attorney General of the United States, Robert F. Kennedy. Both the Commissioner and the Attorney General were very sympathetic with the purpose of this bill and expressed a desire to be of assistance, but indicated that by providing a favorable report a precedent would be established for other veterans with tax cases. They indicated also that they were precluded from participating in the case as the matter is now pending in the U.S. Tax Court.

The Attorney General in one conference expressed the belief that his brother, President Kennedy, would favorably receive the idea of an Executive order to relieve Sergeant York of his tax indebtedness if this were found to be a proper course of action. However, the top legal minds of the Treasury Department, the Justice Department and Legislative Counsel of the House of Representatives expressed opposition to this course of action—no matter how bad the need.

Following the end of World War I, Congressman SAM RAYBURN and Cordell Hull were among those meeting and greeting Sergeant York on his return from Europe.

Speaker RAYBURN listened sympathetically to your Representative as he requested his assistance in securing passage of our bill. However, the Speaker proposed the forming of a special committee to raise funds to settle the tax case and agreed to serve as chairman of the committee with your Representative as treasurer. Others serving on the committee include Attorney General Robert F. Kennedy, Mr. Silliman Evans, Jr., publisher of the Nashville Tennessean, and Gary Cooper, who played the role of Sergeant York in the movie.

The response from all sections of the country has been generous and most encouraging. At this writing the campaign

has reached a total of $13,700—slightly more than half the goal set to settle the long pending case. Generous Americans all across the Nation have been sending some large and many small contributions as an expression of appreciation of the heroic service of Sergeant York in helping to preserve freedom for our Nation.

Meeting of the Pacific Regional Roads Conference of the International Road Federation, Sydney, Australia, February 27 to March 2

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. JONES of Alabama. Mr. Speaker, it has recently been my privilege to chair a three-man delegation of the Public Works Committee that was designated to represent the Congress at the recent Pacific Regional Roads Conference of the International Road Federation. This meeting was held in Sydney, Australia, from February 27 to March 2, and was attended by more than 250 delegates from 17 countries, including Burma, China, Ceylon, Fiji Islands, Hong Kong, India, Indonesia, Japan, Malaya, New Zealand, South Africa, Philippines, Thailand, Turkey, United Kingdom, Australia, and some 30 representatives in various fields from our own country. I would like to briefly report to the Congress the results of this meeting.

May I preface these remarks by saying that I found this trip an extremely profitable one and the exchange of views that took place at this meeting, both in an official and in an unofficial capacity, beneficial to myself, to the other Members of the Congress who accompanied me and, I hope, to our country as a whole. We attended this meeting basically to consider the interrelated highway problems that criss-cross our entire world, but, in addition to that, I personally, and I am certain my colleagues, obtained a deeper and fuller understanding of other problems of the peoples with whom we met, particularly with reference to the Commonwealth of Australia.

I was deeply impressed by Australia, by the Australian people and by the rapidly developing expansion of this great continent. I found these people to be very similar to ourselves, to be deeply interested in our affairs and to be bound to us both in a spirit of friendship and also in a very important military fashion. My brief visit to Australia convinced me that we have indeed in the people of that nation real friends, ones who admire and respect us and are ready to work shoulder to shoulder with us in solving the many problems that face us in this troubled world today.

I was privileged to be one of the two principal speakers at the opening session of the Pacific Regional Conference of the International Road Federation. Might I digress for a moment to explain for the benefit of the members that the International Road Federation came into being some 13 years ago as a result of the realization that high wastages were occuring through the inadequacy of road systems through the world.

The advance of scientific and industrial developments have resulted in the production of new and wide ranges of all types of vehicles possessing greatly enhanced efficiency potentials. These can contribute direct and substantial reductions in the cost of living if road systems which will enable the full effect of vehicle improvement to be achieved are constructed.

The truth, however, is that gains in efficiency through better management techniques, improved equipment, work developments, new inventions and increased output per worker have not resulted in the reduction of prices which the consumer should enjoy because much of the savings is dissipated by the excessive cost of using inefficient transport systems.

The realization of this worldwide handicap, which prevents the fruit of enterpise, energy and invention reaching those who should benefit, in 1948 brought into existence the International Road Federation whose basic purpose was and is to develop better roads throughout the world by an interchange of ideas among all nations and as a result of these interchanges, which create better roads, bring about better living for all.

I am sure you will agree this is a worthwhile purpose to which all of us who are interested in the development of highways for future use and the advancement of economic status of mankind should pay careful attention.

At this meeting among other subjects that were discussed was the need for expanded highway programs; new development in road research; the future of highways and highway transportation; highway construction and maintenance and traffic engineering, as well as that overall most important problem which is ever present, that of proper highway financing.

In keeping with our increased interest in the International Road Federation the United States sent to this particular meeting the largest delegation, some 30 members, including technical experts, a highway safety expert, one of our most efficient highway engineers, Mr. D. C. Greer of Texas, and a representative of the U.S. International Cooperation Administration.

I am certain that out of the interchange of ideas that developed at this meeting our exports in highway matters have brought back to this country further information that will enhance the development of our own road program. Further I believe, our experts contributed to the meeting information that will be beneficial to the highway users of the other countries who were present at this meeting.

Although this was the main purpose of our visit to Australia, we also took the opportunity while in that country to visit the Australian capital of Canberra which is still in the process of being constructed.

This is a wholly planned city some 200 miles from Sydney which is being built and developed in a manner similar to that of Brasilia in Brazil, South America. We were deeply impressed by the modern progressive appearance of this capital. While in Canberra we also took the opportunity to meet with several members of the Australian House of Representatives for an exchange of ideas on problems affecting both our countries.

I would be remiss in my comments on Canberra if I did not mention briefly two most impressive memorials—one the American War Memorial built by the Australian-American Society out of private funds which commemorates the part played by our men in the victory in the Pacific in World War II. Further, we had an opportunity to visit one of the most vivid examples of spirit and pride I have ever seen in my public or private career and that is the Australian War Memorial which tells fully, in my mind, the spirit of the Australian people.

Of particular interest to us as members of the Public Works Committee was the vast Snowy Mountain project now underway in Australia. Although time did not allow for a full and sufficient examination of this tremendous project, we were able to briefly consider the main aspects of what is being attempted in the field of water resources by the Australian Government.

Knowledge of the Snowy Mountain project requires a background as to the problem of water resources in Australia.

The average annual flow of Australia's rivers, if spread evenly over the continent, would give a depth of water about 1⅓ inches. The United States of America on the other hand, from its 10 main rivers alone, would obtain a depth of water of almost 6 inches.

It is vital that full use be made of Australia's water resources. This is the principle on which the Snowy Mountains scheme is based.

Remnants of an ancient alpine range skirt Australia's eastern seaboard. By European, Asian, and American standards these mountains are not high. In fact, compared with the might and grandeur of the Himalayas, Australia's mountains are merely foothills, the highest peak, Kosciusko, rising to an elevation of only 7,314 feet. And yet Australia's Great Dividing Range is vital to the life of her people.

In southeastern New South Wales and the adjacent areas of Victoria, the section of this range known as the Snowy Mountains forms the central and highest area of the Australian Alps. Snow clad for 5 or 6 months each year this area is the source of the westward flowing Murray and Murrumbidgee Rivers which cross dry but otherwise fertile plains stretching over hundreds of miles to the coast of South Australia. Irrigation farming on these plains is already a well established and prosperous industry, but further substantial expansion of production depends on augmenting the flow of these rivers.

The Snowy River rises in the same area as the Murray and Murrumbidgee Rivers. It receives a large share of the runoff from the winter snow fields but flows in the opposite direction of the nearby southeastern coast, traversing an area of reliable and adequate rainfall where water is not required for irrigation.

Not only are the waters of the Snowy River considerable in volume but also, they flow from high altitudes. By diverting them inland through long tunnels driven under the mountain ranges they can be utilized for the double purpose of producing very large quantities of electricity for industry and of enabling 1,000 square miles of drylands on the western plains to be brought into use for flood production.

With this background proposals for the development of Snowy Mountain first came into existence in 1884 and finally, on August 1 of 1949 the Snowy Mountain Authority came into existence. Detailed investigations and construction work started immediately.

This act is now supported by a comprehensive agreement between the Commonwealth of Australia and the States of New South Wales and Victoria covering the construction and operation of the scheme, the distribution of power and water and other development matters. Basically what is intended hereunder is to use by diversion the waters of the Snowy River combined with the Murray and Murrumbidgee Rivers to create large hydroelectric power stations and, at the same time, provide ample water all year round for the vast inland areas of New South Wales, Victoria, and South Australia through which these rivers flow. It is one of the largest civil engineering projects ever undertaken in Australia and one of the largest of its type in the world. It involves the construction of 9 large dams and several smaller ones, at least 11 power stations, over 100 miles of large diameter tunnels, over 80 miles of aqueducts, shafts ranging up to 1,100 feet deep, and hundreds of miles of mountain roads in rugged alpine country.

The total cost of the whole scheme is estimated at $748 million and it will provide nearly 2 million acre-feet of water per annum enabling irrigation production to be increased in value by approximately $60 million per year. In addition, the output from the Snowy Mountain operation will provide approximately 2½ million kilowatts of power and 5,300 million kilowatt-hours per annum of energy. I have outlined very roughly what this project contemplates and attempts, but I think even this brief mention of it will point up the progressive attitude of the Australian Government and the Australian people in the field of water resources.

This trip to Australia was a difficult one involving long flights over vast stretches of water and land mass which gave little rest or comfort to the delegation en route. But our short sojourn in Australia more than rewarded us for any difficulties we experienced in reaching Sydney.

But once we reached Sydney and had an opportunity to fully participate in the Road Conference, to meet with the delegates from the southeast Pacific area nations and to see firsthand the spirit and vigor of these peoples, and particularly of the Australians, any discomfort we may have experienced en route quickly vanished and we found ourselves caught up in the spirit and drive of these Australian people. They are indeed true friends of the United States. They were really delighted to see us. They made us feel at home. They want more and more American recognition and interchange of ideas and I think this should be a two-way street. I trust that over the years to come there will be a continuing flow of ideas between our Nation and that of the Commonwealth of Australia and that delegations in all fields that affect the national interest of both countries will take the opportunity to visit back and forth to develop the strong bonds of friendship and mutual interest that now ties these two great nations together.

Speaking for myself and the members of our delegation, I can truly say this was a unique and stimulating experience. I am proud to have been part of this particular meeting and to have a first-hand opportunity to see even briefly one of the most important sections of our world community.

A Soldier's Views on Current Problems of National Interest

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. BARING. Mr. Speaker, under leave to extend my remarks I should like to insert in the RECORD a letter from a constituent of mine who is now serving in the Armed Forces of the United States. It is not important that I do or do not agree with everything that Steven B. Miller said in his letter.

From an idealistic standpoint his views should be an inspiration to the youth of America and his letter is worthy of recognition by this body.

The letter follows:

HEADQUARTERS DETACHMENT,
NINTH HOSPITAL CENTER,
APO New York, N.Y., March 15, 1961.

Representative WALTER S. BARING,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. BARING: I am an American soldier and native Nevadan, and will become eligible to vote this July. Since the cold war GI bill entered the political scene in the last term of Congress and was revived this term, I have been reading and thinking and moralizing on many of the current political issues. I would like to impart my views to you.

Cold war GI bill: This is a well-meaning but superfluous gesture. The National Defense Education Act of 1958 adequately cares for discharged soldiers and anyone else seeking educations. The idea that we one-term soldiers have given up anything (and therefore should be repaid) is wrong, for military service when needed to defend national and individual freedom is a moral imperative. I realize that I am one of those toward whom the bill is directed. After discharge I will attend college, working parttime and receiving aid from my parents (my father is a telephone repairman in Winnemucca). It is generally acknowledged nowadays that anyone who really wants an education will get one. If the person "can't" get one, he hasn't enough in him to even indirectly benefit the country at large, as some people claim. Some of the soldiers I know are very excited about the bill, even though they are aware of other ways they can go to college. They are under the impression they'll get something for nothing.

Five billion six hundred million dollar education program: Unconstitutional. In my high school civics class we were taught that the 10th amendment to the Constitution meant what it said: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Aid to education is specifically not "delegated to the United States." And it does not matter how wonderful this thing may be, it should be passed only after a constitutional amendment. That argument about promoting the "general welfare" (as stated in the preamble) authorizing it is quite fallacious: under that argument, anything that Congress and the President deem in "the general welfare" would be permissible. I think the Founding Fathers had a good reason for omitting education from Federal powers: the ability to dole out large sums of money, or withhold them, is the power to control. And I honestly believe that quality of education, not quantity, is our best bet in this cold war.

The President's housing program: Unconstitutional again (for the same reason). Also, the President is in effect overruling the cities who have already reached decisions on this matter concerning themselves. The principle of a limited central government was established in the Constitution for a very good reason: the Thirteen States, up until then, had felt the effects of domination by a distant, relatively unconcerned Government. If the housing problem were really so horrible, the local citizens of the cities concerned would have taken action. Local problems are best handled by local people.

More unemployment compensation: I don't think any extension of this is warranted. The only possible excuse (though still questionable) for paying a man who isn't working is pump priming, and the present unemployment benefits take care of that quite adequately: we're on our way out of this recession.

Proposed farm program: (and the entire Department of Agriculture). Unconstitutional. The Federal Government was given no authority over agriculture. Besides, all the Government intervention since 1933 has led to surpluses, high prices, $6 billion in taxes annually, and the farmers' losses of individual freedom. There is no excuse for continuing it. I don't think you need fear antipathy from the farmers themselves—back during Benson's tour of duty they showed a lot of sympathy for him and in the recent national elections, went Republican. I think if any mandates were given in the election, this was a real (though backhanded) mandate for the dropping of controls and supports. And as for the currently proposed program, it will subsidize farmers who give up their right to dispose of their own property as they want, and will penalize farmers who don't want to forsake this right. The entire program should be promptly ended.

Social security: I don't like it. The Government takes my money, promising to give it back when I reach 65 or die (a lot of good it will do me then). Beside the fact that inflation will have sapped the value of the money by the time I reach 65, beside the fact that the Government will have withdrawn a handling fee before returning my money, and beside the fact that if I become a financial flop it won't be enough to do me any good anyway, the damning point of the program is the fact that it is compulsory.

If this thing is the will of the people, it would be able to operate on a voluntary basis, and if it is on a compulsory basis, it can only mean that the public wouldn't stand for it. Note the fact that the law is not to save, but to save through this inefficient Government monopoly.

Tax reform: It is needed all right—all the way back to an equal percentage of each man's earnings. It is quite unjust to take 90 percent from a man who earns $100,000 annually and only 20 percent from one who earns $10,000. Capacity to pay is irrelevant. "From each according to his ability, to each according to his need" is the keystone of Marx's doctrine.

The cold war: The United States must acknowledge that the cold war is a real war—a war marked by Communist advances and freedom's retreats. If an enemy is trying to conquer your country, has sworn to do so, and is aggressively working toward that end through all means (propaganda, subversion, military action, nuclear blackmail, etc.) and is making visible progress, and is achieving visible victories, then any effort toward accommodation is folly, since success encourages further aggression. Did Hitler go away just because we wanted him to? No aggressor ever does. Each instance of appeasement (such as the British and French propose in Laos) shifts more weight on the balance-of-power scales. Unless we take the initiative, even though it may mean risking war, the Communists will continue to cause crisis after crisis, each time forcing us to choose between risking war and retreat. This means that eventually we will be forced to go to war under the most disadvantageous circumstances or accept surrender. We must take the offensive, because that is the only course that can lead to victory.

To insure preparation for any eventualities: We should expand our efforts in the political and psychological warfare area immensely. We should, as President Kennedy has ordered, build up special forces and American guerrillas to assist in the defense against Communist guerrillas throughout the world. Nuclear tests should begin again immediately. As has been evident ever since Lenin signed the Treaty of Brest-Litovsk, the Communists negotiate only for advantages and the best we can hope for from negotiations is to end up where we began. And there is no reason to believe the Communists will keep any agreement any longer than it suits their purpose. They never have. Since we can't even hope to match the Communist world's numerical advantage, we need an armory of limited-yield, tactical nuclear weapons.

Sometimes I think Washington has the idea that Americans, like Bertrand Russell, "would rather be Red than dead," or to paraphrase: would rather give up all dignity, joy, and the things life is worth living for, in exchange for living a life not worth living. It's not true. We're still the same people who, for the defense of liberty, "mutually pledge to each other our lives, our fortunes, and our sacred honor."

Respectfully,

Sp.4c. STEVEN B. MILLER.

The Meaning of Courage

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, courage is a prominent word in the philosophy and the life of President John F. Kennedy. He has been called upon to show personal courage in overcoming a physical disability. He has written a book "Profiles in Courage"—a tribute to bravery in public life—and his inaugural address called upon Americans and our free world allies to show courage in the critical hour with which we are all confronted.

The President in response to a request from Parade magazine has given a personal definition of courage which I believe should be preserved, and I ask unanimous consent that the President's definition and meaning of courage be reproduction in the Appendix of the RECORD.

Parade's succinct article on President Kennedy's definition of courage follows:

THE MEANING OF COURAGE

(By President John F. Kennedy)

Courage takes many forms. It can mean bravery under fire, an inner struggle for self-awareness, or the willingness to risk career, reputation, and friends in steadfast adherence to principle and conviction.

This last is the courage I have written about—the kind of courage which all of us, sooner or later, may be given the opportunity to demonstrate. For at all the levels of our national life, each man is sometimes called upon to stand for what he believes to be right against the pressures and opinions of friends, fellow workers, constituents, or the force of popular attitude.

At such a time each individual must look within himself for the resources to pursue his own course. But all the rest of us can contribute to the vitality of our democracy by refusing to join in unreasoning attacks upon those with whom we disagree; and by respecting them for having the strength to wage such a lonely struggle.

President John F. Kennedy's personal courage has been tested many times. In his 43 years, he has faced crises like these below:

PREWAR

Kennedy—frail, gaunt, weedy—nonetheless tried out for freshman football at Harvard. Knocked off the squad by a severe back injury, he became instead a backstroker on the swimming team.

Just before the Harvard-Yale meet, he was hospitalized with grippe. Kennedy arranged for his roommate, now Representative TORBERT MACDONALD, to smuggle in steaks to keep up his strength. He did exercises in his room, and once crept off to the pool to practice. The coach clamped down, however, and a substitute replaced him in the big meet.

WARTIME

Kennedy visited Great Britain during the German blitz, wrote his first book, "Why England Slept," in an attempt to wake up America to the dangers of Nazism. His trip so moved him that he came home and tried to enlist in the Army. Turned down because of his back troubles, he took special exercises for 5 months to pass the Navy's fitness test. After Pearl Harbor, he persuaded his influential father to help get him a battle assignment.

Kennedy's experiences as a PT-boat commander in the South Pacific have been much publicized, but they still have the ring of a movie thriller. A Japanese destroyer ran down his torpedo boat, slicing it in half. Kennedy was slammed to the deck, jarring his chronically ailing back.

Despite acute pain, he rescued several crewmen. Clutching the strap of one man's lifejacket in his teeth, Kennedy towed him to the nearest island. He swam for 5 hours.

After that, Kennedy built up a reputation for courage virtually to the point of recklessness. Says his old squadron commander, Al Cluster of Van Nuys, Calif.: "Jack took so many chances, it got so the crew didn't want to go out with him."

Finally Kennedy picked up malaria, to go with his back troubles. Emaciated and fever-ridden, he was compelled to go home. The Navy gave him a back operation and a discharge.

POSTWAR

Kennedy's ailing back nagged him throughout his early years in politics. He ran three times for the House, waging whirlwind campaigns. He won each election. In 1952, when he ran for the Senate, every step was agony. He could not climb stairs without dragging one leg. When he was not campaigning, he was in a hot bath, trying to ease the pain.

By 1954, Kennedy was on crutches, and his malaria had flared up again. At his wedding to Jacqueline Bouvier, the pain was so bad he could scarcely kneel at the altar. He decided upon drastic action to rid himself of his problems.

His doctors told him a double fusion of the spinal discs might cure him—or cost him his life. The chances, they estimated, were about 50–50. Characteristically, Kennedy took the gamble.

For weeks he lay at the brink of death. He was given his church's last rites; only his family was allowed to see him. He progressed so slowly that doctors sent him to Florida in the hope sunshine might speed his recovery. He left Washington on a stretcher.

Shortly afterwards, he was back for a second operation, to remove a plate from his spine. Again, his life was despaired of. Says his father, Joseph P. Kennedy: "God's hand is on Jack's shoulder. I have sat at his bedside three times when everyone thought he would die before morning. Everyone but Jack, Jack knew he would come through."

(The White House physician, Dr. Janet Travell, has told Parade that today Kennedy's back is entirely well.)

The final operation was successful. Kennedy spent a few more weeks in Florida, then came back to the Senate, having been gone nearly seven months. A wheelchair and crutches were waiting for him at the airport. Kennedy waved them away. "I threw away my crutches 2 days ago," he told reporters.

Later, a few vigilant reporters noted that he still seemed to be limping slightly as he climbed the steps of the Capitol. Kennedy saw them watching and grinned. Then he gritted his teeth and climbed on.

Up those steps lay the road to the White House.

Library of Congress and World Understanding

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. SCHWENGEL. Mr. Speaker, on Sunday, March 5, I was the speaker at the International Crossroads breakfast at the Central YMCA in Washington, D.C.

On this occasion, I spoke on the "Library of Congress and World Understanding." These remarks were well received and I have had several requests to make them available in the CONGRESSIONAL RECORD so that other Mem-

bers and interested parties could read them.

Under leave to extend my remarks, I ask that the speech "Library of Congress and World Understanding" appear in the Appendix of the RECORD:

LIBRARY OF CONGRESS AND WORLD UNDERSTANDING

It has always been my conviction that an after-breakfast speech ought to be considerably shorter than an after-dinner speech. (One reason is that your audience is apt to be more alert and more critical in the morning.) The heavier indulgence of dinner is apt to make an audience more receptive, more acquiesant, more amiable, and less conscious. I like an audience like this because I happen to be partial to small and intimate groups. This is a sort of board of directors and I can talk to you with a certain earnestness—perhaps even persuasiveness—that permits me a kind of confidential relationship with you I would not attempt with larger groups.

For the subject I want to talk to you about is the "Library of Congress as a Force for World Peace Through Cultural Communication."

Culture may be said to be accrued education.

And education is the open road to communication. And once you have these—education and its handmaiden, communication—you have the beginnings of a major breakdown of prejudice: racial, religious, cultural.

There are certain important repositories of world culture.

In a very active and dynamic sense this institution the world over—the Young Men's Christian Association—is a great center of deposit for the cultures, the thinking, the religious outlook, the education, and the recreation of whole varieties of people in the family of mankind.

Libraries to be sure are everywhere the repositories of world culture. And they have been since the days of Alexandria of antiquity. In this sense and in our time the Library of Congress occupies a special and a very dominant place.

Now I like to think of a library not as a museum although it is that, too.

Rather I like to think of a library as a workshop and a think shop where we carry out the admonition to seek the truth.

I like to think of a library as a scintillating, interesting, exciting, strength-giving, and dynamic force for broad human understanding.

The reason the United Nations is perpetually pleading for peace, peace when there is no peace, is because the basis for human understanding does not exist among the peoples of the earth. It is one of the tragedies of mankind that misunderstanding can be quickly and easily engendered. But understanding and mutual appreciation are difficult to come by.

There is nothing I believe more strongly as a politician who must appeal to people and present himself to them for their approval, than this simple truth. That is it is impossible to hate people you know. It is possible to hate individuals and whole peoples if you know them somewhat. It is possible to form dislikes and nurture them out of some kind of perverse satisfaction. But there is no such thing as really knowing your man, or knowing your people, or of being fully informed, and then finding in information and in knowledge a basis for dissension or disagreement. Oh, it may very well be that your problem is not that you do not know the other man; but rather that the other man does not know you. And ignorance, whether on your side of the fence, or the other side of the fence, is just as destructive.

That is why I feel it so important to disseminate as a living and vibrant force the sum of human knowledge. That is why I am so proud that the Library of Congress may be singled out as one factor in justifying America's leadership of a free mankind. The Library of Congress is not a warehouse for old and new books. It is not a massive edifice for miles upon miles of bookshelves and decks and stacks and dry-as-dust volumes about a dead past and a stagnant present and an unexplored future.

For me the Library of Congress is the cultural showcase of America; just as a library anywhere may be or should be a cultural showcase—an influence to make good men able and able men good.

It is a living testimony of our interest in all of mankind from the dim days of antiquity to the immediate moment. It is a humming, busy, cultural factory and inventory of ideas and policies and living action and progress. It is concerned not only in hewing out new paths in library science as such. It is concerned with providing for men everywhere, the free and the slave, the half-free and the half-slave, the truths about the condition of man.

A savant from Ceylon, a professor from Bonn, a scientist from Japan, a finance analyst from Wall Street or the Bank of England, a statesman from anywhere, finds a hospitable and an inviting atmosphere and a precisely tailored source of knowledge and research for a general or a particular quest here in our Library of Congress. Or it may be a delegation or delegations from the far corners of the earth. Here in this atmosphere of academic freedom, here amid these volumes, among this Library personnel, they find welcome and friendship and assistance. Here is the congenial atmosphere of a scholar among scholars. They find this atmosphere even if they come—as some do—with suspicion and perhaps a suppressed hostility. If we are sucecssful in our Library of Congress, we shall have disabused them of their prejudice. And we shall have sent them home wondering deep down whether somewhere in their home propaganda they have not been misled. For they come here from Moscow and Prague and Belgrade and from Budapest and Albania and everywhere.

How exactly—you may ask—is all this implemented?

For one thing, and just as a single example, the Library of Congress performs a prodigious service, a function, in the international exchange of official publications. On the combat front of ideas, in the areas where policy is made and action is taken, the Library of Congress is a practically unbounded pool of limitless depth for the ascertainment of facts, opinion, commentary, truth, and apocrypha. I can give it to you in figures but they hardly tell the story:

I mentioned the exchange program. When the present Librarian, L. Quincy Mumford, accepted the post he now holds, the Library had only three exchange agreements with institutions in the Soviet Union. Today there are 300 such agreements.

I ask: Is there a more vital area of communication for the knowledge and welfare and well-being of all mankind everywhere?

In addition to this the Library has a worldwide network of about 20,000 exchange agreements with governmental agencies, universities, and other research institutions.

This brings in over half a million items a year.

Without going into the filing techniques I can tell you that in about a half decade the number of publications from the Iron Curtain countries has jumped from 32,620 publications to 64,330 ingeniously indexed so as to make them easily identifiable and available.

There is, for example, an Africana Section.

The Library has an incomparable 1,500,000-volume collection of scientific and technical materials. There is besides a massive quantity of potent and valuable and needed scientific abstracts. But the emphasis on science is no greater than the emphasis on the humanities. One is not pampered at the expense of the other. Rather they are supplemental and complementary in the total story of world culture. And this is an abiding principle in the Library under its present leadership.

When I examined the most current data on the Library I found it impossible to tell the story adequately in a breakfast talk. How can I tell you about the Library's holdings of American and international history and politics except to say it is fabulous. There are original and private documents from the Presidents. There are the instruments of our freedom and the original materials that surround these instruments. There is bibliography and library science and the publications of learned societies. Intensive use is made hourly and daily and the year around of the Library's files of American and foreign newspapers, its maps and atlases. The Library is, of course, rich in rarities ranging from the Gutenberg Bible and the rough draft of the Declaration of Independence to Abraham Lincoln's first drafts of his Gettysburg Address.

I ask you to consider what an immense contribution all this is to the betterment of human understanding. For, of course, understanding is the key to peace. Members of Congress must know quickly and accurately and fully all the facets of an issue about which they are asked to make a decision. Here the Library of Congress steps in with its invaluable Legislative Reference Service. These are scholars and savants and research people and specialists, carefully selected, of proven ability and background, who stand by to brief legislators—usually in writing—on the facts. This is the service that—with hardly more than 200 people—answered more than 81,000 inquiries in 1960 from Members of Congress and from committees of Congress. Many of these inquiries called for highly technical reports, analyses, assessments of assembled data, and conclusions upon which legislators could predicate judgment and decision. The materials thus supplied are highly prized, not only because of accuracy and depth, but even more because of disinterestedness and objectivity.

Since we are talking about the contribution to human understanding let me throw in here another statistic. In fiscal 1960 more than 700,000 readers were supplied with books and other materials and were given other reference assistance. Of course there are other services of the Library which I cannot now pause to describe: its interlibrary loan system, for instance, reaching to libraries all over the world. From the Library of Congress through its National Union Catalog on cards you can learn the location of some 8,500,000 books printed before 1956 in more than 700 libraries in the United States and Canada. An auxiliary catalog records the location of some 550,000 works in Slavic, Hebrew, Japanese, and Chinese. I could talk to you about the Library's library for the blind, the Copyright Office, the Library's cultural activities in the field of music and literary readings. The Library is a vast storehouse of Americana from folk music to motion pictures. When I use the word "understanding" and talk about Americana I have in mind also that the Library has in one form or another the songs of many Indian tribes. It has a growing archive of Latin American poets and their poetry and it has these on tape.

What I have just told you explains why I made it a point to be here today: human understanding.

Nothing in a book, not a whole planet of libraries, can take the place of this, I hope, warm, personal, and friendly contact we are having here today at this Young Men's Christian Association which will enhance our understanding of each other. The very words "Christian association" carry a world of meaning for the mission in human understanding I am trying to perform and that the Library of Congress performs on a huge and mighty international and national stage. This meeting, personal and intimate and friendly, is basic, and the books and paraphernalia of culture are, and must always remain, supplemental. What we learn from books supports what we learn from human contact and vice versa. As we broaden our knowledge of each other we deepen it. We give it sustenance—encourage its growth. Once this knowledge is rich and full, it may not always lead to mutual love but it surely can and should lead to mutual respect. This will shorten the road to peace.

What the influence of libraries everywhere—and the Library of Congress especially—prove above all else, is the great value of variety in human tradition and culture. Let each of us, as a people, develop and cherish, our own culture and tradition, our own religious and spiritual values. If we live up to the tenets of our faith I think—by and large—we shall avoid trespass.

What needs to be established is that all peoples in the variety of their cultures and traditions are asked only to respect and honor each other. What is dangerous is not learning, knowledge, friendly and scholarly criticism and judgment of each other; what is dangerous is ignorance and the resulting suspicion. What we need to remember is not that power per se is a menace, but power without a sense of morals and spiritual values is a menace. This is why in the field of communication and exchange, in the field of mutual knowledge, institutions like the Library of Congress, are a prime potential.

I am inestimably proud as an American to be told by reliable experts that the Library of Congress is the greatest of all libraries in our time and that it is perhaps the greatest in all history. I am proud, not as one is proud of a possession or a property. I am proud as one who is proud of an asset that makes for world comity, world peace, world understanding.

You have honored me both by having me and by listening so intently—I close with hope that I may have stirred your heart and mind to feel and think on these things and with a plea that when you take a book you first thyself prepare to read with zeal and mark with care—and when thou hast read what there is writ then let thy best practice to second it then twice each precept read shall be once in the book and next in thee.

And remember—that there is an admonition to go and teach and preach. Another seer has told us that it is our business to make other men wiser and better as we can make or find opportunity.

A Well-Deserved Tribute to Bill Clay

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. GARMATZ. Mr. Speaker, it was indeed a pleasure to learn of the passage of a resolution by the Maryland House of Delegates, in their present session, congratulating William R. Clay on his election as State commander of the Disabled American Veterans, Department of Maryland, for the year 1960–61.

I have known Bill Clay for many years and can personally attest to the fact that since his discharge from the service, his greatest concern has been for the veterans, especially the disabled ones, and most of his time, outside of his regular employment, is spent in their behalf. Therefore, I feel that the tribute paid to him by the Maryland House of Delegates is a well-deserved one and to bring it to the attention of other Members of the Congress who may have had some contact with Bill Clay, I am inserting in the Appendix, a copy of the resolution.

The resolution follows:

HOUSE RESOLUTION 57

Resolution to congratulate William R. Clay on his election as State commander of the Disabled American Veterans, Department of Maryland, for the year 1960–61

Whereas Mr. Clay is a member of the Bethesda-Chevy Chase No. 10 of the Disabled American Veterans, Department of Maryland; and

Whereas since 1949 he has been legislative officer for the Disabled American Veterans, Department of Maryland. In this capacity, he has been active on both State and National levels in connection with major veterans' legislation. He has at various times conferred with the Maryland delegation in Congress on veterans' matters; and

Whereas Mr. Clay's associates recognize him as a gentleman of good character, capable, and a hard worker. His services to veterans are deemed particularly valuable because of his experience in the field of legislative planning, dissemination of information, and coordination; and

Whereas Commander Clay, in addition to his veterans' duties has served for many years in Government service in positions of trust and responsibility: Now, therefore, be it

Resolved by the House of Delegates of Maryland, That the members of this body express their congratulations to William R. Clay on his election as State commander, Disabled American Veterans, Department of Maryland, for the year 1960–61; and be it further

Resolved, That a copy of this resolution be sent to Mr. Clay at 620 Sheridan Street, apartment 113, Hyattsville, and to the Bethesda-Chevy Chase Chapter No. 10, Disabled American Veterans.

Speedy Action on Textiles

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. DORN. Mr. Speaker, the following timely editorial is from the Greenville News, Greenville, S.C.:

SPEEDY ACTION ON TEXTILES

The textile industry is entitled to the speedy action it requested of President Kennedy's Cabinet-level committee studying the problems imposed by increasing imports from low-wage nations.

The matter is already acute. Textile imports have increased steadily over the past few years and have brought heavier and heavier pressure on domestic mills.

And last Thursday the Japanese Embassy in Washington revealed that its Government will ask for an increase in the volume of cotton goods it may send under a voluntary import quota which expires at the end of the year.

The Japanese base their request on figures purporting to show that their share of the American cotton cloth market has declined drastically since 1957. They claim that, whereas Japan supplied 70 percent of the cotton cloth shipped to the United States in 1957, it sold only 18.4 percent in 1960.

These figures do not tell the whole story, however. Indeed they are quite misleading.

Japan's textile exports to this country have not declined as much as a hasty inspection of the Embassy's figures might indicate. On the contrary, the total volume has increased. What has reduced the Japanese percentage share of the American market has been the great increase in imports from other textile-producing nations.

Japan is still the leading foreign shipper of cotton textiles to the United States. In recent years other countries have become interested in our market and have stepped up their shipments, thus cutting deeper into domestic sales.

The Associated Press the other day reported how this stream of imports from many nations has swelled since 1956. At the risk of boring our readers with statistics, here are some of the figures:

"In dollar value imports from Japan amounted to $169.7 million in 1956; $162.8 million in 1957; $185.6 million in 1958; $241 million in 1959; and $131 million in the first half of 1960.

"From India came imports valued at $79.3 million in 1956; $81.4 million in 1957; $75.1 million in 1958; $92.6 million in 1959; and $49 million in the first six months of 1960.

"Textile imports shipped from Hong Kong were valued at $3.5 million in 1956; $10.3 million in 1957; $25.5 million in 1958; $61.4 million in 1959; and $50.2 million in the first half of 1960.

"Imports from the United Kingdom were valued at $111.7 million in 1956; $102.2 million in 1957; $88.3 million in 1958; $100.2 million in 1959, and $57.5 million in the first half of 1960.

"Italy sent $44.5 million worth in 1956; $45.3 million in 1957; $45.3 million in 1958; $69.9 million in 1959; and $40.7 million in the first half of 1960."

One final set of statistics from the Associated Press story:

"In 1947 employment in the U.S. textile industry totalled 1,325,000. Ten years later the number of workers hired was 1 million. Last year the figure had dropped to 807,300."

This, then, is the direct effect of the rising tide of imports—a loss of 500,000 jobs. To this must be added the costs of idle machinery and plants, and the damage done to those services and industries which are dependent in one way or another upon a prosperous textile industry.

Some of the reduced employment is due to technological advances, to be sure. Better machinery and more advanced production methods have resulted in greater output with less labor. If these new techniques had not been applied, the domestic textile industry would have collapsed long ago.

But there can be no doubt that much of the decline in employment is the direct result of the loss of markets to cheaper foreign-made products.

And there can also be no doubt that if the tide of low-wage imports is permitted to rise further, more unemployment will follow.

President Kennedy, Commerce Secretary Hodges, and Labor Secretary Goldberg have all expressed themselves as being intensely interested in finding a solution to this pressing problem. That solution must be found soon.

Survey Highlights Indian Problems

EXTENSION OF REMARKS
OF

HON. ED EDMONDSON
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. EDMONDSON. Mr. Speaker, an outstanding group of Americans announced last week a summary of important new findings and recommendations regarding the American Indian.

At the executive meeting of the National Congress of American Indians, the recommendations of the survey group established 4 years ago by the Fund for the Republic were an important highlight of the meeting.

The findings were particularly significant because the survey group included the Honorable W. W. Keeler, principal chief of the Cherokee Nation of Oklahoma, who is now heading a special task force on Indian matters appointed by Secretary of the Interior Stewart Udall.

Others in the group, in addition to Chief Keeler, include: Meredith O. Wilson, president of the University of Minnesota, who is chairman; Karl N. Llewellyn, professor of jurisprudence, University of Chicago; Arthur M. Schlesinger, professor (emeritus) of history, Harvard University; and Charles Sprague, editor and publisher of the Salem (Oreg.) Statesman.

Because of the long study which preceded this report, and the distinction and ability of the members of the survey group, I am sure this summary of findings will be of importance to all who are interested in the American Indian.

The summary follows:

COMMISSION ASKS NEW POLICIES FOR AMERICAN INDIAN

WASHINGTON.—Recommendations for fundamental revisions in U.S. policy toward the American Indian were made today by a commission of leading citizens in a report released by the Fund for the Republic.

The 45-page report, a "Program for Indian Citizens," is a summary of findings based on a 4-year study. The full report will be published later this year. It was prepared by the Commission on the Rights, Liberties, and Responsibilities of the American Indian, established in 1957 by the Fund for the Republic.

The chairman of the commission is Meredith O. Wilson, president of the University of Minnesota. Other members are W. W. Keeler, executive vice president of the Phillips Petroleum Co., and a former chief of the Cherokee Nation, who is now consultant to the Secretary of the Interior on Indian Affairs; Karl N. Llewellyn, professor of jurisprudence, University of Chicago; Arthur M. Schlesinger, professor (emeritus) history, Harvard University; and Charles Sprague, editor and publisher of the Salem (Oreg.), Statesman. The commission had two executive directors: William A. Brophy, a former Commissioner of Indian Affairs, who served in 1957, and Dr. S. D. Aberle, who served from 1957–61.

Single copies of "A Program for Indian Citizens" are available without charge by writing to the commission, 424 First National Bank Building, Albuquerque, N. Mex.; the Fund for the Republic's headquarters at Box 4068, Santa Barbara, Calif.; or to the fund's New York office at 133 East 54th Street.

The report examines seven major aspects of the Indian problem and makes recommendations dealing with termination, Indian values and attitudes, economic development, tribal governments and law and order, education, health, and the Bureau of Indian Affairs.

TERMINATION POLICY

One of the commission's major recommendations is a thorough reexamination of the Federal Government's policy of "termination," whereby it is proceeding to cancel various treaty obligations under which it has given special protection to the economic, social and educational welfare of the Indian citizen.

The report criticizes the hasty manner in which Concurrent Resolution 108, passed by the U.S. House of Representatives in 1953, has been implemented in order to carry out termination. It charges that termination as it is being applied threatens to bring about disruption of the Indian's tribal and legal systems, the forced sale and wasteful exploitation of Indian lands, inequitable taxation, and abandonment by the Federal Government of educational, medical and road-building and other services without first establishing other sources of support for such services.

Termination has been carried out in many cases without knowledgeable consent of the Indian tribes affected, the report declares. It recommends that Indians participate fully in the working out of all termination agreements and that such participation should be made a "prerequisite" to the acceptance by the Congress of any termination plans.

The report suggests that Indian tribes be afforded competent technical assistance, paid for when necessary by the Government, to aid them in preparing for termination plans. Such plans should, among other things, adequately safeguard Indian water rights, conserve natural resources, allow Indian tribes to incorporate for business purposes, permit Indian-held lands to remain tax exempt until it is determined that the land can support taxation, and provide for adjustment of the Indian to a new political, social and economic environment.

"For the Government to act out of a sense of frustration and of haste to rid itself of the vexing questions involved in administering Indian affairs is bound to insure failure," the report declares.

"American policy, if it is to succeed, must aim at helping Indians to prepare themselves in advance of termination for self-reliant living in whatever is their prevailing social and economic framework. As this is accomplished, tribe by tribe, termination will follow and follow from the Indians' own desire. Termination so conceived will be an act of statesmanship in the best American tradition."

INDIAN VALUES AND ATTITUDES

The report stresses that "an objective which should undergird all Indian policy is that the Indian individual, the Indian family, and the Indian community be motivated to participate in solving their own problems. The Indian must be given responsibility, must be afforded an opportunity he can utilize, and must develop faith in himself.

"Indian-made plans should receive preferential treatment, and when workable, should be adopted.

"Government programs would be more effective if plans for education, health and economic development drew on those parts of the Indian heritage which are important not only to the Indians but also to the cultural enrichment of modern America."

ECONOMIC DEVELOPMENT

A grim and complex economic future lies ahead for a large segment of American Indians whose reservations lack sufficient land or resources to provide a decent standard of living, the report declares. What land they do retain is being diminished by action of the Federal Government in withdrawing its trusteeship of Indian property and allowing it to be sold to individual private owners.

The report points out that reservations are often too isolated to allow establishment of industry, and yet when the Indian leaves the reservation to seek better jobs and wages, he is severely handicapped by a lack of education and training in skilled occupations.

To meet these and other economic problems of the Indian, the report recommends that the U.S. Bureau of Indian Affairs cooperate with the tribes in developing an economic planning program. The planners, drawn both from Government and private sources, should make population analyses with a view to ascertaining employment possibilities. Planners should also seek ways of developing investment in land, resources, location and conduct of industry, service businesses, and recreation areas.

If planning programs require more capital than available from Indian sources, the Government should be prepared to make grants, short- and long-term loans, and loan guarantees to the tribes and to qualified Indians, the report states.

It declares that the efficient use of Indian land requires merging. In some regions, to prevent disintegration of the land base, the tribe must obtain control of small tracts for reassignment or rental to individuals in larger units.

The problem of Indian unemployment and substandard job levels could be dealt with in part by giving special instruction to untrained Indians, supplemented by education in management of money, the function of savings accounts, relative values of commodities, ways of locating city jobs, and how to adjust to city living.

Priority should be placed on finding jobs for tribesmen near the reservations. When they secure positions far away from their homes, guidance and financial help should be made available to them until they become adjusted to their new environment, and an effort made to locate them in neighboring living quarters.

The report stresses the importance of maintaining field employment offices for the Indians, and of systematic development of industrial employment opportunities on or near the reservations. It also emphasizes the desirability of preserving the practice of Indian arts and crafts.

The report recommends that, like other Americans, Indians should be eligible to participate in the national economic improvements which are not administered by the Secretary of the Interior, such as programs for depressed areas, housing developments, small business, and the like.

TRIBAL GOVERNMENTS AND LAW AND ORDER

"The national policy, which for more than a century and a half has authorized the maintenance of tribal governments should be continued," the report states. "They should be dispensed with only when a tribe so desires. Until then the authority of these governments in local affairs should not be curtailed through unilateral action of the United States except in one respect: Federal law should require that tribal actions safeguard certain basic civil rights and provide for appeal of civil rights cases to Federal and State courts.

"By thus governing themselves, Indians will among other things gain knowledge of and experience in the laws and procedures of the greater community. When it is to their advantage, they should adopt the good features of these other governments. The costs of tribal government should be met, when feasible, by an equitable system of taxation of the members and others rather than exclusively from the collective tribal resources."

EDUCATION

The report says that present "low levels of achievement among Indian children present a situation that will take time, even under the most favorable conditions, to correct."

While Indian children have a mental capacity equal to that of white children, they are too frequently handicapped by poverty, inadequate educational facilities, a lack of parental understanding of the importance of education, and by a confused cultural background.

The report recommends expansion of adult education programs, as well as provisions of Government financial aid to Indian education when tribal resources are insufficient. Public schools attended by Indian children should have programs designed to meet their special needs, and under no circumstances should such schools allow their educational standards to decline.

"Only if greater progress is made in the future than in the past and if programs of education for Indian children at each stage of the acculturation are developed and swiftly put into effect can many of today's pupils be saved from becoming problem children, unable to cope with life."

HEALTH

The report says that, although the record of the U.S. Public Health Service has been "excellent," the Indian health problem remains a serious one.

Substandard housing, inadequate sanitary facilities, contaminated water, frequently scanty medical services, and ignorance of how to seek and use professional care all contribute to the bad health situation, the report declares.

The average Indian life span is 40 years as compared with the national average of 62. Certain tribes are badly afflicted with illnesses due to microbes, while in others obesity, alcoholism, diabetes and hypertension are relatively common. Dental diseases also abound. The worst sufferers from poor health are infants and children, whose death rate is twice the national average.

The report suggests that the Public Health Service and Bureau of Indian Affairs work more closely in attacking the Indian health problem. An example of how the agencies sometimes work at cross purposes is that on occasion the Bureau encourages Indians to leave the reservation while the Public Health Service will not give medical aid to Indians living off the reservations.

BUREAU OF INDIAN AFFAIRS

The report recommends continuation, for the present, of the Bureau of Indian Affairs, but suggests that it be supplemented by an Indian Advisory Board of distinguished citizens appointed by the President to report to him at regular intervals on the state of the tribes.

"The primary function of the Bureau should be an affirmative one: Always to counsel and assist the Indian, not to control or regiment him. It should offer him technical advise and other help in the initiation and execution of plans for developing and managing his natural resources, for expanding his economic opportunities, for operating his government, and for bettering his living conditions. To this end, the Bureau should create a special division staffed with competent economists, planners, and community analysts."

The report also calls for repeal of outdated legislation and revision of statutes, regulations, procedures, tribal constitutions, and corporate charters affecting the conduct of Indian affairs—so as to simplify administration and permit Indians to make their own, unsupervised decisions over a greated number of subjects than is now allowed.

"The Bureau's aim should be to let Indians conduct their own affairs as soon as possible without supervision. Accordingly, it should encourage their assumption of responsibilities for different functions on a piecemeal basis. Tribal land and resources should, however, remain under the Federal trust until the Indians, when able to hold and manage their property, decide otherwise."

The report declares that "under the Indian Reorganization Act of 1934 the Secretary of the Interior is required to inform tribes falling under the law as to the appropriations he will request for their projects before he submits estimates to the Bureau of the Budget. This principle of prior tribal review, now frequently ignored by the Bureau, should be enforced and extended to all tribes.

"Finally, the Department of the Interior and the Bureau of Indian Affairs should speak consistently in announcing policies. Conflicts between the policies proclaimed by the Secretary and those executed by the Bureau should never occur."

The Peace Corps

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, a thoughtful appraisal of the Peace Corps is given by Kenneth Holland, President of the Institute of International Education, in a letter to the New York Times. Mr. Holland, who is the author of "Youth in European Labor Camps" and "Youth in the CCC," weighs the administration's new Peace Corps program in the light of his own practical experience in and his knowledge of earlier projects which have broken ground for the Peace Corps.

Under unanimous consent, I include Mr. Holland's observations in the Appendix of the RECORD:

PEACE CORPS IDEA PRAISED—VALUE AS PRACTICAL EDUCATION SEEN IF PLANNED WITH CARE

(By Kenneth Holland, a letter to the New York Times, Sunday, March 12, 1961)

The proposal for a Peace Corps made by President Kennedy during his campaign has appealed to the imagination of both young and old Americans. Those who remember the successful Civilian Conservation Corps camps established in the early days of the Roosevelt administration and various other youth service projects conducted at that time by both governmental and private organizations do not find the President's proposal impractical or visionary.

The idea of providing an opportunity for American youth to serve and to gain experience in real life situations probably grows out of our belief in the constructive effect of frontier experience on previous generations of young American men and women. George Washington, the surveyor, Abraham Lincoln, the railsplitter, and Daniel Boone, the scout and explorer, are all part of our heritage from days when we were extending our frontiers.

As the physical frontier in the United States disappeared, some of our best minds proposed substitute experiences for our youth. In 1912 William James in his essay "The Moral Equivalent of War" proposed a type of peace corps.

YOUTH SERVICE

He suggested "a conscription of the whole youthful population to form for a certain number of years a part of the army enlisted against nature. * * * No one would remain blind, as the luxurious classes now are blind, to man's relations to the globe he lives on * * * our gilded youths would be drafted off, according to their choice, to get the childishness knocked out of them, and to come back into society with healthier sympathies and more sober ideas." This proposal and others resulted in many projects and experiences with youth services.

Immediately following the First World War a Swiss Quaker, Pierre Ceresole, organized a group of young men, some of whom had fought on opposite sides during the war, to help in the rebuilding of the devastated area of northern France. This Voluntary Service for Peace spread to other countries.

In 1919 Bulgaria developed a compulsory labor service that required every young man upon reaching the age of 20 to give 8 months to compulsory community labor. In the period between the two World Wars most governments of Europe developed some kind of a labor service for their young people, and there were also many privately financed projects.

Most of the governmental projects were designed to provide real and satisfying work for the unemployed. Most of the privately sponsored camps were established to give college and university students from many other countries an opportunity to work together improving underdeveloped areas, while becoming acquainted with the peoples, their problems, hopes and aspirations.

MINING EXPERIENCE

In 1932 I worked in a camp in a depressed coal mining village of Wales, sponsored by the National Union of British Students. This camp was building parks and recreation facilities. We had some fifteen different nationalities in the camp.

We slept on straw mattresses on the floor of a school. We had our meals in the rectory of a little Church of England. We started working with pick and shovel at 6 a.m. leveling talus slides and piles of debris from coal mines.

I worked in another camp sponsored by the National Union of Swiss Students at Ausserberg in the Swiss Alps. There we constructed a "studentweg," or studentway, from the village of Ausserberg to the village of Luerig. Some of the students in these camps, especially the girls, also did some teaching, directed discussion groups and recreation projects for children.

I also worked in camps during the summer of 1932 administered by the Bruening Government of Republican Germany which brought together unemployed workers, peasants and students to attempt to overcome the violent antagonisms of Nazis and Communists.

As these few examples indicate, there is a wealth of experience with voluntary services, civilian conservation corps, work camps and other projects that demonstrates the feasibility of the President's recommendation of a Peace Corps.

Universities and other nongovernmental organizations should be encouraged to utilize corps members in connection with their projects overseas. Agreements with governments that welcome the corps should be developed in writing, setting forth the project's administrative plan.

The Peace Corps is basically a sound idea. If care is used in its planning and administration it will contribute greatly to the practical education of our young people, to better understanding of the motives of the United States and at the same time assist the developing countries of the world.

Our Big Handout Needs Overhauling

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. HALEY. Mr. Speaker, under permission to extend my remarks, I wish to place in the CONGRESSIONAL RECORD at this time, an article entitled "Our Big Handout Needs Overhauling," which appeared in the Tuesday, March 21, 1961, issue of the Miami Tribune.

Of course, my long concern over the waste and extravagance in the foreign aid program is well known. I believe Mr. Jack Kofoed has made a good case in this article and I hope that each of my colleagues will consider the questions he has raised in "Our Big Handout Needs Overhauling," which follows here:

OUR BIG HANDOUT NEEDS OVERHAULING
(By Jack Kofoed)

Franklin Delano Roosevelt started the big handout. Harry S. Truman carried it on. Dwight D. Eisenhower did nothing to slow the pace. Now John Fitzgerald Kennedy asks for a 5-year $7-billion development fund, and promises to overhaul the entire foreign aid program.

Brother, if ever overhaul is needed, it's in this department. A sutdy of General Accounting Office, and other reports, discloses staggering waste, plus stupidity. There has been talk in the past about reforms, but nothing much happened. If something isn't done we'll run out of money ourselves.

If that happens, do you think countries we helped to prosperity will take up the slack?

A certain amount of foreign aid is needed, but the kind we've splashed around for years, while piling up a national debt of nearly $300 million, is ridiculous. Mr. Kennedy says he will try to convince take-it nations to spread some of the loot among their poor people to make them less susceptible to communism. When it is suggested that aid payments to poor Americans be increased a racketing "no" arises from many sources. Giving them more dough would make beggers of 'em, but handouts to foreigners would merely protect them from Red influences.

Remember when bearded, turbaned King Saud, of Saudi Arabia, visited the United States? His country is backward, illiterate, one of the few where slavery remains an established custom. He and his retinue ride in air conditioned Cadillacs. The poor burn their feet on desert sands, are empty bellied while Saud fills his with delicacies.

The United States has an air base in Saudi Arabia, used for military air transport and air-sea rescue operations. We will give it up next year. Saudi Arabians don't like our friendly attitude toward Israel, so out we must go. When we do, runways will crack, buildings decay. Millions sunk in the base can be written off as waste.

Yet, the State Department says there "are no plans to cancel aid in general to Saudi Arabia."

Why not? During the years we have been parceling it out, the miserable, down-trodden poor of the country have never benefitted, only the head man, already fat-rich from oil money. But, we announce that we'll pour more dollars down the Saudi Arabian drain, even though we are kicked out of the country. Why complain? Such doings are par for our foreign fiscal relations.

Then, there is a $65 million Army camp we built for Pakistan. From the American point of view the layout is fine, having all modern conveniences for troops, including lavatories with mirrors, so GI's can shave, and deep freeze units for storing food. It doesn't suit the Pakistani, who squat in the street and pay stumble bums to scrap off the whiskers. They also look suspiciously on refrigeration. The soldiers drive food animals into camp, slaughted them, and eat the meat the same day.

If we're going to blow public funds like Coal Oil Johnny on a spree taking care of foreign countries, why not spend it in accordance with local customs?

I never did understand why we suffer from a give-away compulsion, when it has been proved over and over again that much of the money we taxpayers sweat to earn is completely wasted. Sixty-five million dollars may be a drop in the bucket to the free handed in Washington. Spent in proper ways it could do considerable good. But, not this way. Even Pakistani GI's are laughing at us.

PTA Endorses H.R. 4970

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. BAILEY. Mr. Speaker, the National Congress of Parents and Teachers, with a membership of 11,500,000, is the one organization closest to the problem of improving educational opportunities for our boys and girls. I think it is most significant that this organization is one of the most active in urging that the Federal Government assume its responsibilities by providing some financial underpinning to our public elementary and secondary schools.

Mrs. James C. Parker, of Grand Rapids, Mich., president of the PTA, has called for decisive action in the April PTA magazine. The highlights of Mrs. Parker's editorial comment are summarized by a press release from PTA, which I include as a part of my remarks.

The press release follows:

PTA PRESIDENT CALLS FOR ACTION ON EDUCATION-AID PROPOSAL

CHICAGO, ILL., March 24.—Mrs. James C. Parker, of Grand Rapids, Mich., president of the National Congress of Parents and Teachers, called today for "decisive action" on President Kennedy's proposals for Federal aid to education.

Writing in the April PTA magazine, published today, official magazine of the parent-teacher organization, Mrs. Parker declares:

"It would be difficult to think of any legislative proposal more important for children and the future of our country than the message that the President of the United States sent to Congress on February 20.

"His sober appraisal of the urgency of educational needs and his proposals for a Federal program of assistance to improve children's educational opportunities from elementary school through college deserve our most thoughtful consideration."

Noting that the Nation's some 47,000 PTA's have long been "aware of school needs" and interested in securing "adequate funds for education," she points to a continued "grievous shortage" of classrooms and teachers:

"In 36 States more than 500,000 children (last fall) were on shortened or half-time schedules.

"In 1960 the classroom shortage was worse than the year before.

"American children are being taught by some 90,000 persons who are not fully certified, fully qualified teachers."

Mrs. Parker's editorial affirms that "the PTA is deeply and wholeheartedly committed" to the goal stated in the President's message, "the maximum development of every young American's capacity," and notes that "on the need for Federal aid to achieve this goal there is less and less controversy.

"Undoubtedly there are conflicts of opinion about the aid-to-education legislation now before Congress," she points out, adding that it "deserves study by every citizen.

"It is incumbent upon each of us, as parents, teachers, and citizens, to inform ourselves thoroughly and to let our Senators and Representatives know our views.

"Now is the time to secure for education the priority it must have if our country is to remain strong and free, and if our children are to grow into their finest possibilities. It is a time to take decisive action so that American education may achieve unmatched excellence."

Conference on Footwear Imports, Hotel Congressional, Washington, D.C.

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. BURKE of Massachusetts. Mr. Speaker, Monday, March 27, 1961, in company with other members of the Massachusetts congressional delegation I attended the Conference on Footwear Imports at the Congressional Hotel, Washington, D.C. This conference was conducted by the National Shoe Manufacturers Association.

Mr. Walter T. Spicer, executive secretary, Associated Shoe Industries of Southeastern Massachusetts with offices located at the Commercial Club, 54 North Main Street, Brockton, Mass., was present. The city of Brockton is in my congressional district. Brockton is one of the great shoe centers of America. For many years the shoe industry has been the mainstay for employment.

The following information on imports and exports—other than rubber—in the foreign trade in footwear was released at the conference.

CONFERENCE ON FOOTWEAR IMPORTS, WASHINGTON, D.C., MARCH 27-28, 1961

Percy N. Burton, president, NSMA and Craddock-Terry Corp., Lynchburg, Va.: It is difficult to watch an industry or business suffer from competition that works with a set of rules and standards below our own. Recent inroads by foreign competition into the U.S. footwear market have been made on this basis.

A. W. Berkowitz, chairman, NSMA Imports Committee, president, Songo Shoe Manufacturing Corp., Portland, Maine: Over 36 million pairs of leather footwear and over 94 million pairs of rubber and canvas footwear were imported in 1960. The combined increase over 1959 amounted to 73.4 percent. Where will this rate of increase take our industry if it continues?

Some segments of our industry are hurt more than others. Here are percents of leather footwear production enjoyed by foreign imports.

Imports as percent of U.S. leather footwear production

	1954	Estimate, 1960
Women's and misses' cements	2.0	23.0
Women's and misses' cements under $6	4.0	32.0
Men's, youth's, and boys' cements	6.7	130.0
Skating boots	.4	15.0
Track shoes	3.0	27.5
Little League baseball	0	40.0

U.S. foreign trade in footwear (other than rubber), 1900–1960

Year	Imports		Exports	
	Million pairs	Million dollars	Million pairs	Million dollars
1960	26.6	53.3	3.2	10.9
1950	6.1	9.4	3.7	12.2
1940	2.8	1.3	2.4	4.3
1930	5.7	11.3	3.7	8.3
1920	.2	.8	10.4	10.7
1910 [1]	.1	.2	7.3	12.4
1900 [1]	.05	.1	3.0	4.3

[1] Imports are estimated. Until 1912, boots and shoes were imported under "Miscellaneous leather manufactures."

U.S. foreign trade in footwear (other than rubber), 1951–60

Year	Imports		Exports	
	Million pairs	Million dollars	Million pairs	Million dollars
1960	26.6	53.3	3.2	10.9
1959	22.3	44.4	3.5	11.4
1958	23.6	32.9	4.2	13.4
1957	10.9	22.1	4.4	13.9
1956	9.8	18.3	4.5	14.1
1955	7.7	13.5	4.6	14.4
1954	5.6	10.3	4.7	14.6
1953	7.2	12.7	5.2	16.2
1952	5.3	11.1	4.3	15.3
1951	5.4	11.0	4.2	14.0
Percent change, 1960 compared to 1951	+393	+385	−24	−22

Financing the Balance of the Federal Highway Program

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. CLARK. Mr. Speaker, I have today introduced legislation that I believe will provide adequate financing for the balance of the Federal highway program. This legislation uses only highway-user taxes as was intended by the Congress when the basic 1956 act became law. It, further, contemplates the completion of the system by 1972, as was also intended by the 1956 Highway Act. I believe this legislation is the best possible approach to this program. It adds no new taxes but simply, and in all equity, transfers from the general fund to the highway trust fund those user taxes which have up to now been kept out of the fund.

My bill is a fairly simple one. It provides for the transfer of the remaining 5 percent of the tax on trucks and 5 percent of the tax on parts and accessories, and five-sevenths of the tax on automobiles. This would provide for the period ending fiscal year 1972 aproximately $11.9 billion, which combined wtih the borrowing authority now existing in present law would be more than sufficient to finance the rest of the program.

In addition, the so-called Byrd amendment, or section 209(g) of the Highway Revenue Act of 1956, is repealed. I believe that if we are to finish this program on schedule we should face the situation fairly and squarely and allocate funds to the States in such a manner that they will know how to plan for future years' construction, and provide enough financing to take care of these allocations. In other words, this time we must make a decision and set up a firm financing plan to provide for the balance of the program. I believe my bill does just this and I hope it will receive the serious consideration of all the Members.

Let me conclude by saying that I am a firm believer in good highways and I believe they are essential to our national self-interest. I believe this program should be completed on schedule, and I believe that highway-user taxes should be used to finance this program.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial published in the February 26 issues of the Greensboro Daily News, of Greensboro, N.C., entitled "Juggler Kennedy and Minimum Wages," and an Arthur Krock column published in the March 28 issue of the New York Times.

These articles point up the danger of the Government causing more unemployment by forcing an increase in operating costs and expenses on the business community at a time when the country is in a recession and many business enterprises are finding it difficult to keep operating. It is my judgment that what the country needs today is an expansion of business activities to provide additional jobs and thereby reduce unemployment. But if the Government forces an increase in operating expenses, the result may well be more unemployment and therefore more hardship. As the editorial points out, new jobs do not grow on trees in a recession, and eliminating some marginal businesses is not a way to recover from a recession. The articles follow:

[From the Greensboro (N.C.) Daily News, Feb. 26, 1961]

JUGGLER KENNEDY AND MINIMUM WAGES

President Kennedy is like a juggler who has more objects in the air than he can handle.

He is trying to beef up U.S. business productivity and efficiency because we need to compete better in world markets.

But the President also has a business recession on his hands at home, and that requires Government action in distressed areas.

On top of that he has sent new minimum wage legislation to Congress calling for gradual increases during the next 3 years, from $1 to $1.25 per hour, and extending coverage to about 4,300,000 workers.

Some of these juggler's balls are threatening the airspace of others. Minimum wage legislation is the most flagrant example.

The legislation in itself might be justified in some areas. Certainly, living costs and productivity have increased, as the President notes. But the administration must face the facts of life. Increased labor costs are bound to produce increased consumer costs. If added to the bottom of the salary ranges, they would surely affect labor costs all up the line.

These salary adjustments are not brought on because of greater productivity. Their effect would necessarily be inflationary.

But worst of all, they would hit some marginal businesses and hit them badly. In good times the Government might dismiss this as part of the law of the economic jungle. But in a time when the President is trying to increase the number of jobs available, he cannot take that attitude. New jobs do not grow on trees in a recession. And a recession is what the President has been telling us we are having. Eliminating some marginal businesses—and this legislation would affect retail and service establishments, laundering, cleaning and clothes-repairing businesses, local transit, construction, and some gasoline service stations—is not the way to recover from a recession. Dismissed workers are not helping the economy.

Doubtless Mr. Kennedy knows there will be some conflicts in his program. With a President in office determined to take the overall view, rather than a particularist one, he is bound to meet himself coming and going at one time or another.

In this case curing the recession and improving our international business posture should have priority over trying to help marginal income employees.

Timing of the minimum wage legislation is bad. Its effects could hurt the overall Kennedy program and result in fewer job opportunities.

[From the New York Times, Mar. 28, 1961]

A SMALL BUSINESS AND THE MINIMUM WAGE BILL

(By Arthur Krock)

WASHINGTON, MARCH 27.—In his advocacy of a gradual rise of the minimum wage from $1 to $1.25, and the addition of millions of workers to its beneficiaries, the President has stressed two arguments outside the economic area. One is humanitarian—that it would provide a "decent" living wage standard for large groups of unskilled and semiskilled workers. The other is ethical—his longstanding pledge and that of the Democratic platform of 1960.

"I find it difficult to know," said the President at his last news conference, "why anyone would oppose seeing somebody, by 1963, paid $1.25 an hour who works in a business [entering interstate commerce] which makes

over $1 million a year. I think anyone who is paid less than that [$50 a week] must find it extremely difficult to maintain themselves and their family. I consider it to be a very minimum wage so that I'm hopeful that the House will pass legislation as close to the bill that came out of the committee as possible * * * because * * * I must say we are talking about a standard for fellow Americans and millions of them * * *."

The premise is that the proposed rise in the scale would relieve this difficulty for such employees and that in general the bill, as the President also said, would serve "the national interest." Since it is indisputable that neither of these results would occur if an increased cost-of-living scale, small business failures and additional unemployment were the consequences, it follows that the President rejects all judgments that they would. This supports an estimate of his Secretary of Labor that the Administration's bill would provide an increase of hundreds of millions in purchasing power and many more jobs.

The resistance to this bill in Congress, where the House already has lowered the proposed minimum wage and the scope of the workers' coverage, reflects strong disbelief in such expectations among the small business establishments principally affected by the legislation. These are private enterprises which gross—not, as the President said, "make," which is fundamentally different—$1 million a year and touch, though often remotely, the stream of interstate commerce.

A good example of their contention that the administration measure will have effects opposite from those the President has in view was supplied by the head of a company which manufactures mechanical pens and pencils. In a letter to President Kennedy from this small business manager, Remmie L. Arnold, the following statistics, and conclusions drawn from them, were offered:

1. At $1.25 an hour an employee who at $1 now earns $40 for a 40-hour week would get $50. After the legal subtraction of taxes his week's net would increase from $31.50 to $39.40. The employer's payroll and tax outlay per employee would rise from $42.44, of which the Government gets $10.94, to $53.05, of which the Government would get $13.65.

2. But, said this small manufacturer, "When we increase the minimum wage we will be forced to increase upward the higher-paid," which means more additional expense of doing business. "I will have to add the additional increase and taxes to my products; the people who sell me raw materials will raise their prices to me; the chainstores to which my products mostly are sold will increase their retail prices for them."

AS TO PURCHASING POWER

3. "You cannot take more money from a small business * * * and give more to Government and more to employees and increase our buying power * * *. And the increased minimum wage and coverage will not help the unemployed because they reduce our buying power and cut back money that could be used for capital outlay." Also, the inevitable price level stimulation will absorb the employees' extra take-home pay, and send many retailers into the foreign markets.

His particular factory, Arnold wrote the President, has made no profit since the imposition of the Korean war 10 percent excise tax on such products (still in force); and some of its labor force already has been replaced by automatic machinery as a matter of necessity.

The administration makes the strong point that one example like this does not create an average. But it is sufficiently typical of protests sent to the Capitol from small businessmen to explain the resistance in Congress. And that is fortified by long experience that rising production and consumer living costs, like Floyd Patterson's knockout combination, usually come one, two.

Pearl Harbor Memorial

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. COLMER. Mr. Speaker, too often we are prone to permit the valiant deeds of those who have given their all that the Republic might survive to be forgotten. Some years ago Mr. Ed Clark Ford wrote an editorial in the Nashville Banner in a critical vein about the rickety stand built above the *Arizona*, which lies half buried in Pearl Harbor, the victim of the sneak Pearl Harbor attack. This editorial awakened the conscience of the readers of that publication. The first to contribute to the Pearl Harbor Memorial Fund was Mrs. Veva Perry Capsas. To stimulate the interest of the people of this country, Mrs. Capsas, a former constituent of mine, wrote a poem entitled, "Remember Pearl Harbor: The *Arizona*."

Mr. Speaker, in order that some permanent record may be made of the poem and of the splendid contribution made by Mrs. Capsas, I submit the poem herewith:

REMEMBER PEARL HARBOR: "THE ARIZONA"
(By Mrs. Veva Perry Capsas)

Ah, build the bastions high and deep,
Encase that shattered hulk;
For a thousand heroes sleep down there
Within that rotting bulk.

Make her a shrine for all to know
Whenever we look back;
That fatal Sunday of yesteryear
The vicious sneak attack.

They wrecked our Navy on that day
There was no Declaration;
Yet we were welded by this thing
A strong, determined Nation.

And so we fought the enemy
On land and sea and air,
The way was hard and grievous long;
We often knew despair.

All the beaches of the seas
Ran red with our men's blood,
We took the islands one by one
'Til finally, 'twas a flood.

A flood of victory that we knew
On Hiroshima's plain;
The atom bomb had done its work
And peace had come again.

The Harbor holds our sunken fleet,
Ah, may we not forget
The men who died upon that day
Defending ship and deck.

Let's build the bastions high and deep
About the *Arizona's* bulk;
Salute the heroes who lie there
Within that rotting hulk.

James E. Murray

SPEECH
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. McCORMACK. Mr. Speaker, last Thursday, a friend of mine for many years died in Butte, Mont. He was one of the most famous liberal Members of the U.S. Senate has ever had, and his name was James E. Murray. He represented his State in the Senate for more than a quarter of a century.

Though the Senator spent most of his life serving Montana and the United States, he was born May 3, 1876, in Canada on a farm near St. Thomas, Ontario. His parents, who were Irish immigrants, were Andrew James Murray and Anna Mary (Cooley) Murray. In 1897, when the Murrays moved to Butte, the Senator's uncle, whom the Senator was named after, sent "Young Jim" to New York to study law. The young Canadian became an American citizen, took his LL.B. at New York University Law School in 1900, and an LL.M. in 1901. After graduation, the Senator returned to Butte, which in those days was one of the roughest towns of the West, and started to practice law. A couple years later, in 1905, he married the former Viola E. Hogan, who is now deceased, and raised a large family.

The Senator's first elective office was county attorney of Silver Bow County; he was elected when 30 years old, and served from 1906 to 1908. For the next two decades, the Senator, always a retiring man, led that sort of life. As his uncle grew older, the Senator handled more and more of his affairs, and eventually inherited his uncle's wealth, which was largely in mining investments.

Though a man of means, Senator Murray was a liberal who strongly supported New Deal legislation. His first formal political job was chairman of the Montana Advisory Board of the Public Works Administration in 1933. He was first elected to the U.S. Senate in 1934 to fill the unexpired term of the late Senator Thomas J. Walsh, and soon achieved fame as the author and champion of social welfare legislation that aided factory workers and small businessmen alike.

In 1938, he led a vigorous fight for the Fair Labor Standards Act, and in 1946, he sponsored the Full Employment Act of 1946, which Walter Lippmann called "one of the most significant enacted by Congress in this century." He worked for a higher minimum wage, aid to farmers, and Federal assistance in public health. He sponsored the Indian Sanitation Act of 1959, was a strong backer of a Youth Conservation Corps, and was coauthor of the Murray-Metcalf bill, during the 86th Congress, for Federal aid to education. He was also stanchly for public power legisla-

tion and conservation and was publicly critical of the Eisenhower administration's reclamation programs.

Murray was close friend of organized labor while in the Senate. In 1947 he voted against the Taft-Hartley Act and in 1959 voted against the McClellan "bill of rights" to the labor reform bill. In 1951, the Congress of Industrial Organizations presented to him the Philip Murray Award as "one of the country's outstanding liberals."

When he retired from the Senate in January, he was chairman of the Senate Interior Committee, a high-ranking member of the Labor and Public Welfare Committee, and a member of the Senate Democratic Policy Committee.

Montana, the land where the Great Northern Plains and mountains meet, will long remember this quiet, purposeful man.

What's Next?

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I invite our colleagues' attention to a very penetrating and thought provoking editorial written by Mr. George Watson Marble, editor and publisher of the Fort Scott Tribune. George Marble's editorial is to the point of one of our Nation's most critical challenges:

WHAT'S NEXT?

During the political debates last year we heard much about the need to speed up the rate of the Nation's economic growth. That was the major domestic problem as Kennedy saw it. It may still be, but so far he has been too busy trying to get the country out of a minor cyclical depression to give much attention to the Nation's long-term growth.

That will come in time, but the economists are saying what is needed is another baby industry to emerge from the research laboratories and create a great deal of new employment to take up the slack resulting from automation.

What they are talking about is the birth of some great new industry to do for the next decade or two what the automobile, radio, television, the airplane did to impel economic growth and employment in recent decades.

Those inventions did grow into great new industries, but they were not really new, we are told. Radio, for instance had its start in 1827. It took another century before many people had a set in their homes. Television was proved feasible in 1884, but became a popular household fixture only in recent years. The airplane made its first flight nearly 50 years ago, but required several decades to grow into an industry.

So whatever new industry does come along to take up today's employment slack is probably already well along in the making, and will not prove new at all. Our guess is that it will come through present nuclear research. And its products will bring other great new problems. Rather than provide employment for everyone, nuclear power is more likely to put more people out of work than any other invention in history.

The prospect is that finding jobs for everyone who needs them is going to be an unending problem for all time. So will be the problem of putting men's leisure time into wholesome channels.

There is one old-time industry that is the greatest jobmaker in history. It could put everyone to work overnight. We hope it won't. War has done it before and can do it again. Even today, a large percentage of the Nation's income is being spent for, and a large part of the Nation's employment is in the work of getting ready for war if it does come again.

Will our Nation and the other world powers deliberately choose the problem of unemployment in preference?

Federal Aid to Jewish Parochial Schools

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an interesting letter received from Rabbi Morris Sherer, executive vice president of Agudath Israel of America, of New York City.

AGUDATH ISRAEL OF AMERICA,
New York, N.Y., March 27, 1961.

Hon. JOHN W. McCORMACK,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN McCORMACK: We wish to bring to your attention that our organization representing Americans of the orthodox Jewish faith organized in local chapters throughout the United States, favors Federal aid to parochial schools. Thousands of American Jewish parents are laboring under an undue hardship, because they must bear the heavy brunt of supporting huge budgets of the Jewish parochial schools to which they send their children as a matter of religious conscience.

We appeal to you to remove this discrimination by providing aid to these parents, whether in the form of tax deductions for their tuition, long-term loans to the schools, or outright grants for the secular programs of the parochial schools, which would bear no relationship to the principle of separation of church and state.

The Jewish parochial school system is an integral part of the educational plant of our American society, and it would be in the finest spirit of our American ideals to enable Americans who choose this type of schooling for their children to benefit from their taxes. Otherwise, they are being unduly penalized for practicing freely their religious choice.

We would sincerely appreciate your maximum efforts to help rectify this situation, through enacting legislation which would grant Federal aid to these parochial schools. We would also be grateful if you would kindly arrange for a representative of our organization to appear at any Senate or House of Representatives hearing which will be held in the near future on this subject, so that we could properly present our view to the legislators.

Through your efforts in this direction, you will have earned the grateful recognition of our people.

Very sincerely yours,
Rabbi MORRIS SHERER,
Executive Vice President.

Utica, N.Y., Applies the Self-Help Method

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. KEATING. Mr. President, there are in my State several communities which are economically distressed. One of the most serious areas of unemployment in New York is the Greater Utica area, which has a population of 300,000 and a working force of more than 100,000, of which some 8 or 9 percent are presently unemployed.

Like many other communities of excessive unemployment throughout the country, Utica is not content to stand still.

The people of Utica have demonstrated gratifying vigor in attacking their economic ills. They have applied what I refer to as the "self help" method with great enthusiasm. There is no question that wherever communities face unemployment problems like Utica, N.Y., the best and most logical solution is through the vigorous efforts of community and civic leaders to help their city help itself.

I have no illusions. The problems of the Utica area will not be solved simply and easily. I commend the Mohawk Valley Federation of Towns, Villages, and Municipalities and Dr. Virgil C. Crisafulli for the work which has been done in attempting to analyze and deal with Utica's economic difficulties. I also want to pay tribute to Utica's forward looking mayor, Frank Dulan, who originally proposed the establishment of a federation to promote and develop the economy of Utica. The cost is high and the job is tremendous. But, the people of Utica, under Mayor Dulan are going forward, and that is what counts.

Mr. President, I ask unanimous consent that an excellent article from the Rochester Times Union of Wednesday, March 22 discussing Utica's redevelopment efforts be inserted at this point in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PATTERN FOR COMMUNITY PROGRESS—GREATER UTICA AREA BECOMES A LITTLE UNITED NATIONS

(By Harold Whittemore)

UTICA.—An American city looked in the mirror, didn't like what it saw and decided to do something about it.

A federation of communities, cities, villages and townships, working for the common good—is the result.

A 48-year-old college professor is the prime mover in a pioneering endeavor that could set a pattern for progress.

The concept is not new, but the progress made in the Greater Utica area in rallying support for such a federation raised many eyebrows.

What civic leaders saw when they looked in the mirror were two of the deadliest enemies of civic growth in America—public apathy and provincialism.

These twin termites of community decay were accompanied by familiar companions—unemployment, slums, undeveloped natural resources, hit-and-miss planning, and highways, hospitals, and utilities a step behind on the path of progress.

"The people of our area just haven't realized, at least in large enough numbers, what has been going in the outside world," the Utica industrialist said.

The Mohawk Valley's mirror was a painstakingly prepared, carefully documented, penetrating economic anaylsis of Greater Utica. Reflected were two heavily industrialized counties, Oneida and Herkimer, with a population of 300,000, a working force of more than 100,000—and 10,000 jobless.

The author of the analysis, which was a project of the Council for Economic Development, was Dr. Virgil C. Crisafulli, an associate professor of economics at Utica College.

Crisafulli is the architect of the Mohawk Valley Federation of Towns, Villages, and Municipalities. He often calls it a "United Nations of Communities."

Crisafulli diagnosed the economic illness, recomended a cure, awaited 2 years for signs of recovery, then decided to seek faster relief.

Prodded by the indefatigable professor and shocked by skyrocketing unemployment, Greater Utica, like a mother hen, gathered its brood of smaller cities, townships, and villages and set about to create a new image.

When the federation was proposed by Mayor Frank Dulan of Utica, Dr. Crisafulli (then serving as the unpaid secretary of a mayor's conference) accepted the paid post of executive secretary and trimmed his college schedule.

The 4-month-old federation is scarcely out of the incubator. The formula may be a bit strong. There are about 100 communities in the area. Planners wanted a minimum of 10 for the federation. Already 29 have signed up. Costs to communities are on a per capita basis.

Bringing up this baby is expensive. The cost is estimated at $220,000 the first year, mostly for regional planning, and $70,000 the next year, with $50,000 earmarked for promotion, and the remainder for research.

The baby has some well-to-do and concerned uncles, however. More than $100,000 in Federal and State aid is anticipated for regional planning. This money, Crisafulli explained, would not be available to individual communities.

Crisafulli sees the federation as a united front in competing with their communities. The federation proposes surveys in the fields of regional higher education new sources of tax revenue, use of land, labor supply, and highways, sewer, water and utility programs to keep pace with growth.

Onue maneuver to get sturdy help is to tap second-level executives in industry and the professions to do the planning and organizing. The theory is that topmen usually are too busy.

Emerson C. Itschner

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. EDMONDSON. Mr. Speaker, the Army Engineers paid well-deserved tribute yesterday to a great soldier-engineer, Lt. Gen. Emerson C. Itschner.

In a retirement review at Fort Belvoir, the pride of the Engineers passed before the retiring chief of the corps to salute him for a job well done.

General Itschner has been a sterling example of patriotic service, and the Presidential Medal which was pinned on his uniform yesterday was recognition of that service.

During the years of his leadership, the Corps of Engineers has undertaken some of the biggest jobs in its history, including the tremendous Arkansas River development program.

In the Second District of Oklahoma, General Itschner has personally inspected all of the major works in this great program, and has given tremendously of his time, energy, and great talent to speed the work of flood control and water development.

I am certain that hundreds of my distinguished colleagues in this body will join me in expressing the hope that General Itschner will enjoy a fruitful and satisfying retirement, secure in the knowledge that he has made his country stronger through his service.

University of Cincinnati 1961 NCAA Champions

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. SCHERER. Mr. Speaker, too often here in Washington events both at home and abroad cause us to view with alarm. This week all Americans, especially those from the city of Cincinnati, can point with pride to the University of Cincinnati Bearcats basketball team.

On last Saturday night at Kansas City, Mo., the Cincinnati Bearcats defeated the Ohio State Buckeyes in the National Collegiate Athletic Association finals and became the 1961 national champions.

Mr. Speaker, for 3 years prior to 1961 the Cincinnati Bearcats, led by that great all-American, Oscar Robertson, had won the title of the Missouri Valley Conference, the toughest in the country. The team went to the NCAA those 3 years but did not quite bring back the big prize, although rated the top team in the Nation in 1959–60.

The 1960–61 season for the Bearcats did not look too good. All-American Oscar Robertson had graduated. Charles Mileham, the university's fine athletic director for many years, had been promoted to a University of Cincinnati vice presidency. The team's great coach, George Smith, had succeeded Mileham as athletic director. The Bearcats had a new coach, Ed Jucker, assisted by Tay Baker and John Powless. There were no all-Americans on this team around which to build.

At the beginning of the season the Bearcats were not even rated in the top 20 in the country. Most sportwriters outside Cincinnati, who had drooled over the "Big O," looked for other heroes and completely ignored Cincinnati.

For the first few weeks of the new season it looked as if they might be right. The once-powerful and feared University of Cincinnati Bearcats had only a 5-to-3 record. The coaches and team, however, quietly but with confidence and determination, supported by a small but loyal University of Cincinnati boosters club, went to work on a long, tough, and grueling schedule. They won 21 straight games from some of the toughest teams in the country.

Gradually their phenomenal wins forced skeptical sportswriters and coaches to push them into the top 20 teams, then into the select top 10. They went on to win what no one expected—the fourth straight Missouri Valley Conference title.

As the season ended, the Cincinnati team found itself rated No. 2 in the Nation, second only to Ohio State. Ohio State, with the all-American Jerry Lucas, according to many was supposed to be the greatest basketball team ever assembled.

For years big Ohio State, defending NCAA champion, had looked down its nose at the University of Cincinnati. It had refused to even consider scheduling and playing the Bearcats. The two had not faced each other on the court for 38 years.

Last Saturday night at Kansas City these two great teams were forced to meet as both won their way to the NCAA finals.

In what students of basketball called one of the finest and most thrilling contests in the game's history, the University of Cincinnati Bearcats beat the Ohio State Buckeyes 70 to 65 to become the 1961 NCAA champions—the No. 1 team in the Nation.

Mr. Speaker, this all-American team, coached by the phenomenal Ed Jucker, displayed all those qualities of sportsmanship and character so vitally needed by this Nation today; namely, skill, spirit, devotion, determination, and courage. It is comprised of the following players: Mark Altenau, Cincinnati; Carl Bouldin, Cincinnati; Jim Calhoun, Carr Creek, Ky.; Fred Dierking, Valley Stream, N.Y.; Dale Heidotting, Cincinnati; Paul Hogue, Knoxville, Tenn.; Ron Reis, Cincinnati; Larry Shingleton, Madison, Ind.; Tom Sizer, Middletown; Tom Thacker, Covington, Ky.; Frank Turner, Knoxville, Tenn.; Bob Wiesenhahn, Cincinnati; and Tony Yates, Cincinnati.

There are many other Cincinnatians who deserve much credit for the glory that this team has brought to Cincinnati. Among them are Dr. Walter Langsam, president of the University of Cincinnati; Ralph Burseik, it vice president; Dr. William Schwarberg, assistant director of athletics; Hod Blanye, sports publicity director; Jeff Hanselmann, assistant sports publicity director; Ed Coons, ticket manager; Dr. Don Jacobs, team physician; Joe Keefe, team trainer; Bill Roth, team manager; Joe "Scotty" Kolp, equipment manager; Roy Hodgins, program manager; and Don Galvin, cameraman.

Mr. Speaker, no team could enjoy the prestige that has been achieved by the 1961 University of Cincinnati aggregation without the splendid coverage and cooperation which has been given by the Cincinnati Enquirer and the Cincinnati Post and Times-Star and their outstanding and truly objective sportswriters, Dick Forbes and Walter Forste.

We in the Congress salute the 1961 University of Cincinnati Bearcats.

Sister Barbara: Administrator of Holy Family Home, Parma, Ohio

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. LAUSCHE. Mr. President, throughout the land are those who are devoting themselves to helping the sick and making their lives more comfortable. Too often, these individuals receive little or no recognition for their devotion.

A typical case is that of Sister Barbara, mother general of Holy Family Home at Parma, Ohio. Her devotion is well portrayed in a newspaper article recently appearing in a Cleveland, Ohio, newspaper, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Beatrice Vincent)

No matter what the weather outside, it's always on the bright side at Holy Family Home, State Road, Parma.

"We want it to seem like a home rather than a hospital," says Sister Barbara, a tiny, bright-faced nun who is starting her 5th year as administrator at the hospital.

To the 55 guests, all victims of incurable cancer, it does seem almost like home. Children and grandchildren can visit. Even the bedridden spend a good part of the time out of their rooms.

The nuns wheel their beds into the specially constructed chapel, out onto the wide lawns for picnics or through the gleaming halls into the recreation room for movies.

Sister Barbara, although mother general of the home, helps keep the halls gleaming. With the other 11 nuns, all Dominican Sisters of the Congregation of St. Rose of Lima, she rolls up her sleeves and pitches into the laundry, the scrubbing, the window-washing when not actually tending the patients.

Like their foundress, Mrs. Rose Hawthorne Lathrop, Nathaniel Hawthorne's daughter, they literally—and cheerfully—serve the sick poor. One of the rules of their order is never appearing shocked or repelled by any manifestation of the disease that brings their guests to Holy Family.

It was less than 70 years ago that Rose Lathrop discovered that New York hospitals refused to treat victims of incurable cancer—and decided to do something about it.

Today the 100 or so, members of her order, some of whom worked with her, conduct seven homes for cancer patients. They accept any race, any creed.

American Jewelry Industry Severely Penalized

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks, I include an article from the Boston Globe of Wednesday, March 22, relating to the unfair burdens placed upon the American jewelry industry and its employees by a discriminatory excise tax and imports from abroad which damage the home industry while drastic restrictions impede its export markets:

TWO-DOLLAR CUFF LINKS TAXED BUT NOT $12 SHIRT—JEWELRY MAKERS HIT EXCISE LEVY AS UNFAIR—PROTEST FLOOD OF IMPORTS

(By Howard S. Rains)

Do you know:

That you pay an excise tax on a $1 pair of earrings? But none on a $100 negligee?

Of that you pay the tax on a $2 pair of cuff links—but not on a $12 shirt?

Of that you pay the tax on a $1 lipstick, but none on a $500 hi-fi set?

Let's give you some background of this peculiar situation.

Back in the early part of World War II a retail excise tax was imposed on jewelry, furs, luggage, and cosmetics.

Basic purpose was to divert materials, money, and workers to the war effort.

Question: Other than the money, why should the tax (10 percent) be in effect today?

And even for the revenues involved, why should these industries be so burdened today? Why them and not others?

It looks very much like out and out discrimination.

In other words, grossly unfair, and contrary to our concepts of proper taxation.

For purposes of this discussion we'll stick to jewelry because it is prominent in the New England economy—mostly Rhode Island and southeastern Massachusetts.

We think its argument against the retail excise tax is completely justified.

As the industry points out, some mistakenly assume it is a luxury tax. This, of course, is absurd. Most extreme luxuries—a yacht for example—bears no similar tax burden.

Leaving jewelry for the moment, we also can't understand why a woman is forced to pay a retail excise tax on her cosmetics but none on some fancy gadget.

This is more than economics. It's a matter of commonsense.

Jewelry has another problem that makes one wonder.

Jewelry imports have been leaping—and hurting in a very serious way.

Yet many of the countries sending this jewelry here have not permitted the reverse. They have seriously curbed importation of American jewelry.

Now, this column favors greatest possible freedom of international trade. But it must work both ways.

Here's what we mean:

"A concrete example is a country now having unheralded prosperity at the expense of American jobs.

"In 1959 the American jewelry industry sold 76 orders, $444,288 worth of jewelry and novelties to Japan.

"MITI, the Japanese import licensing agency, approved only $50,000—11 percent of the orders—for entry into Japan.

"The other $400,000 we never shipped.

"During that year tens of millions of dollars worth of Japanese jewelry and allied products flowed freely into this country at a tariff that permitted their sale at one-half to two-thirds of the price of similar American products."

That was one example offered to a U.S. Senate subcommittee at a recent hearing in Providence.

The spokesman for the industry was George R. Frankovich, executive secretary of the Manufacturing Jewelers and Silversmiths of America, Inc.

Mr. Frankovich wisely minimized talking about imports. Rather, he dwelled upon what he called fair play. He cited the retail excise tax, export restrictions and such.

We think that is a step other industries should adopt.

They will get a better hearing. And more attention than they would if they aimed only at imports.

The import picture has been distorted by some. And there are two sides to the situation.

But discrimination is another matter—it demands definite correction.

Sees Midwest Economic Lead

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. ELLSWORTH. Mr. Speaker, out in the midcontinent of America, in the heartland of the United States, we are indeed fortunate. Although economic conditions are far from perfect, we are much better off than are many other areas of the country. The Kansas City Star of March 21, carried a news story reporting on a leadership luncheon given by the Honorable Harry Darby, now a civic leader and industrialist in Kansas City, Kans., and formerly a U.S. Senator. I invite the attention of the Congress to that story, which, under leave to extend my remarks, I insert at this point:

SEES MIDWEST ECONOMIC LEAD—ROCK ISLAND OFFICIAL SAYS HEARTLAND FARES BETTER THAN THE EAST—A BOON IN AGRICULTURE—BUSINESS CONNECTED WITH FARMING AND FARM EQUIPMENT CALLED BRISK

The Midwest is faring better than the eastern part of the country in the current economic picture, R. E. Johnson, executive vice president of the Rock Island Railroad, said today.

"The strong position of agriculture and agricultural products makes this so," Johnson said in an interview here.

GRAIN IS VITAL

He noted that the 7,600-mile Rock Island system relies on agricultural commodities, especially grain.

He added that the moisture outlook in the grain belt is favorable, and he is looking for another big Kansas wheat crop.

Johnson, 51 years old, is a native of Osawatomie, Kans. He began work here for the Rock Island in 1936 as secretary to the general manager, later serving at Little Rock, Ark., and returning here as assistant general manager.

Johnson and Eaton Adams, vice president and general counsel of the railroad, both of Chicago, were guests of honor at a luncheon at the Hotel Muehlebach.

Harry Darby, Kansas City, Kans., industrialist, was the host. About 90 civic and business leaders of Greater Kansas City attended.

The railroad official said the Rock Island's business is a good gage of the economy.

He said he expects 1961 net earnings to be just about equal or better than last year, despite recession talk around the country.

"January this year was about even with a year ago," he said. "February was down a little, and March so far is about even."

The Rock Island has gone into the piggyback business of hauling motor cars and now owns 106 bilevel and trilevel motor-car carriers.

"Railroads are now aggressively trying to win back business they have lost in past years to truck and barge lines," Johnson said.

NOTES RAIL EFFORT

He also pointed out that railroads are generating business through development of industry along their own lines.

Passenger business, however, has declined, but now is holding steady.

Need for a Select Committee on Consumer Problems

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ANFUSO. Mr. Speaker, I am today introducing a resolution to create in the House a Select Committee on Consumer Problems.

The committee, as proposed in my resolution, is to consist of nine Members of the House of Representatives, appointed by the Speaker. Its duties shall be to conduct studies and investigations of the problems of consumers, with particular reference to the following:

First. The administration of Federal laws relating to consumers, in order to determine whether the administration of these laws serve the needs of the American consumer.

Second. The extent to which Government agencies adequately serve the needs of consumers or give due consideration to consumer problems.

Third. The collection of facts and information on consumer problems which would be of public interest generally and would also aid the Congress in enacting remedial legislation.

My bill provides, however, that the select committee "shall not invade any subject matter under active consideration by any standing committee of the House." The committee is authorized to submit preliminary reports of its activities, as well as a final report on the results of its study and investigation at the close of the present Congress.

Mr. Speaker, I was particularly pleased to note several days ago that President Kennedy is setting up an Office of Consumer Counsel in the White House to represent consumer interests. It is also reported that Dr. Persia Campbell will be named to this post. If true, this will be an excellent choice. Dr. Campbell has served as consumer adviser to Gov. Averell Harriman during the years he served as Governor of New York and she has a great deal of knowledge and experience in this field.

Several years ago, when I served on the House Agriculture Committee, I was instrumental in the creation of a Consumers Study Subcommittee, of which I was the chairman. Our subcommittee made several important studies at the time on trend in food prices, food marketing costs, agricultural surpluses and farmer-consumer problems, on meat processing and distribution, food stockpiling, the food stamp program, and several other subjects. The subcommittee was very effective in giving the American consumer a voice, and also in bringing about better understanding between farmers and consumers as to their specific problems.

On several occasions we were privileged to have Dr. Campbell testify at our hearings, and she was most helpful to the subcommittee. After I left the Committee on Agriculture in January 1959, the Consumers Study Subcommittee was dissolved. As far as I know, there is no other committee or subcommittee in the House now which deals with consumer problems specifically.

During the 1960 presidential election campaign, Mr. Kennedy several times mentioned in his speeches that he would appoint someone in his administration to look after consumer interests. This promise he is now keeping.

Mr. Speaker, it is one thing to look after consumer interests such as is to be done by the President's Consumer Counsel, and another thing for Congress to have a committee which is to study and investigate consumer problems with the idea of serving the needs of consumers and giving them the necessary protection through legislation. I believe Congress has a direct responsibility here and should assume this responsibility as soon as possible. Aside from the direct interests of the consumers, there is involved here the general economic condition in the country, matters of consumer interest which come before our regulatory agencies and in such departments as Agriculture, Labor, Commerce, Health, Education, and Welfare, and others.

Just as Congress gives a voice to farmers, to labor, to education, to science, to the armed services, to the veterans, to business and finance, and to other phases of our national activity through its committees, so it must give a voice to the consumer, the housewife, the elderly people, the family wage earner, who struggle with the problem of the high cost of living and how to cope with it. This can be accomplished through the establishment of a committee such as is proposed in my resolution.

Mr. Speaker, our economists and statisticians have figured out that in 1960 the personal consumption expenditures in the United States reached about $328 billion, which is approximately two-third of our gross national product. In 1961, they estimate that these expenditures will rise another $10 or $11 billion. This, in itself, is reason enough why the American consumer's voice should be represented at the highest levels in government.

Think of all the instances that have come to light in recent years involving price-rigging, fraudulent advertising, low standards of purity and wholesomeness of food and other articles, misleading labeling, deceptive packaging, misrepresentations in manufacturing, and other ways to deceive the American consumer. This requires not only continual study and investigation, but also careful oversight by Congress. It is time to stop making an easy victim of the consumer and to see that he obtains his dollar's worth in the marketplaces of our Nation.

It is not enough merely to have a Consumer Counsel at the White House or even advisory committees in one department or another. This is too big and too vast a part of our economy which deserves greater recognition. A congresisonal committee to deal with consumer problems would be the best answer.

President Kennedy has shown deep concern and understanding of the problems of the American consumer when he stated recently:

> The housewives who shop for their families—the wage-earners who pay the rent and meet the bills—all have a vital interest in the activities of government which affect the value, the quality and accessibility of the goods which they buy. And yet those interests have been virtually unrepresented before the agencies, the congressional committees and the executive departments whose work has a direct impact on the daily life and long-term standard of living of the American consumer.

Mr. Speaker, time is of the essence. I think it is of utmost importance to act on my resolution and to set up as soon as possible the Select Committee on Consumer Problems so that it can undertake its work in the near future.

The Recession Under Attack

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. SIBAL. Mr. Speaker, I believe the effects of an economic recession often can be magnified by gloomy talk spreading among the people. This sort of scare talk tends to tighten their purse strings and discourage businesses from their normal plans for growth and reinvestment.

On March 18, the Bridgeport (Conn.) Telegram published an editorial directed to this point and praising a proposal for combating the depressing effects of such talk. I would like to have it printed in the RECORD.

The article follows:

THE RECESSION UNDER ATTACK

For the third time in 7 years the Nation's businessmen, acting through the advertising council which they support, are attacking recession "through the minds of men, where all action starts."

Theodore Repplier, council president, thinks this psychological warfare probably did some good in 1954 and 1958, though he says frankly there's no way to prove it. Most Americans, especially the hard hit, probably would agree it's worth a good try.

In the new campaign, called "Confidence in a growing America," the planners insist there's to be no "Pollyanna stuff," no blinking of the facts of recession. In the words of one, they simply want to "look at the whole stairway instead of the broken step."

What this means is that they intend to emphasize what they consider is legitimate optimism about the country's long-range future. The soberest economic projections largely agree, they say, that by 1975 we'll have a hike in gross national product from $500 billion to $800 billion, and a 22-million boost in jobs.

Some of the advertisements already prepared suggest the council is using what might be termed the "four B" approach. Again and again, alluding to the future, the campaigners say: "Brilliant—Bigger—Better—Brighter."

Heavy stress is laid on the value of organized research in fulfilling this promise.

The council's figures put U.S. business research today at $12 billion a year. By 1969 it's expected to reach $22 billion. Says Mr. Repplier: "It's the best answer to automation."

In its 1958 campaign, the council got donations of 25 million dollars' worth of advertising space. This time it figures on at least 10 million dollars' worth, and possibly much more.

For this time the program won't end once the recession danger is over. It will be continued at lower pace, with the idea that some constant psychological stimulus will do the economy good.

President Kennedy's Commerce Secretary, Luther Hodges, like the whole idea, providing the rough facts are always faced. He should have plenty of company. The campaign, if it's realistic, can't hurt. And it might help a lot.

Byelorussian Independence

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. ANFUSO. Mr. Speaker, the 43d anniversary of the proclamation of independence of the Byelorussian Democratic Republic is observed annually on March 25. It was on that day in 1918 that the people of Byelorussia set themselves up as a free and independent nation, only to be crushed a short time later by the Communist armies.

The anniversary of Byelorussia's independence occurs at a time when our Nation is embarking on a new era under a new leadership. We hope it will be an era of peace and freedom for all nations, including the captive nations of Eastern Europe who are suffering under communism. These nations, such as Byelorussia and others, have been the first and greatest victims of the Kremlin's policies.

Today the Byelorussian people are a silenced nation, but their kinsmen living abroad in this country and elsewhere are maintaining their history and culture and are also keeping world opinion informed on the subjugation of their people in their ancestral homeland Byelorussia by the Communists. The hope of these people to regain their freedom has not been crushed, however. We must help them keep this hope alive until it is realized.

Slowly and Surely

EXTENSION OF REMARKS
OF
HON. BEN REIFEL
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. REIFEL. Mr. Speaker, an editorial appearing in the Pierre (S. Dak.) State News of March 21, 1961, pinpoints the disturbing situation in which our State legislatures are finding themselves, not only in South Dakota, but all across the Nation. This problem is that the State legislatures are becoming little more than a rubberstamp for the programs of the Federal Government.

While $67.4 million was appropriated by the 1961 South Dakota legislature, over $176 million actually will be spent by the State government with this additional two-thirds coming from the Federal Government. This shows the large degree of Federal control that is rapidly diminishing the fiscal say-so powers of the State legislature.

Another alarming aspect of the dependence of the State upon the Federal Government is the fact that South Dakota stands to loose $2 million worth of Federal funds because our people simply cannot afford to provide the matching funds.

I urge Congress to take note of this trend which is occurring in other States, too. Caution should be used in proposing programs calling for the States to match funds with the Federal Government.

Mr. Speaker, under leave to extend my remarks, I wish to include the editorial to which I have referred:

[From the Pierre (S. Dak.) State News, Mar. 21, 1961]

SLOWLY AND SURELY

A favorite game among newspaper editors the past couple of weeks is called "Let's dissect the 1961 legislature." Most of them have performed their postmortems and concluded that the lawmakers did a good job, worked hard, and left State government in sound shape for the next 2 years.

It is nice to believe that our elected representatives did their tasks well, and we will agree with that analysis. However, there is one important point which many people continually overlook when they talk about accomplishments of the legislature. That is, simply, that the powers of State legislatures are slowly but surely being removed from them. More and more duties are being assumed by the Federal Government and State legislatures have gradually become little more than "approval agencies" for Uncle Sam.

Consider the amount of money which is spent through our State government. The 1961 legislature appropriated a total of $67.4 million and most lawmakers agreed that was too much money for them to approve.

However, that's only about one-third the amount which State government will spend during the next 2 years, according to United Press International Writer Wes Pippert. He says audits show the total will be over $176 million. The additional money will come from State taxes which are already earmarked, license fees, and, last but far from least, from the Federal Government.

We have, then, arrived at the point where our elected legislators have a voice in only one-third of the amount of money which State government handles. All they do is place a rubber stamp on the remainder so that various State agencies can spend it. Today, State government is, in the main, merely a subagency for the Federal Government when it comes to fiscal matters.

So, when we say the 1961 legislature "did a good job," we should realize that the area in which State legislating bodies are permitted to operate is growing ever smaller. Federal matching programs are drawing a noose about the necks of our State lawmakers, leaving them little room in which to make their own decisions.

More and more, when we assess the value of a State legislature, we will have to say "they did a good job," and then add the conditioning phrase, "within the boundaries in which they were permitted to operate."

Youth for Freedom

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. HALL. Mr. Speaker, an entire generation of Americans has grown up under the New and Fair Deals and were taught to believe, "the Government owes everyone a living." The New Frontier represents a substantial portion of those who were taken in by this philosophy. Today still another generation is showing signs that it does not relish the economic burdens of debt and confiscatory taxes which it has inherited. These young men and women are organizing politically to restore the tradition of the American free enterprise system. This philosophy is accurately described in an editorial in the Joplin, Mo., Globe, and under leave to extend my remarks I submit the article below for inclusion in the RECORD:

YOUTH FOR FREEDOM

The first among the future generations whose heritage the Nation started mortgaging back in the thirties now is coming of age. And there are growing signs it doesn't relish the economic burdens of debt and confiscatory taxes it is inheriting.

Soured somewhat by sudden realization that they have been robbed of their birthright by a 30-year deficit spending binge into welfare statism, many in this generation now reaching maturity are reported to be turning conservative. They are organizing politically, principally in colleges and universities, to restore the traditional American free enterprise system.

Their "cry in the wilderness" is to restore integrity in government, and to swing the curve of the Nation's social order upward again to restore individual freedoms and self-reliance, and shake off the shackles of big government regimentation under a fallacious welfare state.

We hope this is truly a new and great national movement, for it well might become the salvation of America, rescuing the country from its drift into socialism and democracy's destruction from within.

The new movement has been attracting considerable publicity lately. The central organization is the Young Americans for Freedom and it already has more than 100 affiliates on college campuses.

These vigorous young Americans openly reject the so-called liberal philosophies of the New and Fair Deals and the New Frontier. They prefer patriotism, national, and individual pride, self-reliance, and independence. They hold that the welfare state philosophies are phony, in the light of what they have done to the historic American way of life.

Indeed, these young people, born in the late thirties and early forties, regard President Kennedy and his New Frontiersmen as middle aged and not representative of the new youth of America. They recognize that President Kennedy and his contemporaries grew up under the New and Fair Deals, and really belong to the generation taught to believe the Government owes everyone a living.

It is most refreshing to hear about these courageous young Americans thus going into action. We hope their ranks are joined by oncoming generations—our leaders in government tomorrow—and that they will somehow fortify the country's weary will to resist the erosion of our liberties before it is too late.

Education—Local Responsibility

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DEVINE. Mr. Speaker, under leave to extend my remarks, I wish to point out to the Members of the House a resolution adopted by the board of education of the Washington local school district relative to their views on proposed legislation for Federal aid to education:

Be it resolved by the board of education of the Washington local school district operating schools in Dublin and Jerome, Ohio, That the board of education of the Washington local school district of Franklin County, Ohio, does hereby express its opposition to Federal aid to education for the reasons that under the principles of American democracy and the provisions of the Constitution of the United States of America, the education of schoolchildren is primarily the obligation of State and local governments and for the further reason that the Washington local school district and all other school districts in general in the State of Ohio are providing adequate school and education facilities at reasonable costs under our constitutional theory of local self-government.

It is the consensus of opinion of the Washington local school district board of education that Federal aid to education will sooner or later result in Federal control of local school matters, which is solely a matter of State and local concern.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent that two editorials, appearing in the Advocate, the archdiocesan newspaper of Newark, N.J. on March 16 and 23, be printed in the Appendix of the RECORD.

These editorials, entitled "Read and Write," and "Honor the Whole Constitution," give, I think, an excellent presentation of the view of many Catholic Americans toward Federal aid to education.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Advocate, Mar. 16, 1961]

READ AND WRITE

Discussion of the question of Federal aid to education, especially to the parochial school section of our national system, waxes hot. That is, indeed, as it should be and in full accord with our American way. Much heat will no doubt be generated but, we believe, there will be also a compensating intensity of light.

In that light, we trust, we shall be able to see whether there is really any need for Federal aid, any need sufficient to excuse so great a departure from our traditional division of power between the States and the people on the one hand and the Federal Government on the other, sufficient to justify the unquestioned and unquestionable danger of Federal control of our schools, sufficient to warrant a further step along the path that may lead to the destruction of our Federal system, the great safeguard of our liberties.

In that light all will see, we trust, the eminent fairness of the claim of our bishops that Catholic children have the right to participate in any Fderal aid program and that, if they are excluded, they will be the victims of discriminatory legislation.

In that light we shall, we trust, be able to see that, while the President may be being practical in asserting that the Constitution clearly prohibits aid to parochial schools, he is relying upon a Supreme Court decision (in the New Jersey Everson case of 1947) which has no sound basis in history, in the Constitution or in any other legal source, which, in fact (as one of the Justices was honest enough to admit later), rests on nothing more than the personal opinions and prejudices of the members of the Court.

In that light we shall see, we trust, that eventually the Court must change that unsound, unfounded and unhistorical opinion to one more honest and more to the credit of our highest tribunal. That the Court can—and does—change its mind we can easily realize by recalling its stand in the matter of racial segregation in the schools in 1896 and in 1954.

(We said that the President was being practical in being guided by the distortions of the Everson decision. This is true because, given the present makeup of the Court, there is little, if any, chance of the expected reversal taking place in the foreseeable future.)

In the light that comes from open discussion we shall see, also, an important—perhaps vital—distinction which the President has made. While he has refused to sponsor any form of Federal aid to parochial grammar and high schools, he has defended, as free from any constitutional obstacle, a proposal of aid for college students and for colleges; this, he has said, "is aid to the student, not to the school or college."

Can we not see in this distinction a solution of the insoluble? If it is constitutional to grant aid to the student on the college level, it surely cannot be unconstitutional to do the same for the student in the grammar or high school; that is as simple and as true as the irrefutable fact that two and two make four. There is no relevant difference between colleges and grammar and high schools; what can be done for students in the one can be done for students in the other.

This concept of public aid to the student does more than solve the allegedly insoluble. It is also a practical recognition of the proper relationship between government and the family in the matter of education, a relationship which has been expounded again and again in these columns.

The family is, by the law of nature, that is, by the law of God, the primary educator; even the U.S. Supreme Court has recognized this in the Oregon case of 1925. Government, local, State, Federal, enters the picture only in order to assist the family to the extent that may be necessary for the proper fulfillment of the latter's right and duty; if the family needed no assistance, there would be no government participation in education at all.

(To some extent we in America have always accepted this family basis even of so-called public education. With us these schools are operated, not by the city or the State, that is, by the government, but by specially chosen or elected boards of education who represent the parents or families of each community and act in their name.)

If, then, there is to be Federal aid to education, let it be in the form of aid to the student and/or his family. Against this no valid constitutional objection can be cited; in it all can participate in the properly American, equal way; by it the longstanding injustice suffered by our Catholic people will, in part at least, be redressed. How it is to be carried out—whether by tax rebate or tax exemption or whatever—we leave to experts in fiscal matters to work out.

Our Catholic parents, our Catholic people, must call upon their elected representatives in Congress to enact such a school aid program, if there is to be one at all. Only the pressure of an aroused—and enlightened—public opinion can control the dangerous tendency Congressmen have to "follow the leader."

Let us not be taken in by smooth promises that, if opposition to the President's (discriminatory (and, therefore, un-American) proposal is halted, consideration of our demands—the demands of fairness and equity—will be taken up after the "public school only" bill has been passed. It is extremely unlikely that such promises would ever be honored, so unlikely that we would betray our own interest and right if we were to rely upon them. Now is the time, this is the opportunity. We must not let it slip away.

[From the Advocate, Mar. 23, 1961]

HONOR THE WHOLE CONSTITUTION

Catholics pressing for aid from public funds to parochial schoolers are widely accused of defying the Federal Constitution.

This is calumny. No American Catholic wants, now or ever, anything contrary to that glorious charter. We treasure it, we honor and abide by it, and not just part of it but the whole of it. We wish that our critics would do likewise—honor and abide by the whole of the Constitution.

Instead, they speak as though the question of public aid to parochial schoolers

turned on and is to be settled by the meaning of the "no establishment of religion" provision in the first amendment.

They speak as if that provision were, not just one clause in, but the whole of the first amendment, indeed the whole of the Constitution.

Their tactic is to maneuver us into fighting only on the battleground chosen by themselves, the terrain of church-state relations, where we are bound to bog down and victory is precluded.

So long as our critics succeed in confining the debate to that area, that of the limitations imposed by "no establishment," they can say: "Let's grant for the sake of argument that the 'no establishment' provision, as reinterpreted by the Supreme Court in the Everson and McCollum cases, while forbidding all direct governmental aid to religion or religious institutions, does not prohibit what might amount to indirect aid. But so what? It doesn't command such aid either. By what right, then, do you demand it? We don't have to give it to you. What's more, even if the Constitution doesn't bar indirect aid, public policy does."

So long as foes of public aid for parochial schoolers are allowed to dictate the battleground, so long as we fall in with their arbitrary demand that the issue be debated exclusively in terms of "no establishment," we are foredoomed to a stalemate, in effect a defeat—as were our troops in Korea when they were forbidden to carry the fight north of the 38th parallel.

Such a defeat would be costly not just to ourselves but to the Nation at large, for it would be achieved precisely by obstructing the Constitution itself. Our opponents will have won their victory, not on truly constitutional grounds, but by tearing out of context and exploiting a single clause in complete disregard of and defiance of the rest of the Constitution.

The Advocate has been spelling this out for years. We have contended and we contend that the terrain of church-state relations is the wrong battleground, or at least not the only legitimate battleground on which the contest should be waged and decided. The issue of public aid for parochial schoolers is not primarily, if at all, a question of church-state relations. It is primarily a question of family-state relations.

We have contended and we contend that the "no establishment" clause, if relevant to the dispute at all, is not the only relevant part and certainly not the most relevant part of the Constitution. And we have submitted and we submit that whatever the meaning of the first amendment's "no establishment of religion" clause may be, even as reinterpreted by the Supreme Court, it cannot be one which conflicts with the Constitution elsewhere, it cannot be one which nullifies, abridges, or renders illusory positive rights guaranteed elsewhere in that wise document.

In asking that parochial schoolers be allowed to participate in public funds expended for education, Catholics are not assaulting America's constitutional separation of church and state, we are not asking for governmental support of our religion or of the teaching of it.

We are asking simply that parents who happen to be Catholics may be effectively enabled to direct and control the education of their offspring. We are asking that parents and pupils who happen to be Catholics may be effectively enabled to exercise freedom of choice in education.

We are not asking that non-Catholic taxpayers support parochial school education. We are asking, as Bishop Bernard J. McQuaid of Rochester put it in 1875, "to educate Catholic children in Catholic schools with our own (tax) money. We do not want Protestant money, nor any State money that was not taken from our purses." We are asking that part of the taxes collected from us as citizens for educational purposes be channeled back to us as citizens for the nonreligious aspects of the education of our children.

And these things, we ask, not as largess or condescension, not in circumvention of the Constitution's "no establishment" clause, but in the name of our constitutional rights, rights set forth and documented at length by Virgil Blum, S.J., for one, in his book "Freedom of Choice in Education" (Macmillan, 1958).

Briefly, the Constitution guarantees that the parent is the primary educator of his offspring, has the fundamental and inalienable right and responsibility of controlling and directing his children's education according to his free choice and conscience. The Constitution guarantees freedom of choice in education, the free exercise of religion, and that no one should have to yield any of his constitutional rights in order to participate in public benefits. One or another of these constitutional rights must be surrendered by Catholic parents and children as long as participation in public funds is conditioned upon attendance at public school, as long as parents are economically penalized for exercising their right of sending their children to parochial schools.

We ask our fellow Americans, of whatever persuasion, to honor these our rights, if they would honor and abide by the Federal Constitution, not just in part but the whole of it.

We ask for aid from public funds for parochial schoolers in the conviction that this does not at all conflict with the several State constitutions forbidding use of public funds in support of denominational schools.

We ask for such aid in the conviction that public policy cannot be invoked against it. (It is interesting that foes of aid to parochial schoolers are now raising this issue. Are they growing less sure of their constitutional ground and therefore are preparing a second line of defense?) Since when would it be bad public policy for the Nation to live up to constitutional rights? And even if it were ruled that the Constitution merely permits, does not require, aid from public funds for parochial schoolers, the public interest would still demand, as Father Blum shows in his first chapter, diversity of educational opportunity as an indispensable bulwark against totalitarianism.

Finally, rather than wait patiently, as has been suggested in some quarters, until the Protestant, Jewish, and secular humanist conscience is disposed to accord us our rights, we ask for them now and insistently, because we have already waited patiently and in vain for over a century and, to judge from the current Protestant, Jewish, and secular humanist outcries, very likely we would have to wait at least another century, whereas right now public aid to parochial schoolers is rapidly becoming a matter of survival.

We urge our fellow Americans not to obstruct but to acknowledge and support our rights lest they be party to a vast conspiracy to coerce all children, contrary to the will of millions of parents, into a single, monolithic school system—call it Operation Kidnap. Lest they be party to the injustice of refusing to Catholic parents a fair return on their own tax moneys—call it Operation Pickpocket. Lest they be party to downright discrimination which would make Catholics second-class citizens—call it Operation Ghetto.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another in a series of articles on Ireland written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, Pa., which appeared in that newspaper on March 26, 1961. Mr. Heffernan wrote this interesting and informative series for his newspaper following an extended trip through Ireland last fall.

The latest installment follows:

A JOURNEY TO IRELAND—COUNTY HIGH SCHOOL ATHLETES WOULD SPURN THESE ACCOMMODATIONS

(By Tom Heffernan)

The high school football players of just about every Luzerne County high school would feel rather badly treated if given the accommodations provided the athletes of Dublin's Trinity College—the highly respected Irish university that is situated almost in the middle of Ireland's capital city and surrounded entirely by a high wall.

The building provided for the athletes is situated at the far end of the playing fields, at an elevation some 50 feet above the level of the fields which provide space for cricket and rugby and the building, consisting of a single story and basement, is reached over a series of concrete steps which serve also as seats for the spectators.

There probably is space there for about 200.

Main feature of the building is the long room leading directly out to the top row of seats and its equipment consists of a long serving bar, tables and chairs, plus facilities to provide boiling water.

Tea is served as the athletes and spectators gather in a special get-together after the contest.

FOR THE ATHLETES

Down below, in the basement, is the space for the athletes, consisting of two rooms, each about 20 feet square and when we looked at them we thought first of the fine dressing rooms, showers, and jampacked equipment rooms of most of the county's high schools.

Because there are just two items of equipment in those dressing rooms for the athletic heroes of Trinity College—and these are just about the same as will be found in all the other famed and splendid old schools of the rest of Great Britain and the continent of Europe.

These two items are hooks and benches.

The hooks are in a line around the wall and serve to hold the street clothes of the players when they change into sports gear.

The benches line the walls beneath the rows of hooks.

There is nothing else. No lockers, no extra equipment, no showers—no nothing.

TEA COMES FIRST

The athletes, after the game, join their friends at tea and, that period of pleasure ended, go down into the basement and change into their street clothes.

If they want to have a bath they get one after they reach their places of residence—in the old dormitories of Trinity College.

One of the other playing fields—a rugby field—had accommodations for spectators the full length of the field on both sides.

These accommodations consisted of a single row of benches. That was all.

Obviously, sports are held in quite a different light than here in the county and the rest of these United States.

In Ireland, as in Britain and Europe, there is no such drive for perfection to bring victories. They play for fun.

The star of the rugby team has not been practicing rugby or the plays all week. Far from it.

Instead he has been enjoying as many of the other available sports as he can.

So a boy may play on the rugby team on Monday; have a go at some football (soccer) if it is available on Tuesday; have a game of cricket, if in season, on Wednesday; pull an oar in the shell on Thursday; try still something else like golf on Friday, and then devote Saturday to his social engagements.

They like to win but they are not going to slave all week, to the neglect of all their chances for fun, just to improve their chances for a win in a single sport.

That's not their way of enjoying themselves in athletics.

VIKINGS FOUNDED CITY OF DUBLIN

The far-ranging Vikings, pouring out of Scandinavia as the result of a population explosion and whose wonderful longboats and their fierce fighting qualities took them to conquests in so much of the known world—from the Middle East, to Sicily, up through Russia, in France and England—left their mark on Ireland.

They founded or occupied Dublin late in the Eighth Century—about which time they also started settlements which grew into Limerick and other of the leading cities of the Emerald Isle.

Credited to them also is the second street in importance in Dublin, now known as Dame Street.

But it used to be Dam Street, so called because the Vikings there dammed the River Poddle to create space for their boats.

And now also the National Library and Museum is full of relics and archeological discoveries of Viking remnants. We should add also that, in Ireland, the Vikings are usually called Danes.

FRIENDLY PEOPLE AT THE HOTEL

We had more good fortune in being made to feel at home in the Royal Hibernian, the hotel in which we stayed.

Knowing we had just come from there, one of the three lovely young ladies behind the desk—a dark-eyed, dark-haired colleen—let us know she was from Adare.

Her name was Mary Bowkley.

Then there was the handsome waiter in the excellent dining room, with his wave of dark hair and quite a regal manner in that fine place to eat—until he came down to being the friendly and most helpful sort of chap you'd want to meet.

His name was Tom McGann.

Formal as it could be, the Royal Hibernian had three grades of men in the dining room.

McGann was one of those who took the orders and saw that all was well and who work with tails.

Then there were those who served in gray, cotton coats.

Finally the young bus boys, wearing the tuxedo but with a big, wide apron tied about their middle.

But it was McGann who did so much to make our meals in Dublin, otherwise taken mostly in solitary splendor, far more agreeable.

And when it came to serving meals the Royal Hibernian did not stint space.

One large dining room was for the breakfasts, the main dining room for lunch, a large and really spacious, marble paved entrance foyer leading to the dining room was used at tea time (about 4 p.m.) and then the main dining room for dinner, which started about 7:30.

We had to make special arrangements for an early dinner the night we wanted to see "Ben Hur"—which was advertised to start at 7 p.m. but, with the usual Irish refusal to rush things, started about 7:14.

HOW TO HANDLE STRAYING GOATS

The Irish farmers have their own way of keeping goats from straying too far or getting into too much trouble.

They put collars around their necks and then lash them together in pairs with a rope about 3 feet long. When they try going through the hedges that border most fields they meet little success.

Since even the most advanced goats have not yet reached the point where they try to develop teamwork—with ideas of travel differing widely much of the time—they remain well in hand.

GOOD PARKING AT NO COST TO CITY

Parking is permitted at an angle in the center of O'Connell Street—in certain areas—and it is kept well in hand and in order at no expense to the city of Dublin.

Instead, the task is handled by men who are licensed by the city and assigned certain areas, but are not paid.

They have to depend entirely on those they help to park—who know also that their cars are left under a watchful eye.

As a result, the service they supply is excellent and you never have to wait for them since they do not want you to have to try to park without them.

They come on the run—overcoats flapping—and their only sign of office is the special military-type caps they wear.

Financial Aid for a Homebuilding Program in Latin American Countries

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include a letter from a constituent of mine, Alan Carnoy, a well-known builder from Westchester County, N.Y., which proposes financial aid for a homebuilding program in the Latin American countries.

Mr. Carnoy has a reputation of being one of Westchester County's leading builders for a number of years.

Currently he has embarked on a program which envisions homeownership for multitudes of workers in Central and South America as well as in other countries throughout the world. Mr. Carnoy believes sincerely that homeownership is the finest way of combating communism. When a man, regardless of his financial status, owns a home, he has an equity in his country and is fortified against the subtle blandishments of communism.

To provide funds for the construction of these homes is Mr. Carnoy's objective. He feels that through U.S. Government loans to existing savings and loan banks it will be possible to provide mortgage money for the thousands upon thousands of workers who cherish the dream of having their own homes.

These homes which Mr. Carnoy builds—a number of them have been built in Mexico at his own expense—could be purchased for as little as $4,000 or $5,000 on a long-term amortization arrangement where the purchaser pays from $25 to $40 a month. Mr. Carnoy is so enthused about his objective of homeownership that he is risking his own capital and is willing to undertake doing the task without profit. He is convinced that the apartment or unit arrangement for workers as seen in certain European countries is not the proper answer to the question. Without any equity in their homes the workers sometimes feel they are industrial slaves rather than freemen. They had no gardens to tend, no land to call their own, no home for their progeny. In countries where unit dwellings are prevalent on a large scale, communism has gained ground.

Mr. Carnoy is very concerned about the future of Latin America politically. He believes that his project is of utmost political importance because for about a year now local investors throughout Latin America have become increasingly apprehensive. He feels that should one more country of any significance turn to the left, panic will ensue.

The first result of this situation would be the collapse of exchange rates of most Latin American currencies because of the stampede of local capital to get out. As elections become more and more legitimate in Latin America, it is Mr. Carnoy's belief that a majority of people will vote increasingly to the left for the simple reason that they have seen little if any benefit to them economically in democracy. Communists may then infiltrate their governments and aline themselves with the Soviet bloc.

Mr. Carnoy feels that in the final showdown with communism for Latin America, the psychological impact of a program demonstrating the value of homeownership would inspire the local investors' confidence in the political stability of that area and gain for democracy millions of ardent supporters whom we badly need on our side.

Mr. Carnoy has taken pains to answer the objections heard during past years to his pilot homebuilding project.

The letter and answers follow:

CARNOY INTERNATIONAL BUILDING CORP.,
New York, N.Y., March 18, 1961.

Hon. EDWIN B. DOOLEY,
House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR CONGRESSMAN DOOLEY: I believe that it is imperative that within the framework of President Kennedy's program, a pilot home project be built in a Latin American country. Such project would serve the purpose of exploring the legal and financial ways and means of achieving the results we want in housing stimulated by American loans.

Without such demonstration of our ways of creating homeownership, we will not effectively "help to establish free economic institutions in the field of housing abroad," as directed by the amendment of May 14, 1960, to the Mutual Security Act.

All that is needed is the same kind of loan which DLF has been granting and will be granting under the President's program to savings and loan institutions, except that

this loan should be for a specific project, and to an existing private savings and loan bank, instead of a savings and loan association. Awaiting the creation and proper operation of this form of banking institution is delaying the program in most countries.

The pilot home project has objectives far beyond the obvious ones of demonstrating American methods of land development and homebuilding, establishing standards of values in homes and lots, and giving a boost to savings for future homes. The great goal of the project is to convince Latin Americans that good homes will be available to them as a matter of course through normal, private business. A longer term objective is the reforms in taxation and other conditions which only their own citizens, working through independent homeowners associations, as in the United States, can achieve.

The project will have assured support from the press. Wire service representatives have told me of their concern and interest in seeing homeownership become available to all in Latin America. The most important weeklies have promised me full coverage. As I would immediately start housing exhibits in all Latin American countries, all local newspapers would carry stories about the project. And what is important in Latin America, word of mouth would carry the news throughout the continent.

The project will be an achievement of local private builders.

Please note that I do not want and will not make a penny on this job. I have very strong reasons for this decision. I believe this project is of utmost political importance, because for about a year now, local investors throughout Latin America have become increasingly apprehensive. Should one more country of any significance turn leftist, there will be panic. The first result of this would be the collapse of exchange rates of most Latin American currencies because of the stampede of local capital to get out. Now, as elections become more and more legitimate in Latin America, a majority of the people will vote increasingly to the left, for they have as yet seen little if any benefit to them economically in democracy. Then Communists will infiltrate their governments and aline them with the Soviet bloc.

In this final showdown with communism for Latin America, the psychological impact of a campaign demonstrating the reality of homeownership would inspire the local investors' confidence in the political stability of Latin America, as well as gain for democracy millions of ardent supporters whom we badly need.

This, I believe, is a matter of national urgency.

Sincerely yours,

ALAN CARNOY.

OBJECTIONS HEARD DURING PAST YEARS TO MY PILOT HOME PROJECT

1. There are millions of people in the United States who live in substandard housing. This comes before our financing of housing in foreign countries.

The United States should not finance housing in foreign countries, which is their own business according to Latin American governments, but the United States should help to demonstrate on every continent how homeownership for all can be achieved in every country. It is a matter of utmost importance for the political security of the United States.

2. Pilot home projects are a good idea, but they should be sponsored by foreign governments whom we should help and advise.

The great majority of Latin American governments are convinced that low cost housing should not be built by private enterprise as in the United States.

However, in most Latin American governments there are men who will support American ways if it can be proved that they will work in their country. Therefore, it is necessary to demonstrate how easily homeownership can be put within the reach of many. Necessarily, it has to be done without any special endorsement by the local government, but of course within the framework of existing institutions in that country, which obviously are approved by their respective governments.

3. One thousand homes? It's meaningless. They need millions of homes. To achieve what you want, you need $10 billion not $10 million.

A demonstration properly carried through and properly promoted should be sufficient to start the ball rolling in all Latin America. Thus, it will eventually lead to millions of homes which will be financed by local public savings over years to come.

In Latin America, good homes for low downpayments and at low monthly installments are not available because:

(a) Insufficient amounts of public savings are destined for home mortgages. Promotion of such is inadequate as there are no homes worth saving for.

(b) The taxation system is unfavorable for small homeownership.

(c) Prices for suburban land are higher in Latin America than in comparable areas in the United States.

(d) The requirements and regulations for developments are unfavorable for low cost housing.

4. Land should be donated for workers' communities. Homes should be built by contractors on competitive bids. Owners making low wages should be exempted from real estate taxes. Builders should invest in the projects.

This basis for loans breaks every rule of the American way of creating homeownership.

(a) Workers communities emphasize permanence of class differences. Some of the recent riots in Caracas started in a workers' housing project.

(b) To our knowledge, not a single home development in all the United States has been built by contractors on bids. The best results for the public are obtained from competition among builders who build model homes in various places.

(c) Expropriated land, exemption from taxes, from fees for utilities, permits, etc., helps to maintain low wages for workers.

(d) An American home builder never invests in homes he builds except for the working capital during construction. Any participation in long-term mortgages would force the builder to increase his profit.

5. It is fraudulent to make people in Latin America believe that they will have nice homes. Their wages are too low.

I sincerely believe that they will have such homes when these countries adopt our ways. In any case, a large proportion of the urban population, the middle class, could afford to buy homes right now. As countries develop, more and more workers will get higher wages and qualify to buy homes.

6. It is too late. Communism is inevitable in Latin America.

It is not yet too late. Most of the causes of the social discontent can be quickly removed by making home ownership available for all, and by the reforms in various fields which will result from this.

Out-of-Classroom Service

EXTENSION OF REMARKS

OF

HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. THOMSON of Wisconsin. Mr. Speaker, under leave to extend my remarks, I call to your attention an editorial in the Muscoda Progressive recognizing the great value of vocational education and the contribution its leaders make beyond the classroom:

OUT-OF-CLASSROOM SERVICE

This newspaper does not pass out editorial backslaps very often. But especially because of the developments in watershed promotion which have taken place in this area the past few weeks we would like to give a pat of the editorial hand to vocational ag teachers in this vicinity.

Although the watershed is a farmer project to be governed and operated by farmers for the specific benefit of farmers, nevertheless, the ag teachers, including Howard Jones at Muscoda, Fid Bosch at Highland, Mike Gundlach at Montfort, and Don Kolar, Fennimore, deserve a lot of credit for the "above and beyond the call of duty" work in promoting the development of watersheds.

Mr. Bosch was instrumental in generating watershed interest in the Otter Creek area and now he, Mr. Jones, Mr. Gundlach, and Mr. Kolar are working to help promote interest in the Blue River Valley. They have already held a successful meeting at Muscoda. The Muscoda meeting was credited with being the most successful watershed meeting held to date in any place in Grant County.

A meeting scheduled for Monday night at Highland was postponed due to the inclement weather of the day.

We do not mean to say that these fellows are to be given all the credit for this watershed work, as there have been numerous folks, both rural and village, who have put in a good deal of work toward watershed development, but we do believe the ag teachers are doing a commendable piece of community promotion with their watershed work and deserve their rightful credit for being real assets to their communities as well as their schools.

An article which appeared in the publication titled "Iowa Farm Science," bears out our theory on the value of these men to a community. The article follows:

HOW EFFECTIVE IS VO-AG TRAINING?

How effective is vocational agriculture training in high school? How much does such training benefit the students after graduation—both those graduates who enter farming and those who enter nonfarm occupations?

These are some of the questions researchers at the Iowa Agricultural Experiment Station are trying to answer with a series of studies of high school graduates from 20 communities, which offered vocational agriculture, and from 20 similar communities which did not offer such training.

Here are a few preliminary conclusions from these studies:

1. Farm operators who had completed 3 or more years of high school vocational agriculture had higher crop and livestock production and higher total gross products from their farms than did high school graduates who hadn't received such training. Vo-ag trained operators also used a greater number of improved production and management practices on their farms than did graduates without vo-ag training.

2. Farm operators who had lived on larger home farms when they graduated from high school operated larger farms with more crop acres and produced more total gross products than did high school graduates who had lived on smaller home farms.

3. Vocational agriculture training proved to be as valuable to graduates who entered nonfarm occupations as other high school courses which might have been substituted for vocational agriculture.

4. No difference in the occupational status of high school graduates in nonfarm jobs was found between those who had had and those who had not had vocational agriculture training. The measures of status were:

annual earned income, degree of expressed satisfaction and score of their occupation on a scale of occupational prestige.

The top yearly earned income for the high school graduates was attained at age 35. This information was compared with information from an earlier study of Iowa State agriculture graduates. The total lifetime earnings for high school graduates was about $238,000, for the college graduates it was $360,000. The college graduates reached their top income at age 53. The average yearly earned income for high school graduates was $5,062, and for college graduates was $8,370.

The Textile Industry and National Economic Growth

EXTENSION OF REMARKS
OF
HON. B. EVERETT JORDAN
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. JORDAN. Mr. President, on Friday, March 24, the Secretary of Commerce, the Honorable Luther H. Hodges, delivered a very fine address at the annual meeting of the American Cotton Manufacturers Institute, at Miami Beach, Fla. I had the pleasure of introducing Secretary Hodges to that fine group.

I ask unanimous consent that his complete address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TEXTILE INDUSTRY AND NATIONAL ECONOMIC GROWTH

(Address by Secretary of Commerce Luther H. Hodges at the annual meeting of the American Cotton Manufacturers Institute, March 24, 1961, Miami Beach, Fla.)

It is a particular pleasure for me to be here this morning. I have been away from the textile business for more than 10 years now, but I have kept up with your program and your problems. It is good to be with you and share your warmth again.

And I might add, to share the warmth of this lovely Florida sunshine, which the Commerce Department's Weather Bureau so thoughtfully arranged.

I suppose my main distinction in this new, young Kennedy administration is that I happen to be the oldest member of the Cabinet and its only tie with the 19th century. Well, I concede my age and I confess I am not quite the downfield man in touch football that some of my colleagues may be. Nevertheless, as I remarked the other day to a reporter who seemed transfixed by my antiquity at age 63, "I do drive a Thunderbird." And for your own private information, I am seriously considering installing a supercharger on it.

This administration, pledged to a new vigor in American affairs, has now had 64 working days, including Saturdays and Sundays, in which to set about the critical task of getting this economy moving forward again. Much has been accomplished in the brief time, but much remains to be done.

Many people seem to expect of us in 8 weeks what was done in the previous 8 years.

I have said on several public occasions recently that President Kennedy's legislative program, generally supported by the public, is helpful in showing to our people that their Government is trying to assist in areas where they cannot help themselves. The effect is to build a national spirit of confidence and cooperation which is essential if we are to move forward soundly toward a stronger economy and a stronger Nation.

This is not necessarily in conflict with President Kennedy's ringing declaration in his great inaugural address, "Ask not what your country and do for you—ask what you can do for your country."

I realize, and have said so publicly, that many of us are not doing our part. We are not really trying, not really selling. Many of us are asking the country to take care of us before we have done all we can.

These situations may represent a minority, but they are still serious. May I just say to you and to others, we must all do our part if we are to turn things around for your industry and for the whole economy.

The turning of the business tide—getting people back to work and reviving lagging purchasing power and markets—has been, and is, the essential first step for recovery. But full economic recovery in 1961 involves far more than the spin of the business cycle.

Confronting us, over and above the present recession, is a problem of chronic slack in the economy, a growing gap between what we can produce and what we do produce. This problem, evidenced by our disturbingly slow rate of growth in recent years as compared with other industrialized nations, is in need of urgent solution if America is to meet the demands of national well-being and security and the obligations of world leadership.

Because the problem affects your industry directly, I should like to emphasize it in some detail today.

First, let me say that while this administration is not a businessman's government, neither is it an antibusiness government. In attitude and action, it is committed to the support of the private enterprise system and a sound currency and to a relationship with business marked not by antagonism and suspicion, but by respect, understanding, and fruitful collaboration.

"We know," the President said recently to the National Industrial Conference Board, "that your success and ours are intertwined and that all elements in national economic growth are interdependent."

For its part, this Government intends to take every possible action, consistent with the public interest, which will promote the growth and prosperity of business and enable it to attain its full economic potential.

In return, we expect business to meet its obligations: to help itself and to exert to the fullest measure its powers of innovation, initiative, and hard work.

In short, we seek a true alliance with business—one in which both the public and private sectors of the country will, by fulfilling individual obligations, move forward together toward our goals of economic growth, plant modernization, and price stability.

We in the Department of Commerce bear a very special responsibility to such an alliance. Commerce is the Government's primary business development agency. Under this administration, the Department's total resources are firmly committed to the goal of strengthening the economy and allowing business to prosper. These resources are both vast and fundamental.

Within the walls of the Department is the Bureau of Foreign Commerce, which, at the direction of President Kennedy, is today mustering a vigorous campaign to expand the export side of our Nation's business.

Commerce is also the home of the Bureau of the Census, perhaps the most important of our vital information services; the Office of Business Economics, which keeps the national economic accounts that measure current activity in terms of gross national product, national and personal income, the balance of international payments, and the rest; the Business and Defense Services Administration, a source of invaluable information on specific industries and a main point of contact for business in its dealings with the Government; the Weather Bureau; the Coast and Geodetic Survey; the Patent Office; and the Office of Technical Services, which is charged with collecting and disseminating the flood of American and translated foreign scientific and technical articles so essential to the scientific and business community.

The Bureau of Public Roads is part of the Department of Commerce, and so is the Maritime Administration. The Area Redevelopment program has been centered in Commerce for many years. In addition, the department has important national security responsibilities, particularly the planning for economic mobilization in a national emergency.

All these vital functions are today being massed and strengthened in a comprehensive effort to stimulate the American economy to realize its fullest potential. It is in the spirit of such an effort that this administration has approached the problems of the textile industry.

As you probably know, the President last month appointed an Inter-agency committee of Cabinet rank members under my chairmanship, to examine the current economic plight of textiles and to recommend to him ways in which the Government and industry acting together might better conditions. This Committee, which includes Secretary of the Treasury Dillon, Secretary of Agriculture Freeman, Secretary of Labor Goldberg, and Under Secretary of State Ball, has now received an extensive report from an examining subcommittee, and it expects to send forward recommendations to the President in the next few weeks.

Naturally, you would like to know what the Subcommittee reported and what our Cabinet Committee may recommend to the President.

As regards the Subcommittee (or study committee) report, let me say that under the chairmanship of Mr. Hickman Price, Assistant Secretary of Commerce for Domestic Affairs, it did an outstanding job. I believe that Mac Cheatham, Bob Jackson and others will agree with this. They held many sessions at which representatives of industry, labor and others "spoke their piece" and made suggestions.

There was already available to the committee a wealth of statistical data, but your association and others clarified and elaborated on this data.

The Subcommittee was asked to make no specific recommendations but to specify various possible solutions.

Let me quote here our press release following the Cabinet rank meeting of last Thursday, March 16, which just that morning had received the Subcommittee report.

"Secretary of Commerce Luther H. Hodges issued the following statement today after a meeting of the Interdepartmental Textile Committee:

" 'The subcommittee of the Interdepartmental Textile Committee filed its report this morning, and we have not yet had an opportunity to fully consider it.

" 'However, the report consists largely of a synopsis of the testimony received and a statement of many possible courses of action—ranging from no action at all to the imposition of quotas.

" 'I would prefer not to comment upon their report until the full Committee has had an opportunity to give it the serious and thorough consideration the gravity of the problem merits.

" 'The subcommittee did not make any recommendation, but listed possible courses

of action for the Cabinet Members' consideration.'"

Now as to the Cabinet group—it met for about 2 hours to review in a preliminary way the summary report of its subcommittee and agreed to meet again the first part of April. I can assure you that your problem has already had more top executive attention than it previously received.

But the solution, or the easing, of the problem is not simple, is not easy, and it presents many collateral problems as you can well imagine. Justice Holmes used to say that "the important thing is not where we are, but where we are gonig."

Thus I shall not burden you with a lengthy recapitulation of your problems, which you probably know better than I, anyway. It is enough to note, I think, that because of lagging growth, total textile mill production last year was only 21 percent above the average for 1947–49, compared with 64 percent for all manufacturing production. In cotton broad woven goods, output, measured in yardage, has been below the level of 1947 for the past 4 years.

Total textile-mill employment has been trending downward since 1955, industry profits have been running well below the average for all manufacturing and overcapacity has been an increasing reality. From 1947 through 1960, a total of 838 mills, which formerly employed more than 249,000 workers, were liquidated.

This deterioration has been brought on by a number of elements. First, increased competition from paper and plastics has reduced the size of several textile markets. In automobiles, for example, where interiors used to be finished with textile products, it is now customary for seat covers, headlining, side panels, and floor coverings to be made from nontextiles.

A shift in consumer expenditure patterns, resulting in a dropoff in clothing's share of the consumer dollar, has also been a factor. In addition, there have been strains and dislocations caused by the introduction of newer fibers and, more important, by the industry's intense internal competition, and its continuing difficulty in gearing its output to what the market can absorb at a profitable price.

This particular affliction has produced a long-term series of two-year ups and downs, quite apart from the course of the general business cycle.

Finally, and of greater consequence, there has been a sharp rise in imports of textile products.

In 1960 imports of cotton cloth, which were 122 million yards 4 years ago, rose to 455 million yards, and for the first time since 1875, total cotton cloth imports exceeded exports. The inflow, mainly from Japan and Hong Kong, but also from other areas, amounted to 6 percent of the total domestic consumption of raw cotton.

In certain product lines, however, the ration of imports to production was most substantial.

Gingham imports were more than 22 percent of domestic output, and the inflow was also high in velveteens, coarse sheetings, and in some types of apparel. Imports of blouses, for instance, amounted to more than one-third of U.S. production.

This sharp reversal of the Nation's role as textile exporter, has, understandably, caused great concern. It has alarmed both labor and management of this industry, and it has been the subject of lengthy study by the Congress under the energetic leadership of Senator Pastore's committee.

Since January 20, it has also been one of the major preoccupations of the present national administration: first, in terms of our obligations to the domestic economy; second in light of our commitments to the free world and to the cause of increased international trade through the reciprocal removal of unnecessary trade barriers.

Because of its adverse balance of payments, the United States today needs most urgently to maintain and improve its present favorable balance of trade. To do this, though, we must raise our exports, not our tariff and quota walls.

As the President said in his balance-of-payments message to the Congress: "A return to protectionism is not a solution. Such a course would provoke retaliation; and the balance of trade, which is now substantially in our favor, could be turned against us with disastrous effects to the dollar."

There are other effects to consider.

In the cause of freedom, human dignity, and our own national security, we stand committed to assist the developing countries of the world in their drive for a higher standard of living. These countries need to earn abroad so that they can spend and improve within. Should we turn from them and close our markets to their goods, they will turn from us and look elsewhere for allies—and I am afraid in only one direction.

As Secretary of Commerce, the agency charged by statute with fostering, promoting and developing foreign as well as domestic commerce, I have a continuing, advisory role to play in the setting of U.S. tariffs and quotas. Although the basic power to fix tariffs belongs to the Congress, the President, under the Trade Agreements Act of 1934, has certain authority to enter into agreements with foreign nations to effect changes in tariffs which are mutually beneficial to both parties.

We at Commerce participate, along with other Federal agencies, in the negotiation of tariff changes through GATT, the General Agreement on Tariffs and Trade. But the direct responsibility for recommending tariff changes under the escape clause, which provides aid to industries in distress, lies squarely with the Tariff Commission. The Commerce Department can only suggest to the President that he accept or reject their recommendations.

There are one or more avenues which can be taken which will help you and at the same time preserve our international position but they need careful consideration. I have been particularly impressed with the workings of the voluntary quota agreement which we concluded with Japan in 1957. Under this agreement, you may recall, the Japanese voluntarily agreed to limit and diversify their cotton textile shipments to the United States for a 5-year period.

The original agreement provided for an annual overall ceiling of 235 million square yards equivalent—approximately the rate of 1955—although this was later raised to 247 million yards. Five major subgroups with separate ceilings were established: cloth; made-up goods; woven apparel; knit goods; and miscellaneous. Within these groups, specific ceilings were set for 14 sensitive items.

While there was some flexibility provided for movement from one quota group to another, quotas for items specifically enumerated could not be increased. Although this arrangement has had the defects of its virtues—that is, it has covered only one source of imports—I believe it has been most effective from our standpoint.

I think, too, that through international machinery, voluntary agreements might well be concluded on a much broader base. Expanded to cover all important sources of imports through multilateral concurrence, voluntary quotas could go far toward safeguarding the domestic industry without jeopardizing our interest in trade. The voluntary quota situation is, however, complicated today by the emergence of several nations and areas as important textile exporters.

Taking the largest new shippers, these are Hong Kong, India, Egypt, and Spain. Since 1958, U.S. imports of cotton manufactures from Hong Kong have climbed from an equivalent of 60 million square yards to 271 million yards, a gain of 352 percent. Imports from Spain, Egypt, France, and Portugal have risen from an equivalent of 5 million yards to 230 million yards, a staggering 4,500 percent, and those from Formosa, Korea, Pakistan, and India have shot up from 8 million yards to 112 million a jump of 1,300 percent.

A national administration cannot settle the textile problem in a vacuum or without regard to other matters. But I think I can promise that you will get a decision, you will get action.

That's the way President Kennedy operates, and I believe in the same thing.

Whatever action the President finally takes or imports, you, the leaders of this industry, will still have much to do. Only by your determined efforts to raise productivity, modernize equipment, improve merchandising and selling methods, and pursue research to a far greater extent can textiles achieve their full potential and escape from the slough of lagging growth.

Productivity in textiles has risen impressively in recent years and you are to be commended for what you have done. It must continue to rise, if you are to lower your prices and enlarge your markets. Capital spending for new plant and equipment, which has bumped up and down with the industry's cycles, needs consistent expansion.

Roughly one-fourth of all the textile machines now in place were installed at least 20 years ago and your competition abroad is generally in better shape. In research and development, spending has increased markedly in the last decade, but it still lags, as a percentage of profit, far behind the outlays of all manufacturing. Between 1953 and 1959, research and development expenditures by textile companies increased from $26 million to $35 million a year, a gain of about 35 percent.

However, in the same period the research and development expenditures of all manufacturing companies more than doubled from $3.3 billion to $8.6 billion. That's a gain of 161 percent. What is more, this investment of $8.6 billion by manufacturing companies equaled 53 percent of their total after-tax profits.

On the other hand the R. & D. expenditures of the textile industry equaled only 8.4 percent of its after-tax profits.

There is need for much more research, backed by the industry itself, and especially in the areas of new end uses which might recapture the industrial market.

Finally, the industry has far to go in improving its marketing techniques and its understanding of market forces if it is to escape its chronic cycle of expansion and contraction.

The ACMI has done much to bring cooperation and realism to the industry, but I need not tell you that until and unless you have more unselfishness and more long-range planning and thinking, nobody can really help you stay in business and make a profit; and this comment has no direct relationships to imports.

Now let me take off my textile committee "hat" and put on my Department of Commerce one.

Let me commend to you right here the excellent new economic studies now being developed by the Textiles and Clothing Division of the Department of Commerce. Three studies have already been released and the newest, a report on the role of inventories in the textile cycle, is just out. Others are to follow in a series.

Get them. Read them. They can be most helpful.

In closing let me say that I am confident, more than ever today, that this country and your great textile industry can achieve in the next decade an economic greatness and security of which we can all be deeply proud.

If the past is beyond our control, and the present only tentatively within it, the future can be very much within our grasp and can be, to a great extent, what we make it.

This is the challenge and the opportunity which we as allies face. With solemn hope, I trust we shall not be found wanting.

Thank you for inviting me to be with you.

Socialized Housing

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. HALL. Mr. Speaker, the people of the Ozarks of southwest Missouri, whom I am privileged to represent, take pride in the fact that they have never asked for one penny for public housing. I would remind the administration that our district is far from being wealthy. Our per capita income is far less than many of the large metropolitan areas in this Nation which make a habit of coming to Washington for direct assistance in housing, and so it is not difficult to understand why our residents strongly object to the use of their tax dollars for public housing programs. It seems only just that metropolitan areas which desire public housing should pass revenue bond issues since these same cities also represent areas of the greatest wealth.

I cannot see why areas which do not believe in public housing and which have extremely moderate per capita income should be expected to subsidize housing in cities of high per capita income. Under the urban renewal program the Federal Government can assist in the condemnation of blighted areas. It can offer tax incentives to stimulate private development without the use of tax dollars. The feeling of the people in my district has been expertly told in a recent editorial in the Joplin Globe. Because of the significance of this outstanding editorial and under leave to extend my remarks, I submit the article for inclusion in the RECORD:

SOCIALIZED HOUSING

The administration's housing bill is the most sweeping socialistic measure sent to Congress thus far by President Kennedy. Except for its benefits to cities through urban renewal, it is one of the least needed at this time.

You can find plenty of people in the business who will tell you the Nation comes closer to a housing surplus than it does to a housing shortage after an unprecedented 15-year, postwar, homebuilding boom. America boasts that the majority of its families are homeowners, or at least have equities in homes. More than 10 million new houses were built in the decade of the fifties.

Look magazine recently reported that 29 million families own their homes, and quoted the National Association of Real Estate Boards as saying the trend now is toward second homes, with 200,000 a year to be built by the end of the sixties.

Why, then, all the new billions for Federal housing? The President's own answer is that it is primarily to stimulate jobs and more income in the construction industry, admittedly slowed the past year. The other side of the coin is that it is bound to cause fresh deficit spending and to spur inflation, damaging to everyone, including homeowners. No provision is made to raise the extra money.

In his message to Congress, the President said he wants to provide better housing for 14 million Americans now living in "substandard" houses. In his campaign speeches he said the number of ill housed was 25 million. One wonders if he really knows, and how many would prefer tailfins to new houses.

It is proposed to double the urban renewal program, with $2.5 billion in Federal grants and loans, to help cities fight blight. This program has merit, since more than 90 percent of the people now live in cities and suburban areas, but the question is whether it should be expanded this much after all that has been done. Of course, some cities, like Joplin, have just entered this field and would be helped.

The Kennedy housing bill would further liberalize the FHA insurance program by requiring no downpayments for low-cost housing. Any banker will tell you this approach is fiscally unsound and dangerous. It is a welfare state program, as is building 100,000 more public housing units.

The President also proposes to set up a Department for Urban Affairs, with Cabinet rank. But one wonders if such a Department might mess up the cities as farming has been snarled since creation of the Department of Agriculture.

Such is the new housing program as outlined. No one can accurately estimate its ultimate cost. Congress will do well to take a long look at this proposed spending spree.

Our Young People Are Being Educated Right Now by Programs Which Are Being Broadcast on the Commercial Channels and Stations—They Are Learning All the Latest Devices for "Doing People In"

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. McDOWELL. Mr. Speaker, I feel it is essential that additional educational television stations go on the air, and one of my reasons for such a conclusion is that our young people must be exposed to something more challenging than hillbilly and rock 'n roll music, or the endless expanse of soap operas, and insipid westerns, which are all alike, and the crime and violence of the many private-eye programs.

Our young people are being educated right now by these programs which are being broadcast on the commercial channels and stations—

It may be doubted whether we'll be able to prevent the Soviet Union from burying us as they have announced they will with the kind of programs we're getting on most of the commercial television stations these days.

It may come as a surprise to many people, but only about 20 percent of the channels designated by the Federal Communications Commission for educational television stations have been utilized.

Undoubtedly a much higher percentage of such stations would be able to operate if a bill such as my own H.R. 5536 were enacted into law.

Fifty-one major organizations throughout Delaware have endorsed the use of channel 12 for educational television purposes. These groups include the Delaware State Education Association, the Catholic Diocese of Wilmington, and the American Association of University Women.

Delaware's able Governor, Elbert N. Carvel, also supports the use of channel 12 for educational television purposes.

Adoption of a bill such as I have developed, H.R. 5536, would greatly assist the establishment of an educational television station to serve our State.

I include as part of my remarks an excellent article on the newer educational media from the March 1961 issue of the Delaware School Journal. This fine publication is published by the Delaware State Education Association.

The article follows:

DELAWARE STATE RESEARCH CONFERENCE IN NEWER EDUCATIONAL MEDIA

One important consideration in teaching-machine design is experimentation with computerized or other complex machines for experimental or research purposes. It is possible that devices may be designed which permit a wider range of instructional capabilities with less extensive pre-programed materials. Also, various technical innovations to reduce the labor and cost of programing may appear. If so, relatively greater costs for electromechanical or electronic devices might be practicable in the light of the resulting reduction in program costs. The serious application of technology to the programed-instructional concept is only in its infancy, and it is obviously impossible to foresee all of the possibilities which may become technically and economically feasible during the next few decades. What does seem certain is that change in current instructional practices, materials, and standards is inevitable and that progress may occur in a variety of possible ways. The history of technological development in other fields would suggest that the machines and programing techniques of today are likely to be superseded, within a relatively few years, by improved devices and methods resulting from well-conceived and vigorous continuing research and development.

Conclusions resulting from experimentation with instructional television:

1. Disregarding the caliber of the instructor, a television lecture is as effective as face-to-face instruction (a) for presenting new information to students, (b) for teaching students an understanding of principles, and (c) for instilling desirable concepts and attitudes.

2. Any competent person may present factual information; but

3. Experienced teachers do best in the matter of teaching students to understand principles and integrate knowledge.

4. An experienced or an inexperienced teacher may or may not instill attitudes he deems appropriate. Only by pretesting will he know whether he has done the most effective teaching possible.

5. As expected, students rate teachers as more potent and more active in class than on television.

6. Students rate experienced teachers as more potent and more active than their substitutes; however

7. Experienced teachers transfer to television with less loss than their substitutes. On the average, the experienced teacher was rated only 2 percent less potent and 4 percent less active on television than in class (an insignificant decrease); while the sub-

stitute teacher was rated 8 percent less potent and 11 percent less active.

8. Teachers were rated more confident and more relaxed on television than in the classroom.

9. Experienced teachers were rated more authoritative and more brilliant than substitute teachers teaching identical material.

10. Students may sense greater satisfaction from total use of the medium rather than partial use. Teaching by television was rated significantly higher at the conclusion of the one experimental lecture that made extensive use of a visual aid.

11. Contrary to impressions from other less controlled experiments, after exposure to good instructional television, students rated teaching by television as slightly more profound, slightly more clear, more authoritative, more intimate, much more personal, and much easier to take notes than they at first had thought.

Experiments conducted by the University of North Carolina confirm the following statements:

It appears that in-school TV in North Carolina is here to stay. The systems which entered the program in 1957 are still in it and are now starting their fourth year although they are under no compulsion nor even obligation to continue. Since inauguration of the program 71, additional school systems have officially joined the project. Now that foundation support has practically disappeared, the State legislature, local school systems and the university are assuming the financial obligations necessary to maintain and expand the program. The number of schools adequately equipped for TV reception is growing yearly and new school plants are being designed with TV classes in mind. Teacher education institutions are training prospective teachers for a better utilization of ETV and are assisting local school systems with in-service education activities designed to help presently-employed teachers to make better use of the medium.

At the present time signal coverage of the entire State is impossible. Only those school systems within an 80-mile radius of Chapel Hill are assured programs originating over a State-owned station; other school systems are dependent upon pickup and re-broadcast by such commercial stations as are willing to donate air time. Much thought is being given to the possibility of a State-owned network which will blanket the State. If a State network becomes a reality, the present schedule of 2 hours of in-school TV could easily be increased to 6 hours and TV lessons in foreign languages, advanced science, advanced mathematics and other subjects could be added to the restricted list of courses now being telecast.

School superintendents in North Carolina say that their ultimate objective is an expert, master teacher in every classroom. With today's severe shortage of expert teachers, the only way this can be accomplished is through TV. Growing high school enrollments, a continuing teacher shortage and growing demands for more efficient school plant utilization point to an increased use of TV in our schools for the decade ahead.

Gen. David Wooster

EXTENSION OF REMARKS

OF

HON. ABNER W. SIBAL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. SIBAL. Mr. Speaker, earlier this month, the 250th anniversary of the birthday of Gen. David Wooster, of Danbury, Conn., was celebrated. To mark this occasion, I would like to have printed in the RECORD the following tribute which appeared in the Danbury News-Times on March 3, and the accompanying editorial which appeared the same day:

DAR SALUTES WOOSTER

This week marks the 250th anniversary of the birth of a Revolutionary War hero, Gen. David Wooster, who has special interest to Danbury.

David Wooster was born in Huntington (Stratford) Conn. on March 2, 1711, was educated at Yale and played a heroic part in the Revolutionary War.

It was in the Battle of Ridgefield, while fighting a rearguard attack on General Tryons' troops, who had just burned Danbury, that General Wooster received a mortal wound.

He was carried back to Danbury to the Dibble home on South Street, the same house which the night before held some of the British troops, where he died on May 2, 1777.

He was first buried in the old cemetery back of the Danbury jail and for years his grave went unmarked. Years later, his remains were moved to Wooster Cemetery, named in his honor, and it was then the lofty monument was erected in his honor and dedicated April 27, 1854.

General Wooster was a versatile man. Not only was he a soldier, he served in His Majesty's army as captain, he was also a sailor, serving as a lieutenant and later captain of a sloop of war during England's war with Spain in 1741.

He was appointed brigadier general in the Continental Army and first commanded troops sent to guard New York. In 1776 he returned to Connecticut and was appointed major general of the militia in this State.

He was organizer and the first master of the first Masonic Lodge in the Connecticut colony. Between serving in wars, he was a businessman, importing goods for sale in the colony and was also collector of the port, collecting duty from his competitors.

Danbury has honored Gen. David Wooster in many ways, such as Wooster Square, Wooster Street, Wooster Cemetery, Wooster School, and Wooster Hose Co. Streets in Bethel and Ridgefield bear his name.

The local Daughters of the American Revolution chapter is named for his wife, Mary Wooster, and our Children of the American Revolution group also bears his name, David Wooster.

Each year in commemoration of his death and to honor him, special services are conducted at the monument in Wooster Cemetery by the Masonic Lodge.

Let us take time this week to pay homage to a great man, a devoted patriot, an able general who came to our assistance in the War for Independence.

We, the members of Mary Wooster Chapter, DAR, salute the memory of Gen. David Wooster on the 250th anniversary of his birth.

JOHNNY WOOSTER

The DAR's letter of tribute to Gen. David Wooster recalls a thought we had some years ago, that an interesting story of Danbury could be written just around the organizations and places which have borne the name Wooster.

Not too many years ago, if you mentioned Wooster Village, nearly everyone knew you meant the area around West Wooster and Division Streets. Use of the term seems to be going out of vogue.

Twenty years ago, the business block at Main and White Streets was still generally known as the Wooster Block and the third-floor space as Wooster Hall. Today, people would wonder if you asked about the Wooster Block. But say the Feinson Block and they would know what you mean.

Commercial firms using the name Wooster have come and gone. Thirty years ago there was a Wooster Auto Service and 40 years ago the Wooster Square Market and Wooster Square Taxi.

A half century ago, the Wooster Club was located at 281 Main Street. Sixty years ago there was the Wooster Inn at 107 White Street.

And 70 and more years ago, the Wooster House served travelers and was the scene of local functions. Located at Main and White Streets, it was sold at a public lottery and then gave way to the Wooster Block—oops, the Feinson Block.

In local sports, there have been the Wooster A.C. and similar groups from time to time. And let's not forget Wooster Mountain, the undeveloped State park off Sugar Hollow Road.

People, businesses, activities may come and go but there's one thing pretty sure about Danbury—the name Wooster will go on just about forever.

Northwest Passage: Japan to Milwaukee

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. WILEY. Mr. President, the St. Lawrence Seaway project, completed in 1959, has opened new opportunities for economic growth and progress in the country.

The Great Lakes region, particularly, is reaping the rewards.

Realistically speaking, there is, of course, still a great deal to be done to expand trade and commerce through its full potential to the waterway. Nevertheless, the Lake ports, once inland cities, now are participating in trade and commerce destined for the far corners of the world.

The long-range benefits of the Seaway, I am confident, will be an important aspect of the history of trade and commerce of the United States.

Soon the 1961 shipping season will be opening. The occasion will offer new opportunities to obtain greater benefits from expanded traffic; as well, it will, of course, present contingent problems.

Overall, however, I believe that we can and will, if we adopt realistic policies, further expand traffic for the benefit not only of the Great Lakes region but the whole country.

Recently, the Milwaukee Journal published an informative article by Harry C. Brockel, Municipal Port Director of Milwaukee, entitled, "'Northwest Passage': Japan to Milwaukee." The splendid article reveals the way in which the St. Lawrence Seaway offers new commercial opportunities for Great Lakes ports with countries around the globe. I ask unanimous consent to have this fine article published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"NORTHWEST PASSAGE": JAPAN TO MILWAUKEE

(By Harry C. Brockell, municipal port director, Milwaukee)

The new Japanese general cargo liner *Muneshima Maru* left Yokohoma last Tuesday and, as you read this, is cutting through the blue waters of the broad Pacific somewhere north of Hawaii on an historic first voyage into the Great Lakes to Milwaukee and Chicago, by way of the Panama Canal.

The *Muneshima Maru*, a 2-year-old ship of 12,000 tons, 511 feet long, with a speed of 20 knots and accommodations for 12 passengers, will make the run between Japan and Milwaukee in 40 days, including numerous ports of call. Its owners, Iiono Kaiun Kaisha, Ltd., of Tokoyo, promise monthly service by their ships to and from Lake Michigan ports.

SECOND JAPANESE LINE IN PROSPECT

A second Japanese service, not yet publicly announced, is said to be in the making for Lake Michigan, with good prospects for regular service to Japan, Formosa, Korea and the Philippines.

There are also strong possibilities of a direct trade link with Australia this spring via the Swedish-flag Atlantrafik Express Line. Last year this line made its first runs into the Great Lakes, and is firming up its plans for this year with the likelihood of regular service between Milwaukee and Chicago and the ports "down under."

A direct voyage from Milwaukee to ports such as Sidney or Melbourne would involve a voyage of about 12,500 miles, or half the distance around the globe.

Voyages of 17,000 and 18,000 miles from Milwaukee have already been recorded with shipments to Ceylon, the Malayan Peninsula, Indonesia, Thailand and other ports in that exotic area of the world.

Thus if history and geography failed to produce a practical Northwest Passage to the Orient, once the dream of empires and the goal of dauntless and hardy explorers like Cartier and Nicolet, they have combined to provide another solution. The Orient is now coming to the midcontinent of North America through the same St. Lawrence River and the same Great Lakes which raised the hopes and spurred the ambitions of early seekers for the Northwest Passage.

FOUR LINES TO ASIA

The invetiable facts of economics and geography had led to the building of the St. Lawrence Seaway, so that on these waters, once traversed only by Indian canoes and French bateaux, are now seen in growing numbers the merchant fleets of the world.

The opening of the deepened seaway in 1959 had such great impact on the shipping world and on foreign trade, that by 1960 four regular shipping services were in operation from Milwaukee and Chicago to Asia.

These included the Crescent Line, operating to the eastern Mediterranean, Egypt, the Middle East, West Pakistan and ports on the western coast of India. The Orient Mid-East Great Lakes Service has monthly sailings to the Red Sea; the Persian Gulf; Karachi, Pakistan; Bombay, India; Singapore; Djakarta, Indonesia and Saigon, South Vietnam. The Hellenic Lines Ltd. offers monthly service from Milwaukee to Red Sea ports, the Arabian Gulf, the west coast of India and West Pakistan. A fourth service to the east established in 1960 was that of Nedlloyd Middle East Express, with monthly sailings from Milwaukee to Beirut, Aqaba Karachi and Arabian Gulf ports.

All four of these services go to Asia via the easterly route through the Mediterranean, the Suez Canal, the Red Sea, the Persian Gulf, and the Indian Ocean. A wide variety of agricultural and manufactured goods have been moving from the Middle West through the port of Milwaukee to distant eastern ports over this trade route. The names of ports in India, Ceylon, Malaya, Burma, Thailand, Vietnam, and Indonesia appeared for the first time in history in 1959 and 1960 on steamship manifests made up in Milwaukee.

JAPAN OUR FOURTH BIGGEST CUSTOMER

It is a romantic and exciting prospect to have handsome ships loading in Milwaukee's outer harbor, with the thought that they will drop anchor in Yokohama, Nagasaki, Hong Kong, Manila, Saigon, Rangoon, Calcutta, or Bombay, a part of the world best known to the Middle West through Kipling's poems and through travel literature. But what are the practical economic values involved, and what is the trade potential for such long and costly voyages?

Japan ranks as the fourth largest oversea customer of the United States. During 1960, U.S. imports from Japan were valued at some $1.1 billion, while exports to Japan were valued at more than $1.3 billion.

There is a good potential for a healthy balance of trade between Milwaukee and the far east. Imports from that area coming into Milwaukee and the middle west in volume include bicycles, woodenware, tropical woods, canned tuna, canned pineapple, and a great variety of general merchandise. Japan and the far east are major markets for milling machinery, Milwaukee beer, tractors and farm implements, construction machinery, outboard motors, gasoline engines, grain, flour, dairy foods, cattle and poultry feed, cereals, soaps and chemicals, canned goods, and many other items.

AUSTRALIA BUYS HERE

Australia is also a major American market. Exports from the United States to Australia were valued at $266 million during 1959, and imports from that country were worth $196 million. Australian meats are finding an increasing market in the Middle West. Milwaukee foundries, for example, would be strong users of zircon sand, an essential foundry material found only in Australia, now imported to this area through west coast ports with a costly overland haul to Milwaukee. Direct shipping service should substantially reduce the cost of such imports to the middle west.

Milwaukee and Wisconsin find in Australia an active market for electrical appliances, mining machinery, construction machinery, farm implements, outboard motors, locks, canned goods and dairy products, along with consumer and industrial items too numerous to list.

If the three new oriental services projected all materialize, Milwaukee will find itself served by four shipping services operating easterly through the Mediterranean.

Resolutions Passed by the Wisconsin Society, Daughters of the American Revolution, 65th State Conference, La Crosse, Wis., March 14, 15, 16, 1961

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. LAIRD. Mr. Speaker, at the request of the Wisconsin Society, Daughters of the American Revolution, I ask unanimous consent to include in the RECORD, the resolutions passed at their State conference. The resolutions are as follows:

That each Daughter may have a more thorough understanding of the reasons for the stand taken by the Daughters of the American Revolution, through its resolutions, the national board of management has recommended that the delegates elected as chapter representatives to State conferences and to the national continental congress be those who have studied our national defense material, the DAR magazine and the national defender. Every delegate should be an informed voter and should be able to communicate her knowledge to others who do not have direct access to our documented publications.

The resolutions presented are always consistent with the ideals and policy of our national society. Your resolutions committees, both State and National, keep constantly in mind the following requirements:

Does it uphold the rights of the individual?

Is it in the best interests of our country?

Does it adhere to the original concept of the Constitution of the United States?

REDEDICATION

Whereas the historical, educational, and patriotic objectives of our society and our efforts to foster true patriotism, love of country, and the maintenance of moral and spiritual values, the liberties, cherished freedoms, and governmental philosophies, that have made America preeminent among nations, are now challenged as never before by opposing ideologies and constitutional violations.

Resolved, That the Wisconsin society, Daughters of the American Revolution rededicates itself to active citizenship pledged anew to the perpetuation and preservation of the great constitutional principles of this Government, with its careful delineations of powers and Bill of Rights; and further

Resolved, That we reassert our stand for national care and pride, for free enterprise, fiscal solvency, and a strong defense, in order that we as a nation may survive.

REAFFIRMATIONS, 1961

All past resolutions, State and National, are in effect unless rescinded, but because of continuing pressures within the Nation, the Wisconsin Society, Daughters of the American Revolution, reaffirms its stand on the following resolutions:

"We support:

"1. Legislation to end presently heavy and illegal 'back door Treasury spending' raids by requiring all Government appropriations to be channeled entirely through the House Appropriations Committee, in accordance with the Constitution.

"2. The U.S. Congress in its stand against the recognition of Red China or Red China's admittance to the United Nations.

"3. An unchanged Immigration and Nationality Act of 1952, the revocation of which is a prime Communist target.

"4. Retention of the Connally Act reservation against World Court intervention into domestic affairs.

"5. The textbook 'Study by the National Defense Committee of the National Society, Daughters of the American Revolution," as a vital program for each chapter to support in the 'war of ideas.'

"6. The student loyalty oath of the National Defense Act of 1958 as a basically prudent provision.

"We urge:

"1. That examination and courses requiring thorough grounding in the American Constitution and American history be made mandatory for high school and college graduation.

"2. Appropriate antisubversive legislation to restore to the States their rights to combat subversion within their borders.

"We oppose:

"1. U.S. participation in GATT (General Agreement on Tariffs and Trade) as detrimental to American jobs and economy and

for the loss of our autonomy over American's own trade problems.

"2. U.S. participation in the ILO (International Labor Organization) where we are outvoted 36–4 by the Communist block of nations.

"3. Internationalization of the Panama Canal.

"4. Political activities of the National and World Council of Churches as a violation of the principles of separation of church and state and because of their consistent socialist and one-world aims.

"5. UNESCO activities undermining the national allegiance of our teachers and students.

"6. All forms of world government, in the belief that a strong, free America offers the best moral force and hope for peace.

"7. Summit meetings for their Soviet propaganda potential and repeated submission to Soviet demands.

"SUPPORT OF CONGRESSIONAL INVESTIGATING COMMITTEES

"Whereas Congresional investigating committees, which have long been under intensive attacks by subversives, recently received overwhelming endorsement from the House of Representatives in Congress, by a vote of 412–6, for continuation and support.

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, applauds the ringing stand of Congress supporting the House Un-American Activities Committee and the Senate Subcommittee on Internal Security in their valuable investigations into communism and in their legislative contributions toward curbing communism.

"PEACE CORPS

"Whereas advocates of the so-called Peace Corps as a desirable 'force for peace' also boldly suggest that the mission of the corps might usefully be extended to domestic as well as foreign assignments, thereby laying the groundwork for future regimentation and expansion of the group to a youth draft for civilian as well as military purposes; and

"Whereas the U.S. Congress alertness to the inherent risks of work corps plans has defeated similar plans hidden within both the 1951 universal military training bill and the 1960 foreign aid bill; and

'Whereas the risks enumerated in Congress for former plans, now renamed, are as follows: (1) control of education by curricular requirements and promotional college subsidies, (2) eventual 'universal service drafts,' both domestic and foreign, (3) downgrading of the military by favoritism in deferments and exemptions, or by drafting only the less educated, (4) possible Communist penetration of the corps, (5) diplomatic repercussions if the corps is immature or unskilled in language or aptitudes needed for primitive areas, (6) duplication of existing technical and foreign aid assistance, and (7) creation of a possible 'elite' corps, favored with subsidized college education in the current plan.

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, calls on the Congress to avoid potential regimentation of American youth by opposing all use of foreign aid or domestic appropriations for the so-called Peace Corps.

"FEDERAL AID TO EDUCATION

"Whereas a powerful movement is underway in this Nation to transfer educational control from local and State authority to a nationally organized bureaucracy; and

"Whereas despite claims to the contrary, educational needs have been commendably well met at local and State levels, where the responsibility historically rests; and

"Whereas Federal aid invites wasteful spending, arbitrary standards, and unchecked Federal control over courses, textbooks, and every educational area,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, unalterably opposes Federal aid to education.

"SOCIALIZED MEDICINE

"Whereas present welfare programs provide medical care to needy older persons; and

"Whereas the Social Security program already operates at a deficit, and to add medical aid to the aged to the present social security program would (1) sharply increase social security taxes far beyond present inadequate estimates, (2) lead to demands for overall matching programs for individuals not covered by Social Security, and (3) expand the already swollen power of the Federal Government, by providing aid to those who neither need nor want such aid,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, opposes a Federal medical aid program.

"FOREIGN AID AND THE GOLD CRISIS

"Whereas the strength of the free world depends upon the continued fiscal solvency of this Nation, and extravagent spending at home and abroad has already resulted in loss of gold from this country, with consequent weakening of the dollar; and

"Whereas deficit financing has been employed to aid not only our allies but neutral and pro-Communist countries, who directly oppose American interests; and

"Whereas foreign aid and foreign trade policies have built up foreign industries to the great detriment of American industry and employment,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, calls on Congress and the administration to (1) immediately terminate all aid to pro-Communist and neutral countries, and (2) examine and curtail all aid and nonessential military spending abroad, as steps needed to balance the budget, avoid financial catastrophe, and maintain the strength and integrity of this Nation among its allies.

"ORGANIZATION FOR ECONOMIC COORDINATION AND DEVELOPMENT

"Whereas the proposed OECD (Organization for Economic Cooperation and Development) treaty would surrender congressional power over tariffs and foreign commerce to an international organization over which the Congress of the United States would have no control; and

"Whereas the proposed OECD incorporates a scheme to make foreign aid a permanent feature of our policy, and to channel such aid through this international agency, thereby disenfranchising the Congress and the American people from authority over foreign aid and trade policies; and

"Whereas this convention or treaty is an attempt by indirection to legitimize GATT (General Agreement on Tariffs and Trade), which has done great harm to American industry; and would wrest from the Congress the direction of our policy respecting the efficient use of our economic resources and the development of our scientific and technical resources; and

"Whereas the treaty text states: 'General expenses of the Organization shall be determined in accordance with a scale determined by the Council,' thereby specifically denying the Congress any review of the cost of American participation in the Organization; and

"Whereas any treaty supersedes the Constitution,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, opposes participation in the Organization for Economic Cooperation and Development as an unconsitutional delegation of power and a threat to our sovereignty.

"NUCLEAR TESTING

"Whereas fear of nuclear war has led this country into a self-imposed ban on underground nuclear testing without exacting a similar program from the Soviet Union; and

"Whereas continuation of this ban threatens our national security by making obsolete and freezing our progress in nuclear technology, while permitting the Soviet Union to develop technically and to expand its capacity to stockpile nuclear weapons; and

"Whereas so long as the Kremlin is dedicated to world domination, no strategy against them, including summit negotiations, can succeed which is not based on superior strength and a superior striking force—an air, space, missile and nuclear weapons system,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, urges the U.S. Government to end this self imposed ban on underground testing in the interest of national security.

"THE THREAT OF FEDERALISM TO CONSTITUTIONAL GOVERNMENT AND ECONOMY

"Whereas Federal paternalism and increasing centralization of power are changing our form of government by gradual erosion and special interest pressures; and

"Whereas Federal grants-in-aid and subsidies to agriculture, industry, power, health, housing, urban renewal, education, and welfare invade the responsibilities of States and localities; cost more than State and locally administered programs; accelerate inflation and increase of the public dept; and impair the will of the people for responsible State and local government,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, favors: (1) cutbacks in all Federal grants-in-aid programs and subsidies, (2) elimination of Federal competition with private business, (3) reduction of the public debt, and (4) economy in government, as necessary measures to maintain confidence in the American dollar and to halt the drift from constitutional to socialistic government.

"EXECUTIVE CENSORSHIP AND NATIONAL SECURITY

"Whereas 'the gag rule' imposed on the executive branch of Government has deprived congressional committees of the power to investigate communism in high places in Government, and has denied the American people full information for adequate appraisal of the conduct of foreign policy, and

"Whereas the recent executive effort to silence criticism of the Soviet Union constitutes a new threat to freedom of information and the press,

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, requests the administration to reevaluate the effects of existing censorship on national security, and to restore to the people and the Congress their historic access to information concerning the affairs of Government.

"VIOLATIONS OF VISA LAWS BY 'EXCHANGE' POLICIES

"Whereas testimony before Congress has shown that every cultural, diplomatic, or scientific exchange mission of the Soviet Union has been trained for espionage; and

"Whereas the State Department continues to grant visas to hundreds of these spies in violation of congressional immigration laws concerning the admission of alleged Communist agents.

"*Resolved,* That the Wisconsin Society, Daughters of the American Revolution, again opposes the so-called cultural exchange program and endorses the congressional investigating committees inquiries into the violations of the visa laws by State Department policies."

School Aid a Thorny Issue for Many Other Nations

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. CAREY. Mr. Speaker, Mr. Fred M. Hechinger has published several cogent and enlightened articles on the subject of Aid to Education which appeared in the New York Times. It is my feeling that the resolution of this complex problem will be best accomplished by impartial and unemotional consideration of the huge mass of factual data available. The experience of other countries in dealing with the same problem should be helpful to us in our deliberation and in this connection Mr. Hechinger's latest brief is submitted for the information of my colleagues.

The articles follow:

SCHOOL AID A THORNY ISSUE FOR MANY OTHER NATIONS

(By Fred M. Hechinger)

The issue of church and state, though currently a key question in the debate over Federal aid to education, is by no means an American phenomenon. The problem of public support for nonpublic education has had to be faced in the policy decisions on school financing and control in many nations, including those with greater religious homogeneity than the United States.

To document the many ways in which the issue has been faced elsewhere, questionnaires were sent to correspondents of the New York Times in more than a dozen nations.

No simple or consistent pattern emerges. National solutions and compromises range from broad, all-inclusive government subsidy to schools of every kind—public, church related and private—as in the Netherlands, to the other extreme, in Greece, where taxes levied on private schools are used to help finance the public ones.

At one time attempts to maintain the separation of church and state in France led to a compromise of subsidizing the student rather than the school. To a surprising degree the plan resembled Governor Rockefeller's controversial "scholar-incentive" grant of between $100 and $300 to most New York State college students.

The only nearly universal trend is one of definite supervision of educational standards and teacher qualifications by the national or state government over nonpublic schools once they accept public aid.

Probably the closest parallel to the decentralization in the American tradition is that of the Swiss schools. The best example of a compromise between strong local responsibilities and controls despite clearly defined powers of the national government is offered by the schools of England and Wales.

Public reaction to the issue has ranged from complete apathy, as in Sweden, to near violence, as in France. Offering a direct parallel to President Kennedy's appeal not to let the issue divide the Nation, French Premier René Pleven in 1951 pleaded with "both sides unfailingly to remember how important it is that no imprudence or violence of language run the risk of inflaming passions that might tear France asunder."

In countries whose people appear strongly oriented toward religious schools, government subsidies to private education have weakened the public-school system to a point at which public schools are no longer available in all areas. This has happened in the Netherlands.

Following is an analysis of the situation and background in each of the nations canvassed for this study:

BRITAIN

Publicly financed schools in England and Wales (Scotland has a separate education system and Northern Ireland its own government) are divided into the voluntary-controlled and voluntary-aided. The first receive all their funds from the local education authorities and the Ministry of Education; the second get 75 percent from these public sources.

Under the Education Act of 1944, which introduced universal education through high school, both types of schools must provide religious education and prayer time.

The difference is that the controlled schools use a religious instruction syllabus agreed on by all denominations, while the aided schools are operated by denominations and these, in return for supplying 25 percent of the funds, determines religious instruction. The majority of the Roman Catholic and Anglican schools fall in the latter category.

A third category of schools, called independent, is entirely self-supporting and free to determine the curriculum. They are, however, accredited and inspected by the Government.

These independent schools, many of them the most influential institutions in the country, have no formal representation in the Ministry of Education but are organized through the powerful headmasters' conference.

While there has been much debate over questions of curriculum and school-leaving age, there has been practically no conflict over the church-state issue.

FRANCE

Ever since the French Revolution, which ended the complete control of education by the church, the debate over the state's relations with Catholic schools has been among the most impassioned issues in France. The issue, however, is considered one of law or principle rather than of constitutionality.

In 1951, a law was passed giving supplementary help for school equipment for any institution, public or private. At the same time, faced with impoverished church schools—which enrolled 43 percent of all secondary-school pupils—France evolved a compromise. This was an effort to avoid a head-on clash with the principle of separation of church and state.

"Maintenance scholarships" at 1,000 francs a person, not to be paid to the schools themselves, were given to students attending public or approved private secondary schools. A fund was also provided for state aid to pupils attending private elementary schools.

The controversial law, which closely resembles some current American efforts to avoid constitutional conflict, was passed in the national assembly by 378 votes to 236.

This appears to have prepared the way for the most controversial battle, won in 1959 by the Catholic schools. Direct aid to nonpublic schools was voted. About $40 million was made available in 1960–61 for those schools, provided they agree to one of three options:

They might ask to be completely integrated into the public education system and have their costs met in full. Hardly any schools accepted this offer.

They might sign a contract of association that put their teachers on the public payroll and offered payments for most other expenses, in return for a program conforming with that of the public schools. A small minority, largely secondary schools chose this.

Finally, schools might ask for a simple contract that gave the state some supervisory rights over the school buildings and teacher qualification, but almost none over curriculum. It offered public funds for part or all of teachers' salaries. The vast majority of private schools accepted this offer.

In the religiously neutral French public schools, religious instruction has long been permitted in the school buildings, provided it does not interfere with regular school programs. In secondary schools a chaplain is often named by the church authorities, with the theoretical agreement of the State.

WEST GERMANY

Following longstanding tradition, West Germany's public, private, and church-related schools receive government funds. The country's 11 states, which constitutionally are sovereign in cultural matters, not only pay public school teachers' salaries but also come to the rescue if local communities cannot pay for school construction or improvements.

Private or church-related schools are responsible for their teachers' salaries, but can obtain state aid for other purposes, if a need is proved.

The state, however, sets standards for the accreditation of all teachers and schools. To be eligible for aid, a private school must meet those standards. Though this gives the state a powerful means to control school affairs, nonpublic schools are usually protected by other state laws that define their rights.

The parents decide whether a pupil takes religious instruction both in public and private schools.

In recent years, there has been little controversy over the church-state issue.

THE NETHERLANDS

The National Government and the municipalities in the Netherlands finance almost all elementary and secondary education, both in the so-called voluntary and the public schools. Public funds pay for buildings, equipment, and teachers' salaries of the nonpublic schools.

To receive public funds, a voluntary school must have a sufficient number of pupils—50, in cities of fewer than 166,000 population; 125 in larger communities.

Curriculum and teacher qualifications in all schools are subject to state inspection. Students in all schools must attend courses in religion and morals, taught by the clergy.

The present system is based on a law passed in 1920. There has been no controversy in recent years. The support of nonpublic schools, however, has reduced the public schools to a minority position.

In the primary grades, Catholic schools enroll 43 percent of the pupils; Protestant schools, 27 percent; the public schools 28 percent. The remaining 2 percent are in nonsectarian private schools.

BELGIUM

The Belgian Government aids private elementary and secondary schools, mainly Catholic, through a system of grants designed to offer free education for all pupils.

Government grants to private schools are applied to operating costs, technical equipment and teachers' salaries but not to school buildings. Aid was increased through a school pact in 1958, signed by the Christian Social, Socialist, and Liberal Parties. The pact also subjected the private schools to Government inspection and standards.

Slightly more than a half of all pupils attend nonpublic schools. All pupils, in public and private schools, must receive religious instruction, given by the clergy, but choice of denomination is left to the parents.

At present, there is little controversy over the school issue.

ITALY

The national government and the municipalities give subsidies to private schools,

which enroll about 700,000 pupils. Public schools enroll 5,800,000.

In addition to getting operating aid, the private schools, most of them Catholic, may use government-owned buildings and equipment.

The constitution gives the state the same supervisory powers over accredited private schools as over public ones. Religious instruction must be offered in all schools, but public school pupils may ask to be exempted.

There has been continuing controversy, with the leftwing parties and the anticlerical conservatives accusing the governing Christian Democrats of favoring the church schools.

IRELAND

The Irish Republic has no state schools. All schools are under religious management—of Catholic, Protestant or Jewish clergy.

The state pays practically all the costs of teachers' salaries and school construction, thus it offers a special system of almost total sectarian control, combined with almost total public financing.

The constitution provides a reverse example of separation of church and state by prescribing that "the state shall not oblige parents in violation of their conscience and lawful preference to send their children to schools established by the state or to any type of school designated by the state."

SWITZERLAND

Switzerland's 25 cantons have exclusive jurisdiction over their schools. The federal constitution demands only that education be compulsory and free and be provided for children of all creeds, without interference with religious convictions.

In cantons with an overwhelming majority of the same religious background, as in Catholic Fribourg, church schools can be made a part of the public education system. Whether or not financial aid is provided to nonpublic schools, the cantonal department of education sets and enforces education standards.

Most cantons, however, do not assist church schools. Religious classes in public schools are voluntary.

SWEDEN

Any denomination in this country, which has a Lutheran state church, may start its own school. However, only one such church-related school exists—a small Jewish one in Stockholm, partly run with annual grants from the government.

Lutheran religious instruction is part of the public school curriculum, but Catholics and Jews may be excused if similarly instructed by their own clergy.

NORWAY

Practically all Norwegian pupils are in public schools. Some special government allocations are made to the few nonpublic schools, on the theory that, since teachers and classrooms must be of the same quality as in public schools, such aid is fair. All private school pupils must stand examinations in the nearest public schools.

GREECE

Greek school authorities point that the nation's resources are too limited to consider any aid to nonpublic schools. In fact, they say, Greece annually gets more than $130,000 taxes levied on the private schools. This money contributes to public education.

Private schools are considered private enterprises. Their certificates are not valid for university admission unless students pass state examinations to qualify.

Religious instruction in the Eastern Orthodox faith is compulsory in public schools with a few exceptions.

ISRAEL

In 1953 all elementary schools were consolidated under the state education law.

Teaching in "state schools" is in Hebrew for Jewish children and Arabic for the Arab population.

An alternative or subdivision is provided by the category of the "state religious schools," attended by 25 percent of the Jewish children.

Six percent are in "recognized" schools, run by the ultraorthodox Agudat Israel Party. Though not state schools, they get some state support.

Secondary education is neither free nor compulsory. However, the state has begun to aid these schools, run largely by the political parties, through payments based on tuition costs.

Wherever the state contributes funds, it supervises the curriculums and approves teacher qualifications.

LATIN AMERICA

Nongovernmental schools in Mexico do not receive any financial assistance from the government.

Private schools, both religious and nonsectarian, are maintained in Mexico by fees and by contributions. These schools must prove to the Ministry of Education that they can support themselves before they are allowed to function.

This is not true of Central and South America. In many sections of Guatemala, for instance, there are no public schools, only missionary schools of various denominations. Some of these get slight Government help.

Government assistance is given to some denominational schools in Nicaragua, but it is also small. There is none in Honduras. Some slight help is given in El Salvador.

There is none in Costa Rica, where the Government runs probably the most elaborate public school system in Latin America.

Catholic schools in Colombia get considerable Government help, but the Protestant schools get none.

The teaching of religion in private or public schools is prohibited in Mexico. Religion is taught at Sunday schools for Protestants and at Saturday afternoon classes in the churches for Catholic pupils attending public schools.

There is no released time in public schools in Central America for the teaching of religion. In most of the countries, the denominational schools are allowed to devote part of their time to teaching religion. In most Catholic schools outside Mexico this teaching consists of the catechism and Bible history.

However, some religious teaching is done in denominational schools in Mexico in spite its being prohibited.

CANADA

Canada's school system varies from one Province to another. The British North America Act, the written constitution, guarantees the rights of language and religion in the Province of Quebec and the rights of minorities as they existed at the time of confederation.

Ontario has a public school system and a separate one, almost entirely Catholic. The separation is made at the tax level. The Catholic schools are maintained by Catholic real estate taxpayers and the public schools are supported by non-Catholic taxpayers.

In addition, both public and religious schools gets provincial grants toward salaries, textbooks, and construction.

All schools are inspected by the provincial department of education. The Federal Government has no direct jurisdiction.

No grants are made to other private schools.

Public schools provide nondenominational religious instruction. There is some controversy about this at present, with some parents demanding that such instruction be given outside regular school hours. Generally, however, there is little conflict over school financing and the church-state issue.

Award of Citation to National 4–H Club Foundation by Institute of International Education

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 28, 1961

Mr. LAUSCHE. Mr. President, the National 4–H Club Foundation late last year was awarded a citation for distinguished service by the Institute of International Education.

This fact has just recently come to my attention. It is of sufficient merit and worthiness, however, that I ask unanimous consent that the text of the statement made at the time of the award be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

TEXT OF THE INSTITUTE OF INTERNATIONAL EDUCATION'S CITATION FOR DISTINGUISHED SERVICE PRESENTED TO THE NATIONAL 4–H CLUB FOUNDATION ON FRIDAY, DECEMBER 2

To the International Farm Youth Exchange of the National 4–H Club Foundation, an organization which has dramatically demonstrated that young people of all nations can build understanding on the farm and ranch as well as in the cloisters of the university, the Institute of International Education presents its award for distinguished service.

IFYE, as it is known throughout the world, has a clear and simple objective and program. The members of the 4–H Clubs, deeply interested in international affairs and convinced that "you learn another way of life by living it," arranged to work from 4 to 6 months on farms and in rural centers of 60 countries throughout Europe, Asia, Latin America, and Africa. In return, they invited young people with similar interests from other nations to American farms. Since 1948, more than 2,500 Americans and foreign citizens have had this experience. Throughout the world 18,000 rural families have welcomed IFYE participants to their homes.

Through this worldwide opening of doors to other ways of life, the insights and understandings of IFYE participants have broadened.

They know firsthand the fundamental common need of men everywhere for food and a better way of life. These young men and women have shared their experiences widely and contributed greatly to the sympathetic understanding by many thousands of people of the aspirations of other nations. The members of this growing corps of dedicated young people are now assuming leadership roles not only in agriculture but in civic affairs in countries around the globe.

In typical U.S. fashion, the 4–H Club Foundation has enlisted a host of groups in financing the IFYE program. The Department of Agriculture, of course, cooperates, but funds primarily come from private donations here and abroad—4–H Club members and leaders, local business firms, civic and agricultural groups and foundations. The outreach of American voluntary effort is demonstrated by the fact that in many cooperating countries rural youth organizations modeled after U.S. 4–H Clubs raise funds for the program.

Because these young people have demonstrated how the seeds of better world understanding can be planted and nurtured, the Institute presents its Distinguished Service

Award to the International Farm Youth Exchange of the National 4–H Club Foundation.

The award was accepted by John K. Romig, and IFYE delegate from the United States to Brazil, now a teacher of vocational agriculture in the Leipsic (Ohio) High School.

Only Strong and Firm Actions Now by the United States Can Prevent Serious Defeats by the Communist Bloc

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. JUDD. My Speaker, under leave to extend my remarks in the RECORD, I include the following:

ACTIONS WOULD SPEAK LOUDER THAN WORDS
(By Edgar Ansel Mowrer)

The new Kennedy policy of "civility" in international relations with the U.S.S.R. is bankrupt before it has really started. Our President and his Secretary of State are learning the hard lesson that Presidents Roosevelt, Truman, and Eisenhower learned before them: the more they seek to "relax tensions" with the East, the tighter Moscow pulls them.

For communism deliberately provokes tensions and creates one incident after another in order to secure ever more concessions from a West that is still afraid to look the Cold War in the face—and play to win.

Ever since he took office, Mr. Kennedy has tried to treat the U.S.S.R. as a normal government and Mr. K. as a reasonable man with whom it "ought to be possible" to reach a logical point of agreement. He has not succeeded.

In his Inaugural Address, our President offered to make a "new start" with the U.S.S.R. Nothing happened, except that the Kremlin doubled its efforts to disrupt the Congo and communize Laos. Mr. Kennedy next sent Ambassador Thompson back to Moscow with an urgent personal letter to Khrushchev. In that letter he begged the Soviet leader to realize that the United States meant business and would not permit the Reds to walk off with Laos.

Mr. K. found the message so "urgent" that he first allowed Thompson to cool his heels in Moscow for several days while he lingered in the Siberian sticks, then graciously allowed the Ambassador of the United States of America to fly to Novosibirsk and deliver it in person. Mr. K. then stepped up military aid to Laotian Communists still more.

In desperation, the U.S. administration, doubtless coached by the ever-conciliatory Adlai Stevenson, planned to ask India's Nehru to deliver another message to Khrushchev and try to convince him that we had made our "last offer." Nehru was not interested.

There the situation stands—as I write.

It is no different in the field of negotiations for a treaty to end nuclear tests. There have been almost 300 meetings, and nothing has come of them. Why should it? The U.S.S.R. has secured from anxious Americans a stoppage of tests with no supervision whatsoever.

Conceivably for over 2 years, Moscow has been continuing low-power tests underground while the United States has stopped all tests. Why then, should Khrushchev do anything but stall indefinitely? President Kennedy has said that without an agreement he would start testing again. Khrushchev does not believe him. Why should he? Eisenhower said the same thing but did not resume tests.

At the recent meeting the Russians found a new excuse. They don't want any agreement until the United States prevents France from making tests for more bombs. France already has bombs and is trying to make smaller ones. It still lacks an efficient delivery system. If Mr. K. can induce Kennedy to try to make France stop—and still not sign an agreement—well, that will be Kennedy's fault.

Meanwhile he continues to benefit from the incurable optimism of American leaders who cannot—will not—dare not admit that Khrushchev is an irreconcilable enemy far more dangerous than Hitler.

He will never stop—I repeat, never—until either he is overthrown by the Russians (which seems unlikely), or made to see that if he continues his drive for world rule he is heading for disaster, that the West has reached the limit of its patience and will settle down to winning the cold war with the same intensity—and success—as it displayed in the hot war waged against Nazi Germany and Japan.

When President Kennedy makes this clear by acts, and not by words, he may begin to make progress in negotiations; but not until then—barring an act of God.—This is the cold and cruel fact of the year 1961.

Tribute to the Seventh Regiment

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. LINDSAY. Mr. Speaker, today I have the honor to introduce a resolution to provide for the erection of a tablet in the Hall of the House of Representatives—or immediately adjacent to its entrance—commemorating the 100th anniversary of the quartering of the 7th Regiment, New York State Militia in this Hall. The 7th Regiment arrived in Washington on April 25, 1861, in response to President Lincoln's request for troops to defend the Nation's Capital at the outset of the Civil War. They were quartered in the Hall of the House of Representatives from April 25 to May 2, 1861.

On April 25, 1861, the 7th Regiment, New York State Militia, marched up Pennsylvania Avenue in the City of Washington and was reviewed by President Lincoln in front of the White House. The arrival of the 7th Regiment in Washington was described by Messrs. Nicolay and Hay, President Lincoln's secretaries as "an epoch in American History."

It is difficult for us to realize, a century later, the drama underlying the arrival of this one regiment of militia troops in tension-charged Washington on April 25, 1861. Its significance lay in the fact that this was the best-known regiment of militia troops of its day and its arrival in Washington in response to the President's call was the first tangible demonstration of the willingness of the people to aid the Union.

After the firing upon Fort Sumter on April 12, 1861, President Lincoln called for the militia of the several States of the Union, to the aggregate number of 75,000 to defend the Union and provide for the execution of its laws. He also arranged, through Brevet-Lt. Gen. Winfield Scott, as Chief of Staff of the Army, that certain of the militia troops thus called forth would be assigned to protect and defend the Capital.

President Lincoln knew well the importance of and the need for defending Washington against attack. At the time of his militia proclamation seven States had already seceded, including South Carolina, Georgia, Alabama, Florida, Mississippi, Louisiana, and Texas. They were joined a few days later by the State of Virginia, Washington's southern neighbor across the Potomac. North of Washington, telegraph wires and railroad transportation from the north were severed at Baltimore. The city of Washington was almost completely surrounded by those hostile to President Lincoln's determination to defend the Union.

President Lincoln and his principal advisers expected the war to begin in the city of Washington, with a drive to capture the White House and the Capital. It was said that the White House is turned into a barracks. Two Senators, Cassius M. Clay and James H. Lane, both with military backgrounds, formed a last-ditch "palace guard," to protect the White House and the safety of the President. This feeling that Washington was the immediate target of the seceded States was shared by the press of the South. The Richmond Examiner declared:

> There is one wild shout of fierce resolve to capture Washington City at all and every human hazard.

There was reason for concern for the safety of Washington. The Regular Army, totaling about 17,000 officers and men, was stationed for the most part in the West and Southwest. The civil servants in Washington were predominantly citizens of the seceded States. After the fall of Fort Sumter, Regular Army officers from the South resigned their commissions and returned to their home States to offer their services to the Confederacy.

Any well-organized attack upon Washington would have succeeded. However the Virginia troops did not cross the Potomac. Instead the Virginia Volunteers, on April 18, 1861, the day after the secession of the Old Dominion, marched north and captured the Federal fort at Harpers Ferry and with it a tremendous supply of weapons, ammunition, and equipment. Two days later, on April 20, 1861, the commander of the U.S. Naval Yard at Norfolk, Va., fearful of the capture of the yard by Virginia troops, destroyed $30 million of naval ships, guns, equipment, and munitions.

It was in such an atmosphere of concern for the safety of the Capital and confusion as to the intentions of the forces of the seceded States, that the 7th Regiment marched up Pennsylvania Avenue in Washington to the relief of President Lincoln and the members of his Cabinet. The 7th Regiment brought

a measure of security to the city of Washington, but more importantly, it was the harbinger of men and arms to come, and a symbol of the desire of a united people to fight for and defend the Union of the States.

Just as the arrival of the 7th Regiment in the city of Washington on April 25, 1861, was a symbol of the desire of the people to defend their Union, so also it served in New York City.

Prior to the departure of the 7th Regiment from New York City there was reason to believe that the North would not support a war against the seceded States. The mayor of the city of New York, Fernando Wood, had called seriously for the secession of New York City from the State and from the United States. Rumblings of discontent were heard throughout the North, but with President Lincoln's proclamation calling forth the militia, on April 25, 1861, and the response of the 7th Regiment to that call, fear for the safety of the Nation and concern over the support which might be rendered by the people to the Federal Government was assuaged.

The service of the 7th Regiment in defense of the Nation's Capital, and specifically, in defense of the Halls of Congress and the White House, was an important duty which should be recorded by the erection of a tablet in the Hall of the House of Representatives because this regiment, the first organized, fully equipped and armed regiment to respond to the President's call for volunteers, typified the spirit of unity in support of President Lincoln's determination to preserve the Union, and is a lasting tribute to the patriotism of the citizen-soldier.

Pentagon Butterflies

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DERWINSKI. Mr. Speaker, on April 15 the greatest of all institutions, the taxpayer, will once again be subject to tender treatment by the Federal Government. By that time we will have collected billions of dollars from hard-pressed individuals and then, through the inefficiency that has been perfected by our Federal bureaucracy, we will proceed to spend that money just as if it were pouring from an endless funnel. The editorial in the Chicago Sun-Times on Friday, March 24, called to the taxpayer's attention an insignificant little item for which their hard-earned money was being spent:

PENTAGON BUTTERFLIES

As we await new Federal Budget figures from President Kennedy, we should like to dwell for a moment on a seemingly unrelated subject—the Pentagon's new butterfly switches.

Pentagon brass recently put a rush order in with the Signal Corps to buy 25,320 walkie-talkie type telephone handsets, equipped with a butterfly switch. Joe O'Brien of the telephone company tells us that a butterfly switch looks like a wing nut, and, of course, a wing nut looks like a butterfly.

The Signal Corps on Wednesday awarded a contract for handsets to the Yankee Telecommunication Laboratories, Inc., of Meriden, Conn., at a cost of $171,958.25. That figures out to $6.79 apiece.

This is a little better price than the Government paid the last time it bought handsets with butterfly switches. That was $6.95. But we are not about to compliment the Pentagon on getting a bargain. There is a surplus radio sales company in Lima, Ohio, that has a good supply of the gadgets. And it paid only 50 cents apiece for them. The Lima people know how to get a real bargain.

Of course, the handsets that the Lima company has on hand are the same ones the Signal Corps bought for $6.95 apiece. Somewhere along the line the military brass decided it didn't need those $6.95 handsets with butterfly switches, declared them surplus property and sold them at 50 cents apiece. Then somebody decided later that butterfly switch handsets were vital, after all.

Well, this is the sort of thing that leaves many citizens with the impression that the Military Establishment costs the taxpayers more than it should. And they'll be looking at Mr. Kennedy's budget with this in mind.

Area Redevelopment Legislation

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. NELSEN. Mr. Speaker, with the area redevelopment legislation now before us, I would like to bring to the attention of my colleagues a letter which I have received from the chamber of commerce at St. Cloud, Minn.

The legislative affairs committee of the St. Cloud chamber has gone on record opposing the enactment of S. 1.

In a letter bringing this action to my attention, Mr. Charles H. Richter, chairman of their legislative affairs committee, reports the reasons for their action.

The letter from the St. Cloud Chamber of Commerce is appended hereto in its entirety.

ST. CLOUD CHAMBER OF COMMERCE,
St. Cloud, Minn., March 17, 1961.

Congressman ANCHER NELSEN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: The legislative affairs committee of the St. Cloud Chamber of Commerce has asked that I forward to you the following resolution concerning the Douglas area redevelopment bill (S. 1), designed to channel industrial expansion into depressed areas:

"Our businessmen deplore the implications of the area redevelopment bill, an extension of Federal intervention in local and State affairs, as it will inhibit local leadership and local initiative. Here in St. Cloud, the organization St. Cloud Opportunities, has induced several manufacturers to locate here. Our success has been accomplished by local (and area) business people, with locally subscribed funds. For the Federal Government to use moneys from Minnesota to build, in other States, direct competition for business here, is unsound economics and may merely lead to the relocation of so-called depressed areas."

This resolution was brought before the legislative affairs committee of the St. Cloud Chamber of Commerce and approved by a vote of 15 to 1.

The committee bases its recommendations on the following arguments:

1. The bill does not guarantee economic revival.
2. It will create another permanent agency.
3. It will subsidize competitors and penalize progressive communities.
4. It will be impossible to legislate against transfer of jobs—i.e., industries moving from Minnesota to take advantage of Government subsidies offered by another State.
5. There are better means to encourage economic redevelopment. Lack of finances is not the basic problem to an area's problems, it is the area itself.

The one negative voter on the resolution based his support of the bill on the following arguments:

1. Will decrease unemployment in those areas.
2. Will stimulate the economy of the whole Nation.
3. Will stimulate local leadership and local initiative.
4. Depressed areas, if not checked, spread depressed economy over larger and larger areas.
5. It is the Christian and charitable thing to do, help the brother who is in a bad way.

It is with the knowledge that you represent the people of Minnesota that we send this resolution to you believing that the bill as presently written will do much harm to the working people of this State by robbing them of their jobs.

Sincerely yours,

CHARLES H. RICHTER,
Chairman, Legislative Affairs Committee.

Mermaid With a Broom

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appeared in Skipper magazine of March 1961, chronicling the diligent efforts of our able and beloved colleague, the Honorable JOHN BLATNIK, to clean up water pollution and to have an effective and forceful Federal Water Pollution Control Act to meet one of America's most pressing natural resource problems.

I wish to join others in saluting JOHN BLATNIK for his great endeavors in this field of desperate need and in praising his efforts to meet perhaps the greatest single problem the United States has in the field of natural resources.

The article follows:

MERMAID WITH A BROOM

(By Robert Burkhardt)

Early in January, shortly after the new Congress opened, several bills were introduced to increase Federal aid for water pollution control. The bill put in the hopper by Representative JOHN BLATNIK, Democrat, of Minnesota, was similar to the one passed by

the last Congress and vetoed by former President Eisenhower.

Last year's bill would have increased the Federal grants from $50 million annually to $90 million. Representative BLATNIK's new bill provides for an increase to $100 million annually. It stands a good chance of early passage—partly because the economic recession has inclined lawmakers to view favorably a modest increase in Federal pump-priming measures. For the same reason, President Kennedy is expected to give his support to the new Kerr-Blatnik program—Senator ROBERT S. KERR, Democrat, of Oklahoma, has plans to introduce a companion measure in the Senate.

This new legislative push is in a sense an outgrowth of the water pollution conference held by the U.S. Public Health Service in Washington last December. The Public Health Service deserves little credit for any new Federal effort at pollution control, however. For the most part theirs was a captive conference, run by a small group who oppose further Federal efforts at water pollution control.

Despite the worst blizzard to hit Washington in a decade, more than a thousand determined people showed up for the 3-day meeting. At first I thought they were there to do something about water pollution control. Events proved otherwise. A few sincere people did show up to warn that one of these days we may all be inundated by our own sewage. But in terms of results they had about as much effect as those groups that advocate peace, single taxes, waterways improvement, simple yacht racing rules, ban the bomb, and abolish the income tax. We've got all kinds in Washington; so it was no surprise when a few clean-up-our-polluted waters advocates showed up for the Public Health Service conference.

This small starry-eyed group was lost among the larger numbers of tight-lipped special pleaders who came to the conference by the scores. They scored well, too. Not a single specific suggestion to end, or even to try to reduce, stream and lake pollution was adopted by the conference. One speaker went so far as to suggest that the Government itself was adding to the pollution problem by dumping its atomic waste in our rivers and seas, and there was a brief flurry of interest. But no resolution condemning this was passed, or even introduced. And next day the U.S. Atomic Energy Commission issued a statement reassuring everybody that the concrete drums used to package dangerous atomic byproducts will last up to 10 years.

All was not apathy, however. At one point in the proceedings a large group of delegates to the conference did leap to their feet in standing support of the New England Industrial Water Pollution Commission when a representative of that group declaimed in ringing tones: "We have no pollution problems in New England that require additional Federal help." Leaving no doubt as to where he stood on the more urgent problems of pollution control, he said firmly that enforcement is the primary concern of the State.

Keynote of the conference was set by President Eisenhower himself. He did this in the first instance by his veto of the bill to enlarge Federal participation in the water pollution control work. More to the point was his later letter of instruction to the Public Health Service on the call of the conference. "Arrange," he said, "for a national conference on water pollution." Purpose of the conference was to "help local taxpayers and business concerns to realize the obligations they have to help prevent pollution."

It has to be admitted that arrangements were excellent. By handpicking speakers and key panel members, the Public Health Service saw to it that the conference was all wake and no way. It wasn't easy to do; there were several crucial moments when it seemed almost as though the conference might break its lines and try to go somewhere.

Several of the panels had the temerity to propose some "ideas" for the consideration of the conference. One reporter counted 31 such proposals—the number was not important, though, for none was acted upon. Just as well. One idea was directed at Federal tax officials; they were called on to grant a special income tax benefit to corporations that spend money to treat their waste water. Another idea was to tax all pleasure boats, with the annual receipts to go into a special fund to combat water pollution.

There were some sensible suggestions, too. One lady delegate said her organization hadn't been able to rally any community interest in its Texas-size pollution problem until they adopted the slogan: "Beaumont Is Beautiful—But It Stinks." And Senator KERR said that maybe what is needed is a public symbol to dramatize the water pollution control battle. He suggested a mermaid with a broom.

But it was Congressman BLATNIK's speech that really hit the fan. He let the delegates know that all the talk in the world wouldn't aerate a single drop of sewage. Further, he said, he was not only going to propose a course of action; he was going to act himself. He and Senator KERR were going to introduce bills in the Congress to double the size of the Federal water pollution control program. This they are now in the process of doing.

But even if the program is doubled, it is still—so to speak—only a drop in the bucket, compared to what needs to be done by both the Federal Government and the State and local governments. It looks like it will be a long time before any but a lucky few of us will be able to dip a bucket oversides and come up with water fit to drink. That's the real lesson of the conference.

The Visa: Shorter but Still Required

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ELLSWORTH. Mr. Speaker, one of the largest wholesalers of travel in the world—Maupintour Associates—is located in my hometown, Lawrence, Kans. It is for that reason that I have a special interest in visa reform. The Kansas City Star, of March 21, made an editorial statement in connection with visa reform, and under leave to extend my remarks I include that editorial at this point:

THE VISA: SHORTER BUT STILL REQUIRED

In the years immediately following World War II, most of the governments of Europe eliminated the requirement of visas for persons traveling with an American passport. These nations needed dollars desperately. The best way to lure tourists obviously was to make travel as easy as possible. The approach worked.

In a similar situation, the United States recently decided to minimize visa requirements in an attempt to attract more foreign visitors. So far, so good. The old long form, used at the discretion of consular officials, contained many questions relating to morals, money, and intentions. At best, it was cumbersome and annoying. At worst, it discouraged foreigners from visiting the United States. In its place will be a short form, requiring only basic information.

Minimizing visa requirements is much more than a courtesy to friendly nations. The Government hopes it will mean more tourist dollars at a time when conserving the outflow of money is extremely important. Last year Americans abroad spent $1.2 billion more than foreign travelers spent in this country. This enormous sum represents about one-third of our unfavorable balance of payments. If the travel gap can be at least partly closed, it will substantially ease the flow of gold abroad. And in the process, American travel should give foreigners a better view of our Nation.

Visa reform is an obvious starting point. Other countries are making progress. An American in Paris, wishing to spend the weekend in London, need only grab the next plane or boat train and he's on the way. At the border, a landing card satisfies all Government requirements. A Briton in Montreal, wishing to spend a weekend in New York, still must apply for a visa. The new rule simply stops the excesses in use of visa authority. The general requirement of red-tape continues.

Having taken the first big step, the State Department might well study the feasibility of dropping the visa requirement for nationals of approved countries. There may be sound objections to the change, but it would stimulate travel to America—and help save our gold.

Conservation Education

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 24, 1961

Mr. PHILBIN. Mr. Speaker, at the request of Massachusetts State Senator Paul H. Benoit of the Worcester-Hampden District, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the timely remarks of my valued and dear friend, the Honorable F. Stanley Mikelk, of Gilbertville, Mass., member of the Administrative Board, Fish and Game Division, Massachusetts Department of Natural Resources, regarding Senate bill 158, now before the Massachusetts Legislature.

A very touching feature of Mr. Mikelk's testimony is that reprints of the full text are being distributed under a gift of his devoted wife and helpmate, the late Carmen C. Mikelk, to the conservation education fund of the Izaak Walton League. Like her distinguished husband, Mrs. Mikelk was dedicated to many good causes and was especially interested in conservation education.

I trust that Mr. Mikelk's very admirable remarks will be helpful in pointing up the need for expanding conservation education activities and developing additional conservation measures:

CONSERVATION AND RESOURCE-USE EDUCATION IN MASSACHUSETTS TODAY MEANS A BETTER MASSACHUSETTS FOR ALL TOMORROW

Past: From its days as the earliest permanent settlement in the New World, Massachusetts has drawn strength from nature's resources. The soil, forests, minerals, wa-

ters, and land were crucial in enabling the citizens of Massachusetts to lead the way in economic development and to enjoy enriching recreational and cultural pursuits.

Present: But the past has had its effect on the present. The long years of tapping nature have taken a heavy toll from some resources—there have been abuses by men—and uncontrollable disasters have destroyed valuable resources—and the pressures of more and more people for food, clothing, shelter, space, and recreation are relentless.

Future: And so Massachusetts faces a future in which natural resources are the number one need. Decisions about resources are of greatest significance:

Will there be enough of nature's resources to sustain the demands of personal and industrial needs?

Will the cities have land, water, and air which they need to provide for wholesome living?

Will there be adequate sites to meet the recreational needs of growing populations?

Can you be absolutely certain of the answers to these questions?

No, but you can be certain that (1) what the people of Massachusetts do about their natural resources will have the greatest influence on whether the needs will be met; (2) the key to what is done is education—education concerning the use, conservation, and development of the State's natural resources.

To that end: A concerted effort is underway to develop a statewide program in conservation and resource-use education. From the first days of school and community experience through the last, the people of Massachusetts will be assisted in understanding how best to use, conserve, and develop nature's resources. Looking to the future, the focal point of the program will be in the State department of education. In the development, Massachusetts would be moving ahead as have such States as Illinois, Ohio, Florida, Tennessee, and Texas.

A vital program is planned: When underway, the program calls for a supervisor of conservation education to carry out a diversified, dynamic program. Under Senate Act 158 authorizing the position, the supervisor would "serve in the division of elementary and secondary education, whose duties shall be to set up and maintain a conservation education center, to promote improved educational methods, to organize workshops and encourage the training of teachers, to integrate existing education programs of private groups and other government agencies affecting resources, and to provide useful educational materials for schools at all levels, youth groups and adult organizations for the enlightened advancement of resource management."

From which it can be seen: Massachusetts will be well on its way toward developing citizens who can take intelligent action to use, conserve, and develop their natural resources. And the answers to questions about whether the needs of the people will be met will be a most emphatic, confident "yes."

So pitch in and help: Your support is needed. Contact your legislator and tell him how important you feel it is to provide immediately for the establishment of the position, supervisor of conservation education. After the position is established, do whatever you can to help the supervisor carry out his program effectively.

And Massachusetts will have reason to face the future with confidence that its natural resources will be adequate to meet the needs of the future.

Financing the Highway Program

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. OSMERS. Mr. Speaker, there is great interest throughout the country in continuing the vital Federal-State highway program. President Kennedy has made proposals for the imposition of special taxes on the trucking industry to meet part of the rising costs of this necessary program.

It is my considered judgment that we must not repeat the mistakes made years ago in railroad taxation by imposing discriminatory and ruinous burdens on trucking at this time.

I have set forth my views on highway program taxation in a letter to Chairman MILLS of the House Ways and Means Committee and I ask unanimous consent to have the letter placed in the Appendix of the RECORD.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 28, 1961.

HON. WILBUR D. MILLS,
Chairman, Ways and Means Committee,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: The Committee on Ways and Means is now considering the President's proposals for financing the Federal-State highway program. The purpose of this letter is to set forth briefly my views on the subject for the consideration of the committee.

President Kennedy proposes a 3-cent-a-gallon increase in the tax on diesel fuel, as well as steep increases in the excise taxes on trucks, truck tires, tubes, and tread rubber. With a few exceptions, as a general principle, I oppose the imposition of any excise taxes on necessities during peacetime, particularly when they bear heavily on a specific industry. That is why I have been urging Congress for several years to approve my bills which would repeal certain remaining World War II excise taxes on such items as transportation, communications, appliances, cameras, luggage, etc. Therefore, in my opinion, the President's recommendations for sharp increases at this time in the excise taxes on trucks, truck tires, tubes, and tread rubber should not be approved.

The 75-percent increase in the diesel fuel tax proposed by the President would be borne entirely by about 15 percent of the heavy-duty trucks now operating. In my opinion, such a discriminatory increase would put a number of trucking companies out of business completely and seriously injure many others, with resulting unemployment. Thus, the anticipated revenue from diesel fuel taxes would be lower, thereby partially defeating the purpose of the increase. It seems to me, that if there is need for additional revenue to continue this highway program, as planned, it should be met by a modest increase in the present 4-cent tax on all gasoline and diesel fuel such as the half-cent proposed by President Eisenhower.

In my judgment, an economically sound trucking industry is necessary for a healthy economy just as an adequate highway system is an absolute requirement for the continued growth and development of all motor transportation including the trucking industry. Accordingly, the Federal-State highway program will continue to have my full support, as will any equitable taxation to pay for it.

Discriminatory overly burdensome taxation was a major factor in placing the Nation's railroads in the trouble they are in today. Let us not repeat the mistakes of history by taxing large segments of the trucking industry out of business. There are some who feel that harmful taxes on trucks will somehow help railroads. Two wrongs never make a right. Railroad problems must be solved affirmatively here in Congress and at the State capitals, not by crippling the trucking industry.

For the reasons set forth, I urge the Committee on Ways and Means to reject these discriminatory taxes on the trucking industry.

Sincerely yours,
FRANK C. OSMERS, JR.

Anniversary of Hungarian Independence

SPEECH
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1961

Mr. STRATTON. Mr. Speaker, March 15, the anniversary of the Hungarian Revolution of 1848, is of great significance not only to the valiant people of Hungary, but to all freedom-loving people of the world. This day reminds us of centuries of struggle for freedom and self-determination by a courageous, dauntless, strong spirited and persistent nation, sometimes against the Turks, later against the Hapsburg Emperors and the czars, after the First World War against the Fascists and the Nazis, and now against the Kremlin. Their victories have always been short but sweet enough to encourage them to go on fighting and sacrificing for their great cause. Their thirst for liberty has been so strong that not even Soviet machineguns and tanks could discourage their will or dampen their spirit in the dark days of October 1956.

I find this a great opportunity, Mr. Speaker, as an American to salute the people of Hungary, wherever they may be, for their love of freedom and their long struggle to achieve it. I want to assure those valiant people of Hungary that they are not forgotten by us in the free world today and that we shall keep alive the memory of their constant struggle for freedom, while they, themselves, are unable to celebrate this occasion in their own homeland. Let us today reaffirm our belief in the freedom of Hungary and all other nations who are suffocating under the yoke of Soviet tyranny, whether they be within or outside the Iron Curtain.

This being the 13th year of the 2d century of the anniversary of the Hun-

garian independence, let us all hope that it will be an unlucky year for all tyrants in the world, and let us hope and pray that the valiant people of Hungary will soon be able to celebrate with us a genuine and lasting life of freedom and of peace.

Foreign Policy Versus Politics

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DEROUNIAN. Mr. Speaker, this very penetrating editorial in the April 3 issue of U.S. News & World Report, rightly recommends that we stand behind the President of the United States in stopping the Communist military onslaught. This, despite the fact that in the previous administration, under the same foreign policy situation, shameful politics entered the picture.

THE PENALTY OF CHANGE
(By David Lawrence)

Many millions of persons, with the best of intent, voted last year for a change of administration.

Many millions of others, also believing that they were doing what would be best for America, voted against change.

Today all the people of the United States are paying the penalty of the change. It is costly. It could lead us into a war that nobody wants.

If this happens, it will not be the fault of our President. For he will earnestly strive to keep up from such a catastrophe, and he will have the support of the American people, irrespective of party.

But 1960 was not the time for a change in administration, and events now unfortunately are proving that thesis true. The risk we have taken by "changing horses in midstream" is being revealed in the headlines.

We didn't take such a risk in the midst of World War II, when we even broke the third-term precedent by reelecting a President for a third and a fourth term.

What is being revealed today is that a cold war is really not much different from a hot war as far as possible dangers are concerned. A fixed election date therefore is risky. Flexibility in the date for holding national elections—such as the parliamentary systems provide—would be a wise precaution.

Nikita Khrushchev and his clique in the Kremlin knew, of course, that the Eisenhower policies would be maintained by a Nixon administration. But Moscow had been led to believe that the United States would be softer under a Democratic administration.

Hints to this effect were given to the Kremlin from time to time in the last few years by prominent Democrats, inside and outside of Congress, who criticized the Eisenhower policies.

Will the United States now suffer the effects of the Kremlin's miscalculation?

Almost immediately after the election last November, the Communists stepped up the cold war. They increased military support to their stooges in Laos. They sent arms to Lumumba's forces in the Congo in direct defiance of the United Nations. And they have moved more intensively in Cuba and other areas.

All through November, December, January, and February, the cold war was pressed with renewed vigor by the Communists throughout the world, while American policies stagnated. Though ostensibly concerned with the possibility of reaching agreements in negotiations for disarmament and on such issues as the status of Berlin, the Moscow government saw a chance meanwhile to build a stronger position for itself in Latin America, Africa, and southeast Asia.

Unfortunately, partisan comments in recent years in this country indicated that maybe a Democratic President in the White House would bring a "peace at any price" policy. It will be recalled that in the spring of 1954, when the Indochina crisis was developing, the United States was ready to take a firm stand to meet Communist aggression in southeast Asia. Vice President Nixon made an off-the-record speech to the American Society of Newspaper Editors that was later paraphrased in print and viewed as threatening military action. It was indeed a show of firmness that was essential to our diplomacy. It led to bitter attacks by the Democrats. Senator Kennedy said at a political fundraising dinner in Chicago on April 20, 1954:

"The American people should be told the truth about the situation in the Far East. For if Secretary Dulles' and Vice President Nixon's words are to be taken at their face value, we are about to enter the jungle and do battle with the tiger. But I do believe it both proper and necessary that those who bear responsibility should indicate in advance the course that should be adopted."

So the Kremlin in 1961 apparently decided to test Mr. Kennedy's philosophy.

Another Vice President of the United States—LYNDON JOHNSON—now has made, after a conference with the President, the following statement:

"And I think it should also be known to the world that the United States, while it is going to be reasonable and prudent in all of its moves, is not in a mood to meekly permit an independent nation to be gobbled up by an armed minority supported from the outside."

It is to be hoped that blind partisans and the advocates of "peace at any price" will not again endanger American foreign policy by disparaging the comments of the present Vice President, who has just proclaimed the resolute policy of the United States.

Despite what was said by the Democrats in their ridicule of the policy of the late Secretary Dulles, called "brinkmanship," it is a fact that after 2 months of a Democratic administration we are the brink of armed conflict. It is important, therefore, to let the Soviets know that the American people stand solidly behind their President and will back him fully in whatever stand he may take to resist any further aggression by the Communists in any part of the world.

Grove Minister Blasts "Judas" in the National Council of Churches

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include therein an article appearing in the Garden Grove News under date of March 23. This article consists of excerpts from a sermon by the Reverend Robert Schuller, who has been one of the outstanding opponents of communism in my district. It deals with the position taken by the National Council of Churches and reflects the thinking, I am sure, of a great majority of the members of the Protestant faith whose churches are affiliated with the National Council of Churches:

GROVE MINISTER BLASTS "JUDAS" IN NATIONAL COUNCIL OF CHURCHES—SCHULLER SEES RED IN READING LIST
(By Samuel G. Campbell)

The outcry of "Judas" was raised today by a Garden Grove minister against the National Council of Churches to which his own congregation belongs.

The Reverend Robert Schuller, pastor of the Garden Grove Community Church, today released the text of a sermon delivered this week.

Schuller, who for 3 summers took Norman Vincent Peale's pulpit in Marble Collegiate Church of New York, blasted the National Council's repeated stands on issues involving communism.

CHURCH HAS ITS JUDAS

"Now the church, too, has always had its Judas," he declared, "and in my opinion it would be the height of selfrighteousness and credulity for the church to proudly assume that it has managed to keep out of its ranks today the spirit of men who would betray the church into the hands of sinners," the minister declared.

Schuller pointedly defended the National Council for its charity toward the Jewish people and for its position with respect to the Roman Catholic Church.

Nor did he object, he said, when a study group of the National Council advocated the admission of Red China to the United Nations.

Schuller admitted that he along with others once had considered the Air Force manual, charging Communist infiltration, as "another dirty smear, completely untrue, simply radical rightwing ultrafundamentalists."

CONGRESS HEARD EVIDENCE

But then, he said, he learned the Congress of the United States heard evidence that the National Council published a reading list recommending books authored by Communists.

Among these is a poem by W. E. B. DuBois which begins, "Down then, religion and church, temple and pagoda; away myth and miracle, creed and dogma," and ends, "Commune, communes, with the elect of heaven with mother earth, daughter of sky and sun, born of democracy, fertilized by communism, parents of revolution, makers of the world."

When J. Edgar Hoover gave his warning 4 months ago, Schuller declared, "I began to give the warning voices a fair hearing."

SURRENDER ADVOCATED

"Then came the December meeting of the National Council of the Churches of Christ in San Francisco," he continued, "And I will never forget the morning I listened to Dave Garroway and heard the early morning news announce to America that, 'Yesterday the National Council of Churches of Christ in San Francisco passed a resolution calling upon the American people to prepare to surrender the will of the United States to the will of the United Nations'."

He continued:

"Then came the general board meeting last month in Syracuse. And from the hot wires of the news media came the report that 'the National Council warns against the film Operation Abolition with this presumptuous appendix the National Council speaks for 40 million Americans'."

POWERFUL PULPIT VOICE

Schuller, a powerful pulpit voice, explained that the representative denominations had no opportunity to debate that issue, that because of an airline strike only 115 of the 250 board members were actually present.

Then he declared:

"They do not speak for me on this issue."

Schuller cautioned against suspicion of every liberal Protestant minister. He denounced that as sin.

But he called on the Protestant clergy and the National Council itself to agree to a "clean, honest, fair investigation into the problem of Communist infiltration into the church."

"What have we to fear, what have we to hide?" he challenged.

As a prelude to his remarks, he retold the story of betrayal by Judas which began in the Upper Room and ended in Gethsemane:

"Before the bread was broken, our Lord paused to make this grim announcement—'One of you will betray me.'

"Strange that all 12 did not proudly, arrogantly resent this charge. But in the rare display of genuine humility, the question was repeated, 'Lord is it I?—Is it I?'

"Then to the lost soul Jesus said, 'What thou doest, do quickly.'

"And Judas left to walk into the shivering darkness, into the chilly night, into the gaping gate of his horrible hell.

"Only hours later this same Judas stepped from behind his hiding place in the trees of the Garden of Gethsemane to plant his infamous kiss of death on the face of our Redeemer."

Making the Peace Corps a Reciprocal Project

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. STRATTON. Mr. Speaker, as Members of this House are well aware, there has been tremendous interest expressed by the people of this country, old as well as young, in the so-called Peace Corps recently activated on a trial basis by President Kennedy. In view of this extensive interest, and in view of importance which this dramatic proposal has assumed in our worldwide American image, I was especially impressed by reading a newspaper account recently of certain comments on this program made by a college professor in my district, Dr. Herman Keiter, chairman of the Department of Philosophy and Religion at Hartwick College in Oneonta. I believe Dr. Keiter's constructive recommendations deserve to be carefully considered by Members of this body, as well as by those charged with the responsibility for operation of the new Peace Corps. Under leave to extend my remarks I enclose the following article from the Binghamton Press of March 26, 1961:

U.S. PEACE CORPS AS RECIPROCAL PROJECT CALLED POSSIBLE—FOREIGN VOLUNTEERS SUGGESTED FOR UNITED STATES BY HARTWICK PROFESSOR

International application of President John F. Kennedy's Peace Corps is posed by a professor at Hartwick College in Oneonta.

Dr. Herman Keiter, chairman of the department of philosophy and religion, pointed to the possibility of other countries sending volunteer workers here, even as Americans will be going abroad.

Such application of the Peace Corps proposal, he indicated, could keep it from becoming interpreted as an instrument of U.S. propaganda or charity.

Dr. Keiter headed a relief committee in work camps of Finland after World War II. The volunteers were sponsored by the American Friends Service Committee and the National Lutheran Council.

He was one of several persons heard during a meeting of the International Relations Club yesterday on Oyaron Hill.

Other speakers included Dr. Katherine E. Hobbie, professor of education at Oneonta State University College of Education, and Lawrence Hiler, a sophomore at Hartwick.

DIVIDED OPINIONS

All three discussed implications of the Peace Corps. Students and guests appeared to be divided in their opinion of the proposal.

Dr. Keiter referred to similarities between the Peace Corps and the Finnish work camp program conducted after World War II.

The postwar program included rehabilitation and reconstruction work by young people from America, Finland and other Scandinavian countries. Their task was to overcome the scorched earth left by the Germans during the Nazi withdrawal.

Under direction of a technical adviser provided by the Finnish Government, they worked with the families of Finns whose homes were being repaired.

MEANS OF SHARING

Dr. Keiter explained philosophy of the "sacredness of work" connected with the workcamp idea, in which manual labor becomes a means of sharing.

He emphasized the Peace Corps should avoid the danger of becoming another handout in which participants are made to feel they are recipients of charity.

Initially, the Peace Corps program will be concerned primarily with teaching and education.

Dr. Keiter voiced hope that participants will not be afraid of manual labor and that such activity would be included in the President's program.

THEIR COMFORT

"The willingness of Americans to leave their comfort and go to Finland after World War II was appreciated by the people with whom we worked," he said.

"Today, the Peace Corps promises a similar appreciation by people who find Americans willing to get out of the seclusion of their ivory towers and become involved in meaningful contacts."

Dr. Daniel S. Allen, professor of history and political science, moderated the panel presentation and questions which followed.

He said the Peace Corps is aimed at destroying the image some persons overseas have of Americans as fat, overstuffed individuals driving overpowered automobiles.

PEACE CORPS

Students questioned whether the Peace Corps is practical.

Several who had served with the Armed Forces in civilian or military capacities said they doubted that Americans could survive at the subsistence level of the natives in some countries overseas.

In general, they agreed that the effect of the Peace Corps would be good if it is operated in practice as it has been ideally proposed.

Dr. Hobbie described her experiences as a teacher at a girls' school in Damascus, at a time when the Arabs were becoming aware of the value of educating women.

WORLD WAR II

She also spoke of her reconciliation activities at a Japanese-American War Relocation Center in northeastern California during World War II.

Dr. Hobbie stressed the importance of obtaining an understanding of people who live in a different culture.

Mr. Hiler, whose home is in Phoenix, is a political science major. He summarized the Peace Corps proposals as made public by various media.

"The program is not limited to the young or college students, but probably will attract the largest number from this age because they are most available and best trained to fit into Peace Corps requirements," he declared.

FIVE GROUPS

He said the Peace Corps proposal involves approaches by five different groups. These are private volunteers, college oversea projects, international agencies, U.S. Government agencies and the Peace Corps itself.

A student asked, "Will a training period of a few months be sufficient to prepare adequately Peace Corps workers with a country?"

"Identification with the people is the most important thing," replied Dr. Hobbie. "If a person is willing to try to understand, the training period will be enough to get him started."

Dr. Keiter said a typical tourist could be overseas for 20 years and not know the people, "but an interested coworker can show by his attitude his willingness to learn new customs and traditions."

EAST GERMANY

Gerhard Sommer, a Hartwick freshman who lived in East Germany under Russian domination, also was heard.

He described the "appalling conditions" in Japan, Korea, and Hong Kong which he saw while serving with a civilian branch of the U.S. Armed Forces.

Mr. Sommer stressed leadership and a strong awareness of the values of democracy as prerequisites for participants in the Peace Corps.

"They must know the language and must know their own point of view," he declared.

OWN COUNTRY

The freshman indicated that ill will exists in these countries because of distrust of occupation forces and incidents between natives and servicemen.

"We had better know the conditions in our own country (United States), too," said Mr. Sommer.

He said he has been in sections of the South where conditions also are "very bad."

Another student said it is highly idealistic to think that Americans can adjust to the living standards of some countries overseas.

NATIVE FOOD

Dr. Hobbie said she does not believe the Peace Corps will be expected to exist "at a subsistence level on native food entirely."

"I managed to live through a period in southeast Asia with a diet primarily at the level of a middle-class native," she declared.

Dr. Keiter questioned the possibility of recruiting only personnel who are "well to do" for the Peace Corps.

"Countries should come into contact with Peace Corps people whose income level is not always the highest," he said.

COLD WAR

"Perhaps the program as proposed will prevent lower income people from becoming members of the Peace Corps."

Still another student asked whether the cold war could be reduced by activities of the Peace Corps.

He was answered by a fellow student, who pointed out that communism is a materialistic ideal and not just a temporary thing.

As the session drew to a close, a student not previously heard characterized the Peace Corps as a way of showing parents that the younger generation are not hollow men.

"We have to prove that we can endure hardships which they think we are too soft to handle," he commented.

We Still Need Bedside Nurses

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mrs. BOLTON. Mr. Speaker, it is hardly necessary for me to remind you and most of the Members of this body of my lifelong interest in the care of the sick. It was through my efforts that the Public Health Department was able to secure a quarter of a million dollars for an effort to increase the number of students in the larger schools of nursing of the country when in 1942 war had once again emphasized the need for a greatly increased reservoir of trained nurses. Under the leadership of the then Surgeon General Thomas Parran and Miss Pearl McIver, so fine a job was done that when a year later, I presented the bill to establish a U.S. Cadet Nurse Corps both Houses put it through without delay. Some 125,000 young women received their training (a little abbreviated because of the wartime emergency need) during the life of the Corps. Many of these used their GI status to finish out a full training. But the need for additional trained nurses continued.

Reports from many States told of the closing of a large number of smaller schools. My long association with all phases of nursing needs prompted me to try to find out causes. Why were the schools being "partially accredited" or closed by the accreditation committee of the League for Nursing. Why were students not staying in their chosen profession when they had their RN's, and so forth. I sent out a questionnaire to nurses, nursing schools, hospitals, doctors, and so forth. Some 10,000 in all replies poured in. I made the results available to all and sundry. Then with the most responsible advises, I submitted House Joint Resolution 485 of the 84th Congress. Briefly, this would have set up a Commission to gather together the existing research on the subject, and then to set up a program which would bring down-to-earth, practical action into the whole situation. This bill was killed in committee by the ANA and the league. The arguments were that only they could make and evaluate such research and all others must keep their hands off.

Since that time there has been no alleviation of the shortage of RN's. Indeed, the closing of smaller schools continues. One finds the RN at desks doing paperwork and women with no more than perhaps a year's schooling and practice caring for the sick without even an adequate supervisory staff.

No one appreciates more sincerely than I the splendid work of the practical nurse who has had training in the simplier sides of patient care. Indeed, my home city, Cleveland, has one of the outstanding practical nurses training schools in the country, and its graduates are greatly sought. Ohio has a licensing law that protects the sick against the heartful but unprepared person. Toward the end of last Congress, after many years, we finally passed a bill to require licensure of practical nurses in our Nation's Capital.

Very recently there has come into my hands a guest editorial from the Missouri Nurse which reemphasizes the sad fact that the ANA and the League are still unaware or unwilling to act constructively in the results of their continued emphasis upon certain so-called standards—all of them measured by degrees, and their failure to resolve the tragic dearth of trained personnel to care for the sick.

Dr. Scorse's editorial highlights the problem anew. It would seem that the nursing profession would do well to aline itself with the doctors who see the problem from their own and the patients' need as well as with the intelligent, long suffering and knowledgeable, nonprofessionals who too long have been rendered powerless by the prejudices of the group in control of hospitals and nursing schools.

Under unanimous consent, I include the editorial and certain letters from wise medicos of long experience in these areas:

[Guest editorial from the Missouri Nurse]

THE SMALL SCHOOL VERSUS FINANCIAL AID?

(The Missouri Nurse is privileged to present the following editorial in its entirety. It was written by S. W. Scorse, M.D., F.A.C.S., Joplin, and it concerns a problem that is well known to all in the profession. Dr. Scorse was born in Wellington, England, and came to the United States as a teenager. He was graduated from the Medical School of the University of Cincinnati in 1931 and was assistant in surgery at Deaconess and Christ Hospitals in Cincinnati from 1932 through 1939. Dr. Scorse served with the 69th and 100th General Hospitals, U.S. Army, 1941–45, in the China-Burma-India Theater. He is an active member of the American Medical Writer's Association, American Physicians Artist's Association, American Medical Association, Missouri Medical Association, and Jasper County Medical Association.)

(By S. W. Scorse, M.D.)

The shortage of nurses will not be resolved by the paradoxical closing down of the smaller schools of nursing such as was recently done to St. John's Hospital Nursing School.

Having been on the advisory board of the St. John's School of Nursing for several years, I can speak with a little authority and experience; and, from what can be gathered, it seems that the National League of Nurses, which sets the standards of the school, have made it impossible for the smaller nursing schools to cope with the situation. This tragedy, and truly, that's what it is, represents the shortsighted action of a minority group who put educational standards above the realistic resolution of a rather serious national problem.

It would be well for the leaders in the nursing profession to approach the problem much as a few of the foremost medical schools in this country are doing at the present time; recognizing the fact that a big slice of a young man's earning and productive years are taken away in his preparation for being a doctor. They have cut the requirements of premedical education down, to be more compatable with conditions as they exist today.

The 3-year nursing school, to my way of thinking, will always have a place in medical nursing. It cannot be replaced or substituted for the 1-year program of practical nursing. Neither can it be replaced or substituted by the 5-year course entailing a B.S. degree.

The pushing of a pen versus actual good bedside nursing care has been vigorously advocated during the last two decades so that the graduate and registered nurse of today gets far less actual beside nursing than did her predecessors. Neither the nurses nor the doctors appreciated this.

Geographically and strategically located nursing schools are essential to the economy and well-being of our Nation. In all cases of a strategic and a geographic location for a nursing school, however, does not entail its proximity to a higher school of learning whereby they could obtain a bachelor of science degree. The obtaining of a B.S. degrees does not offer the resolution of the nursing situation, either strategically or geographically. It is indeed very unrealistic.

As the wind is blowing now, in 10 years registered nurses will only be obtainable from higher centers of learning, which are usually situated in the larger cities. It can be taken more or less for granted that most of the nurses will remain there. Unfortunately, all the people in the United States do not live in larger cities; and they are the ones that are going to suffer, chiefly because of the fact that the smaller schools scattered throughout the smaller towns in the United States are being closed because of the aforementioned reasons.

The National Nurses Association can be a very powerful deterrent to such a trend. It is going to require vigorous work, organization, and perseverance to prevent the further onslaught of the smaller nursing schools. Being a registered nurse does imply certain very definite responsibilities beyond the scope of merely taking care of patients. One of these responsibilities is that each and every registered nurse should take an active part in their organization on their own level and institute a practical program whereby the smaller schools of the Nation can survive.

The attrition rate of the smaller nursing schools is alarming. It has already assumed serious and critical proportions; and if allowed to go unabated, it can only end in disaster.

Young women by the thousands are being robbed of the national heritage of wanting to be a nurse by the closing down of these smaller schools. Many of these young women who are desirous of becoming nurses find it financially impossible to attend the 5-year schools, so that by allowing this attrition of the smaller schools to continue, we are literally throwing down the drainpipe thousands of potential good nursing candidates. What a waste of manpower—waste is not the proper word; sinful would be better.

To make up for the financial deficit incident to the training of a nurse, several avenues are open; namely: (1) Charging a few cents extra each day for patient care. (2) Obtaining State financial aid. (3) Obtaining Federal financial aid. (4) Make a few compromises here and there and cut down on the amount of affiliation during which time the nurse is away from her home training school.

Certainly St. John's Hospital School of Nursing is to be congratulated for having carried on the fine work it has throughout the many decades insofar as the training of registered nurses is concerned. It is hoped and desired that in the foreseeable future they will again be able to resume the school of nursing.

In conclusion then, this country and this locality is faced with the serious problem of a shortage of trained registered nurses, which is incident to an unrealistic and paradoxical approach to the resolving of nursing standards insofar as they relate themselves to the educational requirement set down by the National League of Nurses. In my opinion, this program is destructive rather than constructive. It is high time, therefore, that a practical resolution to the problem be found and executed.

SPRINGFIELD, MO., *February 8, 1961.*

Re nurses training.

S. W. SCORSE, M.D.,
Docter's Building,
Joplin, Mo.

DEAR SID: Sister Ralph showed me your editorial in the Nursing Journal in which you condemned the progressive closing of nurses' training programs in small hospitals. Your statement that the more highly trained a nurse becomes, the more apt is she to spend most of her time doing paperwork is certainly true. When I was a deputy surgeon of the Second Army and we would put in a requisition for 50 nurses and the Surgeon General's Office would send us down 20 lieutenants, 20 captains, and 10 majors, we would refuse to take the majors on the basis that we needed nurses, not secretaries.

The same thing is true right now on our psychiatric ward. We have two graduate nurses who spend about 80 percent of their time in the nurses' office doing paperwork, typing, etc. I have agitated enough that they have decided to hire someone whom we can train as a ward secretary, thus releasing the two graduate nurses for nursing duties.

The problem which is the subject of your editorial is one that I have had more than a little to do with, not so much because of any position I held, but because of Mary. She was assistant chief of nursing personnel when we were married and she left the service. During the next 2 years that we stayed in Washington many of her old friends in the nursing profession would drop over, and most of these were nurses both in military and civilian life who were very high up in nursing circles. I cannot tell you how many hours I have spent listening to them discuss this very problem.

The best solution that was ever discussed among them was one in which it would be officially recognized that all registered nurses did not have to have the same amount of training, e.g., operating room nurses, bedside nurses, ward supervisors, and nursing educators. Just as various hospitals are approved for only 1 year of residency training, others for 2 years, and others for the full 3 years, hospitals could be accredited for 2 years of nurses' training, 3 years of nurses' training, etc., to fit in with the various levels of registered nurses. There would then be different courses leading to a certificate as a registered bedside nurse, which might require 2 years training; a registered operating room nurse, which might require 3 years training; a registered supervising nurse, which might require 4 years of training; or a registered nurse educator, which might require 5 years training and a B.S. in nursing education, just as any college has different courses leading to various degrees such as B.A., M.A., or Ph. D., yet all are college graduates. In this way, hospitals that could not qualify for accreditation for one of the longer courses might otherwise qualify for one of the shorter courses, rather than as it is now where a hospital either qualifies for all or none, bringing on the difficulties of which you spoke.

However, this thing has been going on now for at least 13 years that I know of, since that is when I was in Washington listening to all of this; and if they have not done anything yet, I don't expect them to do much in the next 13 years.

Oh tempora; Oh mores!

Sincerely,

ALEX L. BROWN, M.D.

KANSAS CITY, MO., *February 13, 1961.*

S. W. SCORSE, M.D.
Joplin, Mo.

DEAR DR. SCORSE: I have just read your very fine editorial in the Missouri Nurse, February issue. I think you are to be congratulated for the very fine presentation and bringing it to a head among the nursing profession. Your feelings in regard to the National League of Nurses is shared by each and every Doctor that is practicing clinical medicine, and unless we state our opinion freely and openly these conditions will continue to grow worse as time goes on. Again, we appreciate this fine article and congratulate you on presenting it in such a fine manner.

Yours truly,

B. W. ANDREWS, M.D.

DISA Delegates Hear About National Milk Sanitation Legislation

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, on March 10, I had the pleasure of meeting with the delegates to the 42d annual meeting of the Dairy Industries Supply Association and telling them of the work that is being done to enact my proposed national milk sanitation legislation and take the interstate marketing of milk out of the horse-and-buggy era.

As I observed in my speech, these dairy equipment suppliers have a large stake in this type of legislation to permit the free flow of high quality milk from State to State. At the present time, they must go to the added expense of custom-making dairy equipment to meet the varying State and local sanitation regulations. Naturally, the extra expense must be passed along to the purchasers of the equipment and eventually to the consumers of milk.

Under leave to extend my remarks, I would like to include my speech to the DISA delegates in the RECORD:

VARYING MILK REGULATIONS ADD TO COST OF DAIRY EQUIPMENT

Thank you, Mr. Chairman. I was very pleased to accept the invitation to speak to you delegates to the 42d annual meeting of the Dairy Industries Supply Association on a subject that is close to all of us, national milk sanitation legislation.

As a Representative of a dairy district in the dairy State of Wisconsin, I have a longtime and deep-seated interest in the many phases of the dairy industry. This interest has led me into a 4-year fight to correct one of the most unfair and costly milk marketing situations which confronts the dairy industry today. I am referring to the use by all too many States and municipalities of varying, arbitrary, and frequently outdated health standards as trade barriers against the free flow of high quality milk in interstate trade.

As dairy equipment suppliers, you are unhappily familiar with the confusion and unnecessary expense which results from the difference of opinion among many State and local sanitarians about construction requirements for equipment used in handling milk. Dairy equipment is manufactured for sale and installation all over the United States. In the interest of efficiency and economy, it is essential that once an effective standard for a piece of dairy equipment has been established, this standard be universally accepted.

You can well be proud that your organization was a pioneer in the effort to establish a set of sanitary standards for dairy equipment which would provide adequate protection for the public health. As early as the 1920's, the Dairy Industries Supply Association, then known as the Dairy and Ice Cream Machinery and Supplies Association, was working with city, State, and Federal sanitarians in developing what are now known as our 3–A sanitary standards for dairy equipment.

The first rough equivalent of a 3–A sanitary standard was developed in 1929, and applied to sanitary fittings used in milk plants. Throughout the 1930's the work on standards was slowly broadened. Following World War II, the sanitarians, the users, and the manufacturers of equipment began to formulate and publish the standards in the manner in which we know them today.

DISA has continued to make a vital contribution to this program through its task committees, which conduct the initial investigation on any request that a standard be developed for a certain type of equipment. That request may come from a sanitarian, the U.S. Public Health Service, representatives of users or an equipment company. As you know, a proposed standard must undergo thorough examination and considerable revision before it is signed by the chairman of the Committee on Sanitary Procedure of the International Association of Milk and Food Sanitarians, by the Chief of the Milk and Food Branch of the U.S. Public Health Service, by the chairman of the sanitary standards subcommittee of the dairy industry committee, and by the chairman of the DISA technical committee. With all of this study by all interested parties, including the watchdogs of our public health, a 3–A standard is certainly a valid standard for dairy equipment.

However, even though these 3–A standards are recognized as valid and in the public interest, they are not accepted in many areas by local sanitarians who are enforcing that area's particular and frequently peculiar set of milk regulations. As a result, equipment must be custom made to conform with varying standards, and this adds to the cost of the equipment. Naturally, the extra expense must be passed along to the purchasers of the equipment and eventually to the consumers of milk.

In discussing this problem with a Wisconsin manufacturer of bulk milk tanks, I learned his company has to manufacture a special tank for the State of Louisiana, which requires that a pipeline milk hole be added in the bridge of each tank and that a special valve be used on Louisiana installations. The States of New York and Georgia require a special type dipstick, and this means additional manufacturing steps and increased inventory for farm tank manufacturers. One county in Pennsylvania insists upon a stainless steel drip shield around the agitator shaft, even though all other areas accept a

neoprene or hard rubber shield for this purpose.

In the course of my work with national milk sanitation legislation, I have made an extensive study of milk regulations in different areas, particularly those which appear to be using their health rules to create a milk monopoly for local producers. For the life of me, I cannot see what some of those regulations contribute to the production of wholesale, sanitary milk.

Take, for instance, the regulation calling for longer legs than the accepted standard length on bulk milk tanks. I can't imagine what benefits can come from an extra 2 inches of leg on a bulk tank, unless perhaps the local health officials feel the farmers need the additional exercise that is involved in lifting the pails of milk the extra 2 inches. Now I am familiar with the amount of physical labor involved in farming, and I can assure you a farmer really doesn't need any extra exercise. Matter of fact, he could do with less.

Another ridiculous regulation which is used in some areas calls for a mirrorlike finish on the exteriors of bulk milk tanks, which never come in contact with the milk at all. One sanitarian insists that he will not approve a tank unless he can see his reflection when he looks at the equipment. I would suggest that he invest in a pocket mirror for that purpose.

One of our Southern States requires the bulk-milk pickup trucks to have refrigeration capacity to cool the pump compartment as well as the milk tank. Inasmuch as the pump compartment has to be opened at each farm on the trucker's route, you can imagine how much good is derived from this extra refrigeration equipment, which adds an additional $1,700 to the cost of each truck. I might add that only one State has this requirement. All of the other States have found such a regulation to be unnecessary and useless.

Milk is one of our most basic foods. It is also the only one of our major food products which is not allowed to more freely from State to State. In this day and age of modern transportation and refrigeration methods, we are still hampered by a horse-and-buggy type of interstate milk marketing. This works to the disadvantage of you dairy equipment suppliers, the bulk of dairy producers, and last but not least, to the disadvantage of consumers, who eventually have to foot the bill for the costs of custom-made equipment and duplicate inspections of milk.

Under the provisions of my proposed National Milk Sanitation Act, the U.S. Public Health Service's proven Milk Ordinance and Code would be established as the quality yardstick for milk shipped in interstate trade. Fluid milk and fluid milk products meeting the standards of this code could not be kept out of interstate trade because of varying local health rules.

My bill is designed to avoid adding another layer of expensive milk inspections to the existing system. Under the provisions of this measure, dairy plant inspections would continue to be carried on by State and local health officials. The results of their inspections would be certified by the U.S. Public Health Service. Milk from certified plants could move freely from State to State.

Fortunately, we did not have to start from scratch to formulate a good, sound set of uniform standards for quality milk. We already have a proven set of health regulations in the U.S. Milk Code. Designed as a model for the industry, the code is the work of top technical experts in both the health and dairy fields. Since the first code was published in 1924, it has been revised 12 times to keep pace with the rapid improvements in milk processing, handling and shipment. The code has already been voluntarily adopted as the basis for milk sanitation regulations by 36 States and 2,000 cities and municipalities.

However, we still have the hold-outs who are not about to give up their pet theories on milk sanitation to voluntarily accept the Public Health Service's Milk Code. These holdouts are the ones who are causing you to custom-make dairy equipment rather than produce it all on an efficient assembly-line basis.

I might add that the U.S. Milk Code recognizes the validity of your 3–A sanitary standards. The section relating to these standards reads as follows: "Health officers should accept new dairy equipment which complies with the 3–A sanitary standards promulgated jointly by the sanitary standards subcommittee of the dairy industry committee, the committee on sanitary procedure of the International Association of Milk and Food Sanitarians, and the milk and food program, Division of Sanitary Engineering Services, Public Health Service, Department of Health, Education, and Welfare. Equipment manufactured in conformity with 3–A Sanitary Standards complies with the sanitary design and construction standards of this ordinance and code."

Actually, the introduction of my national milk sanitation bill, H.R. 50, on the opening day of the 87th Congress was act three in my fight for this type of legislation. I had introduced my first milk sanitation bill, H.R. 7794, during the 85th Congress, and hearings were held on the measure before the Health and Science Subcommittee of the House Interstate and Foreign Commerce Committee. The subcommittee did not report the bill to the full committee, and the measure died at the close of the 85th Congress.

However, testimony at those hearings proved very useful to me in pointing out a number of weak spots in the legislation, and I set to work with public health officials to iron out those difficulties. By the time that the 86th Congress opened in 1959, I was ready with an improved milk sanitation bill, the much discussed H.R. 3840. This measure used a new approach to the problem and satisfied the major objections raised to my first milk sanitation measure.

I might add that H.R. 50, my national milk sanitation bill now before the 87th Congress, is almost identical to H.R. 3840. Only a few minor technical changes have been made in order to clarify the wording of several provisions relating to the State milk sanitation rating agency. Therefore, any references which I make to the provisions of H.R. 3840 also apply to H.R. 50.

Objections had been raised to the tendency of my first bill to force all milk up to the standards of the U.S. Milk Code. Many sanitarians were also of the opinion that this bill took away their rights to control the quality of milk shipped within their state or locality.

The new version does not require any State or municipality to adopt the U.S. Milk Code, nor must all milk shipped in interstate commerce conform to the code. However, milk which meets the high standards of the code cannot be excluded from any interstate market on health grounds.

My bill also contains many safeguards for areas receiving milk shipped from certified plants. Local health authorities would retain the right to inspect the milk upon arrival to make sure it had not deteriorated or been mishandled in transit. From there on, the handling, processing and sale of the interstate milk would have to meet the requirements applied to milk entering the market from sources inside the State.

This concept of Federal legislation to eliminate the misuse of milk sanitation regulations was proposed and developed by a committee of the Association of State and Territorial Health Officers. Following the introduction of my original milk sanitation bill, the association set up a committee to study the matter of Federal milk sanitation legislation. A year later, the Committee issued an official report titled "Need and Recommended Principles for Federal Milk Sanitation Legislation."

My bill is in full agreement with the principles set forth by the Association of State and Territorial Health Officers. And when hearings were held on H.R. 3840 in April of last year before the Health and Safety Subcommittee of the House Interstate and Foreign Commerce Committee, the association sent Dr. Russell E. Teague, commissioner of health of Kentucky, to present a strong statement in support of the legislation.

The revised national milk sanitation measure drew much stronger and more varied support than the original bill. When I introduced the first bill, I was joined by two of my colleagues in the House of Representatives, Minnesota Congressman FRED MARSHALL and EUGENE MCCARTHY, who is now Senator MCCARTHY. On the Senate side, the measure was sponsored by Senator HUBERT HUMPHREY, of Minnesota.

But when I introduced my revised milk sanitation bill, H.R. 3840, 19 other Congressmen introduced identical measures, and the bill had four sponsors in the Senate. To date, my current bill, H.R. 50, has been introduced by 13 Congressmen and has 4 sponsors in the Senate.

When hearings were held on H.R. 3840, so many witnesses appeared that the subcommittee was hard put to hear them all in the 3 days allotted to study of the measure. The list of supporters is an impressive one. In addition to the Association of State and Territorial Health Officers, we had favorable testimony from the National Association of Dairy Equipment Manufacturers; the U.S. Department of Health, Education, and Welfare; the International Association of Milk and Food Sanitarians; the Dairymen's League Cooperative Association of New York; the General Federation of Women's Clubs; the National Consumer's League; the Connecticut Milk Consumers Association, Inc.; the National Creameries Association; the Pure Milk Association of Chicago; the State Farmers Unions and Farm Bureau of Wisconsin and Minnesota; the Wisconsin Association of Cooperatives; the Wisconsin Council of Agricultural Cooperatives; the Governors of Wisconsin and Minnesota; the sanitary engineers from the North Carolina State Board of Health, and many other interested groups and individuals.

The bill received a favorable report from the U.S. Department of Health, Education, and Welfare, the Department of Commerce and the Bureau of the Budget. The Department of Agriculture remained uncommitted on the measure. When asked if Agriculture opposed the bill, a USDA witness replied: "No, but neither do we favor it."

However, when H.R. 50 comes up for hearings, I am hopeful that the Department of Agriculture will join the ranks of active supporters. Our new Secretary of Agriculture, former Minnesota Governor Orville Freeman, has always supported this type of legislation, and testified strongly in its behalf during the hearings on H.R. 3840.

President Kennedy endorsed the principles of national milk sanitation legislation at a midwestern farm meeting held in Des Moines, Iowa, last August. He noted that our constitutional convention was originally formed in order to promote interstate commerce and provide for its free flow. He added that he didn't believe any unnecessary or artificial standard should be used in any area in any part of American life to block the flow of commerce.

Incidentally, the 1960 Republican Party platform endorsed the National Milk Sanitation proposal, so both parties are on record in favor of the legislation.

Shortly after I introduced H.R. 50, I was pleased to learn that the American Public Health Association had gone on record in favor of the National Milk Sanitation measure. This action was taken by the association's governing council, which passed a resolution calling for enactment of legislation to permit the free flow of high quality milk from State to State. The association is the major organization of public health officials in the United States, having over 13,400 members. Significantly enough, this association seldom takes a position on proposed national legislation. National milk sanitation and Federal water pollution control are two of the few exceptions made to this rule by the association.

I understand that we are going to have a question and answer session following my talk. The question I hear most frequently is: What are the chances for passage of national milk sanitation legislation during the 87th Congress? Lacking a crystal ball, I can only assess the progress which has been made in this direction since I introduced my first milk sanitation bill and note the steadily snowballing support for this type of legislation.

As I mentioned before, my original milk sanitation bill received hearings but was not reported out by the subcommittee. My revised measure, H.R. 3840, had hearings and was favorably reported by the Health and Safety Subcommittee to the House Interstate and Foreign Commerce Committee. However, the full committee took no action on the bill, so it never reached the floor of the House for a vote. This year, I am pressing for early hearings before the full Interstate and Foreign Commerce Committee, and I am optimistic about the possibility of getting them.

Eventually, Federal legislation must come in this field, and the sooner it does, the better for the general welfare of the citizens of this country. Our present system of Balkanized milk markets benefits only the small minority of milk producers who are protected by these local milk monopolies. The perverted use by some States and municipalities of sanitary regulations as trade barriers against high-quality milk from other areas, works a hardship on you as dairy equipment suppliers. It works a hardship on your customers in the dairy industry. And it works a hardship on all of us as consumers.

Sanitary regulations should be used only to protect the public health, not for the protection of local monopolies. No one can question the fact that the U.S. Public Health Service has always been and always will be a zealous watchdog of our public health. For this reason, my national milk sanitation legislation calls for the use of the Public Health Service's Milk Code as the quality yardstick for milk moving in interstate trade and provides that the program be administered by the Public Health Service. I strongly feel that this is good, sound legislation and should be enacted into law as soon as possible.

Thank you for asking me to take part in your meeting. It has been a pleasure for me to be here.

Federal Excise Tax on Jewelry

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. BREEDING. Mr. Speaker, at the request of the Kansas Retail Jewelers Association, I wish to insert in the Appendix of the RECORD a resolution adopted by the association relative to the excise tax on jewelry. I believe this resolution should be considered in the overall study of tax revision:

To the Honorable U.S. Congress:

Whereas the 180 members of the Kansas Retail Jewelers Association request that the Federal excise tax on jewelry be transferred from the retail to the manufacturer's level in order that they may eliminate the unfair competition and discrimination against the products they must sell to sustain a livelihood; and

Whereas there is a definite relationship between those taxed products which the jeweler sells, competing with other items sold as gifts in substantial quantities which are untaxed, and taxed at the manufacturer's level. These items, therefore, discriminate against the jeweler. This tax acts as a deterrent to sales. The effect of the increase of the cost of the taxed article to the consumer, acts as a brake on sales. This was, in fact, the original purpose of the tax. That is, it was intended to cut down the sales of certain items in a wartime economy. The need to curtail sales has long passed—the present need is for more production and consumption to fit the needs and to expand our economy. This tax acts in exactly the opposite way; and

Whereas this tax is difficult and costly to administer. Not only is a hardship placed upon the small retail jeweler who ordinarily does not have a complete accounting department to calculate, collect, and remit this tax on behalf of the Government; but it is extremely costly for the Government to administer this tax since there are so many outlets from which this tax must be collected. Manufacturers ordinarily have complete bookkeeping departments to calculate, collect, and remit. Therefore, transferring this tax to the manufacturer's level would not only grant relief to the small jeweler, but would also simplify collection on the Government's behalf because of the relatively small number of retailers and so-called wholesale retailers from which this tax is collected. Therefore, this would not only reduce the costs substantially, by saving the Government money administering the tax, but would plug many loopholes on the literally thousands of items where the tax status is doubtful, and the collection of the tax often has led to arbitrary practices. This would also increase revenues by plugging the loopholes in tax collection by taxing the article at its source—the manufacturer's level, thereby eliminating many items sold through certain outlets, etc., on which the tax is overlooked: Now, therefore, be it

Resolved, That the Kansas Retail Jewelers Association and its 180 members respectfully request and urge the Honorable Congress of the United States of America to take immediate action toward transferring this 10 percent Federal excise tax on jewelry at the retail level to a 10 percent Federal excise tax at the manufacturer's level thereby:

1. Eliminating unfair and discriminatory competition.

2. Removing sales deterrents placed in wartime for the duration and six months, to discourage sales of jewelry; thus fulfilling a need for more production by encouraging consumption, providing a much-needed expansion and employment in our economy.

3. Lowering administrative costs to the Government giving needed savings of tax dollars.

4. Removing loopholes to increase revenues by taxing the article at its source.

5. Relieving the hardships placed on the small businessman by removing from him the responsibility of calculating, collecting, and remitting this burdensome tax.

Excessive Importation of Lamb and Mutton Must Be Curbed

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. FISHER. Mr. Speaker, on last Friday I introduced H.R. 5935, which reads as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph 702 of the Tariff Act of 1930 (19 U.S.C., sec. 1001, par. 702) is amended by inserting "(a)" after "702." and by adding the following subparagraph:

"(b)(1) Sheep, lambs, mutton, and lamb, provided for in subparagraph (a), entered, or withdrawn from warehouse, for consumption, during any calendar year, in excess of the average annual quantity thereof imported during the five-year period ending December 31, 1960, shall be subject to duty at the following rates, in addition to any other duties imposed upon the importation of such articles:

"Mutton and lamb, 10 cents per pound.

"Sheep and lambs, $1.50 per head.

"(2) The quantity of the above articles entitled to enter under this subparagraph during the unexpired portion of the calendar year 1961 without payment of additional duty shall be the annual quota quantity less one-twelfth thereof for each full calendar month that has expired in such year."

SEC. 2. The amendments made by the first section of this Act shall take effect as soon as practicable, on a date to be specified by the President in a notice to the Secretary of the Treasury following such negotiations as may be necessary to effect a modification or termination of any international obligation of the United States with which the amendment might conflict, but in any event not later than sixty days after the date of enactment of this Act.

Mr. Speaker, the need for this legislation becomes apparent when we survey the vast increase in the imports of lamb and mutton, especially during the past 3 years, from countries with much lower production costs than ours. I am alarmed because dressed lamb is being landed in this country, duty and freight paid, and offered to our retail outlets at prices 10 to 15 cents per pound below our dressed market. Making the situation even more critical is the fact that lamb and mutton imports are arriving here at a time when our own live lamb market is experiencing a 15-year low in prices.

Even though Australian and New Zealand meat board officials, as well as American packers and importers, have given assurance that it is not their intention to injure the American lamb producers through the importations of lamb and mutton, there arrived in Newark, N.J., early this month the S.S. *Essex* from Australia with 220½ tons of lamb cuts and 2,016,512 pounds of boneless mutton. It arrived here right in the midst of the lowest U.S. lamb prices since the end of World War II.

In view of this record, who can say the imports are not excessive, and who can say that these excessive imports have not and are not now doing serious dam-

age to our domestic producers? The record speaks for itself. Five years ago, before the massive upsurge in imporattions of lamb and mutton began, our lamb market was fairly stable and steady. The domestic demands were being met. But 5 years later, after the vast increase in imports, what do we find? We find the American lamb growers getting the lowest prices for their lambs since World War II.

The bill I have introduced would not prevent 1 pound of lamb or mutton from coming into the United States. It simply provides that whenever in any calendar year imports exceed those based on the a verage annual quantity imported during a 5-year period, that the tariff would be increased from present extremely low levels on the remaining quantity shipped in during the year. This would partially compensate for the increased costs of production in this country.

Lamb producers in the United States, through research, breeding programs, promotion, and through innovations in greater operating efficiency, such as fencing, reseeding, health measures, and conservation practices, are endeavoring to reduce costs of production. Progress has been made. But it is obvious that even with very peak efficiency, high operating costs in the United States would prevent our ever being able to produce lambs which could compete pricewise with those from New Zealand, Australia, and Iceland.

Let us again look at the record. Dressed lamb imports rose from 1.4 million pounds in 1955 to an alltime high of 12.4 million pounds in 1960. Last year mutton imports so overshadowed the market that prices for domestic ewes dropped to approximately $2.75 per hundredweight live. In many cases this would not even pay freight and handling charges from the ranch to the market.

While shipments of live lambs are halted at the present, at least temporarily, such imports could again become a threat as they did last year. Duties on live lambs have been reduced from $3 per head in the Tariff Act of 1930 to 75 cents per head. My bill provides for a partial restoration of this duty, or an increase to $1.50 per head whenever lamb imports in any 1 year exceed the average annual importations for a 5-year period.

Mr. Speaker, it is evident that my bill is a fair one, not only from the standpoint of our own growers but also as applied to our friends who choose to make use of the American market for disposal of their lamb and mutton. An escape clause action under section 7 of the Trade Agreements Act would permit maximum duties considerably higher than those set forth in this bill.

Ever-increasing importations of lamb and mutton furnishes a good example of how an American industry can be seriously adversely affected as a result of our foreign trade policies of the past 25 years. We must encourage foreign trade, but in the administration of our trade policies let us not lose sight of the well-being of our own people. Other countries do not hesitate to protect their own people against the adverse effect of excessive imports. Why should we not do as much for our citizens?

I know a great number of my colleagues share my concern over domestic industry and job losses occasioned by the flood of imports. It is my hope that prompt and favorable consideration can be given this bill by the Ways and Means Committee.

Lifting of Ban on Importation of Russian Crabmeat Ignores U.S. Fishing Industry

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. PELLY. Mr. Speaker, a few days ago, as a result of numerous complaints from interested constituents, my attention was attracted to an administration proposal to lift the ban on the importation of Russian crabmeat into the United States.

I immediately addressed a letter to the Secretary of State, The Honorable Dean Rusk, protesting any such action, in the strongest possible language. My objections were based on the effect the policy decision would inevitably have on the economy of the vital fishing industry in my district and State of Washington.

I deliberately avoided any reference to the obvious appeasement implication in the lifting of this ban. That letter was mailed on March 16. Four days later, on March 20, I was advised by telephone that within 30 minutes the Treasury Department would formally announce by means of a press release the lifting of the ban.

Three days later, on March 23, the State Department finally favored me with a "too little and too late" reply to my formal protest. Too late in that the announcement had already been made and too little, by way of justification of the decision—and I quote from the State Department's letter:

> The Secretary of the Treasury, pursuant to his responsibilities, under the applicable law, (sec. 307 of the United States Tariff Act), found that there is no current evidence that prison or forced labor is still being used in the production of Soviet canned crabmeat. On the basis of this judgment, he determined that the prohibition should be removed.

The fallacy of this argument is obvious. Indeed, it would be laughable were we not dealing with such a serious matter involving the foreign policy of the United States.

But I challenge either the State Department or the Treasury Department to produce documented evidence of any proper investigation to determine whether or not Soviet canned crabmeat is still packaged by slave or prison labor.

Neither the CIA or any other cloak-and-dagger agency has filed any report to substantiate this statement. Consequently, the only obvious current evidence is that furnished by the Kremlin itself.

If my judgment is wrong in this instance, then let the administration's policymakers present documented evidence to support their statement "that prison or forced labor" is not currently being used in the production of Soviet canned crabmeat.

Furthermore, the untimely haste involved in finalizing a policy decision involving, as it does, an important segment of our domestic economy, is certainly subject to critical review and censure. Why was the fishing industry never consulted or invited to express its view?

If the fishermen and the fishing industry of the Pacific Northwest are to be the expendable shock troops in this friendly gesture to the Kremlin, they should at least be told what they are dying for. Instead, and by administrative edict, to paraphrase the gladiators of ancient Rome, the fishermen of America can only stand before the State Department and say "We who are about to starve salute you."

So, Mr. Speaker, I urge that the House Committee on Foreign Affairs undertake an investigation of this policy decision, so destructive to the vital fishing industry in the Pacific Northwest. Otherwise, I predict that the housewives of America will enter the fray, wielding the most potent weapon of all, a national boycott against the purchase of Soviet crabmeat—crabmeat tainted, either directly or indirectly, with the blood of freedom-loving people from all four corners of the earth.

President of Inter-American Press Association Diagnoses "Yankee Imperialism" Smear

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. EVINS. Mr. Speaker, the editor of La Nacion, San Jose, Costa Rica, and president of the Inter-American Press Association, addressed the recent meeting of the directors of the press association on "Yankee imperialism."

Mr. Ricardo Castro Beeche told the newspapermen what "Yankee imperialism" has really meant to the world and clearly refutes statements which Soviet propagandists use in an attempt to embarrass the United States.

Mr. Speaker, the Nashville Banner reprinted Mr. Beeche's very excellent tribute to this country in its March 23 issue and I ask unanimous consent that the article be reprinted in the Appendix of the RECORD.

The article follows:

WHAT IS "YANKEE IMPERIALISM"?—SACRIFICE FOR OTHERS, LATIN EDITOR SAYS

(EDITOR'S NOTE.—While blackguards rant, with posters and utterances translated "Yankee, Go Home," there still are voices of

reason rebuking that canard with truth. While Castroites in the Caribbean or closer home vilify the United States to woo Latin America into their camp of malice and contempt—there are men with respect for facts and the courage to employ them in answer to the screed of hate. Ricardo Castro Beeche, editor of La Nación, San José, Costa Rica, is such a man. He is president of the Inter-American Press Association. Two weeks ago, at the Acapulco meeting of IAPA directors, he diagnosed the "Yankee imperialism" smear. Because of his tribute to our country, the Banner is publishing his remarks.)

Yankee imperialism means a country that has gone to two World Wars with enormous sacrifice of lives and money and which hasn't taken a single inch of land from the beaten countries.

It means a nation which devoted hundreds of millions of dollars for the reconstruction of the defeated countries after the war through the Marshall plan—and these are the very countries whose people were victims of their own dictatorial governments.

Yankee imperialism is a country which has spent millions of dollars in technical assistance and in food over all these years in order to have many people of the world from hunger and misery. Yankee imperialism says a man has a right to happiness through a worthy life.

Perhaps Soviets could tell us how this compares with the imperialism which Russia exercises. The Soviets maintain all the countries defeated and occupied by them under their yoke without freedom at all; and moreover, they try through subversive means to destroy the democracies in order to make themselves the lords and masters of the world.

Washington Daily News Publishes Anfuso Article on U.S. Science Academy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ANFUSO. Mr. Speaker, today's issue of the Washington Daily News carries a special 24-page section on "Science in the Nation's Capital," containing many interesting articles which show that Washington is rapidly becoming the science city of America.

Among the articles published, is one written by me and entitled "Why Not a U.S. Science Academy Here?" in which I discuss the proposal to establish a Science Academy. As my colleagues well know, I had introduced a bill H.R. 1 on the first day of the present session. It so happens that today and tomorrow the House Science and Astronautics Subcommittee, of which I am the chairman, is holding hearings on this bill. This is, therefore, very timely and for this reason I wish to insert my article into the RECORD:

WHY NOT A U.S. SCIENCE ACADEMY HERE?
(By Representative V. L. ANFUSO)

I have had bills in the previous two Congresses advocating the establishment of a Science Academy along somewhat different lines. The new bill, H.R. 1, has been completely rewritten after consultations with leading scientists, educators, and Government officials, and after hearings held in recent months by a House Science and Astronautics Subcommittee of which I am chairman.

The proposal to establish a National Science Center is intended to meet future national needs for trained manpower and new scientific knowledge, and also to help win the scientific and technical phase of the cold war. As proposed in the bill, the Science Center would be comprised of:

THE BEST

First. An educational institution of the highest caliber to be known as the National Science Academy, intended for both undergraduate and postgraduate studies in science and engineering.

Second. Research institutes in various scientific fields for the promotion of scientific knowledge and research to advance the Nation's economy, health, welfare, and progress.

Third. A Scientific Career Service for obtaining and retaining the personnel necessary to carry out the scientific, technological and research functions of the U.S. Government. Graduates of the Science Academy and other qualified persons able to meet its standards would be eligible for placement in the Scientific Career Service.

COEDUCATIONAL

The educational institution would be open to young men and young women desiring to make a career in science, while the research institutes would invite outstanding scientists to work in their laboratories on scientific, medical, and other projects designed to benefit humanity.

The realization of my proposal would unquestionably have a beneficial impact on scientific progress and education in this country, and it would also go far in building up the image of America as a nation devoted to the utilization of science for the benefit of all mankind and for the attainment of a peaceful world. A science center of this type, dedicated to peaceful purposes, would help raise our prestige in the eyes of all nations to new and greater heights.

GRADUATE WORK

Graduate training will be provided for those who have completed undergraduate studies at accredited schools and possess special qualifications for graduate work in the sciences. A 6-year straight-line program leading to a doctor's degree is authorized for undergraduates. Also authorized are a program of college scholarships in science and engineering at other schools and a program of graduate fellowships both at the research institutes of the Academy and at other colleges and universities.

Research institutes in specialized fields of science are to be established, among them an Institute of Meteorology, an Institute of Oceanography, an Institute of Astronautics, an Institute of Medicine, and others deemed necessary.

A limited number of foreign nationals from friendly countries may be admitted, provided they pass a security check, but their number shall not exceed 10 percent of the total number of science trainees attending the Academy.

The proposed Science Center would be nonmilitary in nature and would emphasize the peaceful pursuits of the United States in the sciences, which can and must be separated from military scientific research. It would compete with the so-called Freedom University in Moscow by inviting foreign students to come to the United States to study and to develop into mature scientists able to help their underdeveloped countries. Here they could pursue their studies and research in freedom, observe our way of life, and become convinced of our peaceful intentions.

"GAP"

The Science Center would fill a gap presently existing in trained scientific personnel by providing education and training for young men and young women who, under present circumstances, could not obtain such an education. Outstanding graduate students and noted scientists from all over the country would be attracted to the Academy and its research institute. Creation of a Science Career Service would elevate the scientist's stature in the public eye as a man interested in the promotion of human welfare and peace. At the same time, the U.S. Government would be guaranteed of a sufficient supply of scientists in this fast-moving era of world competition.

The research institutes, which we would strive to make the largest in the world, would provide the most modern facilities available for research. The best scientific brains from our own country, as well as selected scientists from abroad, would be invited to work there.

There is no need to stress the importance of the basic and engineering sciences in the world today. My bill would go a long way toward meeting our most urgent national problems in science and engineering: The shortages of trained manpower (and womanpower) for private and public employment, of qualified science teachers, and of facilities and funds for scientific research. The bill would also help to overcome our lag compared with the U.S.S.R. in the annual number of graduates both in engineering and in many forms of natural science.

REDS AHEAD

In 1959, for example, the U.S.S.R. produced about three times as many graduate engineers as the United States. The figures given by our National Science Foundation show 38,000 graduating in the United States, compared with 106,000 in the U.S.S.R. More surprising still, the United States is lagging even in the total number of professional engineers: 850,000 compared with the Soviet figure of 894,000. In graduates specializing in purely scientific studies, apart from engineering, the only field in which we lead the U.S.S.R. at the present time is the physical and mathematical sciences.

The Science Academy and its research institutes would serve to stimulate the people of the underdeveloped countries in furthering their economic growth, in improving their national health, in developing their human and material resources, and in attaining a higher standard of living. In this way, we could be instrumental in creating through science a world of abundance where no people need be in want. In the years to come, this important institution would pay for itself in many ways through better education, advanced research, scientific progress, and good will.

Not So Flexible

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DERWINSKI. Mr. Speaker, in view of the greater than usual budget-busting request for foreign-aid handouts, an editorial which appeared in Chicago's American on March 21 is a vivid reminder to the Congress that the entire

program should receive a thorough and nonpartisan discussion this year.

NOT SO FLEXIBLE

We Americans like to boast of the flexibility of our thinking, but our foreign-aid efforts keep demonstrating that we don't really have much of it. At least those Americans who are sent to design and build facilities in foreign countries often don't.

Take those barracks for the Pakistani tank force, which the United States military-aid people have built at Kharian. As the House Foreign Affairs Committee has reported, building them cost the American taxpayers $83 million and they are replete with costly fixtures which bemuse the Pakistani tankmen.

These include huge walk-in refrigerators in the messhalls. They were designed to keep the meat supply fresh until it can be cooked and served. But the soldiers are Moslems, and the Moslem religion prefers that the animals be killed the same day the meat is to be eaten. So the meat never goes into the refrigerators. It comes into the station on the hoof and easily stays fresh long enough to get into the pot.

Also, the barracks washrooms are equipped with long rows of shaving mirrors. The Pakistani finds these admirable but baffling.

A Pakistani soldier doesn't shave when he gets up in the morning. He doesn't shave himself at all. He waits until siesta time, then squats companionably face to face with an itinerant barber, also squatting, and gets shaved.

The refrigerators and shaving mirrors demonstrate, we're afraid, a rather shocking one-trackness in the world-saving American mind. The Americans who installed them were thinking only of what they would want installed in a kitchen and in a washroom, not of what the Pakistani would want.

And maybe this partly explains our failure to buy more love abroad with our do-gooding.

Civil War Reminiscences Have Special Meaning

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, one of the few remaining Civil War widows in Wisconsin lives in my home district at the town of Elmwood, Wis. As we observe the Civil War centennial during these troubled times, her reminiscences of her husband's devotion to his country take on a special meaning. Under leave to extend my remarks, I would like to include in the RECORD Mrs. Maud Green's story as it appeared in the Elmwood Argus:

ELMWOOD CIVIL WAR WIDOW IS ONE OF FEW REMAINING IN WISCONSIN

Mrs. Maud Smith, a familiar figure to Elmwood residents as she takes her almost daily walk to the post office and cheerily greets her friends in passing, was featured in a story in the Eau Claire Leader this week.

Mrs. Maud I. Smith, 87, has an apartment in the Leo Manor home and has walked the five blocks to the business district many times in the 14 years she has lived in Elmwood. Cold weather doesn't stop her nor do the hints from her daughter, Mrs. Earl DeLong, Elmwood, that she restrict her travel. Talking about that advice to a third person, Mrs. Smith confided jokingly, "Things have certainly changed. I used to tell her what to do." A son, Ira, also lives in Elmwood.

Mrs. Smith married Willard H. Smith December 4, 1900, and they lived in Eau Galle. She had met him when he stopped at the farm to pick up cream and remembers him as a good man and a fine father. She was born in the town of Rock Elm.

Smith was born in New York State but grew up around Eau Galle and worked as a youth for a lumber company, piloting a boat in the summer and cooking in the camps during the winter.

In March of 1864 he enlisted at Eau Galle in company E of the 37th Wisconsin Infantry and served in the Army of the Potomac under Grant at Spotsylvania, Cold Harbor, and 10 months in the siege of Petersburg before Richmond fell. He was present at Appomattox and took part in the Grand Review in Washington receiving his discharge in July 1865.

He was wounded in the left leg at Reams Station, Va., and spent 16 days in a hospital. After the war he was commander of the John Green Post of the GAR for 12 years. He farmed about 7 miles southwest of Eau Galle for many years.

He first married in 1872. Of the eight children by that marriage, four sons and a daughter survive. They are Milton, Harrison, Mrs. Cora Klatt, Elmwood, Harwood, of Eau Claire, and Edwin, Madison.

Mrs. Smith and Mrs. DeLong both recall his devotion to his country. The American flag was always flown on holidays and Memorial Day services were one of the highlights of each year. He was 56 years old when he married Maud Smith and she was 27.

Smith was a Dunn County board supervisor for 17 years and its chairman for 4. He was a school district clerk for 20 years and served one term as sheriff. He was also active in Masonic affairs. He died September 26, 1929.

Mrs. Smith reads a veterans' paper, "The National Tribune" regularly. "What little housework there is to do doesn't take me very long," she says. Her hearing isn't as good as it once was but it doesn't interfere with her sense of humor.

Lower Missouri Basin Under Attack

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. ELLSWORTH. Mr. Speaker, although competition with the Soviets seems to be the watchword, it has been proven time and time again that only by cooperation with one another can we in the United States achieve the orderly and dynamic progress that has characterized, for instance, the development of the whole Missouri Basin under the Pick-Sloan plan. The Kansas City Star of March 21, has commented editorially on some recent developments in that connection, and I would like to draw the attention of the entire Congress to the situation as outlined in the editorial which, under leave to extend my remarks, I insert at this point in the RECORD:

LOWER MISSOURI BASIN UNDER ATTACK

After many months of threats the public power interests of the upper Missouri Basin have moved to seize the main benefit of the upstream reservoirs for the upriver States. Speaking through their Senators, they have asked the President to shut off the flow of impounded waters for use downstream in Missouri, Kansas, Nebraska, and Iowa.

The attack, specifically, is aimed at stopping the flow of water for navigation. But the scope of the assault is much broader. The Missouri River program (the Pick-Sloan plan) was set up for the development of the Missouri Basin through all the benefits that come from flood control and the impounding of water behind the big dams. To the upriver States hydroelectric power is the basis for industrial development and irrigation is the means of developing agriculture.

Farther down the river, the hope for industrial growth depends on a bountiful supply of water for industries and low-cost barge transportation for the bulk commodities used by industry.

The proposal for shutting off the flow of water would deny the downriver States their share in the growth promised by the tremendous tax investment in the greatest series of reservoirs ever built by man. Of course, it would leave the downriver States with the benefits of flood control which is very important. But far more was promised by the Pick-Sloan plan.

If this move succeeds it will be a conspicious failure to keep faith by upriver States. The dams were made possible only because the whole basin joined in a common effort.

Prior to the Pick-Sloan plan the upper and lower river States fought for their special interests and got nowhere. The dry northern States tried to sell the Department of Interior plan for irrigation and public power with the participation of the States downstream. Their spokesman was W. G. Sloan, of the Interior Department.

At the same time the downstream interests gave their support to the Corps of Engineers plan for Missouri River development. The Corps of Engineers concentrated on flood control and the stored water that could be used for navigation and industrial growth. The spearhead of this plan was Col. Lewis A. Pick (later Chief of Engineers and a lieutenant general).

At the end of World War II, the two conflicting groups faced the fact that neither could succeed alone. They joined forces and Congress put the two plans together into the one big program known as the Pick-Sloan plan.

Working together for their mutual purposes, the two groups and the two departments of Government were able to achieve an unprecedented series of manmade dams. The reservoirs now extend all the way from the South Dakota-Nebraska line to the far reaches of the river in northern Montana.

This great public works project is a monument to cooperation. It has already virtually ended the threat of big floods on the main stem of the Missouri. Several more years may be required to give the reservoirs the amount of water intended for permanent storage.

Already it has been possible to raise the commitments for hydroelectric power above the original plan. The lower river States are beginning to feel the benefit of an assured supply of water. But the overall development expected from the Pick-Sloan plan is still in its early stages. If it continues as planned the future is almost limitless.

Now the big job is to keep the principle that made the Pick-Sloan plan possible. That principle is cooperation—cooperation for the benefit of the whole Missouri Basin. If the upriver States were permitted to get by with their destructive maneuver the

whole cause of American river development would suffer. No part of the country would be able to count on any commitments that might be made by an administration or Congress.

We would say this is the time for all Congressmen and Senators in this part of the country to start fighting. And the challenge should stir action among all other Members of Congress who believe in the multiple purposes of sound river development.

Reports Submitted by Department of Interior on Wilderness Preservation System

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the CONGRESSIONAL RECORD copies of the reports submitted by the Department of the Interior to the chairman of the House Committee on Interior and Insular Affairs and the chairman of the Senate Committee on Interior and Insular Affairs on my bill, H.R. 1762, and similar legislation to create a national system of wilderness preservation. The administration has endorsed such legislation.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 17, 1961.

DEAR MR. ASPINALL: Your committee has requested reports on H.R. 293, H.R. 299, H.R. 496, H.R. 776, H.R. 1762, H.R. 1925, and H.R. 2008, all of which relate to the establishment of a national wilderness preservation system.

We urge the enactment of this proposed legislation for the establishment of a national wilderness preservation system. We recommend that it be amended in conformance with a similar proposal, S. 174, and our suggested amendments thereon, as set forth in our report of February 24, 1961, copies of which are enclosed.

Wilderness resources contain basic values and provide undeniable benefits to the American people. Establishment of a wilderness system is in the public interest and we believe the current proposals recognize equitably the various facets to the problem of wilderness preservation. We believe that many if not all of the objections that have been raised in the past to wilderness proposals are resolved by the current bills.

These proposals would delimit the wilderness system to well-defined areas and would prescribe an orderly method for establishment of the system. Also, these proposals prescribe sound procedures applicable to both executive and legislative branches of the Government in determining the particular areas or parts of Federal reservations to be included in the wilderness system.

The Bureau of the Budget has advised that, subject to your consideration of our recommended amendments, the enactment of this proposed legislation would be in accord with the President's program.

Sincerely yours,

JAMES K. CARR,
Acting Secretary of the Interior.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., February 24, 1961.

DEAR SENATOR ANDERSON: Your committee has requested a report on S. 174, a bill to establish a national wildlife preservation system for the permanent good of the whole people, and for other purposes.

We urge the enactment of this proposal. We suggest hereafter certain minor amendments to the bill that we believe would be desirable.

Wilderness resources contain basic values and provide undeniable benefits to the American people. We believe this has been amply demonstrated from the previous hearings of your committee on wilderness proposals. In our opinion, the establishment of a wilderness ssytem, along the lines outlined in this bill, is in the public interest.

This proposal recognizes equitably the various facets to the problem of wilderness preservation. We believe that it resolves many, if not all, of the objections that have been raised in the past to wilderness proposals. It clearly delimits the wilderness system to well-defined areas and prescribes an orderly method for establishment of the system. It prescribes sound procedures applicable to both the executive and legislative branches of the Government in determining the particular areas or parts of Federal reservations to be included in the wilderness system.

The system to be established by this bill would be composed of federally owned lands. Portions of the National Park System, wildlife refuges, and game ranges administered by this Department, and portions of the national forests administered by the Department of Agriculture would be included in the system. It should be noted in this connection that the National Park System areas, wildlife refuges, and game ranges that we administer would not be included immediately following enactment of the proposal in the wilderness system. Portions of these areas would be selected and included in this system over a 10-year period, in accordance with prescribed procedures set forth in the bill. In the case of the national forest areas, however, there would be included in the wilderness system immediately upon enactment of the legislation those national forest areas classified by the Department of Agriculture as wilderness, wild, primitive, or canoe. The primitive group of areas, however, would be subject to subsequent review over a 15-year period in order to determine which of these areas should be retained in the system.

One of the major provisions of the bill is contained in section 3(h). This subsection provides that the addition of new wilderness areas to the system or the elimination of the areas from the system that are not specifically provided for by the bill shall be made only after specific authorization by law for such addition or elimination. We believe this requirement is desirable.

Section 2 of the bill contains a statement of policy that would express the desire of the Congress to secure for present and future generations the benefits of an enduring resource of wilderness. Sections 2 and 6 contain the general provisions that would govern the administration of wilderness areas as well as prescribe the purposes and uses of the system. Significantly, the bill provides that the system shall be administered for the use and enjoyment of the American people, in such manner as will leave the system unimpaired for future use and enjoyment as wilderness, and so as to provide for the protection of the areas, and the preservation of the wilderness character. This provision is very similar to the requirements now applicable, pursuant to the basic National Park Act of 1916 (16 U.S.C. 1–3), to the National Park System. On this point we observe that wilderness type areas constitute an important segment of the National Park System and have contributed heavily over the years to the enjoyment by the American people of wilderness values.

We believe that section 6(a) is worthy of special note. This subsection provides that nothing in the act shall be interpreted as interfering with the purposes stated in the establishment of or pertaining to, any park, monument, or other unit of the National Park System, or any national forest, wildlife refuge, game range, or other area involved, except that any agency administering any area within the wilderness system shall be responsible for preserving the wilderness character of the area and shall so administer such area for such other purposes and also to preserve its wilderness character. This provision, we believe, has the effect of preserving the status quo to the maximum extent in the management of the Federal reservations in question, subject however to the overall requirement that the administering agencies carry out the essential requirements set forth in the bill for wilderness preservation.

While the bill prohibits, consistently with wilderness preservation, as prescribed in section 6(b), commercial enterprises within the wilderness system, roads, motor vehicles, motorized equipment, et cetera, it provides in section 6(c)(4) that commercial services may be performed within the wilderness system to the extent necessary for activities which are proper for realizing the recreational or other purposes of the system.

In addition to the general provisions relating to administration of the wilderness system, there are specific provisions in the bill that are applicable to national forest areas. These provisions would permit certain uses to continue that are already well established within the forest areas in question. Also, certain additional uses may be authorized by the President upon his determination that such use or uses in the specific area will better serve the interests of the United States and the people thereof than will its denial. In the case of wildlife refuges and game ranges, the bill provides that any existing use or form of appropriation authorized or provided for in the Executive order or legislation establishing such areas and which use exists on the effective date of the act may be continued under such authorization or provision. In this connection, we note that the bill makes no provision for special uses within the National Park System. We believe this is appropriate and is consistent with long established policies and standards, established by the Congress for administration of that system.

There are other provisions that are worthy of mention. Boundary adjustments may be made in wilderness areas in accordance with certain prescribed procedures whereby the appropriate Secretary after public notice and hearing, subsequent recommendations to the President and transmittal of such recommendations to the Congress the boundary adjustment may be accomplished if the Congress makes no objection thereto. We note that in the case of areas of the National Park System the bill provides for the inclusion of those areas of more than 5,000 acres where such areas exist without roads. The Secretary would be required to determine what portions of the parks would be required for roads, utilities, et cetera. The bill contains no minimum acreage limitations regarding wildlife refuges and game ranges to be included in the system.

We recommend the following amendments to this bill:

1. On page 5, line 7, strike out the word "ten" and insert in lieu thereof the word "fifteen".

This amendment is suggested in the interest of uniformity. Fifteen years are allowed in the bill for the review of certain national forest areas to determine their suitability for inclusion in the wilderness system. We believe that National Park System areas, as well as the wildlife refuges and game ranges, should be governed by the same requirement.

2. On page 6, line 16, beginning with the word "Further" strike out the language in the sentence up to and including the word

"area" in line 20, and substitute in lieu thereof "The purposes of this Act are hereby declared to be within and supplemental to but not in interference with the purposes for which parks, monuments, and other units of the National Park System are administered".

This amendment is desirable in the interest of clarification. It is in harmony with a similar provision relating to national forests in section 3(b)(2).

3. On page 7, line 10, strike out the word "ten" and insert in lieu thereof the word "fifteen".

As previously explained regarding a similar amendment relating to national parks, this amendment is suggested for the purposes of uniformity. If this amendment is adopted, in the interest of promoting further clarification, the next amendment would be desirable.

4. On page 7, line 10, insert a period immediately following the word "Act" and strike out the rest of the sentence beginning with ", and" in line 10 and ending with the word "jurisdiction." in line 16.

5. On page 8, line 10, following the words "shall" insert ", if found to be justified by the Secretary,".

6. On page 9, revise line 8 to read "(g) Public notice when given by either the Secretary of the".

We consider this amendment to be desirable in the interest of clarification. Subsection (g) provides that "The public notice by either the Secretary of the Interior or the Secretary of Agriculture that any areas to be proposed under the provisions of this Act for incorporation as part of the wilderness system shall segregate such area from any or all appropriation under the public land laws to the extent deemed necessary by such Secretary." The only requirement for the giving of public notice, however, is contained in subsection (e) concerning modification of boundaries. We believe the language of subsection (g) probably would be limited in application to boundary modifications under subsection (e). On the other hand, it appears that the intent of subsection (g) is to have the provision apply also to new areas. Our amendment is suggested in order to permit the giving of notice, and the segregation of the lands in question from the public land laws pursuant to subsection (g), in the discretion of the particular Secretary. There would be no need to give notice or use the authority under subsection (g) to segregate the lands within the National Park System from the public land laws as these areas are already segregated from such laws.

7. On page 9, line 22, following the word "any" insert the word "new".

This is a clarifying amendment.

8. On page 10, line 7, strike out the words "privately owned" and insert in lieu thereof the words "non-Federal".

This is a clarifying amendment.

(9) On page 10, line 25, and on page 11, line 1, strike out the words ", except that any", and insert in lieu thereof ". Each".

This amendment is suggested for clarification. So far as the national parks are concerned, the present language indicating that an exception is required to preserve the areas for wilderness purposes is inaccurate. These areas, as we have indicated previously are administered in keeping with wilderness standards.

The Bureau of the Budget has advised that, subject to your consideration of the foregoing amendments, enactment of S. 174 would be in accordance with the President's program.

Sincerely yours,

STEWART L. UDALL,
Secretary of the Interior.

The Crusade for Democracy in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 28, 1961

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a statement by Luis A. Ferre, a partner in the firm Ferre Enterprises at Ponce, P.R.

Mr. Ferre indicates that he for one has not lost faith in the democratic way of life and feels it can be adapted successfully to South American countries.

Through the establishment of a Pan American Code, Mr. Ferre believes that much could be accomplished in the way of economic, cultural, and political progress. Virtually every facet of our democratic way of life, including unionization, collective bargaining, minimum wages, maximum hours of work, unemployment insurance, and even social security, could be incorporated into the Pan American way of life if the governments of those countries interested would but approve of such legislation.

Homeownership must be spurred on by a system like our FHA, cultural centers should be financed from a common fund, and a student exchange program must be established to better acquaint all concerned with the patterns of existence in the various countries.

Mr. Ferre's statement follows:

THE CRUSADE FOR DEMOCRACY IN THE WESTERN HEMISPHERE

(A program for action by Luis A. Ferre, partner, Ferre Enterprises, Ponce, P.R.)

There are many contradictions in the U.S. relations with Latin America. The people of the United States are free and enjoy all the benefits of democratic government. And our country is rich, too. We have the greatest productive machine in the history of the world and we have bolstered our economic system by a whole complex of social safeguards, including minimum wages, social-security benefits, FHA home construction loans, free education, and many others.

And yet we have complacently acquiesced while our sister republics south of the Rio Grande continue enmeshed in the old social system—exploitation and economic tyranny. What is worse, our own capital investments have many times unwittingly contributed to the perpetuation of that system. Thus, even though we condemn and punish governmental corruption where we find it in the United States, we have felt no compunctions in dealing with corrupt governments in Latin America. As a result we have seemed to condone the economic oligarchies and the military strongmen these regimes have represented.

This sort of inconsistency has provided a veneer of plausibility to communistic popaganda here in the Americas and facilitated the penetration of our hemisphere by Communist agents. There is no difficulty in finding an example; Castro's Cuba is only minutes away from both Florida and Puerto Rico.

Of course, some of the advantages that our tacit acceptance of social injustice provided the Communists have now been undone by Castro. The slogan "To the Wall" epitomizes the violence and mob hysteria that has characterized the Cuban regime. The lesson is unmistakably sinking in with the people of this hemisphere.

And Fidelism has certainly helped to open the eyes of the people of the United States, too. We were not ignorant of Communist oppression before. We had read of the way in which Poland, Czechoslovakia, East Germany, Bulgaria, Rumania and, most poignantly, Hungary were crushed.

But that seemed remote, somehow. It did not fully register in our minds. Dictatorship is now right on our doorstep, however. Thus, once the haven for Europeans fleeing Old World despotism, our hemisphere now harbors the worst sort of Communist police state. Tyranny, we see, is not a phenomenon of time or geographic situation; unfortunately, it is contained in the very nature of man.

The feeling of isolation which gave all the Americas a sense of security has been shattered by Castro. The barbarians are literally at our gates. Our mission is like that of Charles Martel who fought off the Moors at Tours. This is no mere historical flourish; I deeply believe that the threat to the survival of Western civilization is now precisely as grave as it was in A.D. 732.

What can we do? As the first imperative, we must not any longer accept the defeatist notion that democratic institutions cannot be adapted for use by all peoples. That simply is not true.

Instead, we must convince the people of the world (and certainly of Latin America) that representative democracy is, as Winston Churchill put it, "the best form of government ever devised by man to guarantee his fundamental freedom and to insure his material progress." We must put it across that, given the proper training, any people can and will learn to thrive under democratic institutions. And, basic to all, we must win recognition for the fact that only government "of the people, by the people, and for the people" can safeguard against the sort of authoritarianism that has made this a century of war and now threatens a new outbreak that might end civilization and literally vaporize mankind.

But how can we convert this general approach into a working program?

As a first step I urge that we combine with all our fellow members of the Organization of American States and establish a Pan American Code.

The cornerstone upon which such a code should be founded would be a prohibition against the creation of any government in our hemisphere that is not some form of representative democracy. A basic requirement, therefore, would be regular—and absolutely free—elections. Possibly, the code would go as far as laying down some formula under which the OAS would supervise such elections.

Indispensably, the code would also commit the nations to economic progress for all classes. Necessary steps would include:

1. A common market, in which tariffs and other trade barriers are gradually reduced as wages are increased.

2. A Pan American loan fund to finance economic development (a great part of the capital would, of course, come from the United States, and we should insist upon the same sort of self-help system among the recipients that crowned the success of the Marshall plan).

3. Regional minimum wages, to be attained within a fixed period of time, say 10 years. This phase of the code program

should be supervised by regional boards that would review the minimum standards periodically and raise them in line with the gains scored in productivity (which should be considerable—thanks to the adoption of better production techniques and the economic stimulation of the common market).

4. A minimum standard of social protection, establishing the rights of unionization and collective bargaining; workman's compensation; maximum hours of work per week and per day; the employee's right to regular vacations with pay; unemployment insurance; social security and all other basic social benefits.

5. The encouragement of private investment (the U.S. Government should help in this by guaranteeing private investments by U.S. entrepreneurs against unlawful and willful expropriation or blocking of currency, provided these investors are willing to permit local participation in their Latin American ventures equaling at least 40 percent of total capital).

6. Special tax treatment by host countries (and by the United States) on profits returned to the United States where the entrepreneur has assumed leadership in the payment of higher wages and broader fringe benefits.

7. A progressive income tax—the foundation of an equitable tax policy—to be established in all countries. The code would prescribe minimum standards.

8. Standards on public education, sanitation and health, norms to be determined in terms of minimum percentages of national budgets to be appropriated to these purposes.

9. An FHA system for all those acceding to the code in order to spur homebuilding throughout the hemisphere.

10. Pan American cultural centers for the various nations, to be financed from a common fund, with the objective of stimulating the exchange of students throughout the Americas.

This is a practical plan. It would work. And, I am convinced, it can be attained. By it, we shall be able to strike a massive blow against poverty, tyranny and prejudice.

But there is no value in merely spinning out 10-point programs. Instead, we must all go to work—energized by the huge need that exists and by our moral obligation to extend the frontiers of freedom to all the peoples of the world.

This is another hour of trial for the human spirit. We must recognize that either the whole world will be free, or it will inevitably be wholly slave. Establishing the Pan American Code for a stronger Western Hemisphere can help us tip the world balance toward freedom.

Postmaster General Day's Reply

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. JOHANSEN. Mr. Speaker, on March 14, I placed in the RECORD a copy of a letter which I had that day addressed to the Honorable J. Edward Day, Postmaster General, containing a number of questions regarding personnel and other matters involving the Post Office Department on which he had acted or publicly commented.

Under permission to extend and revise my remarks, I include his reply of March 17.

On the floor of the House I today discussed the matter of Project Turnkey, in the course of debate on the Treasury-Post Office appropriation bill. Subsequently I expect to have additional comments regarding some of the other matters referred to in the exchange of letters with the Postmaster General.

While I am by no means satisfied with many phases of the Postmaster General's response to my inquiries, I appreciate the promptness of his reply.

Postmaster General Day's letter follows. I have retained in my files the names of the persons affected by the personnel actions as included in a list which accompanied the letter:

OFFICE OF THE
POSTMASTER GENERAL,
Washington, D.C., March 17, 1961.

Hon. AUGUST E. JOHANSEN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN JOHANSEN: This is in response to your letter of March 14 and will answer the specific questions which you asked:

1. Of the 4,000 regional people, all except about 130 held career civil service status as of January 20, 1961. Two assistants to the regional directors have been replaced since my administration took office, and we contemplate replacing the remaining 13 assistants to the regional directors and many of the 15 regional directors. Actually four of the assistants to the regional director positions were vacant on January 20, 1961. One of the regional directors had already applied for disability retirement, and 11 others have either applied for retirement or have voluntarily accepted appointment to other high salary positions. Names of all of these regional directors and assistants to the regional directors are attached, along with the name of the one person whose regional job has been abolished. That one job had been created in December, 1960, specifically for the incumbent who was then assistant to the regional director. Civil service laws and regulations have been complied with in every respect. I do not feel free to deliver the civil service records of these people to you.

2. In the Washington headquarters, 21 employees with competitive status, and principally having very high grades, have been adversely affected. Five of them were in excepted positions. The positions of eight have been abolished, and the incumbents have received reduction-in-force notices. Of the remaining eight, two have resigned and six have voluntarily accepted change to lower grade positions. A list reflecting these names and their changes in position is attached. I do not feel free to deliver their civil service records to you.

3. Undistributed copies of the two issues of the Postal Service News were withdrawn from circulation because they contained inaccuracies and potentially erroneous statements regarding policies which were being considered for change, and it would have been confusing to the employees of the Postal Service to have allowed further distribution.

4. My public statements regarding Turnkey have been accurate. The statement of mine to which you refer was made February 9, 1961, in reference to the previous administration's publicity to the effect that Turnkey was a completed and completely working post office and was the world's first automated post office, which previous publicity was not accurate. The Post Office Subcommittee of the House Appropriations Committee, after its inspection of Turnkey, launched an investigation and requested the Post Office Department to withhold any further payment to Intelex Systems, Inc., until the congressional investigation is finished.

5. It would be historically inaccurate if the plaques installed on buildings dedicated after January 21, 1961, bear the names of officers from a previous administration. Plaques on buildings dedicated subsequent to that date bear the names of President Kennedy, myself, and Deputy Postmaster General Brawley.

6. A proposal has been received and is being considered by the Post Office Department that it consider changing to flat payment in cash the $100 per year uniform allowance to letter carriers in lieu of the present reimbursement basis. No decision to change from the present system has been made.

Sincerely,

J. EDWARD DAY,
Postmaster General.

Make Way for the B–70

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 28, 1961

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the January 1961 issue of the Reader's Digest, entitled "Make Way for the B–70."

This article, which is a condensation of one written by Mr. Ed Rees and which appeared in Life magazine on October 17, 1960, provides an excellent analysis of the deterrent capacity represented by this great new supersonic bomber. In my capacity as ranking member of the Preparedness Investigating Subcommittee of the Armed Services Committee, as well as ranking member of the Senate Appropriations Committee, I was one of those who urged continuation of the B–70 program and voted for the necessary funds to accomplish this purpose.

I feel strongly that every effort should be made to accelerate planning and construction of the B–70, in order that it may become an operational reality at the earliest possible time. In my judgment, this country will have need for manned aircraft, with the inherent capabilities of the B–70, for a number of years to come.

I commend the reading of this extremely important article to all Americans.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAKE WAY FOR THE B–70

(Condensed from Life by Ed Rees)

One day in 1962 a test pilot named Alvin White will open up six mighty jet engines and take off in an enormous, dart-shaped, goosenecked airplane that may be the most controversial military venture of the decade.

Those who have fought for its construction believe it will travel 2,000 miles an hour,

faster than the earth's rotation; that it will climb to its cruising altitude of almost 15 miles at a beginning rate of 25,000 feet per minute; that it will ultimately bring about 75-minute transcontinental travel. Most important, they say that for years to come this 250-ton plane will be a deterrent to war more effective than ballistic missiles.

This airplane is the Air Force's B–70 bomber, and the battle over it has been raging for years. At one point its development was brought almost to a halt after nearly one third of a billion dollars had been spent on it. A vigorous Air Force campaign got the project restored. Present plans call for the delivery of 250 B–70's, starting in 1962.

Right now the B–70 exists only as a flightless metal model—a full-scale mockup supported by guy wires. Hidden within its mass is a new aerodynamic concept that is intended to help bridge the gap between current aircraft and the space ships of the future.

The B–70 evolved from what today seems to have been an almost laughably modest request for a good, fast bomber. On October 14, 1954, Gen Curtis E. LeMay, then boss of the Strategic Air Command, wrote a top-secret letter to the Pentagon laying down his requirements for an aircraft to succeed the brand new eight-jet, 500 miles-per-hour B–52 bomber. He wanted an airplane with a range of 6,000 nautical miles, one that could fly from a northern U.S. base to any Soviet target, deliver its bomb load and continue on to another friendly field—all without refueling.

Speed was another requirement. LeMay asked for a plane that would cruise at about 590 miles per hour for most of its range and yet have the ability to go much faster—1,100 miles per hour would be adequate—for about 1,000 miles as it flew over enemy territory.

Engineers and designers were taken aback at LeMay's conditions. Airplane design is a compromise in which the plane's total performance can be thought of as a whole pie. The larger one slice is, the smaller the others. A bomber usually has a big slice for range but a relatively small slice for speed. LeMay was asking for an airplane where all the slices were huge.

Two big manufacturers, Boeing and North American, entered the competition. Their first designs were turned down as impractical. Months passed. It began to seem that the huge long-range bomber could never be built.

Then, almost by accident, came a breakthrough. In 1957 a North American engineer, checking through the library of high-speed engineering, came upon a recent report by two engineers working for the National Advisory Committee on Aeronautics. The report was entitled "Aircraft Configurations Developing High Lift-Drag Ratios at High Supersonic Speeds." Within its formula-cluttered pages lay the key to an airplane beyond General LeMay's wildest dreams.

An airplane traveling at high speed creates a shock wave as it smashes against air molecules. The pushed-aside air is piled up in a V-pattern similar to the bow wave made by a ship. The two NACA engineers suggested that a really fast airplane might take advantage of this wave and, through ingenious design of wing and underbelly, climb right on top of it and ride it like a surfboard. Such a plane would gain enormous extra lift without an extra pound of thrust or gallon of fuel.

North American's engineers seized on these dramatic possibilities. The drawing-board version of the B–70 they presented to LeMay in February 1958 had a 185-foot-long fuselage and a vast delta wing whose outer edges would fold downward at top speed. Its speed would be much greater than LeMay had asked for.

For more than 10 years designers of large aircraft had been blocked by the problems of the speed zone between mach .75 and mach 1.5 (490–985 miles per hour).[1] Flying through this zone, in which the air is broken up into pressure ridges, is like racing a car along a rocky, potholed road. But beyond mach 2, according to every slide rule, a plane would recapture much of the flight efficiency it had at subsonic speeds, when the flow of air around it was smooth. Mach 3 speed should be even better—and the B–70 would do just that. LeMay's pie was bigger all around.

Air Force approval of the suggested new plane was enthusiastic, and North American was awarded a $300 million contract. For strategic defense during the 1965–75 period, the Air Force wanted 250 of the craft. Total cost: $6.4 billion, the largest single weapon-system expenditure in U.S. history.

The possibilities of such a plane, the Air Force pointed out, went far beyond its ability to deliver bombs. The B–70 could, indeed, carry an enormously destructive load. It could fly so high and fast that interceptor planes and missiles would have great trouble reaching it, and it could fire missiles of its own while still 1,500 miles from target. But the B–70 also had important peacetime potential in the field of commercial aviation. Military air developments traditionally lead to major advances in civil aviation. They made possible pressurized cabins and turbojet engines, for example, and without these advances there would be no commercial jets flying in the United States.

Building a plane that would operate at the B–70's speed and altitude, however, required a whole new technology. Because even such minute imperfections as fingerprints caused trouble when certain sections were fused together, the workers had to wear gloves. Because weight in such a supersonic giant is critical, the steel skin had to be rolled as thin as possible—down to six one-thousandths of an inch.

One of the major engineering problems was the great friction heat that the B–70 would create as it ripped through the air at 2,000 miles per hour. The temperature on the plane's skin would climb to an unbearable 500 degrees. The engineers struck on a unique solution. Instead of a single layer, they devised a three-thickness skin consisting of a one-inch layer of honeycombed foil between two thin plates of steel. When this was brazed together with another metal foil, the resultant sandwich was lightweight, strong, and would keep the B–70 alive at its infernal cruising temperature.

But even with this insulating skin, some of the frictional heat would still get inside. The engineers then thought of using the airplane's 300,000 pounds of fuel to absorb this residue of heat. Fuel was to be stored nearly everywhere in the great plane—throughout the wing, along the fuselage—and whatever heat got through the skin could be fed into this cooling reservoir.

In October 1959 the B–70 was on schedule, within cost estimates, and the equipment was meeting all performance requirements. Then the ax fell.

The B–70 budget request for fiscal 1961 (which would begin in July 1960) was sent to the Director of the Budget for approval. The Defense Department, which had already cut the Air Force request by $100 million, was asking $360 million for the B–70. The military budget requests before Budget Director Maurice Stans totaled $41.3 billion—well above the administration's $40.7 billion ceiling. Substantial cuts had to be made somewhere. President Eisenhower decided that the B–70 program should be canceled.

The Air Force Chief of Staff, Gen. Thomas D. White, called his top advisers into an emergency meeting. "I want you to tell me how little money we can get along with," he said, "the minimum which will keep the B–70 alive and breathing." Within moments busy pencils and slide rules came up with the answer: a single airplane—not a full-fledged bomber with all the equipment needed for combat, but a flying shell—would require $75 million in 1961. White got the Secretary of Defense to approve the figures, and went directly to the White House.

It would be barely possible to proceed, he told the President, with $75 million. If the President canceled the program entirely, the United States would halt a vital advance in aviation and writeoff a critical future weapon for defense. The program must go on.

President Eisenhower reluctantly agreed. The gleaming shape in the Los Angeles hanger would survive and grow to full size. But it might well be the only one of a species that would be extinct before birth.

Then Francis Gary Powers' U–2 was shot down over Sverdlosk on May 1. Immediately, circumstances were violently altered. With the abrupt tightening of world tension and the growing truculence of the Soviet Union, the case of the B–70 was reopened.

The main argument against further development, aside from cost, was that manned bombers would be obsolete in the age of missiles. The B–70 would not become operational until 1965, which time we would have the Titan, Atlas, Minuteman, and Polaris systems. These ballistic missiles are enormously difficult to detect, hard to stop, and can deliver tremendously powerful bomb loads with great accuracy to any point on the globe. What can the B–70 do that these weapons can't?

The B–70 group had some solid answers. Where precise marksmanship is required, because an installation is hidden or hardened so that the bomb burst must be placed virtually on top of it, the missile is not nearly so dependable as the airplane. And the missile cannot be used against targets where precise geographic information is lacking: for example, it takes a pilot to hit a target that is somewhere near this bend of the river of just beyond that mountain. Also, the B–70's exposure time on a bombing run is fantastically short. A B–70 spotted off Leningrad is about 10 minutes from Moscow, 386 miles away. By the time the Soviet defense forces have identified and tracked it and dispatched missile-carrying fighters to try to knock it down, the U.S. bomber probably would be in danger of attack for less than 2 minutes.

Gen. Nathan F. Twining, then chairman of the Joint Chiefs of Staff, told Congress: "I am convinced we will have bombers all the way through 1967, 1968 and maybe beyond. The B–52 will be on the way out but the bomber will still be a useful weapon system in the inventory, regardless of how good the ICBM may get. We would be much better off with a more advanced plane like the B–70."

One other argument was presented for the mach 3 high-altitude bomber. The U–2 made many flights above 70,000 feet before Powers was downed, and U.S. officials still do not believe that Soviet fire did it. The Russians, moreover, have an obsessive fear of such high-speed, high-level penetration, and would presumably try to defend against it. Experts of the Strategic Air Command recently made a detailed operational analysis

[1] Very high airplane speeds are measured by using the speed of sound (650 miles per hour at sea level) as a unit called a mach after the 19th century Austrian physicist Ernst Mach. Thus the speed of sound is referred to as mach 1; twice the speed of sound, mach 2, etc.

of the amount a mach 3 air defense would cost the Russians. It came to $40 billion—as against the $6.4 billion it would cost the United States for 250 B–70's. And the expenditure still would not give the Soviets an ironclad defense.

Last July the Senate Preparedness Subcommittee recommended that appropriations for the airplane be brought back up to the amount originally requested by the Department of Defense. In the appropriations bill finally passed by both Houses of Congress and signed by the President, the B–70 program got an additional $190 million.

So, test pilot Al White will fly his prototype in 1962, and there is strong hope that the first combat-ready B–70 will be on the line in 1965. Thus, after all the wrangling and uncertainty it now seems likely that within 5 years the United States will boast the world's fastest, hardest punching operational aircraft—and perhaps the last piloted bomber in military history.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Liberalism's Responsibility

EXTENSION OF REMARKS
OF

HON. JOHN O. PASTORE

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 29, 1961
